3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at km. 42+650 near Dakshina Sekhpur with the following infrastructure.

Table 3-8 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 42+650
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for over dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel / Yes
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes (only 20 nos. near Toll plaza i.e., 10 nos. in both direction)
15	Low mast Light	No
16	User Fee Boards	3
17	Cantilever / Gantry Boards	Yes
18	Automatic boom barrier	Yes

Note:

- *Presently, Concessionaire is using Annuity Concessionaire's building as an administration building for toll plaza.*
- *The electric supply for the existing streetlights is provided by the TOT Concessionaire. The maintenance of these streetlights is in the scope of Annuity Concessionaire.*

- *Toll plaza is completed as per rehabilitation work and as per scope given in schedule-B.*

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller are located within the Electronic Enclosure placed inside the tunnel below the toll booth which are connected to the common server and are capable of independent storage of data.

Lane Controller in Tunnel at TP

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at TP

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at TP

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at TP

3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at TP

3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

Server

3.12.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the toll plaza location (km. 42+650). As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle Actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km 15+465).

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.13.3 Emergency Call Boxes (ECB)

It is not installed at site.

3.13.4 Portable Weigh in Motion (PWIM)

Portable Weigh in Motion (PWIM) is available at site.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km. 42+650.

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 14 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

km. 29+000

km. 33+000

km. 46+000

km. 64+000

3.13.7 CCTV Surveillance Cameras

Surveillance cameras are installed at 55 locations along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

km. 18+500

km. 30+400

3.13.8 Video Incident Detection System

62 fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at 3 locations each on LHS and RHS.

km. 19+650 (LHS)

km. 61+750 (RHS)

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy - All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.

- The Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition. Some components such as ECB and MRCS have not been installed.

3.13.11 Truck Lay-bye

The following are the truck lay-bye locations.

Table 3-9 Details of Truck Lay-bye

Sr. No.	Chainage (km)	Remarks
1	52+555	LHS
2	32+300	RHS

Figure 3-20 Photographs of Truck Lay Bye

km. 52+555 (LHS)

km. 32+300 (RHS)

3.14 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are in the scope of Annuity Concessionaire. photographs of the Traffic Aid Post and Medical Aid Post are presented below.

Traffic Aid Post and Medical Aid Post

3.15 Toilet Block

There are two nos. of toilet blocks and maintenance of the same is in Annuity Concessionaire's scope.

Table 3-10 Details of Toilet Block

Sr. No.	Chainage (km)	Side		Remarks
		LHS	RHS	
1	42+500	Yes	-	
2	42+700	-	Yes	

Figure 3-21 Photographs of Toilet block

km. 42+500 (LHS)

3.16 Bus Bays and Passenger Shelters

There are 45 Nos. of bus bays / passenger shelter along the Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-22 Photographs of Bus Bay / Passenger Shelter

km. 30+630 (LHS)

km. 47+800 (RHS)

3.17 Balance Work Status

During site visit it has been observed that construction of 2 Nos. of VUPs at km. 77+276 and at km. 78+770 along with approaches are balance due to non-availability of land. As informed the Concessionaire, the correspondence is in progress with Authority to resolve the issue. The same is referred as below.

- Concessionaire informed to TDD Consultant that earlier there was a change of scope as IE had proposed an elevated road instead of two nos. new VUP vide their letter no. IE/LKO-RBL/24B/O&M/2021/160 dated 05-07-2021 to NHAI. However, later NHAI decided to continue at site as per their original scope of work given in schedule B vide their letter no. NHAI/PIU/LKO/NH-24B/TOT/2022/3287 Dated 04-10-2022 to IE and the same has been communicated with Concessionaire to start as per the original scope of work vide their letter no. IE/LKO-RBL/24B/O&M/2022/470 Dated 08-10-2022.

3.18 Operation and Maintenance

3.18.1 O&M Contract

As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall confirm to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.18.2 Organization Chart

The Concessionaire has given the Organization Chart at site for operation and maintenance. Accordingly, there is 01 Project Head, 01 CFO-CHFA, 01 Executive (F&A), 01 Assistant Manager, 01 Executive, 04 Shift Supervisor (ATMS), 01 Plaza Manager, 01 Assistant Manager, 04 Cashiers, 04 validators and 02 Executive (ATMS) to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

Organization Chart

3	Finance Controlling	1	0	1
4	Operations	0	8	8
5	Operations System	0	1	1
6	ATMS Maintenance	0	10	10
7	TMS Maintenance	0	4	4
	TOTAL	2	23	25

3.18.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.18.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2029. Hence, routine maintenance is considered from the year 2029 till end of concession period.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Annuity Concessionaire as per Scope of Work. The Annuity Concessionaire has received Completion Certificate on 14th April 2015.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period. The project will be handed over to TOT Concessionaire in March 2029.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 42+500 (near Toll Plaza) on 23rd July 2019 and 24th July 2019. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Category	Direction	
		Lucknow - Raebareli	Raebareli - Lucknow
1	Bus	0.82	0.76
2	LCV	1.48	0.57
3	2-Axle	3.18	3.05
4	3-Axle	5.31	8.55
5	MAV	10.56	17.09

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
2024-25	-	**-**	-	**-**	
2025-26	1.51	**1.51**	2.15	**2.15**	
2026-27	1.54	**3.05**	2.21	**4.36**	
2027-28	1.59	**4.64**	2.28	**6.64**	
2028-29	1.66	**6.30**	2.37	**9.01**	Handing over from Annuity Concessionaire in Mar 2029
2029-30	1.71	**8.01**	2.45	**11.46**	
2030-31	1.77	**9.78**	2.54	**14.00**

2041-42	2.40	**32.97**	3.46	**47.35**	
2042-43	2.47	**35.44**	3.56	**50.91**	PCU crossed 40000
2043-44	2.53	**37.97**	3.64	**54.55**	PCU crossed 40000
2044-45	2.59	**40.56**	3.74	**58.29**	PCU crossed 40000
2045-46	2.65	**43.21**	3.83	**62.12**	DPR Preparation for 6-laning
2046-47	2.72	**45.93**	3.93	**66.05**	DPR Preparation for 6-laning
2047-48	2.79	**48.72**	4.03	**70.08**	6-Laning of Project Road Construction
2048-49	2.87	**51.59**	4.13	**74.21**	6-Laning of Project Road Construction
2049-50	2.34	**53.93**	3.38	**77.59**	
2050-51	2.39	**56.32**	3.46	**81.05**	End of concession period

4.4 Network Survey Vehicles (NSV) Survey

The O&M is not under the scope of Concessionaire / Client.

4.5 Structural Investigations

The O&M is not under the scope of Concessionaire / Client.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Table 4-3 Test Results Summary of Natural Ground Soil Samples

Sr. No.	Location (km)	Side (LHS / RHS)	Soil Classification as per IS:1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)						Clay & silt content %	Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		4-Days Soaked CBR (%)	Free Swell Index (%)
				19.0 mm	10.0 mm	4.75 mm	2.0 mm	425 microns	75 microns		Liquid Limit (LL) %	Plastic Limit (PL) %	Plasticity Index (PI)	Max. dry density (gm/cc)	OMC (%)		
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
1	77+100	LHS	CL	96.7	94.3	93.2	91.5	89.6	85.8	85.8	32	19	13	1.86	11.8	4.1	25.0

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement in Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Currently, the Project Road is maintained by the existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2029. It is assumed that the pavement will be overlaid before handing over the project confirming the pavement parameters kept within the limits as per Table-1 (Maintenance Criteria for Pavements) of Schedule-F. Hence, the major maintenance cycles are proposed between the year 2029 and end of concession period.

As per Article 14 of CA, the Authority shall carry out capacity augmentation under EPC contract if traffic exceeds 40,000 PCU for three consecutive accounting years. As per the traffic study report submitted by the Company, it is observed that the project traffic crosses 40,000 PCU in FY 2043, FY 2044, FY 2045. Assumption has made that execution of 6-laning of project highway will start in the year 2048 or 2049. It is also assumed that during the 6-laning of Project Road, overlay of existing four lane road will be the part of the capacity augmentation. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-4 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2026 to FY 2028	-	-
2	FY 2029	Handing over of Project Road from Annuity Concessionaire	
3	FY 2030 to FY 2031	-	-
4	FY 2032	Major maintenance with 30 mm BC (PMB) (50%) + Major maintenance with 40 mm BC (PMB) (50%) + Milling & 50 mm DBM (VG-40) (100%)	Major maintenance with 30 mm BC (VG-40) (50%) + Micro-surfacing (50%)
5	FY 2033 to FY 2038	-	-
6	FY 2039	Major maintenance with 40 mm BC (VG40) (100%) + Milling & 50 mm DBM (VG-40) (5%)	Major maintenance with 30 mm BC (VG-40) (50%) + Micro-surfacing (50%)
7	FY 2040 to FY 2048	-	-
8	FY 2049	Assumption of Capacity Augmentation to Six Lane Configuration	

Sr. No.	Year	Main Carriageway	Service Road
9	FY 2050	-	-
10	FY 2051	End of Concession Period	

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

    a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

    b. **Bitumen:** The Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. The same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026 and FY 2027. Average 10 years of bitumen price are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971
IOC Barauni	VG-30	48,502	34,540
IOC Barauni	VG-40	51,242	36,492
CPC Chennai	VG-10	48,202	34,156
CPC Chennai	VG-30	49,002	34,723
CPC Chennai	VG-40	51,752	36,672

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from Market rate.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	9,604
2	Bituminous Concrete (VG-30)	Cum	10,629
3	Bituminous Concrete (VG-40)	Cum	10,932
4	Bituminous Concrete (PMB)	Cum	13,357
5	Milling	Sqm	89
6	Micro-surfacing	Sqm	155
7	Kerb re-laying	Rmt	297
8	Road Marking	Sqm	605
9	Road Studs	Nos.	179

5.3 Balance Work Cost

As discussed in previous chapters, the construction of two VUPs at km. 77+276 and at km. 78+770 has not started yet due to various reasons stated earlier. However, Concessionaire has worked out the cost of construction of these VUP which was subsequently also approved by IE. The IE has recommended the balance work amounting Rs.53,61,73,996.00 vide their letter no.SAICPL/OMT/NH-24B/LUC-REI/2022/MG/18938 Dated 18-08-2022 to NHAI. The same is presented below.

Table 5-3 Summary of Balance Works

Sr. No.	Items of Work	Balance Cost
1	Earth Work	12,035,953.00
2	Sub-base, Base (Non-Bituminous) & Shoulder	147,206,127.00
3	Bases and Surface course (Bituminous layer)	101,344,029.00
4	Box Culvert	23,061,971.00
5	Pipe Culvert	1,913,756.00
6	Structure at Underpasses	102,540,280.00
7	Drainage and protective works (RE Wall)	144,284,980.00
8	Traffic Signs, Marking & other road Appurtenances	3,786,901.00
	Total Balance Amount (Rs.)	**536,173,996.00**

Sr. No.	Items of Work	Balance Cost
	Total Balance Amount (Cr.)	**53.62**

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by existing Annuity Concessionaire. The project will be handed over to TOT Concessionaire in March 2029. Hence, the routine maintenance and horticulture maintenance is considered from year 2029 till end of concession period.

The Routine Operation Cost is presented as below.

Table 5-4 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026-29)	Amount after Annuity (FY 2030-49)	Amount after Annuity & 6 lane Augmentation (FY 2050-51)
1	Salary and Welfare Expenses	10,395,000	10,395,000	10,395,000
2	Tolling Operations Services	29,511,898	29,511,898	29,511,898
3	Toll Security Services	6,738,645	6,738,645	6,738,645

Sr. No.	Particulars	Amount (FY 2026-29)	Amount after Annuity (FY 2030-49)	Amount after Annuity & 6 lane Augmentation (FY 2050-51)
4	Incident Management & Emergency Services	-	24,679,831	24,679,831
5	Electricity and Diesel Charges	3,266,762	29,512,899	29,512,899
6	TMS/HTMS/System Expenses	6,299,783	7,504,699	5,812,689
7	Office Operating Expenses	3,118,094	3,118,094	3,118,094
8	Vehicle Running Expenses	3,456,000	3,456,000	3,456,000
9	Professional Fees Expense	4,696,453	6,919,801	8,031,475
10	Community Development	998,547	998,547	998,547
11	Communication Expenses	347,156	347,156	347,156
12	Conveyance Expenses	378,716	378,716	378,716
13	Insurance Expense	2,524,773	2,524,773	2,524,773
14	IE Fees	6,362,427	6,362,427	6,362,427
15	Routine Maintenance Cost (Project Road)	-	25,818,479	34,192,403
16	Horticulture & ROW Maintenance	-	20,007,372	20,007,372
17	Miscellaneous including Contingency	3,123,770	5,297,939	5,274,726
	Total Cost (Rs.)	**81,218,024**	**183,572,277**	**191,342,651**
	Total Cost (Cr.)	**8.12**	**18.36**	**19.13**
	Per km Cost (Lakhs)	11.60	26.22	27.33

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in Annexure-II.

Table 5-5 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2026 to FY 2031	-	
2	FY 2032	186.19	
3	FY 2033 to FY 2038	-	
4	FY 2039	92.41	
5	FY 2040 to FY 2050	-	
6	FY 2051	-	End of Concession Period
	Total Cost (Cr.)	278.60	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	7.40	
2	FY 2034	7.40	

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
3	FY 2041	7.40	
4	FY 2048	7.40	
Total Cost (Cr.)		**29.60**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-6 Escalation

Year	Escalation	Year	Escalation
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%
2041	3.99%	**2057**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

	Year of expense	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45	FY46	FY47	FY48	FY49	FY50	FY51

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost (Up to FY 2048)	
Project - Lucknow Raibareli	
Ordinary Repair Cost for Flexible (with GST)	**25,818,479**
(Inclusive of GST)	**= 3.69 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7 m or 14 m or 21 m) with 1.5 m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD	**Urban** More than 4500 CVD	**Project Length (km)**		**Per Year Project Maintenance Cost**	
				2,12,090	**2,45,137**				
						Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	324498.00	375059.00	-	-	-	-
		Paved shoulder	1.70	360553.00	416733.00	66.76	-	24,069,256	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	424180.00	490274.00	-	-	-	-
		Paved shoulder	2.20	466598.00	539301.00	-	3.24	-	1,749,223
					TOTAL	**70.000**		**25,818,479**	

Routine Maintenance Cost (For FY 2049 onwards)	
Project - Lucknow Raebareli	
Ordinary Repair Cost for Flexible (with GST)	**34,192,403**
(Inclusive of GST)	**= 4.88 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7 m or 14 m or 21 m) with 1.5 m wide shoulders

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	0.50%
	Volume (cum)			2.50
	Rs/m^3			11505
	Cost in Rupees			28,763
	ii) Patch repair	100 % Patch less	As & when required	0.50%
	Area (sqm)			50
	Rs/m^2			460
	Cost in Rupees			23,010
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.50%
	Area (sqm)			250
	Rs/m^2			87
	Cost in Rupees			21,665
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			58
	Cost in Rupees			8,684
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			460
	Cost in Rupees			34,515
	v) Road marking	14%	Once in 7th year & @ Repaired location	32582
	SUB TOTAL			**149,219**

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6210
	ii) Kuccha Drain Maintenance	100%	Twice in a Year	1092
	SUB TOTAL			**7,302**
3	**Maintenance of Cross Drainage works:**			
	i) Repair of floors	100%	Once in a Year	4978
	ii) Repair of parapets	100%	As & when required	2074
	SUB TOTAL			**7,052**
4	**Maintenance of Minor & Major Bridges:**			
	i) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints	100%	As & when required	36,387
	ii) Repair of minor washouts, erosion scour and animal holes			
	iii) Sealing Cracks with Cement/ Epoxy Mortar			
	iv) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,387**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometer stone etc.		Once in a Year	3639
	ii) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	7277
	iii) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1213
	iv) Traffic Census		Once in a Year	0
	v) Provision for roughness measurement		Twice in a Year	0

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
	SUB TOTAL			**12,129**
	GRAND TOTAL (Normal)			**212,090**
6	**Additional Cost required for Urban Area**			
	i) Renewal of Center Line, Edge Marking, Kerb Marking/ Zebra crossing etc. in City Portion	33%	Once in three years with thermoplastic paint	3694
	ii) Repairs to footpath	100%	As & when required	4852
	iii) ROB/ Fly-over Railings & repair	100%	As & when required	4852
	iv) Street Lighting	0%	As & when required	0
	v) Encroachment Removal Squad	100%	As & when required	7520
	vi) Repair of divider/ Railing in City portion	100%	As & when required	9703
	vii) Provision for maintenance of pedestrian underpass	100%	As & when required	2426
	SUB TOTAL			**33,047**
	GRAND TOTAL (Urban)			**245,137**

ANNEXURE II - MAJOR MAINTENANCE COST

Major Maintenance Cost (FY 2032)

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Bharatpur - Mahua section of NH-11 from km. 63+000 to km. 120+000 in the State of Rajasthan (hereinafter referred as "Project Road").

M/s. Mahua Bharatpur Expressway Ltd. (MBEL) (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Mahua to Bharatpur Section (from km. 63+000 to km. 120+000) of NH-11 on BOT Basis. The project was awarded to Concessionaire on 07th March 2005 with a concession period of 25 years including construction Period of 3 years by National Highway Authority of India (NHAI). The length of Project Road is 57.000 kms with two toll plazas at km. 64+570 (Ludhawai) and at km. 98+500 (Amoli).

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyzing the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **16th January 2025 to 17th January 2025**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, and overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement **M/s. Mahua Bharatpur Expressway Ltd. (MBEL),** is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 07th March 2005. The Appointed Date for the Project Road is 10th April 2006.

The project was developed on a BOT basis with a concession period of 25 years from the Appointed Date including construction period of 3 years. The Concessionaire received the Completion Certificate on 9th March 2015. The project is currently under operation and Maintenance phase.

2.2 Location

The Project Road is a section of National Highway No. 11 from Bharatpur to Mahua in the state of Rajasthan. The total project length is 57.000 kms.

The Location Map of the Project Road is presented below:

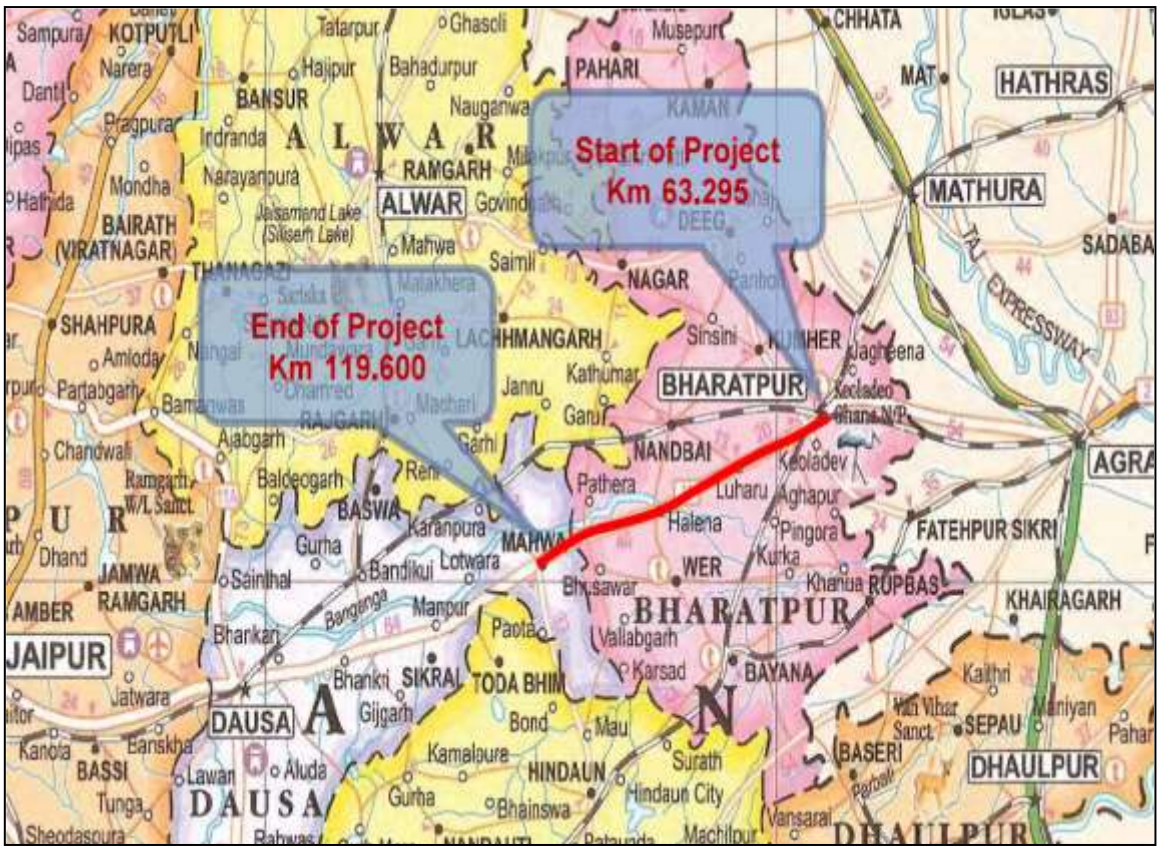

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of Project Road

Start of Project Road (LHS)

Start of Project Road (RHS)

Figure 2-3 End of Project Road

End of Project Road (LHS)

End of Project Road (RHS)

2.3 Climate

The climate features of the area covered by the Project Road are:

Summer	March - May, with maximum temperature up to 47 ^{0}C.
Monsoon	June - August, with annual rainfall of about 560-660 mm.
Retreating monsoon season	September - November, with dry weather and moderate temperature.
Winter	December - February, temperature falls up to 3 ^{0}C.

2.4 Terrain

This section of National Highway traverses through plain terrain.

2.5 Abutting Land Use

The Project Road is characterized by a mix of habituated areas and agriculture lands.

2.6 Right of Way

The width of existing Right of Way (RoW) for the Project Road varies from 13.50 m to 22.50 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services located along the Project Road were shifted to the PROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Bharatpur (km. 63+000) to Mahua (km. 120+000) has been developed as a four-lane divided carriageway with median width of 4.5 m and 2.0 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	Km.	57.000	
2	Construction of Service Road	Km.	12.980	Both Side
3	Major Bridge	Nos.	01	
4	Minor Bridge	Nos.	04	
5	Pipe Culvert	Nos.	25	
6	Slab Culvert	Nos.	12	
7	Box Culvert	Nos.	03	
8	Underpasses	Nos.	05	
9	Grade Separated Structure	Nos.	01	
10	Rail Over Bridge	Nos.	01	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 General

The Project Road is four lane divided carriageway and generally has a paved carriageway of 9.0 m with an earthen shoulder of 1.5 m on either side. The Project Road has a median width of 4.5 m and 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is rigid pavement.

3.2 Pavement Condition Survey

Pavement condition survey was carried out from **16th January 2025 to 17th January 2025** through visual inspection for the entire project length. From the visual inspection, the pavement condition of the Project Road for the entire length is generally found to be Good. In the project, Major maintenance work has been done in FY 2025. The same has been intimated to NHAI by the Concessionaire.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW-LHS)

3.3 Bypass / Realignment

There is one bypass on Project Road. The detail of the bypass is tabulated below:

Bypass:

Location of Bypass	Design Chainage (km)		Design length (km)
	From	To	
Mahwa	114+380	118+680	4.30

The photographs taken during the site visit are presented below.

Figure 3-3 Photographs of Bypass

Start of Mahua Bypass

End of Mahua Bypass

3.4 Service Road / Slip Road

The service road with a 5.5 width is constructed in built-up area and adjoining underpass locations. The Project Road has total service road length of 12.980 kms on both sides. The photographs taken during the site visit are presented below.

Figure 3-4 Photographs of Service Road

Service Road at km. 101+800 (RHS)

3.6 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Major Structures:	
Road Over Bridge (ROB)	01
Grade Separator	01
Major Bridges (MJB)	01
Minor Bridges (MNB)	04
Underpass (UP)	05
Culverts:	
Pipe Culverts	25
Slab Culverts	12
Box Culverts	03
Total	**52**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

Sr. No.	Name of Structure	Chainage (km)	Size (m)	Width (m)	Remarks
1	Minor Bridge (SLAB)	62+800	5x6.40 M	12	**LHS-** Existing Bridge, Stone masonry is used for Abutment, Pier and Wing wall, RCC deck slab, Tar Paper bearings are used, Median and Shoulder side RCC Railing, Cracks are observed on RCC Railing at span no. 4 and 5, and slope protection are in good condition. Drainage spouts are choked, Structure is in sound condition. **RHS-** Newly constructed Bridge, Substructure RCC abutment and Pier, RCC deck slab, Tar Paper bearings are used, Footpath side RCC Railing, Median side RCC Crash Barrier with handrail. Shoulder side RCC Crash Barrier. Crash barriers are in good condition. Expansion Joints are filled with Bituminous material. A1 side Slope protection damage. Drainage spouts are choked, Structure is in sound condition.
2	ROB	63+236	LHS-1x48.65 RHS-1x14.56+1x23+1x14.56	12	**LHS-** Single span Existing Bridge, Substructure RCC abutment, PSC Girder 4 nos. are used, Elastomeric bearing are used, Footpath slab damaged. Shoulder, Median side RCC Crash Barrier, Expansion Joint, crash barrier and Slope protection are in good condition. Drainage spouts are cleaned, Structure is in sound condition. **RHS-** Newly constructed Bridge, Substructure RCC abutment, PSC Girder 5 no. are used for Railway span, RCC T Beam Girder 5 no. are used for obligatory span, Elastomeric Bearings are used, Footpath, Shoulder, and Median side RCC Crash Barrier. Expansion Joint, Crash Barrier and Slope protection are in good condition. Drainage spouts are cleaned, Structure is in sound condition. A return wall with RCC parapet is constructed. One high mass is erected at A1 side.
3	Minor Bridge	63+600	2x6.40 M	LHS-12.00 RHS-13.95	**LHS-** Existing Bridge, Stone masonry is used for Abutment, Pier and Return Wall. RCC deck slab, Tar Paper bearings are used, Median and Shoulder side RCC Railing. RCC Railing and slope protection are in good condition. Drainage spouts are choked. The structure is in sound condition.

Sr. No.	Name of Structure	Chainage (km)	Size (m)	Width (m)	Remarks
					RHS- Newly constructed Bridge, Substructure RCC abutment, Pier and Wing Wall, RCC deck slab, Tar Paper bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier and Median side RCC Crash Barrier with handrail. A2 side Slope protection damaged. Crash barrier is in good condition. Drainage spouts are cleaned. The structure is in sound condition.
4	Ludhawai Underpass	66+305	1x11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, RCC Crash Barrier is in good condition. Drainage spouts are choked. The structure is in sound condition.
5	Hantra Underpass	82+050	1x11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, RCC Crash Barrier is in good condition. Drainage spouts are choked. Structure is in sound condition Cross Drain on RHS Service Road is damaged and obstructed to traffic. Water is stagnant in Underpass.
6	Minor Bridge(SLAB)	92+350 in Skew	3x10 M	13.95	**LHS-** Newly constructed Bridge, Substructure RCC abutment and Pier, RCC deck slab, Tar Paper bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier, Median side RCC Crash Barrier with handrail. RCC Return wall with RCC railing. Slope protection damaged. Crash barrier is in good condition. Drainage spouts are choked. The structure is in sound condition. At slab joint cracks are seen on Main Carriageway **RHS-** Newly constructed Bridge, Substructure RCC abutment and Pier, RCC deck slab, Tar Paper bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier Median side RCC Crash Barrier with handrail. RCC Return wall with RCC railing. Crash barrier and slope protection are in good condition. Drainage spouts are choked. Structure is in sound condition. At slab joint cracks are seen on Main Carriageway
7	Major Bridge	95+450	7x39.75 +1x40.25	13.95	**LHS and RHS**- Newly constructed Bridge, Substructure RCC abutment and Pier, PSC Girder 4 no., POT PTFE bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier, Median side RCC Crash Barrier with handrail. Expansion Joint Cleaning work in progress on RHS side. Crash Barrier is in good

Sr. No.	Name of Structure	Chainage (km)	Size (m)	Width (m)	Remarks
					condition, Slope protection is in good condition Except A1 side LHS slope protection not done. Drainage spouts are cleaned. The structure is in sound condition.
8	Chhankarwada Underpass	100+460	1x11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, RCC Crash Barrier is in good condition. Drainage spouts are cleaned. Structure is in sound condition
9	Bachhrain Underpass	105+570	1x11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, RCC Crash Barrier is in good condition. Drainage spouts are cleaned. Structure is in sound condition
10	Minor Bridge	108+180 in Skew	2x7 M	LHS-13.95 RHS-11.00	**LHS-** Newly constructed Bridge, Substructure RCC abutment and Pier, RCC deck slab, Tar Paper bearings are used, RCC return wall, Footpath side RCC Railing, Median side RCC Crash Barrier and shoulder side RCC Crash Barrier with handrail. Crash barrier and slope protection are in good condition. The structure is in sound condition. **RHS-** Existing Bridge, Stone masonry are used for Abutment and Pier, RCC deck slab, Tar Paper bearings are used, Parapet Constructed in Brick work, Median side Partly RCC Railing and partly Parapet constructed in stone masonry, Slope protection are in good condition. The structure is in sound condition.
11	Fly Over/GS	116+839	LHS and RHS - 1x12+2x16+1x12	13.5	Newly constructed, Substructure RCC abutment and Pier, RCC Girder 5 no. for each span, Elastomeric bearings are used, Footpath side RCC Railing, Shoulder side RCC Crash Barrier, Expansion Joint and RCC wing wall are in good condition, Drainage spouts are Cleaned. The structure is in sound condition.
12	Mahwa Underpass	118+110	1x11.16	12.25	Newly constructed, RCC Abutments, RCC Girder 4 no. for each span, Elastomeric Bearings are used, Shoulder side RCC Crash Barrier and Median side RCC Crash Barrier with handrail. RCC Crash Barrier is in good condition. Drainage spouts are choked. Structure is in sound condition

3.7 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and slab culverts at various locations. There are 25 Nos. of pipe culverts, 12 Nos. of slab culverts and 03 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found sound. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching has been damaged which required to be addressed under routine repair work by the Concessionaire.

3.8 Drainage

RCC drain is constructed in built-up area and locations where service roads are provided. The photographs taken during site visit is presented as below:

Figure 3-14 Photographs of Drainage

RCC Drain at km. 65+260 (LHS)

V shape Drain at km. 83+500 (LHS)

RCC Drain at km. 101+800 (RHS)

V shape at km. 104+900 (RHS)

3.9 Slope Protection

Slope protection and chute drains are found on Project Road at required locations. A few of the slope protection and chute drains are damaged which will be rectified by the Concessionaire. The photographs taken during site visit is presented as below:

Figure 3-15 Photographs of Slope Protection and Chute Drain

Chute Drain at km. 62+800 (RHS)

Slope Protection at km. 116+839 (LHS)

Slope Protection at km. 95+450 (RHS)

Chute Drain at km. 63+230 (RHS)

3.10 Road Furniture

The Concessionaire has provided road furniture along Project Road as per the standards and specifications mentioned in Schedule-C.

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Some of the photographs of road marking are presented below.

Figure 3-16 Photographs of Pavement Marking

Road Marking at km. 62+800 (RHS)

Road Marking at km. 93+670 (RHS)

Road Marking at km. 71+200 (LHS)

Road Marking at km. 79+440 (LHS)

Road Studs

Cat's eye / road studs for the Project Road are done as per the design standards indicated in section 12 of Schedule-D. Cat's eye has been fixed at junction and at pedestrian crossings locations. Some of the photographs of road studs are presented below.

Figure 3-17 Photographs of Road Studs

km. 96+880 (LHS)

km. 67+970 (RHS)

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards are properly placed.

Some of the photographs of sign boards are presented below.

Figure 3-18 Photographs of Traffic Signages

Cantilever Gantry Sign Board at km. 118+940

Directional Sign Board at km. 91+860

Kilometer Stone at km. 78+000

Informatory sign board at km. 111+280

Highway Lighting

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers. Some of the photographs of highway lighting are presented below.

Figure 3-19 Photographs of Street Light

Street Lighting at km. 90+900

Street Lighting at km. 111+250

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site. Some of the photographs of metal beam crash barriers and concrete crash barriers are presented below.

Figure 3-20 Photographs of MBCB / Crash Barrier

Crash Barrier at km. 116+1000

Crash Barrier at km. 73+920

Concrete Barrier at km. 66+280

MBCB Barrier at km. 95+450

Delineators

The traffic delineators are seen in median on curve portion and at median openings along the Project Road. Some of the photographs of delineators are presented below.

Figure 3-21 Photographs of Delineators

Delineators at km. 93+640

Delineators at km. 64+980

Pedestrian Guard Rail

The pedestrian guard rails are provided in between the main carriageway and service road. It is maintained by the Concessionaire. Some of the photographs of pedestrian guard rails are presented below.

Figure 3-22 Photographs of Pedestrian Guard Rail

Pedestrian Guard Rail at km. 65+260

Pedestrian Guard Rail at km. 104+900

Pedestrian Guard Rail at km. 83+500

Pedestrian Guard Rail at km. 87+600

Road Land Boundary

Some of the road land boundary stones are seen along the Project Road. The photographs taken during site visit are presented below.

Figure 3-23 Photographs of Road Land Boundary

Boundary Stone at km. 72+400 (LHS)

Boundary Stone at km. 89+420 (RHS)

3.11 Avenue Plantation and Median Plantation

Avenue plantation and median plantation are done along the project length as per IRC specification except at built-up Locations.

Figure 3-24 Photographs of Avenue Plantation and Median Plantation

Avenue Plantation at km. 89+400 (RHS)

Avenue Plantation at km. 78+000

Figure 3-25 Photographs of Median Plantation

Median Plantation at km. 78+000

Median Plantation at km. 64+000

3.12 Toll Plaza

As per the Concession Agreement, there are two no. of toll plazas at km. 64+570 (Ludhawali) and at km. 98+500 (Amoli) with the following infrastructure.

Figure 3-26 Photographs of Toll Plaza

Amoli Toll Plaza at km. 98+500

Ludhawai Toll Plaza at km. 64+360

Amoli Toll Plaza at km. 98+500

Ludhawai Toll Plaza at km. 64+360

3.13 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.13.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

3.13.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data at Km 64+360 and at km 98+500 is located in Tunnel.

Lane Controller in Booth at TP

3.13.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

3.13.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. Torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.13.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

3.13.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.13.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

3.13.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at TP

3.13.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.14 Plaza Equipment

3.14.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

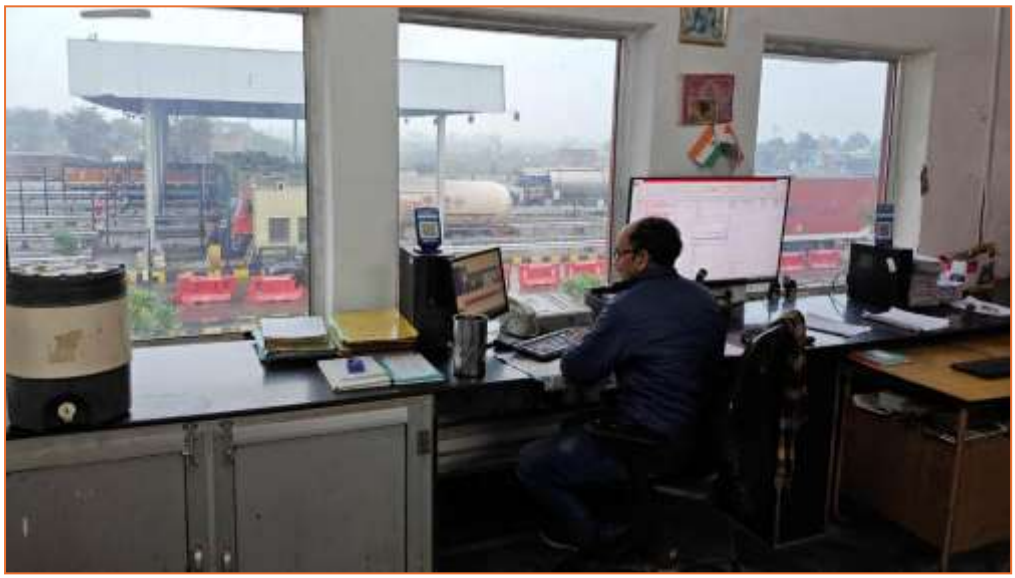
3.14.2 55" LED screen for CCTV monitoring

55" LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.14.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.



3.15 Truck Lay-bye

The Concessionaire has provided truck lay-bye at the following locations.

Table 3-3 Details of Truck Lay-bye

Sr. No.	Design Chainage (km)	Side
1	90+740	LHS
2	91+200	RHS
3	113+820	LHS
4	113+820	RHS

Some of the photographs of the truck lay-bye are presented below.

Figure 3-27 Photographs of Truck Lay-bye

3.16 Administrative, Operation and Maintenance Base Camp

Traffic Aid Post and Medical Aid Post are in the scope of Concessionaire.

Toll Plaza Administrative Building at km. 64+570

Toll Plaza Administrative Building at km. 98+500

3.17 Toilet Block

There are 04 Nos. toilet blocks at truck lay bye locations and the same is being maintained by the Concessionaire.

Table 3-4 Details of Toilet Block

Sr. No.	Design Chainage (km)	Side
1	90+740	LHS
2	91+200	RHS
3	113+820	LHS
4	113+820	RHS

Some of the photographs of the toilet block are presented below.

Figure 3-28 Photograph of Toilet Block

3.18 Bus Bays and Passenger Shelters

There are 42 Nos. of bus bays / passenger shelters along Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-29 Photographs of Bus Bays

Bus Bay at km. 71+200 (LHS)

Bus Bay at km. 118+800 (RHS)

Bus Bay at km. 96+800 (RHS)

Bus Bay at km. 115+550 (LHS)

3.19 Balance Work Status

The project has received Final Completion Certificate on 13th September 2009 by completing all the works as mentioned in the Technical Schedules of Concession Agreement. There are no balance works to be executed as per CA.

3.20 Operation and Maintenance

3.20.1 O&M Contract

As per Clause 18.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, or otherwise make improvements to the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems, More Specifically.

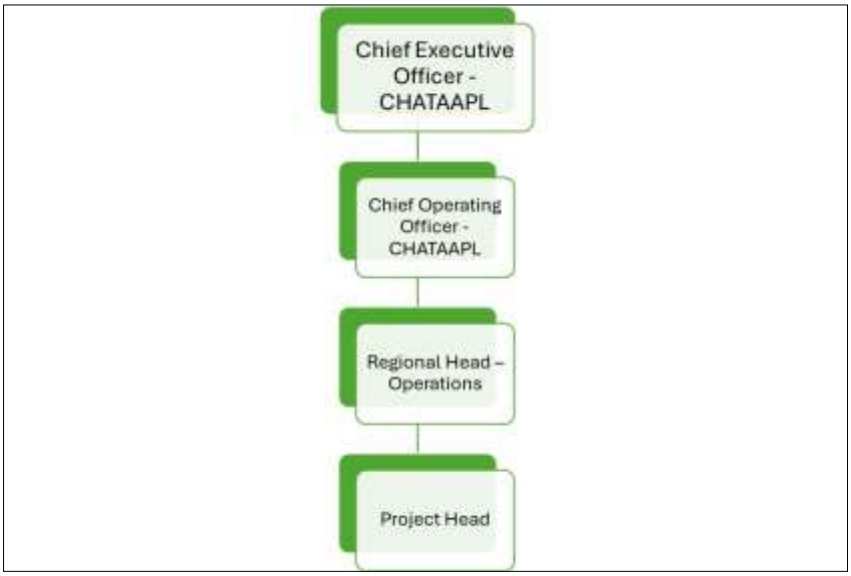
The Concessionaire has been outsourced to carry out the activities related to operation and maintenance of the Project Road including toll operation services, security services.

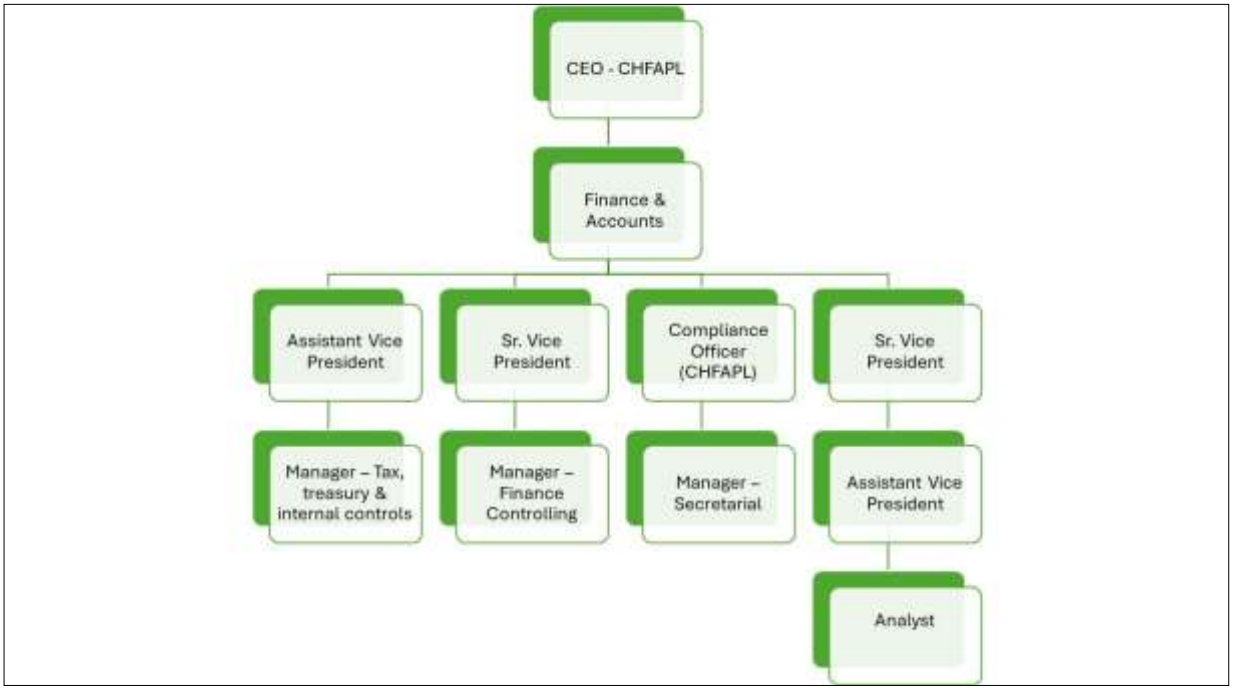
The Operation Cost is presented in the subsequent chapter.

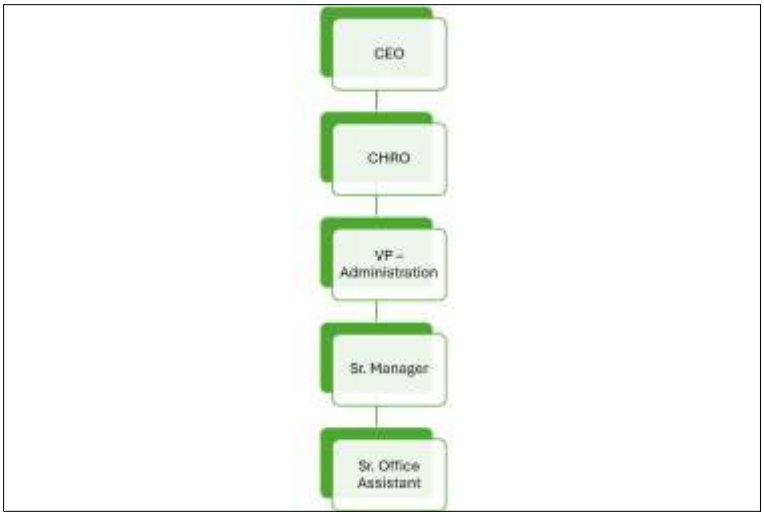
3.20.2 Organization Chart

The Concessionaire has provided the Organization Chart at site for Operation and maintenance. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

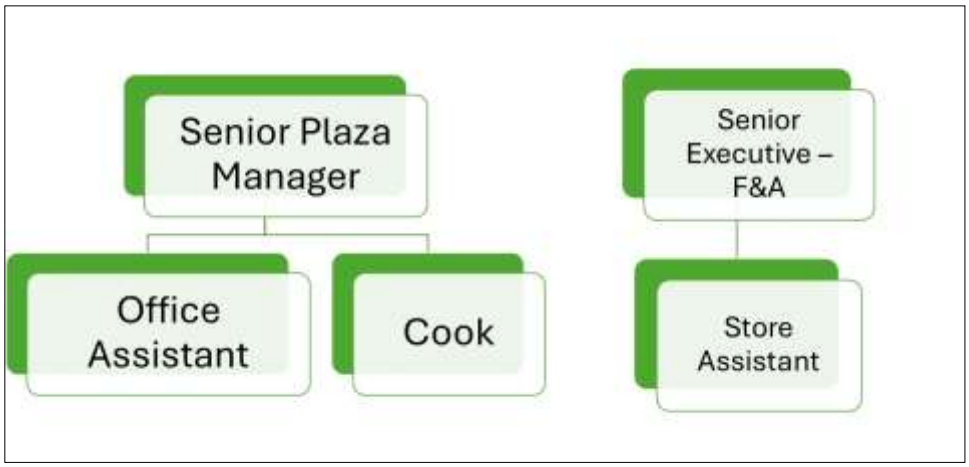
Organization Chart of Head Office Administration



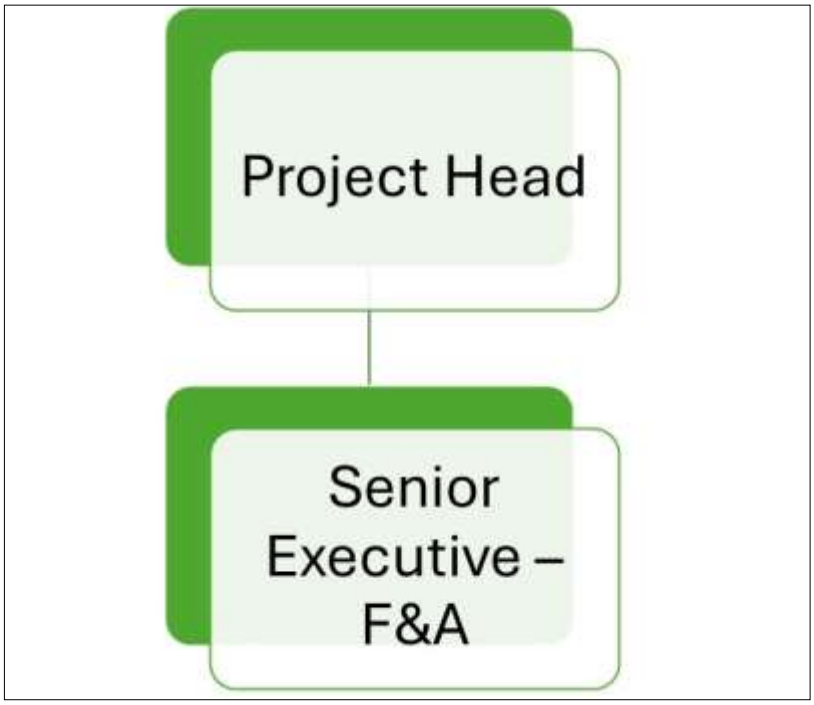




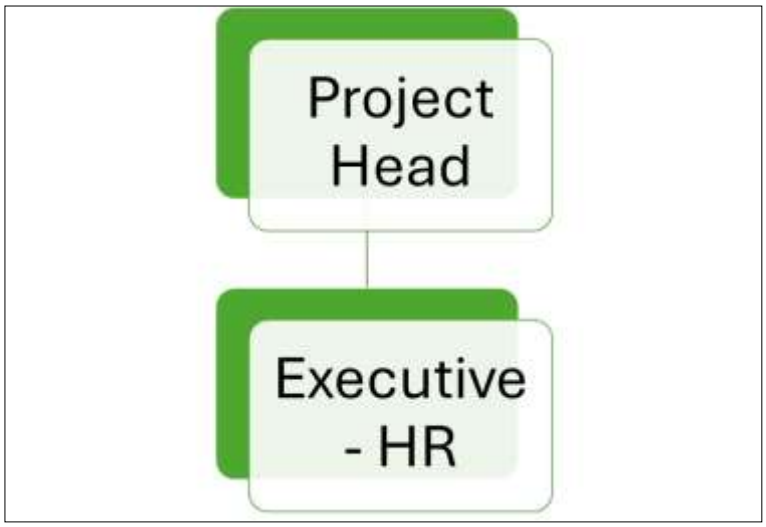
Administration-Site Office



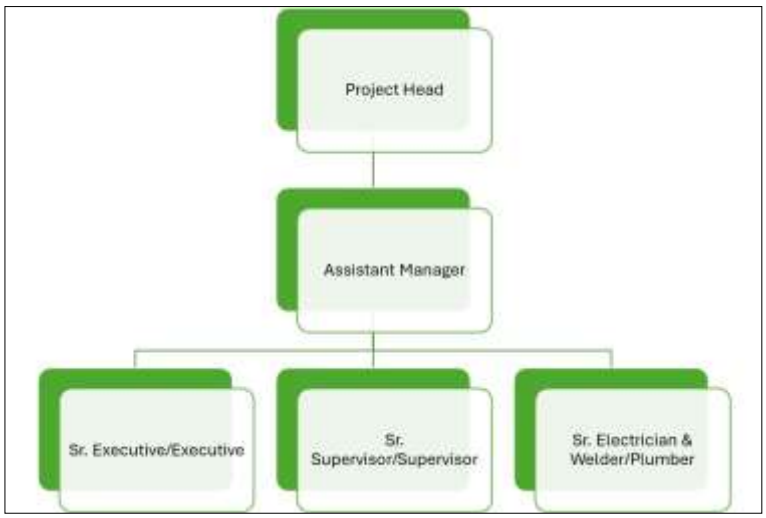
Finance & Accounts – Site office



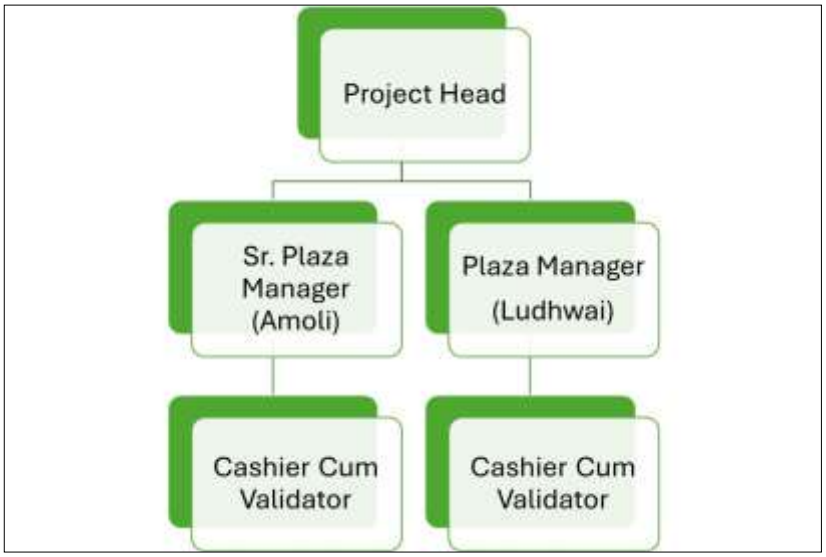
Human and Resources- Site Office



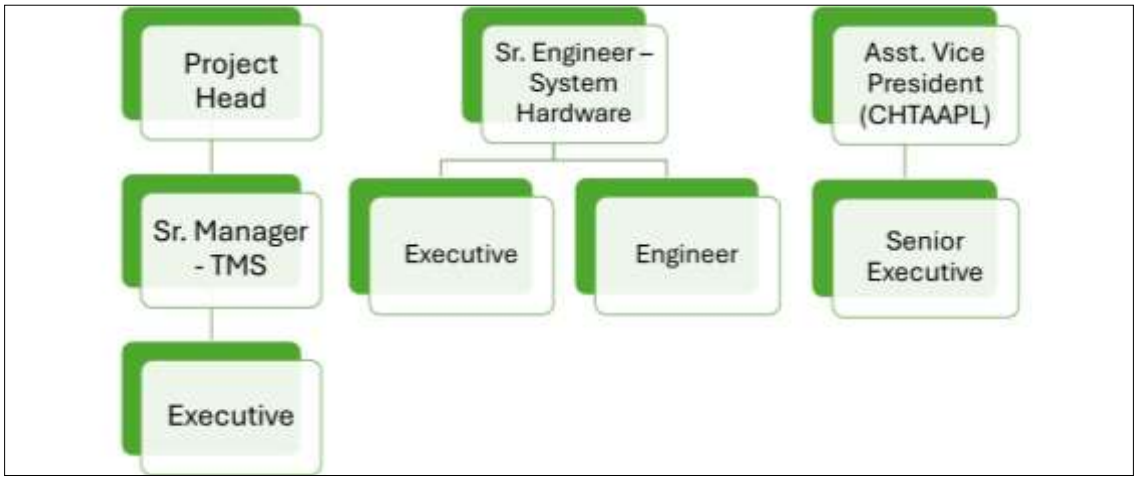
Maintenance-Site Office



Operation-Site Office



TMS Maintenance – Site Office



MBEL-Manpower Summary

S.NO.	DEPARTMENT	HEAD OFFICE	SITE	TOTAL STRENGTH
1	Administration	1	4	5
2	Finance & Accounts	0	1	1
3	Tax, Treasury & Internal Controls	2	0	2
4	Finance Controlling	1	0	1
5	Human Resource	0	1	1
6	Maintenance	0	9	9
7	Operations	0	11	11
8	TMS Maintenance	0	11	11
9	Secretarial	1	0	1
	Total	5	37	42

3.20.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses incurred towards operation expenses for past years. Necessary assumptions have been made about the expenses of similar types of projects to arrive at the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

3.20.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India

(published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the entire length of the Project Road is maintained by the Concessionaire.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Concessionaire received the Completion Certificate on 9th March 2015.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 25 years from the Appointed Date including a construction period of 36 months.

4.2 Axle Load and VDF

The Concessionaire has conducted the axle load survey on Project Road at km. 64+500 (near Ludhawai Toll Plaza) and at km. 98+500 (near Amoli Toll Plaza) from 13-Nov-2022 to 15-Nov-2022 and 21-Nov-2022 to 23-Nov-2022 respectively. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Vehicle Category	Vehicle Damage Factor			
	At TP-1 (km. 64+500)		At TP-2 (km. 98+500)	
	LHS	RHS	LHS	RHS
Bus	0.941	1.138	0.977	0.994
LCV	0.412	0.716	0.887	0.706
2-Axle	2.226	2.433	2.673	3.612
3-Axle	3.604	4.641	4.021	6.287
MAV	6.249	15.758	9.247	22.362

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculation MBEL (TP-1 LHS)			
Year	**MSA**	**Cumulative MSA**	**Remarks**
FY26	3.86	**3.86**	
FY27	4.19	**8.05**	
FY28	4.41	**12.46**

FY29	6.62	**24.43**	
FY30	6.94	**31.38**	
FY31	7.27	**38.65**	**End of concession Period**

MSA Calculation MBEL (TP-2 RHS)			
Year	**MSA**	**Cumulative MSA**	**Remarks**
FY26	12.57	**12.57**	
FY27	13.71	**26.28**	
FY28	14.44	**40.72**	
FY29	15.17	**55.89**	
FY30	15.92	**71.82**	
FY31	16.70	**88.51**	**End of concession Period**

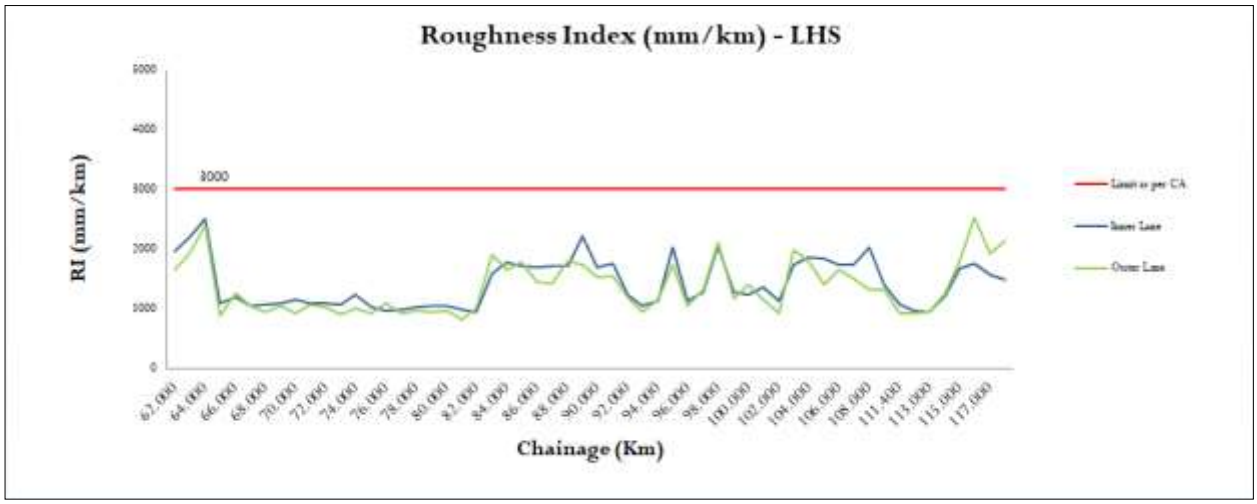
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted in the month of April 2024. The NSV data is used to assess the riding quality and pavement condition of Project Road. The summary of classification of pavement as per Schedule-L is given in the table below:

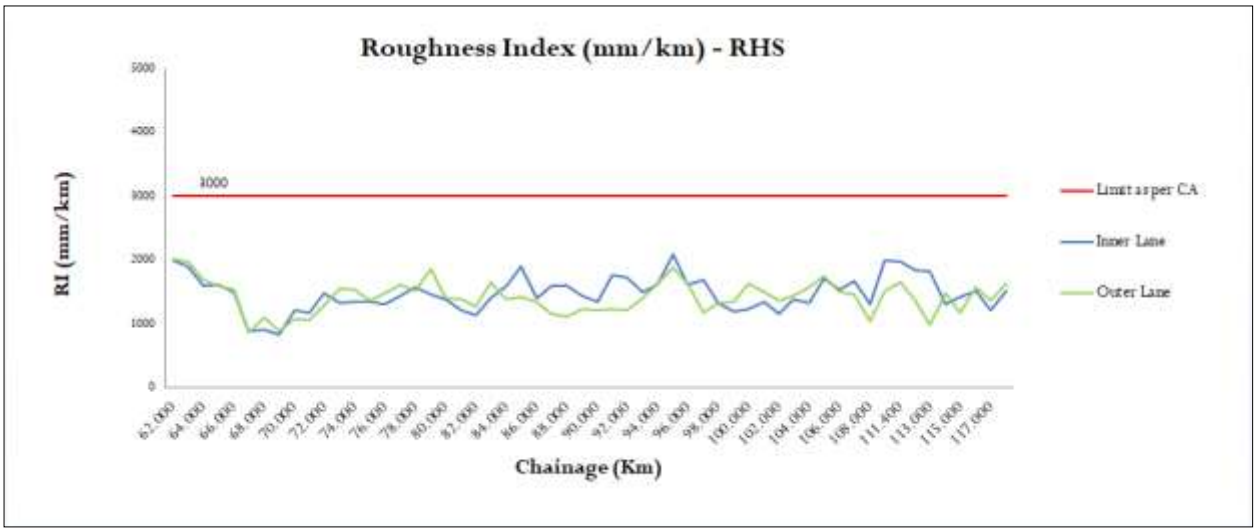
Riding Condition	**Roughness Index limit (mm/km)**	**Length (km)**			
		LHS		**RHS**	
		Inner	**Outer**	**Inner**	**Outer**
Good	<2000	51.7	53.3	54.2	54.7
Fair	2000-3000	4.00	2.40	1.50	1.00
Poor	>3000	-	-	-	-

From the above table it is observed that the overall condition of pavement is good. At a few stretches the condition is found to be fair.

LHS:



RHS:



4.5 Structural Investigations

An evaluation of existing pavements using Falling Weight Deflectometer (FWD) survey was carried out in the month of September 2024. Summary of FWD Survey report is presented in the table below:

Description	LHS (km)		RHS (km)	
	Inner Lane	Outer lane	Inner Lane	Outer lane
Less than 20 MSA	0.00	0.80	0.80	0.00
20 MSA - 100 MSA	3.20	4.06	3.99	4.78
Greater than 100 MSA	42.58	41.05	41.00	40.85

From the above table, it is concluded that the residual life of the pavement is more than the design life of the Project Road. Hence, immediate major maintenance of the pavement is not required.

The strengthening / overlay of pavement for project stretch are derived from 15th percentile of corrected E moduli of existing pavement, existing crust thickness etc. The combination of existing pavement and overlay will be analyzed as a four-layer system to ensure that fatigue and rutting criteria are satisfied for the calculated design traffic in terms of MSA. IITPAVE program is used to compute strain value at bottom of bituminous layer and top of subgrade in order to calculate design life of the proposed overlay. Poisson's ratio values used in overlay analysis from top to bottom of existing pavement layers are 0.5, 0.4 and 0.4 for existing bituminous, existing granular and existing subgrade layers respectively. Elastic modulus of 3000 MPa (VG-40) is used for the new bituminous layer.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Table 4-3 Test Results Summary of Natural Ground Soil Samples

Sr. No.	Name of Road	Location (Km.)	Side (LHS/RHS)	Soil Classification as per IS: 1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)						Clay & silt content %	Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		Field Density		4-Days Soaked CBR (%)	Free Swell Index (%)	Degree of Compaction (%)
					19.0 mm	10.0 mm	4.75 mm	2.0 mm	425 microns	75 microns		Liquid Limit (LL) %	Plastic Limit (PL) %	Plasticity Index (PI)	Max. dry density gm/cc.	OMC (%)	Field Dry Density (gm/cc)	FMC (%)

4.7 Periodic Maintenance Strategy

Major Maintenance is required in order to comply requirement of Concession Agreement and to maintain performance level as defined in Schedule-L. As per schedule-L of Concession Agreement, periodic maintenance shall be carried out at least once every 5th year from COD and in the last year of concession period.

It is noted that Concessionaire has carried out 1st major / periodic maintenance in Year 2018/19. 2nd cycle of major maintenance is completed in FY 25. The table below shows the major / periodic maintenance cycle throughout the balance concession period for the Project Road. As per Concession Agreement, periodic maintenance shall be carried out in the last year of concession period. Accordingly, major maintenance is proposed in FY 2031 for the entire length. Before carrying out major maintenance, structural evaluation shall be done through surveys and investigation to determine the overlay requirement.

Table 4-6 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2026 - FY2028	-	-
2	FY 2029	30 mm BC (PMB) overlay in 68%, 40 mm BC (PMB) overlay in 32%, and 50 mm DBM (VG-40) overlay in 10% length.	30 mm BC (VG-30) overlay in 50% and Micro-surfacing in 50% length.
3	FY 2030	-	-
4	FY 2031	30 mm BC (VG-40) overlay for entire length, 5% DBM (VG-40) with 50 mm.	30 mm BC (VG-30) overlay in 50% and Micro-surfacing in 50% length.

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories:

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, concrete etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

a. Manpower and labour: As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

b. Bitumen: The Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026 and FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years.

Rate of Polymer content and modification cost were provided by the client to work out BC rate with PMB.

Following rates of bitumen are considered:

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 28 onwards (Rs. / MT)
IOC Mathura	VG-10	32,985
IOC Mathura	VG-30	34,666
IOC Mathura	VG-40	36,712
IOC Haldia	VG-10	33,913
IOC Haldia	VG-30	34,482
IOC Haldia	VG-40	36,476

Refineries	Grade	Rate for FY 28 onwards (Rs. / MT)
IOC Barauni	VG-10	34,646
IOC Barauni	VG-30	35,215
IOC Barauni	VG-40	37,209
CPC Chennai	VG-10	34,091
CPC Chennai	VG-30	34,663
CPC Chennai	VG-40	36,667

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from SAIL.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (FY 28 onwards)
1	Dense Bituminous Macadam (PMB)	Cum	9,871
2	Dense Bituminous Macadam (VG-40)	Cum	8,081
3	Bituminous Concrete (PMB)	Cum	11,459
4	Bituminous Concrete (VG-40)	Cum	9,225
5	Bituminous Concrete (VG-30)	Cum	8,904
6	Milling	Sqm	75
7	Micro-surfacing	Sqm	150
8	Kerb Re-laying	Rmt	270
9	Road Marking-On BC Surface	Sqm	423
10	Road Marking-On Micro-Surface	Sqm	526
11	Road Studs	Nos.	170

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, the balanced work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads:

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management & Emergency Services
5. Electricity and Diesel Charges
6. TMS/HTMS/System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Routine Maintenance Cost (Project Highway)
16. Horticulture & ROW Maintenance
17. Miscellaneous including Contingency

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026)
1	Salary and Welfare Expenses	90,00,000
2	Tolling Operations Services	4,79,28,113
3	Toll Security Services	1,03,22,640
4	Incident Management & Emergency Services	2,06,95,787
5	Electricity and Diesel Charges	31,74,542
6	TMS /System Expenses	27,52,500
7	Office Operating Expenses	17,19,150

Sr. No.	Particulars	Amount (FY 2026)
8	Vehicle Running Expenses	39,60,000
9	Professional Fees Expense	25,78,725
10	Community Development	8,59,575
11	Communication Expenses	4,87,093
12	Conveyance Expenses	5,73,050
13	Insurance Expense	22,92,200
14	IE Fees	40,11,350
15	Routine Maintenance	3,04,86,378
16	Horticulture & ROW Maintenance	1,57,01,341
17	Miscellaneous including Contingency	44,14,189
	Total Cost (Rs.)	**16,09,56,632**
	Total Cost (Cr.)	**16.10**
	Per km Cost (Lakhs)	28.09

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2029	68.25	
2	FY 2031	52.31	
	Total	**120.56**	

5.6 Periodic Replacement of TMS /System

Every 5 years, replacement of cost of major TMS system is considered. The same is provided as below.

Sr. No.	Year	ATMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2030	0.58	
Total Cost (Cr.)		**0.58**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%

Year	Escalation	Year	Escalation
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

	Year of expense	FY26	FY27	FY28	FY29	FY30	FY31
1	Routine O&M Cost						
1.01	Salary and Welfare Expense	0.90	0.95	0.99	1.04	1.08	1.13
1.02	Tolling Operations Services	4.79	5.04	5.29	5.52	5.76	6.00
1.03	Toll Security Services	1.03	1.09	1.14	1.19	1.24	1.29
1.04	Incident Management Services	2.07	2.18	2.28	2.39	2.49	2.59
1.05	Electricity and Diesel Charges	0.32	0.33	0.35	0.37	0.38	0.40
1.06	TMS/HTMS/System Expenses	0.28	0.29	0.30	0.32	0.33	0.34
1.07	Office Operating Expenses	0.17	0.18	0.19	0.20	0.21	0.22
1.08	Vehicle Running Expenses	0.40	0.42	0.44	0.46	0.48	0.50
1.09	Professional Fees Expense	0.26	0.27	0.28	0.30	0.31	0.32
1.10	Community Development	0.09	0.09	0.09	0.10	0.10	0.11

2	Major Maintenance Cost				78.67		60.74
3	Periodic Cost of TMS Replacement	-	-	-	-	0.70	
	Total Cost	**16.10**	**16.94**	**17.76**	**97.22**	**20.04**	**80.87**

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Ordinary Repair Cost for Flexible (with GST)	**3,04,86,378**
(Inclusive of GST)	**= 5.32 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD	**Urban** More than 4500 CVD	**Project Length (km)**		**Per Year Project Maintenance Cost**	
				2,95,945	**3,33,151**				
						Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	452795	509720	-	-	-	-
		Paved shoulder	1.70	503106	566356	50.10	-	2,52,05,610	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	591890	666301	-	-	-	-
		Paved shoulder	2.20	651078	732931	-	7.21	-	52,80,768
					TOTAL	**57.305**		**3,04,86,378**	

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year (Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Potholes repair (50 mm deep)	100 % Pothole free	As & when required	1.0%
	Volume (cum)			5.00
	Rs/m^3			12538
	Cost in Rupees			62,688
	ii) Patch repair	100 % Patch less	As & when required	1%
	Area (sqm)			100
	Rs/m^2			502
	Cost in Rupees			50,150
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.5%
	Area (sqm)			250
	Rs/m^2			109
	Cost in Rupees			27,140
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			89
	Cost in Rupees			13,275
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.50%
	Area (sqm)			112.5
	Rs/m^2			502

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
	Cost in Rupees			56,419
	v) Road marking	14%	Once in 7th year & @ Repaired location	23402
	SUB TOTAL			**2,33,074**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6210
	ii) Kuccha Drain Maintenance	100%	Twice in a Year	1092
	SUB TOTAL			**7,302**
3	**Maintenance of Cross Drainage works:**			
	i) Repair of floors	100%	Once in a Year	4978
	ii) Repair of parapets	100%	As & when required	2074
	SUB TOTAL			**7,052**
4	**Maintenance of Minor & Major Bridges:**			
	i) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints	100%	As & when required	36,387
	ii) Repair of minor washouts, erosion scour and animal holes			
	iii) Sealing Cracks with Cement/ Epoxy Mortar			
	iv) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,387**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometre stone etc.		Once in a Year	3639
	ii) Replacement and providing additional retro reflective signage	20%	Covering Total Network in	7277

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Madurai to Kanyakumari section (Package-I) km. 0+000 to km. 52+300 in the State of Tamil Nādu (hereinafter referred as "Project Road").

Madurai Kanyakumari Tollway Private Limited (MKTPL) (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Madurai to Kanyakumari Section (from km. 0+000 to km. 52+300) of NH-44. The project was awarded to Concessionaire on 20th October 2020. The length of Project Road is 52.300 kms with one toll plaza at Kappalur Village at km. 18+935.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets, mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out on **18th January 2025 and 19th January 2025.**

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Madurai Kanyakumari Tollway Private Limited,** is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 27th December 2019. The Appointed Date for the Project Road is 20th October 2020.

The project is being developed under TOT (Toll Operate Transfer) Bundle-3 with a concession period of 30 years from the Appointed Date. The end of the concession period is in the year 2046 as per the traffic report submitted by the Company.

2.2 Location

The Project Road is part of National Highway No. 44 (old NH-7) of Madurai - Kanyakumari section in the state of Tamil Nādu. The total project length is 52.300 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start and end of Project Road

Start of Project Road at km. 0+000

End of Project Road at km. 52+300

2.3 Climate

The project area being in the region south-east of the western ghats, the area is hot and dry for eight months of the year. Cold winds are experienced during February and March. The hottest months are from March to July. The project stretches experiences a moderate climate from August to October, tempered by heavy rain and thundershowers, and a slightly cooler climate from November to February. Fog and dew are rare, occurring only during the winter season. Being equidistant from mountains and the sea, it experiences similar monsoon pattern with North-east monsoon and South-west monsoon, with the former providing more rain during October to December. Temperatures during summer generally reach a maximum of 42°C and a minimum of 26.3°C, although temperatures up to 43°C are not uncommon. Winter temperatures range between 29.6°C and 18°C. The average rainfall for the project is about 857.60 mm per year, occurring almost entirely within the three months of the South-west Monsoon.

2.4 Terrain

The Project Road traverses through plain terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up area.

2.6 Right of Way

The width of the existing Right of Way (ROW) for the Project Road is 60 m throughout its length.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC cables, etc.

2.8 Development as per Schedule-B

The Project Road from Madurai (km. 0+000) to Virudhunagar (km. 52+300) has been developed as a four-lane divided carriageway with median width of 2 m, service road at some built up locations and other arrangements. The Project Road passes through rural as well as built-up sections.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	52.30	
2	Construction of Service Road	km.	1.050	
3	Widening of Pipe Culvert	Nos.	01	
4	Repair & rehabilitation of Major Bridges	Nos.	03	
5	Repair & rehabilitation of Minor Bridges	Nos.	12	
6	Repair & rehabilitation of Box Culvert	Nos.	19	
7	Repair & rehabilitation of Pipe Culvert	Nos.	59	
8	Repair & rehabilitation of ROB	Nos.	02	
9	Repair & rehabilitation Vehicular Underpass (VUP)	Nos.	09	
10	Improvement of Junctions	Nos.	09	
11	Provision of Drain	m	1.050	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried on **18th January 2025 and 19th January 2025** through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is found to be Good.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW)

km. 0+050

km. 2+100

km. 6+100

km. 18+980

km. 49+550

km. 51+400

3.2 Service Road / Slip Road

The width of the service road varies from 5.5 m to 7.0 m. The service road is constructed in a built-up area and adjoining underpass locations. The Project Road has total service road length of 40.730 kms.

The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

Service Road / Slip Road at km. 0+980 (LHS)

Service Road / Slip Road at km. 24+350 (LHS)

3.3 Junctions / Intersections

There are a total of 09 nos. of junctions / intersections along Project Road.

The photographs taken during site visit is presented as below:

Figure 3-3 Photographs of Junctions

Junction at km. 7+080

Junction at km. 25+600

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Road Over Bridge (ROB)	2
Major Bridges (MJB)	3
Minor Bridges (MNB)	12
Vehicular Underpass (VUP)	09
Culverts	78
Total	**104**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

Sr. No.	Chainage (km)	Side	Span Arrangement (m)	Carriageway (m)	Deck Width (m)	Type of structure	Type of foundation	Remarks
Major Bridges								
1	2+994	LHS	17x23.8	7.5	10	RCC	Open	The structure is sound in condition. However, expansion joints need to clean.
		RHS	17x23.8	7.5	10	RCC	Open	The structure is sound in condition. However, expansion joints need to clean.

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There is total 78 Nos. of culverts along the Project Road. The height of the culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involved strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, metal beam crash barrier or RCC railing has been provided at culvert locations wherever required which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area, it is found blocked due to debris, drainage water or bushes, tree growth, which has to be removed and cleaned before monsoon to clear waterway. The stone pitching has been provided for slope protection.

The photographs taken during the site visit are presented below.

Figure 3-5 Photographs of Hume Pipe Culvert and Box Culvert

Box culvert at km. 19+252

Box culvert at km. 29+713

Hume pipe culvert at km. 23+105

Hume pipe culvert at km. 32+650

3.6 Drainage

There is 5.506 kms of existing drain (which includes drain on both sides) along the Project Road as per Concession Agreement. However, 0.950 kms of RCC drain is additionally constructed in locations where service roads are provided.

3.7 Slope Protection

Slope protection and chute drains are found on Project Road at required locations.

3.8 Road Furniture

The Concessionaire has provided additional road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C. Details of the items are provided below.

3.8.1 Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. The pavement marking is found to be Good throughout the Project Road.

Some of the photographs of road marking are presented below.

Figure 3-6 Photographs of Pavement Marking

Pedestrian marking at km. 4+950(LHS)

Road marking at km. 2+140 (LHS) near Junction

3.8.2 Road Studs

Road studs/ cat's eye for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Road studs / cat's eye has been fixed at junction and zebra crossings.

3.8.3 Traffic Signage / Median Kerb painting / KM Stone

Traffic signs includes roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in Schedule-D.

The height, lateral clearance, location, and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements. Roadside signs, overhead signs, kerb mounted signs, vertical post of sign boards, chevron boards and median kerb paint are all in good condition. Some of the photographs of sign boards are presented below.

Figure 3-7 Photographs of Sign Boards

Kilometre Stone

Flag Type Direction Sign Board

Pedestrian Crossing Sig Board

Hazard Marker & Median Sign Board

Sign Board indicating Curve

Emergency Assistance Number Sign Board

3.8.4 Highway Lighting

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers.

Some of the photographs of highway lighting are presented below.

Figure 3-8 Photographs of Highway Lighting

Highway Lighting at Toll Plaza

Highway Lighting at km. 19+300

3.8.5 Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

Some of the photographs of metal beam crash barriers are presented below:

Figure 3-9 Photographs of MBCB / Crash Barrier

Metal beam crash barrier at km. 0+650

Metal beam crash barrier at km. 20+600 (LHS)

3.8.6 Delineators

The traffic delineators are provided by the Concessionaire for road users in abnormal condition of weather for the Project Road. The same is maintained by the Concessionaire. Some of the photographs of delineators are presented below.

Figure 3-10 Photographs of Delineator

Road Delineator at km. 0+200

Road Delineator at km. 1+200

3.8.7 Pedestrian Guard Rail

The pedestrian guard rails are provided in the median. It is maintained by the Concessionaire. Some of the photographs of pedestrian guard rails are presented below.

Figure 3-11 Photographs of Pedestrian Guard Rail

At km. 39+300 - Between MCW and SR

At km. 49+300 - Between MCW and SR

3.8.8 Road Land Boundary

Road land boundary pillars have been found on Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantation is provided in open country locations and median plantation has been provided in the project length as per IRC specification. Some of the photographs of avenue plantation and median plantation are presented below.

Figure 3-12 Photographs of Avenue Plantation

Avenue Plantation

Median Plantation

3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at Kappalur Village at km. 18+935 with the following infrastructure.

Table 3-3 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 18+935
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for over-dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel/no
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes (only 20 nos. near Toll Plaza. 10 nos. in both direction)
15	Low mast Light	No
16	User Fee Boards	4
17	Cantilever/Gantry Boards	Yes

Sr. No.	Particulars	Details
18	Automatic boom barrier	Yes

Note:

- *Toll Operation is carrying through containers temporarily.*

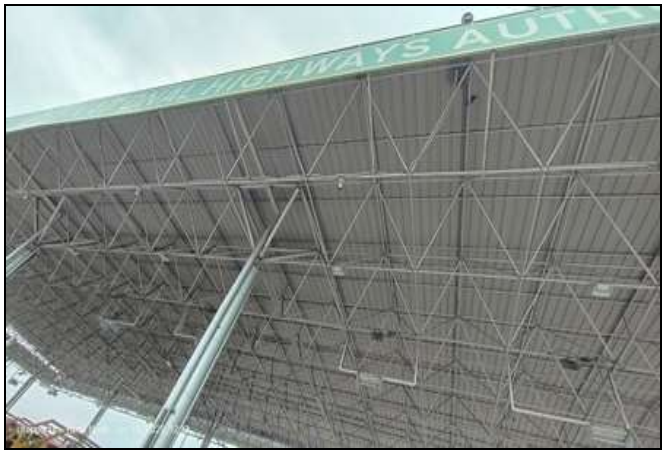
3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.



RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of camera based, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at Toll Plaza

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Plaza

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on the island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC at Toll Plaza

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at Toll Plaza

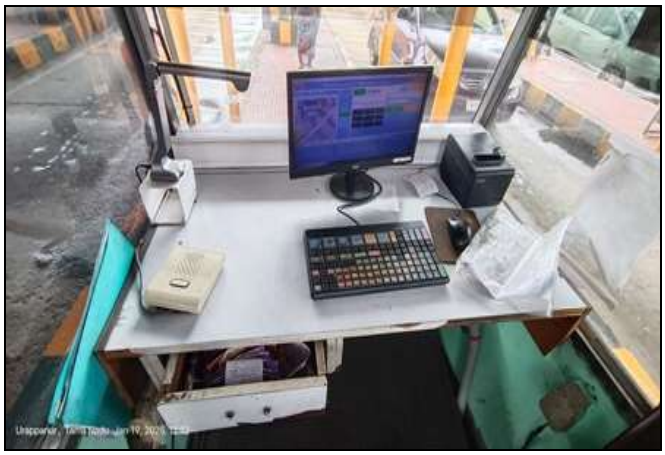
3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.



Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at Toll Plaza

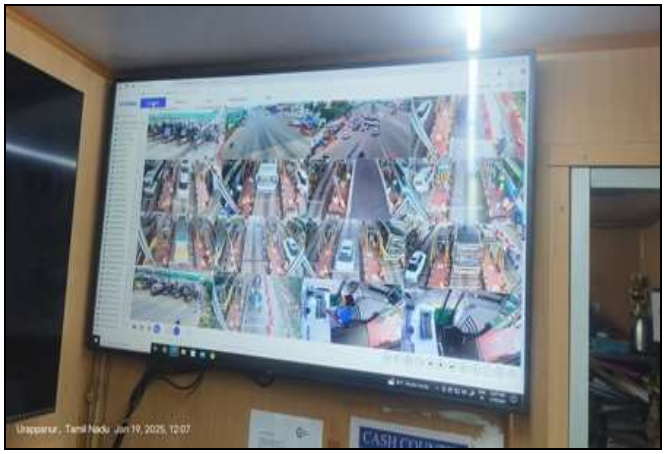
3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

3.12.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).



The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the toll plaza location (km. 18+935). As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

Automatic Traffic Counter cum Classifier (ATCC)

- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km 18+935).

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.13.3 Emergency Call Boxes (ECB)

ECB's are not installed at site.

3.13.4 Portable Weigh in Motion (PWIM)

PWIM is provided at site and is not functioning.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km 18+935.

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 11 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system

3.13.7 CCTV Surveillance Cameras

There are 29 nos. PTZ cameras and 186 VIDS cameras are installed along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed. At toll plaza 4 PTZ and 10 lane cover cameras are installed.

3.13.8 Video Incident Detection System

186 fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at 10 locations each on LHS and RHS.

Actuated Speed Display

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy-All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.

- The Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

3.14 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Posts are under construction at Toll Plaza location.

3.15 Toilet Block

There is one no. of temporary toilet block at toll plaza. The same is maintained by the Concessionaire.

3.16 Bus Bays and Passenger Shelters

There are 27 Nos. of bus bays / passenger shelters along the Project Road.

3.17 Balance Work Status

There is no balance work to be executed as per the Concession Agreement.

3.18 Operation and Maintenance

3.18.1 O&M Contract

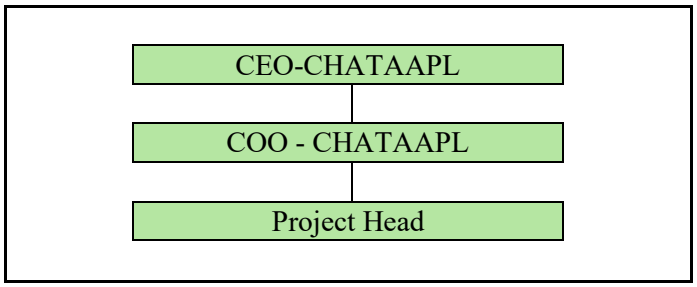
As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall conform to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

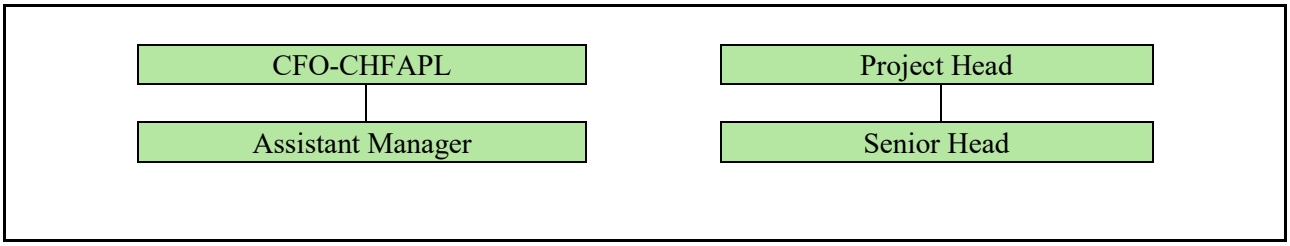
3.18.2 Organization Chart

The Concessionaire has shared the Organization Chart at site for Operation and maintenance. Accordingly, there are 01 Project Head, 01 Senior Executive (HR), 01 Manager (TMS / IT), 01 Executive (TMS / IT), 01 Senior Supervisor, 01 Electrician, 01 Supervisor, 01 Plaza Manager, 01 Assistant Plaza Manager, 01 Document Controller, 03 Cashiers and 03 Validators, 01 Traffic and Road Safety Manager to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

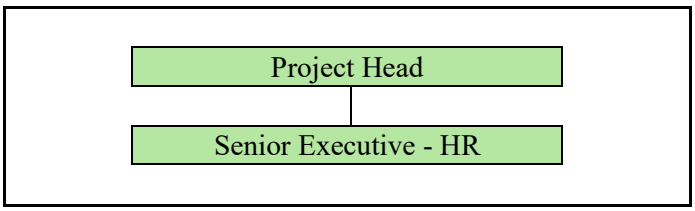
Organization Chart

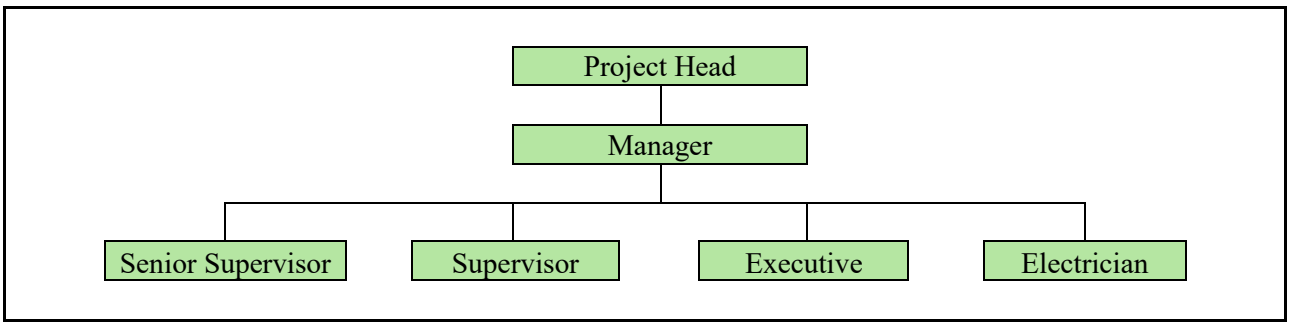


Finance & Accounts

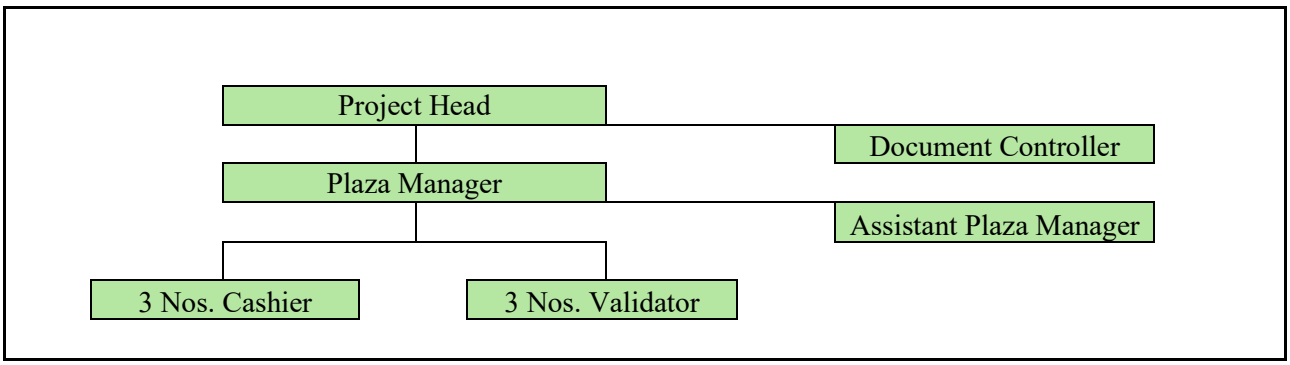


Human Resource Maintenance

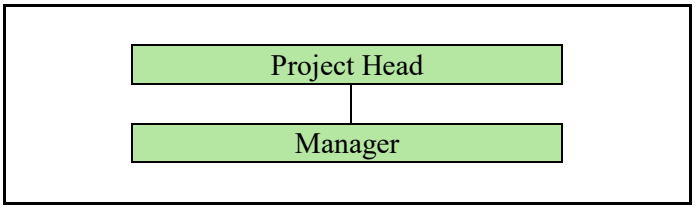




Operations



Traffic & Road Safety



3.18.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.18.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the entire length of the Project Road is maintained by Concessionaire.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Article 15 and Schedule-F of the Concession Agreement define the Operation and Maintenance requirement during the concession period.

The project is currently under the Operation and Maintenance stage. The Concession Period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 18+975 (near Toll Plaza) on 12th March 2020 and 14h March 2020. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Weighted Average VDF Values			
Sr. No.	Vehicle Type	Direction	
		Madurai - Kanyakumari	Kanyakumari - Madurai
1	BUS	1.012	0.848
2	LCV	0.655	0.682
3	2-Axle	2.201	3.238
4	3-Axle	5.018	5.994
5	MAV	11.958	7.918

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculation					
Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
FY25	2.97	**2.97**	2.63	**2.63**	PCU crossed 40,000
FY26	3.09	**3.09**	2.73	**2.73**	PCU crossed 40,000
FY27	3.22	**6.31**	2.84	**5.57**	PCU crossed 40,000

FY46*	5.07	**81.36**	4.35	**70.65**	End of concession period as per Appointed Date & CA

**Actual end of concession period as per Concession Agreement is October 2050. As per recent traffic study conducted by Concessionaire, the revised concession period is upto FY 2046.*

4.4 Network Survey Vehicles (NSV) Survey

Roughness Index

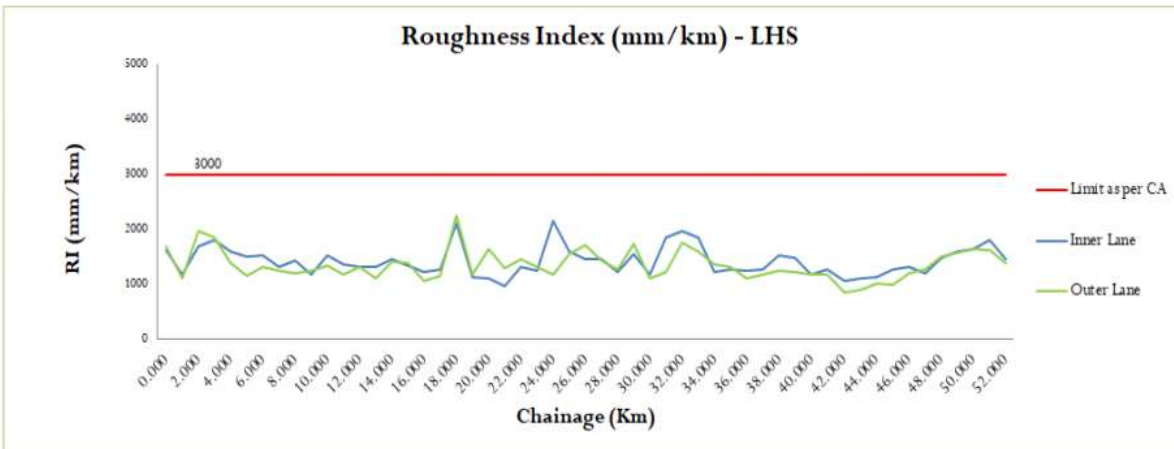
The Concessionaire has conducted pavement condition survey on each lane of carriageway through NSV. The NSV survey was conducted on the Project Road from 5th January 2025 to 18th January 2025. The summary of the same is presented below.

Table 4-3 Summary of Roughness Index

Table 2-1: Summary of RI Limit as per Schedule F of CA

Roughness Summary % as per Schedule F of CA (mm/km)					
Condition	Limit as per Schedule F of CA (mm/km)	LHS		RHS	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane
Good	<3000	100.00%	100.00%	100.00%	100.00%
Poor	>3000	0.00%	0.00%	0.00%	0.00%

Figure 2-3: Roughness Summary for MKTPL as per Schedule F of CA



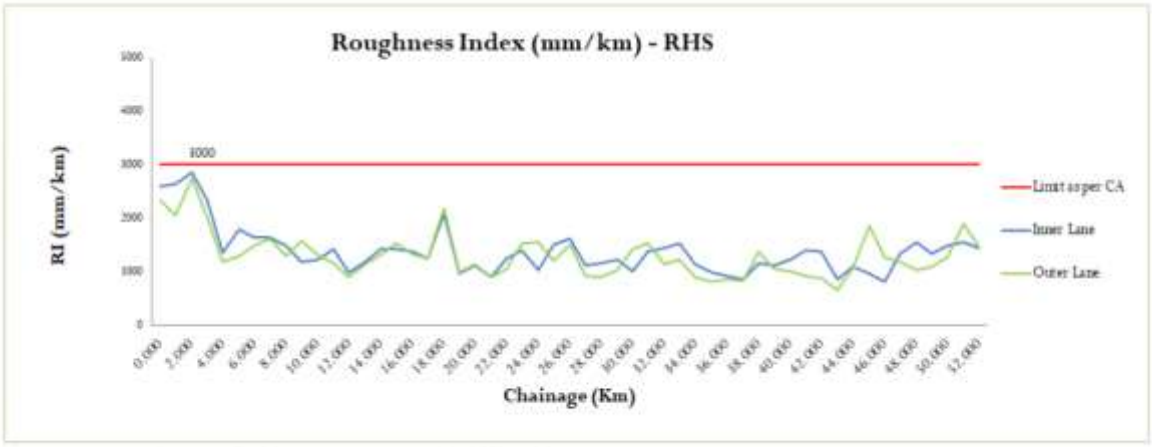


Figure 2-4: Roughness Index for MKTPL as per Schedule F of CA

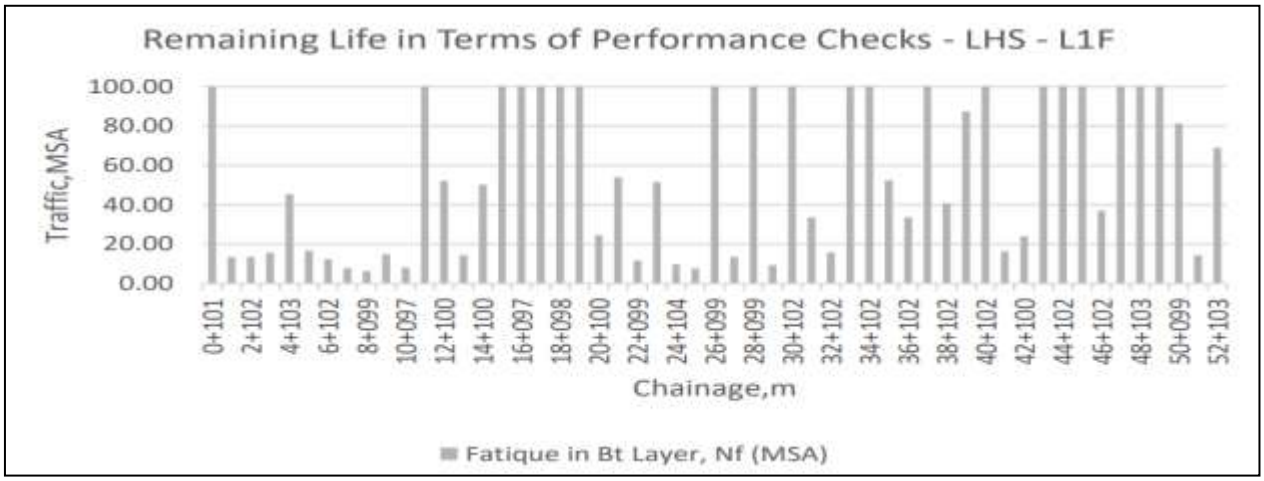
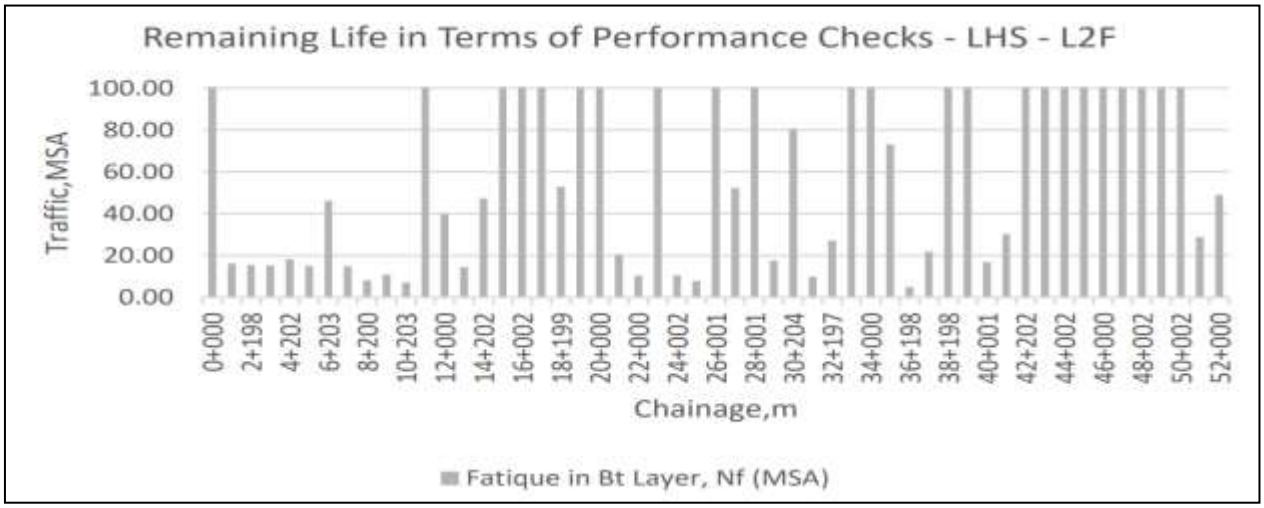
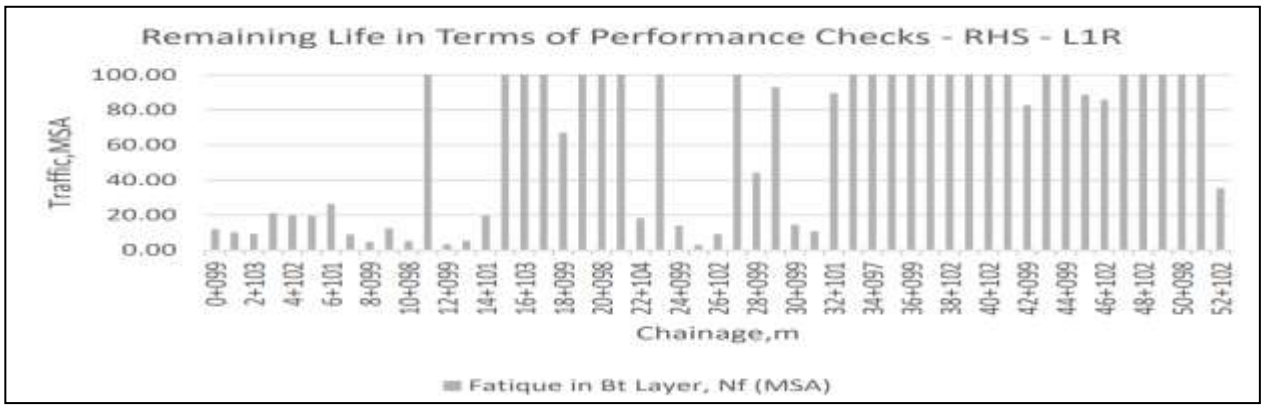
4.5 Falling Weight Deflectometer (FWD) Survey

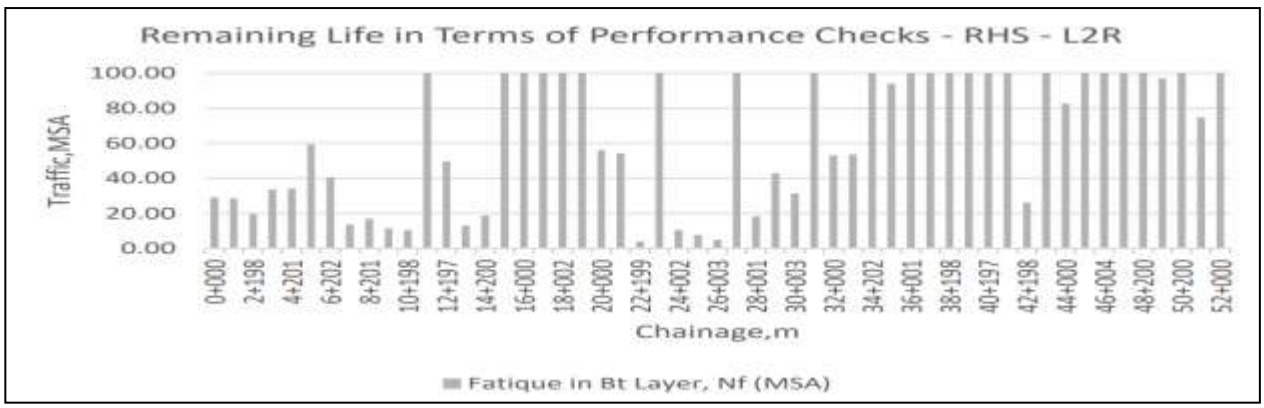
The structural evaluation and analysis of the remaining life of project was carried out in conformity with IRC:115-2014 “Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique”.

The FWD survey was conducted on the Project Road on 24th January 2025 to 27th January 2025. The summary of the same is presented below.









However, the maintenance can be carried out on as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. However, improvement in Riding Quality is expected if the roughness value exceeds 3000 mm/km.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

CBR Analysis

Sr. No.	Road Name	Existing Chainage (km)	Side	DCP-CBR
1	NH-7	0+000	LHS	24.7
2	NH-7	2+300	RHS	13.8

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Overlay laying work on LHS and RHS is completed at site in the month of October 2021. Means Financial year FY 2022, so that as per our experience next overlay cycle has come in the FY 2029.

As per Article 14 of CA, Authority shall carry out capacity augmentation under EPC contract if traffic exceeds 40,000 PCU for three consecutive accounting years. Recent traffic study reveals that, the project traffic crosses 40,000 PCU in FY 2025, FY 2026, FY 2027. Assumption has made that execution of 6-laning of Project Road will start in the year FY 2030 or FY 2031. It is also assumed that during 6-laning of Project Road, overlay of existing four lane road will be the part of the capacity augmentation. Hence, the major maintenance cycle is adjusted accordingly. The summary of the major maintenance planned up to end of concession period is presented in the below table.

Table 4-5 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2024 to FY 2028	-	
2	FY 2029	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (9%)	Major maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
3	FY 2030 to FY 2032	Assumption of Capacity Augmentation to Six Lane Configuration	
4	FY 2033 to FY 2036	-	
5	FY 2037	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (10%)	Major maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
6	FY 2038 to FY 2043	-	
7	FY 2044	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (10%)	Major maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
8	FY 2045	-	
9	FY 2046*	End of concession period	

**Actual end of concession period as per Concession Agreement is October 2050. As per recent traffic study conducted by Concessionaire, the revised concession period is upto FY 2046.*

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026 and FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971
IOC Barauni	VG-30	48,502	34,540
IOC Barauni	VG-40	51,242	36,492

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
CPC Chennai	VG-10	48,202	34,156
CPC Chennai	VG-30	49,002	34,723
CPC Chennai	VG-40	51,752	36,672

c. **Sand and Aggregate:** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25.

d. **Cement:** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25.

e. **Steel :** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable NHAI Standard data book.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro-surfacing, milling, median filling rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam	Cum	8,416
2	Bituminous Concrete (VG40)	Cum	9,628
3	Bituminous Concrete (PMB)	Cum	11,396
4	Milling	Sqm	86
5	Micro-surfacing	Sqm	155
6	Kerb Re-laying	Rmt	316
7	Road Marking on BC surface	Sqm	571
8	Road Marking on micro surface	Sqm	682
9	Road Studs	Nos.	193

5.3 Balance Work Cost

As discussed in the previous chapter, the balance works cost for the Project Road is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the

operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management & Emergency Services
5. Electricity and Diesel Charges
6. TMS/HTMS/System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Routine Maintenance Cost (Project Road)
16. Horticulture & ROW Maintenance
17. Miscellaneous including Contingency

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2025 to 32)	Amount FY 2033 onwards
1	Salary and Welfare Expenses	1,08,90,000	1,08,90,000
2	Tolling Operations Services	2,80,93,242	2,80,93,242
3	Toll Security Services	58,16,999	58,16,999
4	Incident Management & Emergency Services	2,12,41,356	2,12,41,356
5	Electricity and Diesel Charges	37,63,822	37,63,822
6	TMS/HTMS/System Expenses	70,92,277	73,85,153
7	Office Operating Expenses	35,60,049	35,60,049
8	Vehicle Running Expenses	29,17,200	29,17,200
9	Professional Fees Expense	50,86,346	85,66,369
10	Community Development	12,62,386	12,62,386
11	Communication Expenses	3,47,156	3,47,156
12	Conveyance Expenses	12,62,386	12,62,386
13	Insurance Expense	57,17,863	57,17,863
14	IE Fees	24,33,432	24,33,432

Sr. No.	Particulars	Amount (FY 2025 to 32)	Amount FY 2033 onwards
15	Routine Maintenance Cost (Project Road)	2,52,37,536	3,26,08,163
16	Horticulture & ROW Maintenance	1,71,07,121	1,71,07,121
17	Miscellaneous including Contingency	39,79,381	41,30,296
	Total Cost (Rs.)	**14,58,08,551**	**15,71,02,992**
	Total Cost (Cr.)	**14.58**	**15.71**
	Per km Cost (Lakhs)	27.88	30.04

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2024 to FY 2028	-	
2	FY 2029	61.98	1st MM cycle
3	FY 2030 to FY 2036	-	
4	FY 2037	95.27	2nd MM cycle
5	FY 2038 to FY 2043	-	
6	FY 2044	77.97	3rd MM cycle
	Total	**235.22**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below:

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	6.25	
2	FY 2034	6.25	
3	FY 2041	6.25	
Total Cost (Cr.)		**18.75**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2025	-	**2041**	3.99%
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%

Year	Escalation	Year	Escalation
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

Sr.	Year of expense	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45	FY46

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year (Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	1.00%
	Volume (cum)			5.00
	Rs/m^3			10355
	Cost in Rupees			51,773
	ii) Patch repair	100 % Patch less	As & when required	1.00%
	Area (sqm)			100
	Rs/m^2			414
	Cost in Rupees			41,418
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.00%
	Area (sqm)			200
	Rs/m^2			74
	Cost in Rupees			14,802
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			49
	Cost in Rupees			7,407
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			414
	Cost in Rupees			31,064
	v) Road marking	14%	Once in 7th year & @	12689

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
			Repaired location	
	SUB TOTAL			**1,59,153**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6210
	ii) Jungle Clearance	100%	Twice in a Year	2038
	iii) Kuccha Drain Maintenance	100%	Twice in a Year	1092
	SUB TOTAL			**9,340**
3	**Maintenance of Cross Drainage works:**			
	i) Cleaning of culvert bed	100%	Once in a Year	2751
	ii) Repair of floors	100%	Once in a Year	4978
	iii) Repair of parapets	100%	As & when required	2074
	SUB TOTAL			**9,803**
4	**Maintenance of Minor & Major Bridges:**			
	i) Cleaning and removal of dirt & vegetation from pier caps, Bearings, Expansion Joints, Superstructure, Substructure and Retaining wall etc.	100%	As & when required	36,387
	ii) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints			
	iii) Repair of minor washouts, erosion scour and animal holes			
	iv) Sealing Cracks with Cement/ Epoxy Mortar			
	v) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,387**
5	**Miscellaneous Items:**			
	i) Turfing and Arboriculture		Once in a Year	2426
	ii) Maintenance of gang hut store, sheds, animal & debries		Once in a Year	3639

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Mangloor - Telangana / Maharashtra border section of NH-161 from km. 86+788 to km. 135+751 in the State of Telangana (hereinafter referred as "Project Road").

M/s. DBL Mangloor Highways Pvt. Limited (hereafter known as M/s. Mangloor Highways Pvt. Ltd.) vide COI dated 02.12.2022 (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for operation, maintenance, and transfer of Mangloor to Telangana / Maharashtra border section (Design Chainage from km. 86+788 to km. 135+751) of NH-161 or Project Road under Hybrid Annuity basis. The project was awarded to Concessionaire **M/s**. **DBL Mangloor Highways Pvt. Limited**., a company promoted and incorporated by M/s. Dilip Buildcon Ltd. on 09.05.2018 (Including construction period) by National Highway Authority of India (NHAI). Cube Highway group is a shareholder in the Concessionaire company. The length of project as per CA is 48.963 kms with one toll plaza at Dharmaram at km. 96+073.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.,
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.,
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / ATMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our proposed team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader will coordinate the activities between all the key staff who will work closely together. The key is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader will act as the point of contact for Client Technical Study.

The technical study include review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings.
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted.
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority.
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **24th February 2025** to **25th February 2025**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**

Chapter 2 **Project Description:** The chapter describes existing project features, and an overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**

Chapter 4 **Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** This chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **M/s. DBL Mangloor Highways Pvt. Limited** (hereafter known as M/s. Mangloor Highways Pvt. Ltd.) is a company promoted by Cube Highway group. The Appointment Date of the project was 12th April 2019. The concession period of the project is 17 years including construction period. The project has received PCOD on 15th December 2021 for the length 47.412 kms out of 48.963 kms. However, presently all work has been completed, and IE has drafted work completion letter to NHAI vide their letter no. MSV/IE(O&M)/PKG II&III/2025/GJW/PIU/504 Dated 05.02.2025 which is under review at NHAI end. Cube Highway group is a shareholder in the Concessionaire company.

2.2 Location

The Project Road is part of National Highway No. 161, of Mangloor - Telangana / Maharashtra border section in the state of Telangana. The total project length is 48.963 kms as per CA.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

Figure 2-2 Start / End of the Project Road (LHS)

Start of the Project Road

End of the Project Road

Figure 2-3 Start / End of Project Road (RHS)

Start of the Project Road

End of the Project Road

2.3 Climate

The climate of the region is marked by heavy rainfall with high humidity in the hot season. The Indian Meteorological Department (IMD) has identified the following four seasons in the region.

Sr. No.	Weather	Month
1	Summer	February to May
2	Monsoon	June to September
3	Post Monsoon	October
4	Winter	November to February
5	Maximum Temperature	38 ^{0}C
6	Minimum Temperature	18 ^{0}C
7	Average annual rainfall	910 mm

2.4 Terrain

The Project Road passes through plain to rolling terrain.

2.5 Abutting Land Use

The following are the various developments that are anticipated in the Four Lanning of Mangloor Telangana / Maharashtra border Section.

- Agriculture is the predominant land use along the Project Road.
- This road reduces the travel time for getting access to Hyderabad, Nanded Sahib, Akola, Nagpur and Shegaon which results in better industrial growth and economy.
- The tourism industry gets a great booster as majority of people using this road, for going to places like Nanded Sahib & Shegaon, a group of temples & Gurudwara etc.,

A lot of commercial establishments along the Project Road in the form of hotels and Snack Parlors may be developed in the coming future.

2.6 Right of Way

The width of the existing Right of Way (ROW) for the Project Road varies from 30.0 m to 60 / 180.0 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW and presently no utility shifting is balance at site. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Mangloor to Telangana / Maharashtra border (km. 86+788 to km. 135+751) has been developed as a four-lane divided carriageway with median width varies from 4.0 m to 12.0 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Operation and maintenance of the Project in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all the obligations of the Concessionaire under this Agreement.

2.9 Bypass and Realignment

There are four Bypass on Project Road. The total length of Bypass is 10.63 kms. Apart from these bypasses, there are four realignments in the Project Road. The bypass constructed along the Project Road as well as realignment is as tabulated below.

Table 2-1 Details of Bypass

Sr. No.	Name of Bypass	Design Chainage (km)		Length (km)
		From	To	
1	Pitlam	89+00	91+300	2.30
2	Pedda Kodapgal	99+350	101+640	2.29
3	Mainur	125+150	126+600	1.45
4	Madnoor	128+710	133+300	4.59
			Total	**10.63**

Table 2-2 Details of Realignment

Sr. No.	Existing Chainage (km)		Design Chainage (km)		Length (km)
	From	To	From	To	
1	108.440	108.900	103.200	103.600	0.400
2	109.750	111.380	104.450	105.700	1.250
3	111.680	112.280	106.000	106.570	0.570
4	122.390	123.390	116.650	117.600	0.950
				Total	**3.170**

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 8.5 m with earthen shoulder of 1.75 to 2.00 meter on either side. The Project Road has median width varies from 4.0 m to 12.0 m.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **24th February 2025 to 25th February 2025** through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is Good. The summary of pavement condition survey is presented as below.

Rating	Main carriageway	
	LHS	RHS
Good	73.45 %	57.11 %
Fair	6.13%	10.21 %
Good / Fair	20.42 %	32.68 %
Fair / Poor	-	-
Poor	-	-
Total	**100.00 %**	**100.00 %**

3.2 Service Road

a) Existing Service Road

The width of service road is found to be 7.0 m and it is constructed in built-up area and adjoining underpasses and flyover locations. The scope of service road as per CA is 9.90 kms as well as slip road is 27.010 kms. However, 1.55 kms of service road has de-scoped by NHAI due to non-availability of ROW. The details of service road are presented as below.

Table 3-1 Details of Service Road

Sr. No.	Design Chainage (km)		Length (km)		Width (m)	Side	Remarks
	From	To	LHS	RHS			
1	89+010	89+450	0.440	0.440	7.0	Both	Bypass
2	100+320	100+720	0.400	0.400	7.0	Both	Bypass

3.4 Condition Survey of Structure

The inventory of structures including Major Bridges, Minor Bridges, ROB's, Underpasses and Culverts is presented in table as below:

Table 3-3 Summary of Structures

Type of Structure	Total Number of Structures
Major Structures:	
Road Over Bridge (ROB)	-
Flyover	-
Major Bridges (MJB)	01
Minor Bridges (MNB)	09 + 01 (COS)
Vehicular Underpass (VUP)	08 + 01 (COS)
Pedestrian Underpass (PUP/LVUP)	04
Culverts:	
Reconstruction of Box / Slab Culverts	11
Reconstruction of Pipe to Box Culvert	32
New Construction of Box Culvert	45 + 6 (COS)

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-4 Condition Survey of Major Structure

Major Bridge

Sr. No.	Chainage (km)	Side	Span Arrangement (m)	Carriageway Width (m)	Type of Sub-structure	Type of Super-structure	Type of foundation	Remarks
1	108+762	LHS	4 span - 81.88 M length	1 x 16	RCC	RCC Voided Slab	-	Re-Construction - Structure is in sound condition. Expansion Joint, crash barrier and slope protection are in good condition.
		RHS	4 span - 81.88 M length	1 x 16	RCC	Solid slab	-	Re-Construction - Structure is in sound condition. Expansion Joint, crash barrier and slope protection are in good condition.

Minor Bridge

Sr. No.	Design Chainage (km)	Structural Configuration	Structure Type	Span Arrangement (No. x Length)	Total Structure Width (m)	Remarks
1	100+034	New 4-Lane bridge on LHS and RHS	Precast PSC Girder	One Span - Length-38.70m	LHS-14.5m RHS-14.5m	New Bridge - RCC Substructure with Precast PSC Girder Super Structure and Structure is in sound condition. In Bridge opening soil needs to be cleared which is under the Bridge.
2	111+104	New 6-Lane bridge	Box type	Two Span -Total Length-14.23m	LHS-16.0m RHS-16.0m	Re-Construction - RCC box type - Structure is in sound condition. As informed, vegetation is being cleaned on regular basis.
3	117+441	New 6-Lane bridge	Box type	Four Span -Total Length-34.04 m	LHS-16.0m RHS-16.0m	Re-Construction - RCC box type - Structure is in sound condition. As informed, vegetation is being cleaned on regular basis.
4	117+664	New 6-Lane bridge	Box type	Four Span -Total Length-47.20 m	LHS-16.0m RHS-16.0m	Re-Construction - RCC box type - Structure is in sound condition. As informed, vegetation is being cleaned on regular basis.
5	119+950	New 6-Lane bridge	Box type	Four Span -Total Length-34.04 m	LHS-16.0m RHS-16.0m	Re-Construction - RCC box type - Structure is in sound condition. Slope protection is in good condition.

Sr. No.	Design Chainage (km)	Structural Configuration	Structure Type	Span Arrangement (No. x Length)	Total Structure Width (m)	Remarks
6	120+191	New 6-Lane bridge	Box type	Two Span -Total Length-18.28 m	LHS-16.0m RHS-16.0m	New Construction - RCC box type - Structure is in sound condition. Slope protection is in good condition.
7	127+030	New 6-Lane bridge	Box type	Two Span -Total Length-14.23 m	LHS-16.0m RHS-16.0m	New Construction - RCC box type - Structure is in sound condition. Slope protection is in good condition.
8	127+256	New 6-Lane bridge	Box type	Five Span -Total Length-20.80 m	LHS-16.0m RHS-16.0m	New Construction - RCC box type - Structure is in sound condition. Slope protection is in good condition.
9	131+926	New 6-Lane bridge	Box type	Four Span -Total Length-37.04 m	LHS-14.5 m RHS-14.5 m LHS Service Road-11 m RHS Service Road-11 m	New Construction - RCC box type - Structure is in sound condition. As informed, vegetation is being cleaned on regular basis.
10	132+935	New 6-Lane bridge	Box type	Single Span - Total Length----- m	LHS-14.5 m RHS-14.5 m LHS Service Road-11 m RHS Service Road-11 m	New Construction - RCC box type - Structure is in sound condition. As informed, vegetation is being cleaned on regular basis.

VUP and PUP

3.5 Condition Survey of Culverts

The cross-drainage structures include reconstruction and new construction of box culverts at various locations. There are total 94 Nos. of culverts in which 11 Nos. of reconstruction of box culverts, 32 Nos. of reconstruction of pipe to box culverts, 45 Nos. of new construction of box culverts, and 06 Nos. box culverts (constructed under Change of Scope) along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway with service road on both side and construction of new four lane carriageway at proposed bypass location. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts and slab culverts is found to be satisfactory. The RCC parapet, metal beam crash barrier or RCC railing has been provided at culvert locations which is maintained properly.

Vegetation growth and accumulation of debris at waterway is being removed and cleaned by the Concessionaire on regular basis.

3.8 Road Furniture

The Concessionaire shall maintain the road furniture as per Schedule-C.

a) Summary of Quantity for Road Furniture Items

The following details show the summary of quantity for road furniture's items.

Table 3-5 Summary for Road Furniture Items

Sr. No.	Description	Unit	Quantity
1	Traffic Solar Blinkers	No.	96
2	W-beam Crash Barriers in both direction	kms	15.439
3	Delineator	Nos.	675
4	km Stone	Nos.	98
5	Informatory Signs	Nos.	250
6	Mandatory Signs	Nos.	130
7	Cautionary Signs	Nos.	946

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road & Kilometre stone etc, the design for the traffic signs along the Project Road is done as per the design standards indicated in Schedule-D.

The height, lateral clearance, location, and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards & Median kerb paint are generally in good condition except few locations.

Some of the photographs of sign boards are presented below.

3.11 Highway Lighting / Solar Blinker

Highway Lighting is provided at underpasses, flyovers, toll plaza, truck lay byes, passenger shelters, major and minor junctions, and built-up locations. High mast lighting is provided at toll plaza.

At underpass and flyover locations, highway lighting is provided at the structure locations and at its approaches.

Solar amber blinker signals are provided at median opening and service road, junctions and bus stop locations. These lights are properly maintained and are in good working condition. Some of the photographs of highway lightings are presented below.

3.18 Protection Wall

The protection wall is provided wherever required in the project. It is maintained by the Concessionaire.

3.19 Toll Plaza

There is one toll plaza at km. 96+035 near Dharmaram village. As it is a HAM project, it is being operated by NHAI through their external vendor namely Indrajeet Construction. The toll operation is not in the scope of the Concessionaire.

3.20 Advance Traffic Management System (ATMS)

Advance Traffic Management System (ATMS) installed for the project road is controlled by the ATMS center near the toll plaza location (km. 96+035). As per Concession agreement ATMS shall conform to ATMS Policy Guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Meteorological Data system
- Variable Message Signboards (VMS)

- CCTV system
- Video Incident Detection System (VIDS)

Status of these systems at site are described below:

3.20.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at km. 95+930.

ATCC (LHS)

ATCC (RHS)

3.20.2 Emergency Call Boxes (ECB)

Emergency Call Boxes are installed along the project length, and all are functional. The same are maintained by the Concessionaire.

km. 102+100 (LHS)

km. 120+200 (LHS)

km. 128+000

3.20.3 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at km. 96+035 at Toll Plaza office building in Dharmaram village.

MET

3.20.4 Variable Message Signboards (VMS)

Variable message sign boards are installed in the Project Road. These display specific messages to the users based on the prevailing conditions on the Project Road. The message can be changed at any point of time from the ATMS centre. About 250 customised messages can be stored on the system.

km. 88+250 (LHS)

km. 128+000 (RHS)

3.20.5 CCTV Surveillance Cameras

Surveillance Cameras are installed along the Project Road which are monitored through the ATMS control room.

Control Room for ATMS at TP

km. 86+788

km. 110+366

km. 117+600

3.20.6 Vehicle Actuated Speed Display (VASD)

VASD / speedometers are installed along the Project Road which are monitored through the ATMS control room. The same are in working condition.

km. 93+200 (LHS)

km. 127+550 (RHS)

3.20.7 Adequacy of Toll Collection System and ATMS

The Advance Traffic Management System (ATMS) installed is as per specifications required by the Authority and the same is in working condition.

3.21 Truck Lay bye

The following are the Truck Lay-Bye cum Rest Room locations.

Table 3-6 Details of Truck lay bye

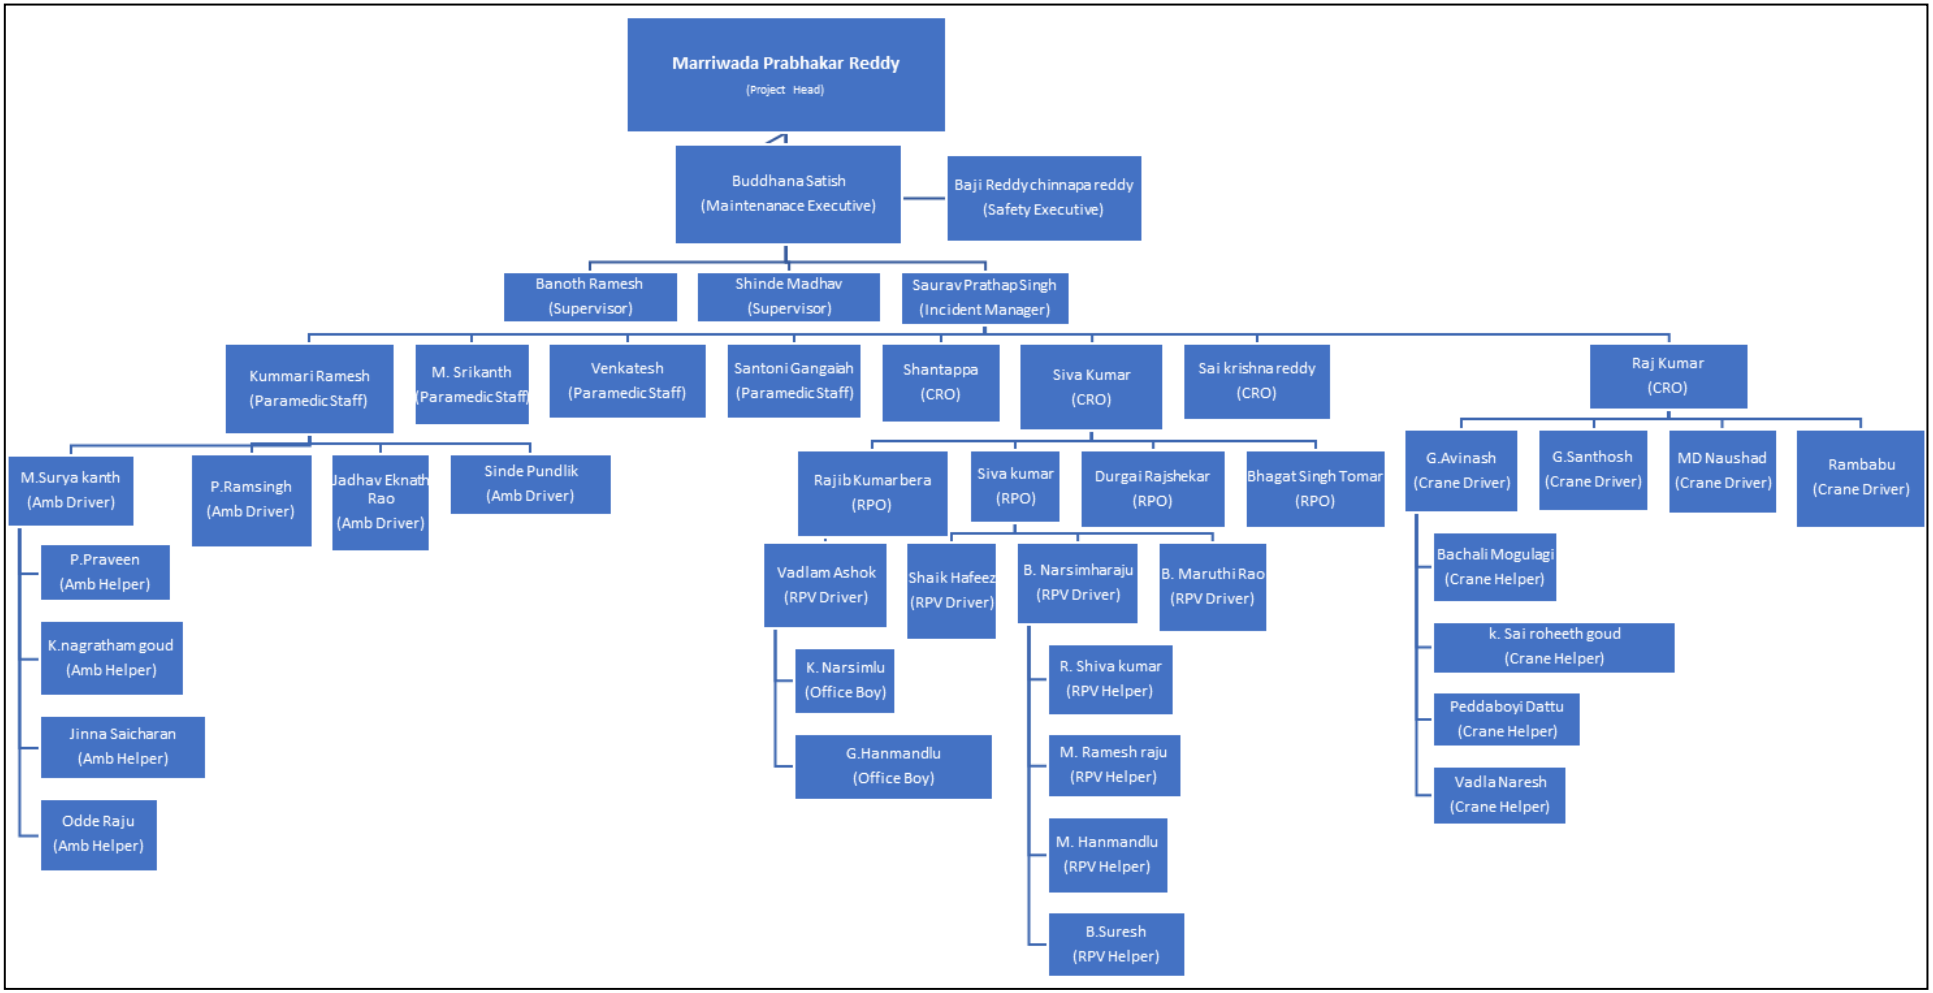
3.26 Balance Work Status

Presently, all work has been completed and there is no balance work at site. Further, IE has communicated the completion of work through letter no. MSV/IE(O&M)/PKG II&III/2025/GJW/PIU/504 Dated 05.02.2025, which is being reviewed by NHAI.

3.27 Organization Chart

The Concessionaire has prepared the Organization Chart to maintain the site during Operation and maintenance. The same is presented below.

Organization Chart



3.28 Operation

Operation cost is comprised of manpower cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. As the Project is in Annuity mode, the Toll Operation is not in the Scope of Concessionaire. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.29 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

The project is currently under the Operation and Maintenance stage. The concession period of the project is 17 years from the Appointed / Commencement Date (i.e., 12th April 2019) including construction period of 2 years (730 days).

The project has received PCOD on 15th December 2021 for the length 47.412 kms out of 48.963 kms.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 96+050 from 21st July 2021 to 22nd July 2021. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Type	Direction	
		LHS (Mangloor - MH border)	RHS (MH border - Mangloor)
1	BUS	0.861	0.951
2	LCV	0.714	0.929
3	2-Axle	3.253	2.968
4	3-Axle	6.127	7.464
5	MAV	9.204	10.958

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculations MHPL Project									
Year	4 Lane				6 Lane				Remarks
	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	
2024-25	-	**-**	-	**-**	-	**-**	-	**-**	
2025-26	1.42	**1.42**	1.67	**1.67**	1.14	**1.14**	1.34	**1.34**	
2026-27	1.49	**2.91**	1.76	**3.43**	1.20	**2.34**	1.41	**2.75**	
2027-28	1.57	**4.48**	1.85	**5.28**	1.25	**3.59**	1.48	**4.23**	
2028-29	1.65	**6.13**	1.94	**7.22**	1.32	**4.91**	1.55	**5.78**	1st MM cycle
2029-30	1.73	**7.86**	2.04	**9.26**	1.38	**6.29**	1.63	**7.41**	

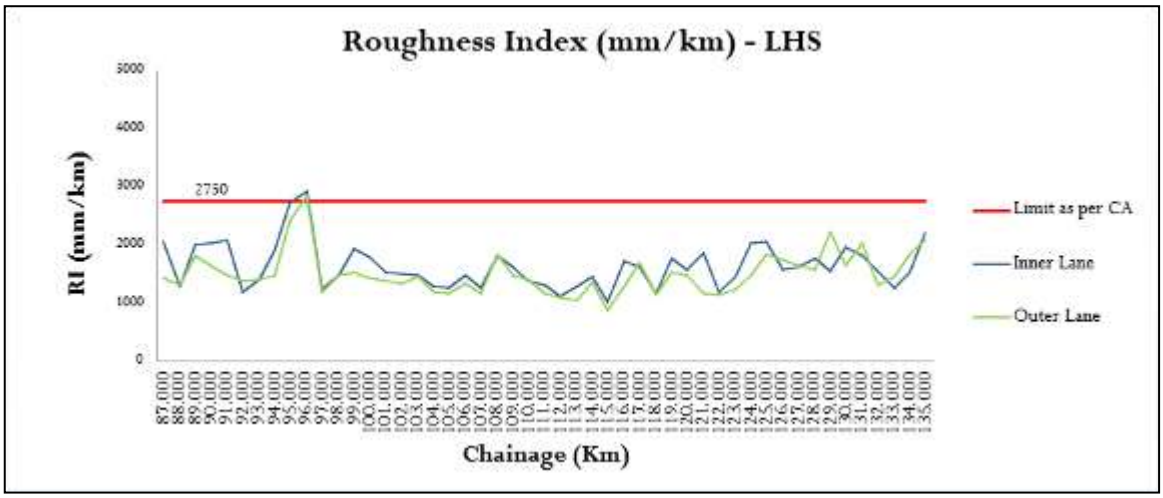
MSA Calculations MHPL Project									
Year	4 Lane				6 Lane				Remarks
	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	
2030-31	1.81	**9.67**	2.14	**11.40**	1.45	**7.74**	1.71	**9.12**	
2031-32	1.91	**11.58**	2.24	**13.64**	1.52	**9.26**	1.80	**10.92**	
2032-33	2.00	**13.58**	2.36	**16.00**	1.60	**10.86**	1.89	**12.81**	
2033-34	2.10	**15.68**	2.47	**18.47**	1.68	**12.54**	1.98	**14.79**	
2034-35	2.21	**17.89**	2.60	**21.07**	1.76	**14.30**	2.08	**16.87**	
2035-36	2.32	**20.21**	2.73	**23.80**	1.85	**16.15**	2.18	**19.05**	2nd MM cycle
2036-37	2.43	**22.64**	2.87	**26.67**	1.95	**18.10**	2.29	**21.34**	

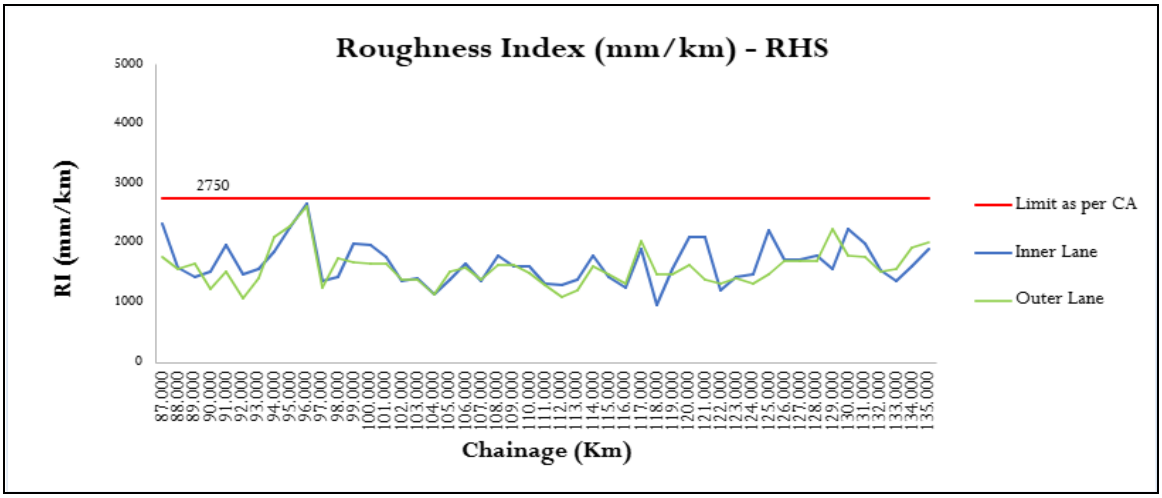
4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted in May 2024. The NSV data is used to assess the riding quality and pavement condition of project road. The summary of Roughness Index is given in table below:

Table 4-3 Roughness Index Summary

Sr. No.	Rating	Roughness Value as per CA limit	Length (km)			
			LHS		RHS	
			Inner Lane	Outer Lane	Inner Lane	Outer Lane
1	Good - Fair	<2750	47.70	47.70	48.70	48.70
2	Poor	>2750	1.00	1.00	-	-





The summary of Rutting of the Project is given in the table below:

Rut Depth (mm)	Length of the Road Effected with Rutting (km)			
	LHS		RHS	
	Inner Lane	Outer Lane	Inner Lane	Outer Lane
<5	25.75	12.75	43.21	32.21
5-10	22.97	33.99	5.75	16.75
>10	0.00	1.00	0.00	0.00
Total Length	48.72	47.74	48.96	48.96

4.5 Structural Investigation

Falling Weight Deflectometer survey was conducted for flexible pavement by the Concessionaire in November 2022. The summary of the FWD survey report is presented in the table below.

Table 4-4 FWD Summary

Remaining life (MSA)	Length (km)				Remark
	LHS		RHS		
	Inner Edge	Outer Edge	Inner Edge	Outer Edge	
<20	-	-	-	-	
20-30	-	-	-	-	
>30	38.526	38.730	38.663	38.532	
Total Length	**38.526**	**38.730**	**38.663**	**38.532**	

From the above table, it is observed that residual life of the pavement is more than the cumulative design MSA up to FY 2037 i.e., up to end of concession period except 6 kms on BHS. The periodic maintenance of the Project Road is proposed considering the above results.

4.6 Test pit and Subgrade Investigation

The required data / details are yet to be received from the Concessionaire / Client. The same will be updated after receiving the data from Concessionaire / Client.

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-k of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. Only improvement in Riding Quality is expected if the roughness value exceeds 2750 mm / km.

The project has received PCOD on 15th December 2021 for the length 47.412 kms out of 48.963 kms. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-5 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2026 to FY 2028	-	-
2	FY 2029	Major maintenance with 35 mm BC (VG-40) (60%) + Micro-surfacing (40%) + Milling & 50 mm DBM (2.5%)	Major Maintenance with Micro-surfacing (100%)
3	FY 2030 to FY 2035	-	-
4	FY 2036	Major maintenance with 35 mm BC (VG-40) (40%) + Micro-surfacing (60%) + Milling & 50 mm DBM (2.5%)	Major Maintenance with Micro-surfacing (100%)

**End of concession period as per Concession Agreement is FY 2037.*

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATE

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost (CAPEX)
II. Balance Repair / Rectification Works
III. Routine O&M Cost
IV. Major Maintenance Cost
V. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per Government of Telangana Common SoR (Road & Bridge Works) 2024-25. The input rates for SoR were adopted as below:

    a. **Manpower and labour:** As per applicable minimum wages published by Sschedule of Rates, Government of Telangana.

    b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

    Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026 and FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST.

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971
IOC Barauni	VG-30	48,502	34,540

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Barauni	VG-40	51,242	36,492
CPC Chennai	VG-10	48,202	34,156
CPC Chennai	VG-30	49,002	34,723
CPC Chennai	VG-40	51,752	36,672

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from Market rate.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book / rate as per work order adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	8,354
2	Bituminous Concrete (VG-40)	Cum	9,549
3	Bituminous Concrete (VG-30)	Cum	9,048
4	Milling	Sqm	88
5	Micro-surfacing	Sqm	149
6	Kerb Re-laying	Rmt	303
7	Road Marking	Sqm	501
8	Road Studs	Nos.	179

5.3 Balance Works Cost (CAPEX)

As discussed in the previous chapter, the cost of balance works as per CA is found to be **NIL**.

5.4 Balance Repair / Rectification Works

As discussed in the previous chapter, the cost of balance work related to repair / rectification at site is presented below.

Table 5-3 Total cost of Repairs and Rectification Works

Sr. No.	Item Description	Amount (Cr.)
1	Stone Pitching / Slope Protection Works-Box Culverts	0.30
2	Flexible Apron, repairs of MBCB, CC M20, Filter Media, Excavation, PCC, Replacement of Bearings, additional reinforcement, drain spouts, crack sealing, Micro concrete, cleaning, shoulder repairs, survey, Curtain wall, Rigid and flexible apron - Major Bridges, Minor Bridges, VUP, LVUPs etc.	2.22
3	Bituminous concrete works (includes junction improvement, rest area works, connecting road and rutting rectification works)	14.07
4	Balance Works at Rest Area for COD includes: Earth-filling, PCC Laying, Construction of Separator, Kerb, Boundary wall, Earthen Drain.	0.28
5	Soil Filling	0.07
6	Building Painting	0.14
7	Construction of Drain	0.24
8	Rest Area - Truck Parking area paver blocks	0.78
9	Plantation	0.08
10	Electrical Issues and Pole Foundation for Rest Area	0.20
11	Balance Highway Lighting Works	0.70
12	HTMS / ATMS Works	3.05
13	Balance Paved Shoulder	0.91
14	Median Pipe at Junction	0.45
15	Shoulder at all Crossroads	0.27
16	Construction of Wall at VUP Median Opening Locations	0.15
17	**Total Cost of Repairs and Rectification work**	**23.92**

The Total cost of repairs and rectification is worked out to be **Rs. 23.92 Cr.**

5.5 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services (Not in Scope)
3. Incident Management Services
4. Electricity and Diesel Charges
5. HTMS Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-4 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026-37)	Remarks
1	Salary and Welfare Expenses	4,290,000	
2	Tolling Operations Services	-	
3	Toll Security Services	1,190,460	
4	Incident Management & Emergency Services	31,244,454	
5	Electricity and Diesel Charges	9,152,273	
6	HTMS Expenses	8,400,421	
7	Office Operating Expenses	2,262,091	
8	Vehicle Running Expenses	4,680,000	
9	Professional Fees Expense	9,156,081	
10	Community Development	1,508,060	
11	Communication Expenses	134,648	
12	Conveyance Expenses	269,297	
13	Insurance Expense	10,780,000	
14	IE Fees	2,235,161	
15	Routine Maintenance Cost (Project Road)	16,133,589	
16	Horticulture & ROW Maintenance	16,778,249	
17	Miscellaneous including Contingency	3,412,118	
	Total Cost (Rs.)	**121,626,900**	
	Total Cost (Cr.)	**12.16**	
	Per km Cost (Lakhs)	24.84	

5.6 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Table 5-5 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr)	Remarks
1	FY 2026 - FY 2028	-	
2	FY 2029	49.54	
3	FY 2030 -FY 2035	-	
4	FY 2036	43.31	
5	FY 2037	-	
Total Cost (Cr.)		**92.85**	

5.7 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr)	Remarks
1	FY 2026 - FY 2028	-	
2	FY 2029	3.94	
3	FY 2030 -FY 2035	-	
4	FY 2036	3.94	
5	FY 2037		
Total Cost (Cr.)		**7.88**	

5.8 Escalation Assumption

The following escalation is considered basis discussions with Client and our internal estimates.

Table 5-6 Escalation

Year	Escalation	Year	Escalation
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%
2041	3.99%	**2057**	3.99%

5.9 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in above clause.

Escalated O&M Cost (in INR Cr.)

Year of expense	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an infrastructure investment trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed M/s. **FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Narketpally - Addanki - Medarametla (NAMEL) section of SH-2 from km. 0+000 to km. 212+500 in the State of Andhra Pradesh and Telangana under Public Private Partnership on DBFOT (Toll) basis (hereinafter referred as "Project Road").

N.A.M. Expressway Limited Hyderabad, (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Narketpally - Addanki - Medarametla (NAMEL) section of SH-2 from km. 0.000 to km. 212.500 or Project Road under DBFOT mode. The project was awarded to Concessionaire on 23rd July 2010 with a concession period of 24 years (from Appointed Date including 30 months construction period) by National Highway Authority of India (NHAI). The length of Project Road is 212.860 kms with three Nos. of toll plaza at km. 41+200, km. 110+000 and km. 168+000.

Accordingly, the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting technical due diligence of Project Road is presented below.

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, Punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle Load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Annual Routine Maintenance and Major Maintenance forecast for all projects till the end of concession period (considering the traffic projections presented in the traffic study reports).
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period.
- Review of balance work cost for Project Road including estimation of quantities and item rates.

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our proposed team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client Technical Study.

The technical study shall include review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement survey conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project as per the contract and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams are expected to carry out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection.
- The information like material sources and the probable cost is collected for the purpose of cost estimates.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity are gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the Consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

The site visit and inspection for the reconnaissance, road inventory and condition survey were carried from **03rd March 2025** to **06th March 2025**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**

Chapter 2 **Project Description:** The chapter describes existing project features, and overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**

Chapter 4 **Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance

Chapter 5 **Cost Estimates**: This chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India had signed the Concession Agreement with **N.A.M. Expressway Limited**, is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this Project on 23rd July 2010. The Appointed Date for the Project Road is 18th January 2011. The Supplementary Agreement was also executed on 27th January 2016.

The Project Road is being developed through PPP mode on DBFOT (Design, Built, Finance, Operate and Transfer) with concession period of 24 years from the Appointed Date.

2.2 Location of the Project Road

The Project Road is a State Highway No. 2 of Narketpally - Addanki - Medarametla section in the state of Andhra Pradesh and Telangana. The total length of Project Road is 212.860 kms.

The Location Map of the Project Road is presented below:

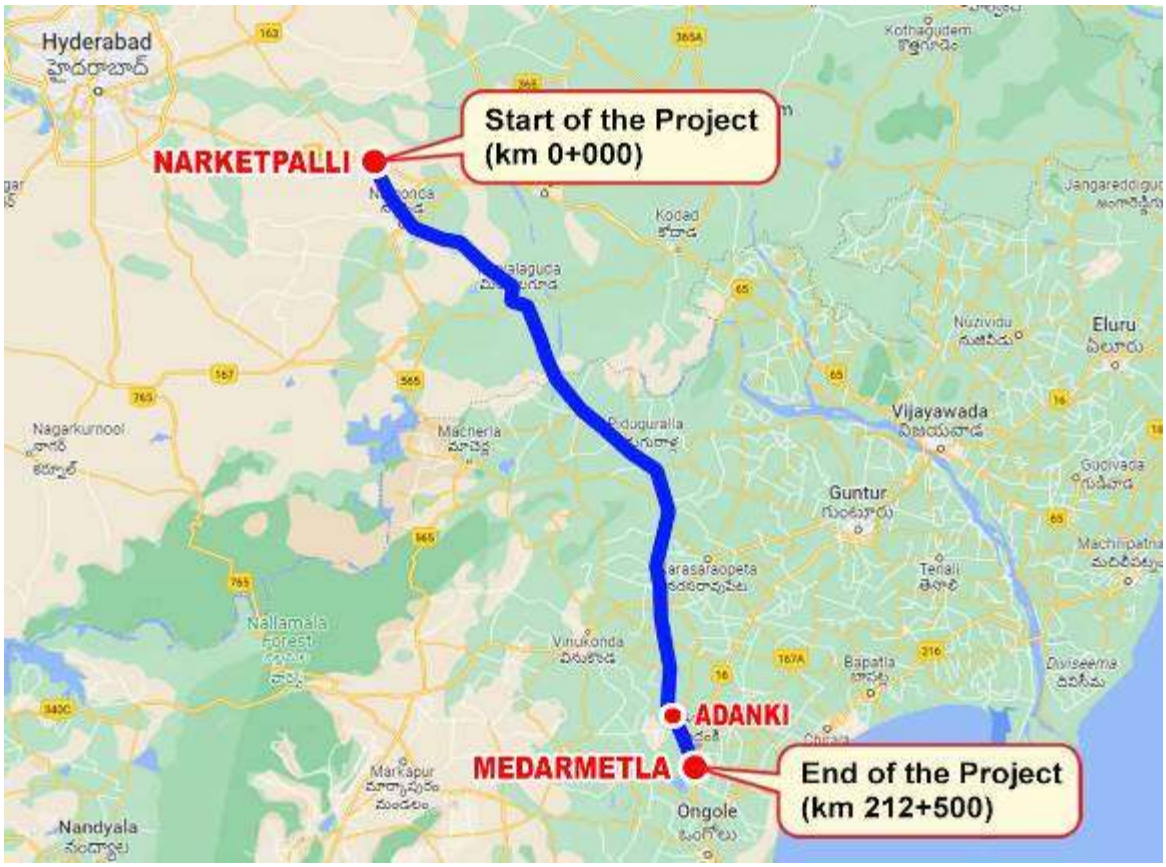

Figure 2-1 Location Map

The Photographs taken during the site visit are presented as below.

Figure 2-2 Start of the Project Road

Figure 2-3 End of the Project Road

2.3 Climate

Summer temperature of project area reaches as high as 44 °C (111 °F) (March - May) has the highest temperatures but these are usually followed by monsoon rains and the annual average rainfall 794.5 mm receiving both northeast and southwest monsoons. The winter season (from November / to February) is the most enjoyable with a pleasant climate. Winter months are usually dry, with little to no rainfall. The average annual temperature is 24.5 °C. Cyclones may occur at any time of the year, but occur more commonly in the period from October to December.

2.4 Terrain

This section of State Highway traverses through plain / rolling terrain.

2.5 Abutting Land Use

The land used along Project Road is predominantly agriculture with intermittent built-up settlements.

2.6 Right of Way

The width of the existing Right of Way (Row) for the Project Road varies from 30.0 m to 35.0 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services located along the Project Road were shifted to the PROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Narketpally (km. 0+000) to Medarametla (km. 212+500) has been developed as a four-lane divided carriageway with other facilities such as service road, toll plaza, truck lay-bye, bus bays and other arrangements. The Project Road passes through rural as well as built up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement; and

b) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule B of the Concession Agreement.

Sr. No.	Description	Unit	Scope	Remarks
1	Construction of Main Carriageway	km	212.860	
2	Construction of Service Road	km	25.5	
3	Construction of Major Bridges	Nos.	7	
4	Construction of ROB	Nos.	2	
5	Construction of Minor Bridges	Nos.	46	
6	Improvement of Major Junction	Nos.	5	
7	Improvement of Minor Junction	Nos.	34	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 8.75 m with an earthen shoulder of 1.0 m to 1.5 m on either side. The Project Road has a median width of 1.5 m to 4.5 m throughout its length. The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the toll plaza including taper is of rigid pavement.

3.2 Pavement Condition Survey

The pavement condition survey was carried out from **03rd March 2025 to 06th March 2025** through visual inspection for the entire project length. From the visual inspection, the pavement condition of the entire project road is found to be Good to fair. During the site visit, some cracks and rutting were observed at few locations. The Concessionaire is carrying out major maintenance and routine maintenance for Project Road which is witnessed during the site visit.

The photographs taken during the site visit are presented below.

Figure 3-1 Photographs of Pavement Condition (Main Carriageway)

Pavement Condition at km. 168+690 (LHS)

Pavement Condition at km. 163+150 (LHS)

Pavement Condition at km. 30+850 (RHS)

Pavement Condition at km. 67+350 (RHS)

Pavement Condition at km. 110+185 (LHS)

Pavement Condition at km. 199+550 (RHS)

Pavement Condition at km. 212+000 (RHS)

Pavement Condition at km. 212+700 (LHS)

3.3 Service Road / Slip Road

The service road / slip road of width 3.75 / 5.50 m is constructed at built-up locations and at adjoining underpass locations. The service road / slip road is provided for total length of 25.50 kms as per Concession Agreement.

The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road / Slip Road

Pavement Condition at km. 25+800 (RHS)

Pavement Condition at km. 61+000 (RHS)

Pavement Condition at km. 12+700 (RHS)

Pavement Condition at km. 73+600 (RHS)

Pavement Condition at km. 206+100 (LHS)

Pavement Condition at km. 205+400 km (RHS)

3.4 Major / Minor Intersection

There are 05 nos. of major junctions and 35 nos. of minor junctions along Project Road. The photographs taken during the site visit are presented below.

Figure 3-3 Photographs of Major Junctions

Major Junction at km. 61+000

Major Junction at km. 0+900

Minor Junction at km. 113+650

Minor Junction at km. 141+800

Minor Junction at km. 58+800

3.5 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, underpass and culverts is presented in table below:

Table 3-1 Details of Summary for Structures

Sr. No.	Particulars	Unit	Total Number of Structures as per site
1	Road Over Bridge (ROB)	Nos.	02
2	Road Under Bridge (RUB)	Nos.	02 (Not in the scope of Concessionaire)
3	Flyover	Nos.	02 (Not in the scope of Concessionaire)
4	Major Bridge	Nos.	05
5	Minor Bridge	Nos.	53
6	Vehicular Underpass (PUP)	Nos.	10
7	Light Vehicular Underpass	Nos.	-
8	Slab Culverts	Nos.	58
9	Box Culverts	Nos.	49
10	Hume Pipe Culverts	Nos.	323

All major structures and CD works were visually inspected. The structures are generally sufficient for storm water drainage. The waterway needs regular cleaning. All the old bridges are 2-lane and widened to 2 additional lanes. Generally, the structures have open foundation. At few bridges, approach settlement and pavement cracks were observed. New bridges are constructed with 2-lane with footpath keeping a provision of converting into 3-lane configuration in future. The wearing course and expansion joints are found satisfactory. The crash barriers are of RCC type and are in sound condition. The return walls are of RCC type and pitching has been provided in all bridges.

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Details of New Minor Bridges

Sr. No.	Type of Structure	Chainage (km)	Size	Length of structure (m)	Type of Construction	FPPM Comments
1	Minor Bridge	05+955	6 x 2.10	12.60	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
2	Minor Bridge	06+029	12 x 2.12	25.44	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
3	Minor Bridge	09+275	2 x 6.40	12.80	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
4	Minor Bridge	11+592	2 x 7.40	14.80	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
5	Minor Bridge	16+721	3 x 7.85	23.55	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
6	Minor Bridge	16+978	3 x 3.50	10.50	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
7	Minor Bridge	17+372	2 x 7.85	15.70	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
8	Minor Bridge	30+844	2 x 4.40	8.80	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
9	Minor Bridge	34+345	3 x 6.35	19.05	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
10	Minor Bridge	35+210	3 x 7.00	21.00	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
11	Minor Bridge	41+710		13.50	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
12	Minor Bridge	48+231	3 x 4.40	13.20	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
13	Minor Bridge	50+919	5 x 8.75 + 2 x 9.70	63.15	Concentric widening	Overall structure, pavement, railing is in good condition on LHS new structure & RHS is Old Structure.
14	Minor Bridge	56+325	2 x 5.40	10.80	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
15	Minor Bridge	58+774	4 x 3.50	14.00	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
16	Minor Bridge	67+331	5 x 7.75	38.75	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
17	Minor Bridge	68+206	3 x 9.40	28.20	Concentric widening	Overall structure, pavement, railing is in good condition on both sides.
18	Minor Bridge	70+290	3 x 7.30	21.90	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
19	Minor Bridge	73+474	10 x 3.50	35.00	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
20	Minor Bridge	77+924	3 x 3.80	11.40	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
21	Minor Bridge	82+752	3 x 7.35	22.05	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
22	Minor Bridge	89+524	3 x 3.00	9.00	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
23	Minor Bridge	93+359	8 x 3.00	24.00	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
24	Minor Bridge	96+370	4 x 3.80	15.20	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
25	Minor Bridge	97+047	3 x 3.00	9.00	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
26	Minor Bridge	98+164	4 x 3.80	15.20	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
27	Minor Bridge	99+610	7 x 5.30	37.10	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.
28	Minor Bridge	106+290	3 x 4.20	12.60	Concentric widening	Overall structure, pavement, railing is in good condition on both sides. Waterway cleaning is required.

3.5.1 Major Bridge (length > 60 m)

There are 06 Nos. of major bridges on Project Road. All major bridges are visually inspected. The structures are generally sufficient for the crossing of river water. The waterway needs regular cleaning. Old structures are present on the right side of Project Road. The old bridges have 2-lane configurations and have RCC railing. The sub-structures are constructed with RCC piers. The expansion joints of the bridges need to be cleaned. New bridges are constructed with 2-lane + footpath. Old bridges on RHS have RCC pier and T-beam girders. The wearing course and expansion joints were found to be in good condition. W-beam and RCC type crash barriers are in sound condition. Drainage spouts need to be cleaned on a regular basis. Further, vegetation and silt need to be removed from the waterway for smooth flow of water.

Table 3-3 Details of Major Bridges

Sr. No.	Existing Chainage (km)	Design Chainage (km)	Type of Bridge	Existing Structure Span Details (m)	Type of Widening	Length of the Bridge (m)	FPPM Comments
1	29+989	29+972	RCC Slab	12x9.75	Eccentric	120.00	The structure is in good condition. Old structure is present on LHS and New structure is on RHS. Expansion joints condition is good. Railing is in good condition. Waterway needs to be cleaned.
2	53+497	52+435	RCC Solid Slab	6x10.90	Eccentric	66.00	New Structure is on LHS side, while old structure is in RHS side. Overall structure is in good condition on both sides. Vegetation is seen in the waterway, which needs to be cleaned for proper water flow. Pavement, expansion joint, railing is in good condition.
3	87+400	87+290	RCC Deck with Girders	13x35.40	Eccentric	500.00	New Structure is present on LHS and old structure is on RHS. Both the structures are in sound condition. Footpath with railing is provided on LHS. Expansion joint condition is good. Pavement condition is good on LHS and needs to be repaired on RHS.
4	101+000	100+895	RCC Solid Slab	16x12.50	Eccentric	200.00	Overall structural condition is found good. Pavement, Expansion Joints, footpath and railing is in good condition. Cleaning is necessary for the flow of water.
5	196+600	197+560	RCC Solid Slab	22x8.90	Eccentric	200.00	New Structure is on RHS and Old structure is on LHS. Overall structural condition is good. Expansion joints, Pavement, railing and footpath on RHS is in good condition.
6	206+400	207+260	RCC Deck with Girders	4x18.30	Eccentric	74.00	New structure on LHS is in good condition. Footpath, railing, expansion joint and pavement is in very good condition. Old structure on RHS is in good condition. Repairing of expansion joint is required at some places on RHS & LHS. Waterway cleaning is required for the smooth flow of water.

The photographs taken during the site visit are presented below.

3.6 Condition Survey of Culvert

The cross-drainage structure includes hume pipe culverts, box culverts and slab culverts at various locations. There are 323 Nos. of pipe culverts, 58 Nos. of slab culverts and 49 Nos. of box culverts along the Project Road. The height of the culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on a sample basis.

The Project Road involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath the existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts and slab culverts is found satisfactory. The RCC railing has been provided at culvert locations which is maintained properly.

At some culverts, the waterway needs to be cleaned. It is observed that waterways are blocked due to debris near urban areas. It is also found that bushes and tree growth are observed which must be removed and cleaned before monsoon. The wing wall has been provided for slope protection.

The culverts are maintained by the Concessionaire during the O&M period. However, damaged wing walls were observed at few culverts, which need to be addressed under routine repair work.

The photographs taken during the site visit are presented below.

3.7 Drainage

The drains are to be constructed on the Project Road to have good drainage for surface water. Covered lined drains are provided along the service / slip roads. Median cut drains are provided at superelevation locations. Chute drains are also constructed at high embankment portion of the Project Road. The drainage condition of Project Road is found to be satisfactory. Silt deposits need to be removed during routine maintenance. Earther drains are also provided in rural areas. The condition of the same is good to fair.

The photographs taken during site visit is presented as below:

Figure 3-10 Photographs of Drainage

RCC Drain at km. 87+100 (RHS)

RCC Covered Drain at km. 12+650

RCC Covered Drain at km. 25+800

RCC Drain at km. 73+600 (LHS)

3.8 Slope Protection

Slope protection for high embankment areas has been done by providing revetment, chute drain and pitching at some locations. The same has been found as per the standards of O&M contracts.

The photographs taken during the site visit are presented below.

Figure 3-11 Photographs of Slope Protection

Slope Protection at km. 121+960

Slope Protection at km. 125+262

3.9 Road Furniture

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which needs rectification.

The photographs taken during the site visit are presented below.

Figure 3-12 Photographs of Pavement Marking

km. 134+990

km. 125+260

km. 35+210

km. 199+500 (LHS)

Road Studs

The Concessionaire has provided road studs on the curves, road junctions, pedestrian crossings, municipal area, village settlements and ramps to provide the proper visibility to the road users. These are provided as per standards. The Concessionaire has replaced all the road studs on the Project Road.

The photographs taken during the site visit are presented below.

Figure 3-13 Photographs of Road Studs

km. 120+950

km. 126+600.

Traffic signage / Median kerb painting / KM Stone

Traffic signs includes roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Painting at median kerb is found faded at few locations which needs to be rectified by the Concessionaire.

The photographs taken during the site visit are presented below.

Figure 3-14 Photographs of Traffic Signages

Speed limit Sign Board at km. 96+990

Informatory Sign Board at km. 120+950

Name board with direction at km. 141+800

Highway Lighting

Highway Lighting is provided at urban and semi-urban areas of the Project Road. Lighting is provided at the locations of truck lay-bye, bus bay, toll plazas, underpasses, service road and at intersections. IS:1944 (Part-I and Part-II) is followed for installation of lighting. High mast lighting systems are provided at toll plaza locations.

The photographs taken during the site visit are presented below.

Figure 3-15 Photographs of Highway Lighting

Highway Lighting at km. 50+800

Highway Lighting at km. 25+580

Highway Lighting at km. 167+450

Highway Lighting at km. 41+700

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are properly maintained at site.

The photographs taken during the site visit are presented below.

Figure 3-16 Photographs of Crash Barrier

Crash Barrier at km. 58+770

Crash Barrier at km. 53+497

Crash Barrier at km. 30+010

Crash Barrier at km. 121+960

Delineators

The traffic delineators are provided by Concessionaire for road users on the Project Road. The same are maintained by the Concessionaire.

The photographs taken during the site visit are presented below.

Figure 3-17 Photographs of Delineator

Delineator at km. 113+650

Delineator at km. 35+210

Pedestrian Guard Rail

The pedestrian guard rails are provided in the median between service road and main carriageway at built-up locations.

The photographs taken during the site visit are presented below.

Figure 3-18 Photographs of Pedestrian Guard Rail

Pedestrian Guard Rail at km. 205+400 (RHS)

Pedestrian Guard Rail at km. 70+150 (RHS)

3.10 Avenue Plantation and Median Plantation

Avenue plantations and median plantations are done along the project length as per IRC specification except at built-up locations. Median plantation needs regular maintenance. Avenue plantation work is in progress at required location as per CA.

The photographs taken during the site visit are presented below.

Figure 3-19 Photographs of Avenue Plantation and Median Plantation

Avenue Plantation at km. 44+540

Median Plantation at km. 56+120

Median Plantation at km. 53+497

Median Plantation at km. 58+770

3.11 Toll Plaza

The Concessionaire has constructed 03 nos. of Toll Plaza at km. 41+200, km. 110+000 and km. 168+000. The details of the Toll Plaza are tabulated below.

Table 3-6 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details		Remarks
		LHS	RHS	
1	Number of Tolling Lanes	4	4	
2	Weigh-in-Motion Facility (Number of Lanes)	4	4	
3	No. of ETC lanes	4	4	
4	No of Toll booths	8		
5	Canopy	Present		
6	Administrative building	Temporary arrangement is made		
7	Parking cum toilet box	Present		
8	Availability of tunnel or elevated walkaway for	Tunnel / Yes		

Sr. No.	Particulars	Details		Remarks
		LHS	RHS	
	movement between toll lanes and administrative building			
9	Availability of static weigh bridge	No		Installation is pending
10	Availability of loading / unloading facility for overloading vehicles	No		
11	Storage facility for overloaded material	No		
12	High mast light	Yes		
13	Street light	Yes		
14	Low mast light	No		
15	User fee boards	Yes		
16	Cantilever / gantry boards	Yes		
17	Automatic boom barrier	Yes		

The photographs taken during the site visit are presented below.

3.12 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC

3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.12.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID at Toll Plaza

3.12.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which is connected to the common server and are capable of independent storage of data.

Inside View of Toll Booth

3.12.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

3.12.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

Automatic Lane Barrier at Toll Plaza

3.12.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

3.12.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

3.12.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3m pole facing incoming vehicle to capture the image of the vehicle number plate.

3.12.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

Over Head Lane Signal at Toll Plaza

3.12.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.
Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.12.10 Weigh in Motion (MSWIM)

Weigh in Motion (WIM) is installed on entry lanes of Toll Plaza.

MSWIM at Toll Plaza

3.13 Plaza Equipment

3.13.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewall with Sophos antivirus is provided.

TMS server at Toll Plaza

3.13.2 55” LED screen for CCTV monitoring

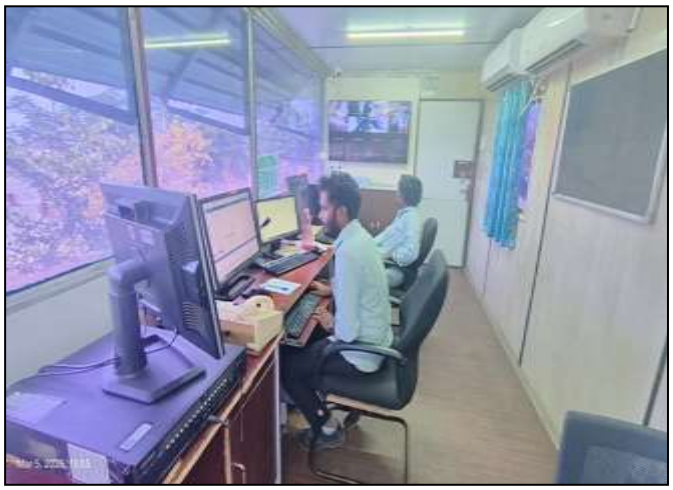
55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

LED screen at Toll Plaza

The toll plaza manager can observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager can comprehend the situation at the lane by a zoomed view of the particular lane.

3.13.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.



Control room at Toll Plaza

POS room at Toll Plaza

3.14 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the project road is controlled by the ATMS center at the toll plaza location (km 467.700). As per Concession agreement ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio Communication System (MRCS)
- Emergency Call Box (ECB)
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site is described below:

3.14.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is not installed at Toll Plazas.

3.14.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed.

3.14.3 Emergency Call Boxes (ECB)

Emergency Call Box (ECB) are missing at many locations on the Project Road. The Concessionaire has already purchased the required material for installation. It is informed that the work of installation will commence soon.

The photographs taken during the site visit are presented below.

Figure 3-21 Photographs of ECB

ECB is not working on the project site

3.14.4 MET System

MET system is not yet installed.

3.14.5 Variable Message Signboards (VMS)

VMS is not installed on the Project Road due to land issues. It is informed that the installation work of VMS will start soon.

3.14.6 CCTV Surveillance Cameras

Surveillance cameras are installed as per CA requirement along the Project Road. The HTMS control room has video wall to monitor these locations through the cameras installed.

The photographs taken during the site visit are presented below.

Figure 3-22 Photographs of CCTV Surveillance Camera

CCTV at Toll Plaza-2

CCTV at Toll Plaza-3

3.14.7 Video Incident Detection System

CCTV cameras are installed as part of Video incident detection system.

Figure 3-23 Photographs of CCTV Surveillance Camera

Surveillance Camera at km. 156+600

Surveillance Camera at km. 110+185

3.14.8 Adequacy of Toll Collection System and ATMS

- Adequacy - All lanes are hybrid ETC system as stipulated by NHAI in technical specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.
- Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition. Some components such as ATCC, ECB, MET system and MRCS have not been installed.

3.15 Truck Lay-bye

There are 05 Nos. of truck lay-bye without facilities such as Toilet Blocks on Project Road.

The photographs taken during the site visit are presented below.

Figure 3-24 Photographs of Truck Lay-bye

Truck lay bye at km. 84+400 (LHS)

Truck lay bye at km. 127+650 (RHS)

3.16 Bus Bays and Passenger Shelters

The Concessionaire has constructed 23 Nos. of bus bays and passenger shelters along Project Road.

The photographs taken during the site visit are presented below.

Figure 3-25 Photograph of Bus Bay / Passenger Shelter

Bus Bay and Shelter at km. 4+390

Bus Bay and Shelter at km. 145+800

Bus Bay and Shelter at km. 107+500

Bus Bay and Shelter at km. 101+950

3.17 Balance Work Status

For the execution of balance works as per Concession Agreement, the Concessionaire has executed an 'AMENDMENT AGREEMENT' with M/s Ramky Infrastructure Limited on 11th August 2020. This agreement is an amendment to the Engineering Procurement & Construction Agreement dated 30-Nov-2008.

M/s Ramky Infrastructure Limited, being the earlier promoter for this Project, the scope of the work is defined through a fixed Bill of Quantities and Rates. The Agreement value was fixed on a lump sum basis. The details of the Contract value are as follows.

1. Part-A - Rs. 74.12 Crores (work to be executed by M/s Ramky)
2. Part-B - Rs. 24.13 Crores (work to be de-scoped at own cost of M/s Ramky)
3. **Total - Rs. 98.25 Crores**

As per the details provided by the Concessionaire, the work executed as per the Amendment Agreement till end of 28th February 2025 is Rs. 46.07 Crores.

Thus, the balance work as on 28th February 2025 is worked out be 52.18 Crores.

3.18 Operation and Maintenance

a) O&M Contract

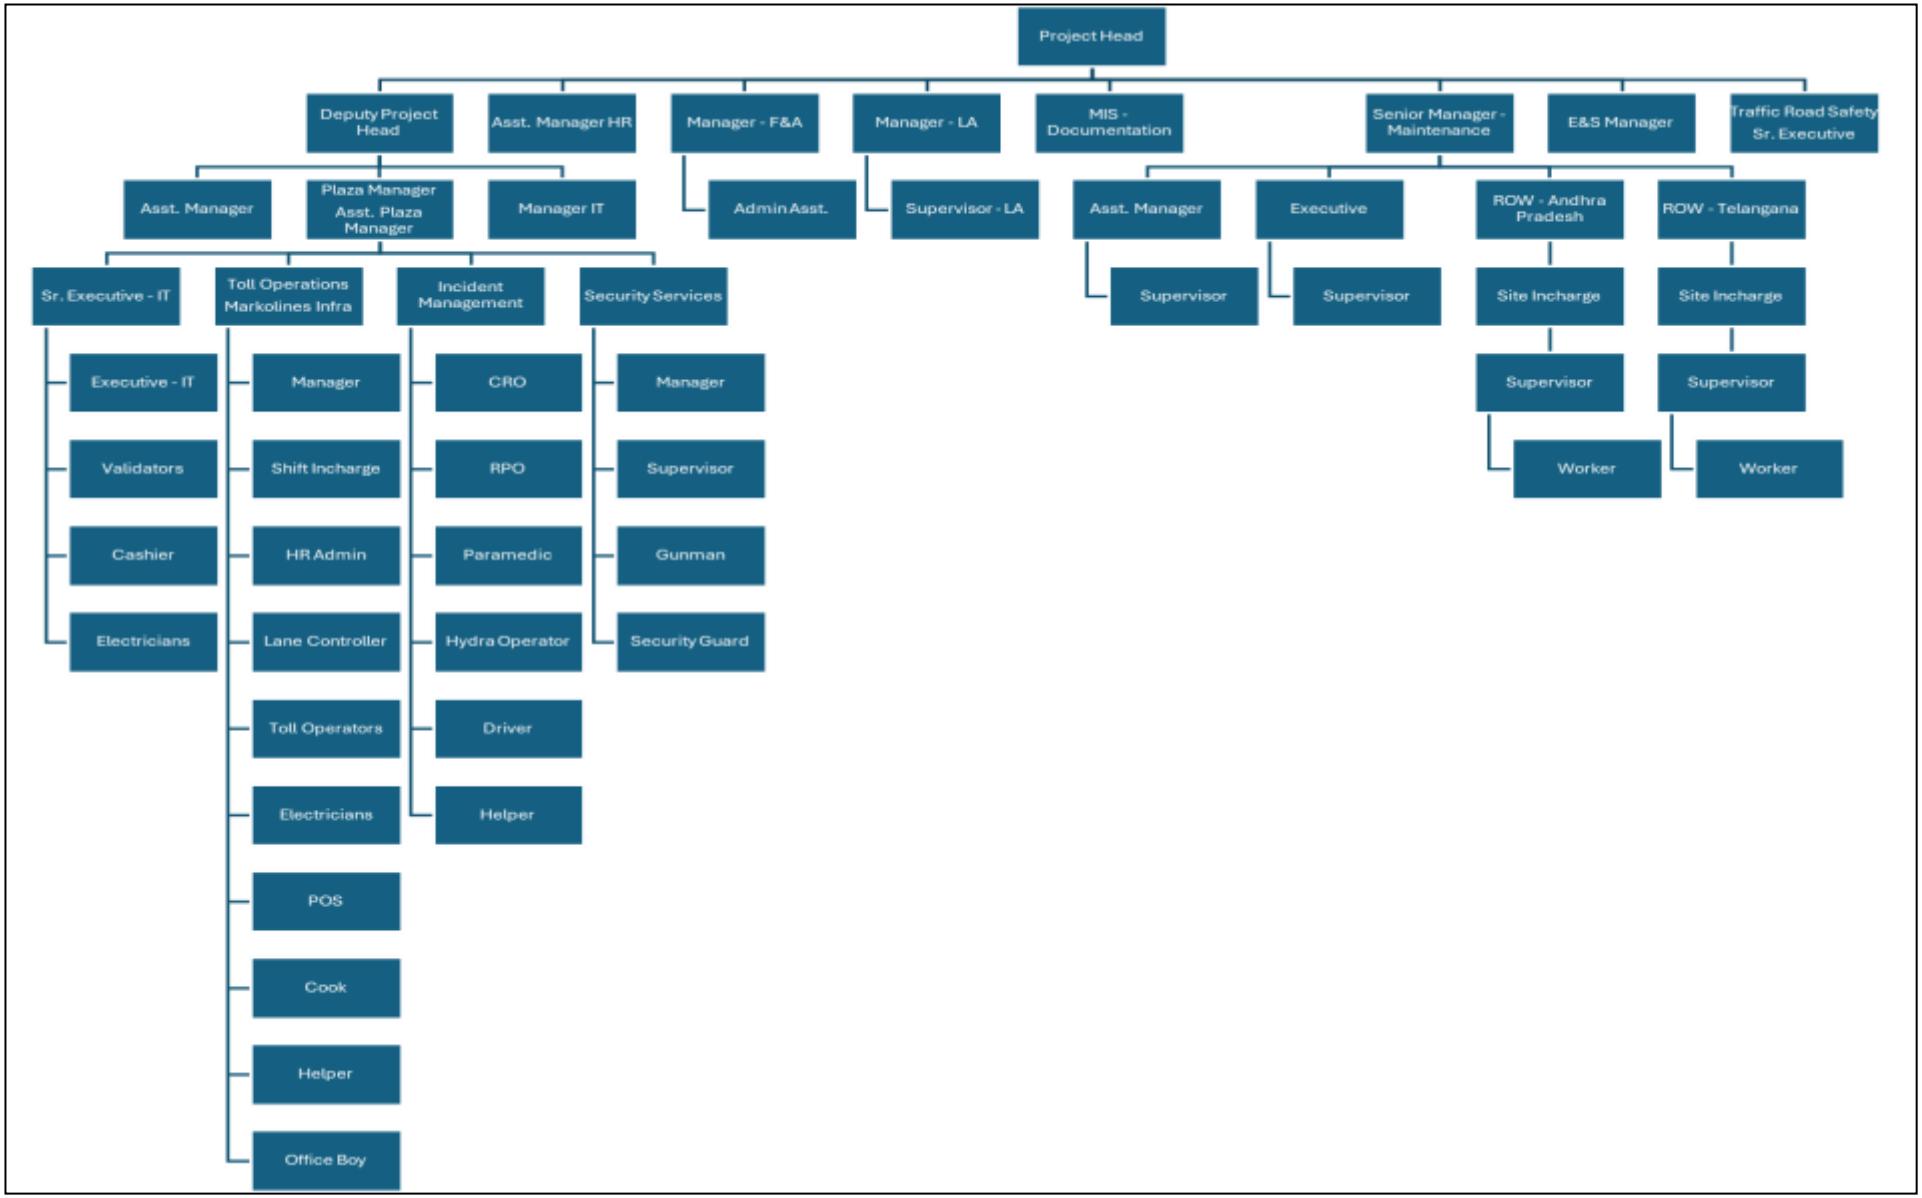
As per Article 17 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall meet all the requirements laid down in the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, Incident management service.

b) Organization Chart

The Concessionaire has provided the Organization Chart for Operation and maintenance. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

Organization Chart



c) Operation

The Operation Cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expense of similar types of projects to arrive at the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

d) Routine Maintenance

The Routine Maintenance Cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Concessionaire has received a Provisional Completion Certificate on 06th March 2014 for the length of 190.38 kms out of 212.860 kms.

The Project Road is currently in the Operation and Maintenance stage. The concession period of the project is 24 years from the Appointed Date (18th January 2011) including construction period of 2.5 years. The end of scheduled concession period is 17th October 2035. As informed by the Concessionaire, the concession period of the Project Road is likely to extend up to March 2040 on the basis of the traffic data.

4.2 Surveys and Investigation

Pavement Condition Survey

The pavement condition survey was carried out by the Technical Consultant during the period from **04th March 2025 to 06th March 2025** through visual inspection of the total Project Road.

From the visual inspection, the pavement condition of the entire project road is found to be Good to Fair. During the site visit, some rutting and cracks were observed at few of the locations. The Concessionaire is carrying out routine maintenance for Project Road which is witnessed during the site visit.

4.3 Axle Load and VDF

In order to estimate vehicle-loading pattern in the project area, and to determine vehicle damage factor for the commercial vehicles, axle load survey of the vehicles plying on the project road stretch was carried out at three different locations of project stretch.

The Axle load survey was conducted by the Concessionaire at three toll plaza locations. i.e., at km. 41+200, at km. 110+000 and at km. 168+000 in the month of August 2021. The survey was carried out for both directions (LHS and RHS) simultaneously and for 24 hours using standard weigh pads. The survey was carried out using random sample method for goods vehicles i.e., for LCV, bus, trucks and multi-axle vehicles with special axle configuration count. The vehicle damage factors for various categories of vehicles were provided.

The Summary of VDF is presented as below.

Table 4-1 Vehicle Damage Factor

Sr. No.	Vehicle Type	TP at km. 41+200		TP at km. 110+000		TP at km. 168+000	
		Direction		Direction		Direction	
		Narketpalli-Addanki	Addanki-Narketpalli	Narketpalli-Addanki	Addanki-Narketpalli	Narketpalli-Addanki	Addanki-Narketpalli
1	BUS	0.984	1.006	0.787	1.004	0.805	0.751
2	LCV	0.972	0.753	1.739	1.109	1.050	1.303
3	2-Axle	2.611	3.271	3.610	3.465	3.136	3.775
4	3-Axle	4.618	6.126	5.861	5.611	5.769	5.781
5	MAV	6.131	12.495	11.338	11.447	10.64	11.837

4.4 Design Traffic

The Traffic in Million Standard Axles (MSA) for the homogeneous section based on the traffic data as provided by the Concessionaire has been used for future projections. The estimated design MSA is computed and presented in the subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculations - Madgullapally					
Year	**MSA (LHS)**	**Cumulative MSA (LHS)**	**MSA (RHS)**	**Cumulative MSA (RHS)**	**Remarks**

2039-40	6.86	**76.75**	7.64	**85.36**	Extended end of concession period

4.5 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted. The NSV data is used to assess the riding quality and pavement condition of Project Road. The test is carried out on 13th December 2024. The summary of classification of pavement as per CA is given in below table.

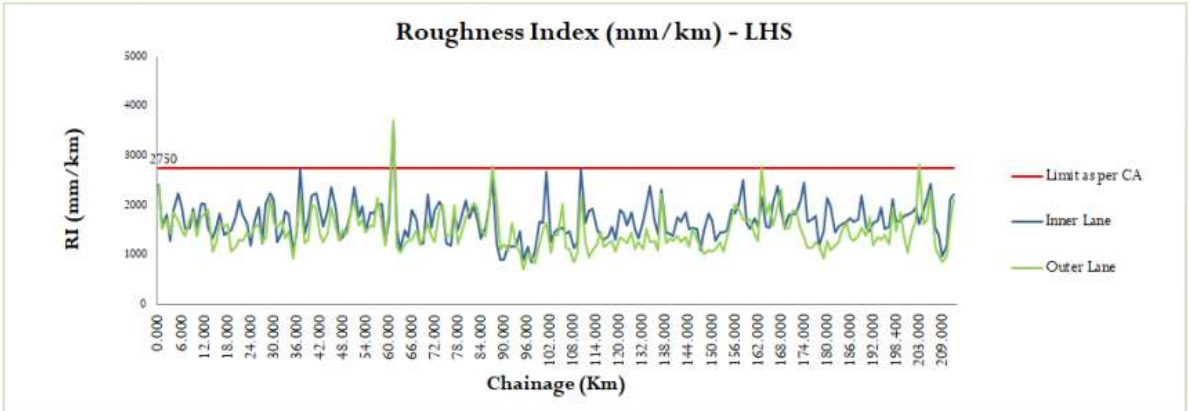
Table 4-3 Result of Roughness Survey

Table 2-2: Summary of RI Limit as per Schedule K of CA

Roughness Summary % as per Schedule K of CA (mm/km)					
Condition	Limit as per Schedule K of CA (mm/km)	LHS		RHS	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane
Good	<2750	99.51%	98.17%	98.32%	99.31%
Poor	>2750	0.49%	1.83%	1.68%	0.69%

Note: Higher Roughness values are observed due to Hanumanpeta Flyover at from km 61.000 to km 61.300 BHS, Toll Plaza at from km 110.100 to km 110.200 BHS, Speed breakers from km 198.800 to km 198.900 RHS, km 202.500 to 202.600 BHS and km 203.200 to 203.800 LHS.

Figure 2-3: Roughness Summary for NAMEL as per Schedule K of CA



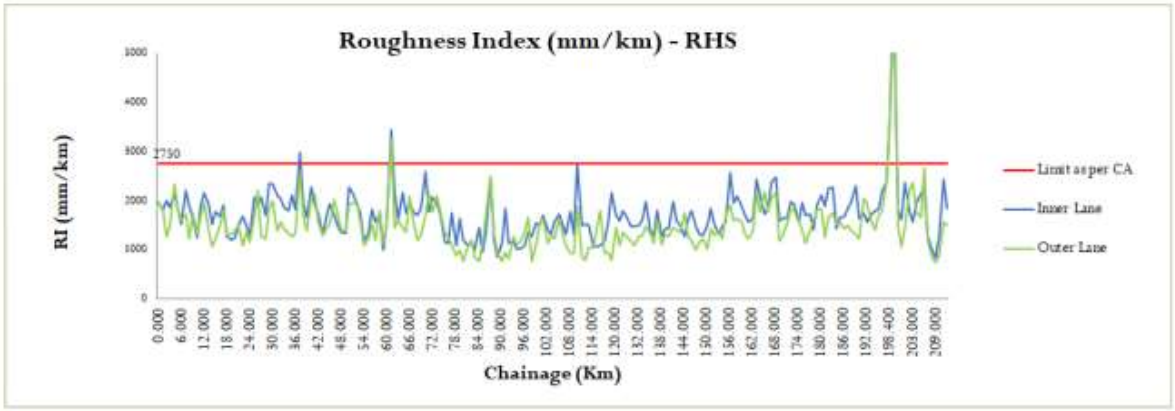


Figure 2-4: Roughness Index for NAMEL as per Schedule K of CA

Observation and Conclusion:

As per the NSV test carried out in the month of 13th December 2024 and the related Roughness results provided by the Concessionaire, it was observed that the overall pavement condition for the Project Road is found to be Good for 98.83% length (210.36 kms) and Poor for 1.170% length (2.49 kms). Poor road surface condition is maintained as part of routine maintenance; hence no additional expense is necessary to be considered when calculating major maintenance costs.

4.6 FWD Survey

The structural evaluation and analysis of the remaining life of project was carried out in conformity with IRC:115-2014 “Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique”.

The FWD survey was conducted on the Project Road on 12th September 2024 to 21st September 2024. The summary of the same is presented below.

Figure 1-2: Existing Pavement Layers 15th Percentile E Values on LHS Inner Lane

Figure 1-3: Existing Pavement Layers 15th Percentile E Values on LHS Outer Lane

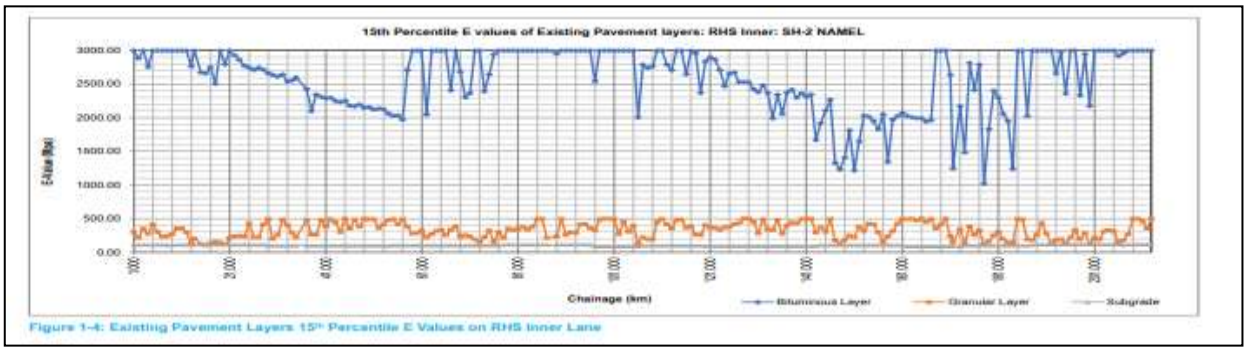

Figure 1-4: Existing Pavement Layers 15th Percentile E Values on RHS Inner Lane

Figure 1-5: Existing Pavement Layers 15th Percentile E Values on RHS Outer Lane

However, the maintenance can be carried out on as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. However, improvement in Riding Quality is expected if the roughness value exceeds 2500 mm/km.

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-K of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. Only improvement in Riding Quality is expected if the roughness value exceeds 2750 mm/km.

The Provisional Completion Certificate for the project was achieved on 06th March 2014. Hence, the major maintenance cycle is projected accordingly.

Currently Major Maintenance (Cycle-1) work for Section-3 from Km. 155+000 to Km. 212+500 is in progress. For the entire length of the Phase-3, 40 mm BC overlay with PMB-70 will be done and wherever the distresses are observed, those stretches (around 7% of the total Project length) will be rectified with milling & 50 mm DBM (with 35% RAP). Also, there are some stretches in Section-1, where distresses are observed and will be rectified with 35 mm BC (VG-40). Thin White Topping (TWT) of thickness 150 mm will be adopted for Toll Plaza 2 at Km. 110+200, Toll Plaza 3 at Km. 168+200 and Major Junction location at Km. 167+450. As the Service road is in good to fair condition, 30 mm BC Overlay will be done only at distressed locations on the Service road.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-4 Major Maintenance Cycle

Sr. No.	Chainage (km)		Length (km)	Length (%)	MM Cycle-1		MM Cycle-2	MM Cycle-3
	From	To			LHS	RHS	BHS	BHS
Sec-1	0	77	77	36.24%	MM completed in FY 2024		FY 2028	FY 2036
	77	87	10	4.71%	MM completed in FY 2024	MM completed in FY 2021	FY 2029	
Sec-2	87	120	33	15.53%	MM completed in FY21			
	120	127	7	3.29%	COS		FY 2031	FY 2038
Sec-3	127	155	28	13.18%	MM completed in FY 2024			
	155	212.5	57.5	27.06%	FY 2026		FY 2033	

Table 4-5 Major Maintenance Strategy

Cycle	Year	BC Overlay	Micro-surfacing	DBM Rehabilitation	Overlay	Rehabilitation	Service road
Cycle 1 Section 3	FY 26	27.00%	-	7.00%	27% 40 mm BC Overlay	7% 50 mm DBM Rehabilitation	BC 30 mm Overlay on 1.68 Km
Cycle 2	FY 28	36.24%	-	-	100% 40 mm BC Overlay	-	50% Micro-surfacing + 50% BC 30 mm Overlay
	FY 29	20.24%	-	-			
	FY 31	16.47%	-	-			
	FY 33	27.06%	-	-			
Cycle 3	FY 36	56.47%	-	-	73% 30 mm BC Overlay 27% Micro-surfacing	5% 50 mm DBM Rehabilitation	50% Micro-surfacing + 50% BC 30 mm Overlay
	FY 38	16.47%	27%	3%			

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost (CAPEX)
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1 Unit rates of different items (BC, DBM, Concrete, etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

a) **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

b) **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026 and FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971
IOC Barauni	VG-30	48,502	34,540
IOC Barauni	VG-40	51,242	36,492

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
CPC Chennai	VG-10	48,202	34,156
CPC Chennai	VG-30	49,002	34,723
CPC Chennai	VG-40	51,752	36,672

c) **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d) **Cement:** Market rates are considered from the nearest local market.

e) **Steel :** Rate of steel is taken from SAIL.

f) **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g) **Rates of items as per Work Order:** The rates of items such as kerb raising, micro-surfacing, milling, road stud etc. are based on the actual rates at which the work to be executed and thus are considered as per the Work Orders shared by the Client which is issued to the Contractors executing these works at the site.

2 Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (FY 2026 to FY 2027)	Rates (FY 2028 onwards)
1	PMB 70-10V	Cum	13,949	11,699
2	Dense Bituminous Macadam (With 35% RAP)	Cum	8,554	8,807
3	Bituminous Concrete	Cum	12,244	9,867
4	Milling	Sqm	99	99
5	Micro-surfacing	Sqm	160	160
6	Kerb Re-laying	Rmt	256	256
7	Road Marking	Sqm	515	515
8	Road Studs	Nos.	246	246

5.3 Balance Work Cost (CAPEX)

As discussed in the earlier chapter, the cost of Balance Work is **Rs. 52.18 Crores**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The

estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads:

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management Services
5. Electricity and Diesel Charges
6. TMS / HTMS / System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Horticulture & ROW Maintenance
16. Routine Maintenance Cost
17. Contingency

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026-40)
1	Salary and Welfare Expenses	39,758,400
2	Tolling Operations Services	40,013,880
3	Toll Security Services	12,327,455
4	Incident Management & Emergency Services	47,291,134
5	Electricity and Diesel Charges	13,157,012
6	TMS/HTMS/System Expenses	9,956,333
7	Office Operating Expenses	11,379,375
8	Vehicle Running Expenses	6,624,000
9	Professional Fees Expense	33,468,750
10	Community Development	5,578,125
11	Communication Expenses	1,338,750
12	Conveyance Expenses	1,450,313
13	Insurance Expense	29,006,250
14	IE Fees	18,921,000

Sr. No.	Particulars	Amount (FY 2026-40)
15	Routine Maintenance Cost (Project Road)	87,703,541
16	Horticulture & ROW Maintenance	56,353,033
17	Miscellaneous including Contingency	13,513,539
	Total Cost (Rs.)	**427,840,889**
	Total Cost (Cr.)	**42.78**
	Per km Cost (Lakhs)	20.13

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2026	101.68	
2	FY 2028	95.14	
3	FY 2029	52.86	
4	FY 2031	43.55	
5	FY 2033	70.40	
6	FY 2036	101.52	
7	FY 2038	56.38	
Total Cost (Cr.)		**521.54**	

5.6 Periodic Replacement of TMS /System

Every 7 years, replacement of cost of major TMS system is considered. The same is provided as below.

Sr. No.	Year	TMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	1.83	
2	FY 2034	1.83	
Total Cost (Cr.)		**3.66**	

5.7 Escalation Assumption

The following escalation is considered basis discussions with Client and our internal estimates.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2025	-	**2041**	4.00%
2026	4.87%	**2042**	3.99%
2027	5.23%	**2043**	3.99%
2028	4.92%	**2044**	3.99%
2029	4.63%	**2045**	3.98%
2030	4.33%	**2046**	3.98%
2031	4.12%	**2047**	3.96%
2032	4.07%	**2048**	3.96%
2033	4.06%	**2049**	3.95%
2034	4.00%	**2050**	3.95%
2035	4.01%	**2051**	3.95%

Year	Escalation	Year	Escalation
2036	3.99%	**2052**	3.95%
2037	4.00%	**2053**	3.95%
2038	4.02%	**2054**	3.95%
2039	4.00%	**2055**	3.95%
2040	3.98%	**2056**	3.95%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr)

Sr. No.	Year of expense	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40
1	Routine O&M Cost															
1.01	Salary and Welfare Expense	3.98	4.18	4.38	4.61	4.84	5.06	5.28	5.50	5.72	5.95	6.19	6.44	6.70	6.96	7.24

ANNEXURE

ANNEXURE-I ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Project -Narketpally to Medarametla	
Ordinary Repair Cost for Flexible (with GST)	**87,703,541**
(inclusive of GST)	**= 4.12 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders									
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)									
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD	**Urban** More than 4500 CVD	**Project Length (km)**		**Per Year Project Maintenance Cost**	
				230,866	**267,049**				
						Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	353225.00	408585.00	-	-	-	-
		Paved shoulder	1.70	392472.00	453983.00	191.44	-	7,51,19,141	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	461732.00	534098.00	-	-	-	-
		Paved shoulder	2.20	507905.00	587507.00	-	21.42	-	1,25,84,400
					TOTAL		**212.860**		**8,77,03,541**

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	1.00%
	Volume (cum)			5.00
	Rs/m^3			10443
	Cost in Rupees			52,215
	ii) Patch repair	100 % Patch less	As & when required	0.50%
	Area (sqm)			50
	Rs/m^2			418
	Cost in Rupees			20,886
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.50%
	Area (sqm)			250
	Rs/m^2			80
	Cost in Rupees			19,883
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			52
	Cost in Rupees			7,875
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.25%
	Area (sqm)			93.75
	Rs/m^2			418
	Cost in Rupees			39,161
	v) Road marking	14%	Once in 7th year & @ Repaired location	26156
	SUB TOTAL			**166,176**

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6210
	ii) Kuccha Drain Maintenance	100%	Twice in a Year	1092
	SUB TOTAL			**7,302**
3	**Maintenance of Cross Drainage works:**			
	i) Repair of floors	100%	Once in a Year	4978
	ii) Repair of parapets	100%	As & when required	2074
	SUB TOTAL			**7,052**
4	**Maintenance of Minor & Major Bridges:**			
	i) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints	100%	As & when required	
	ii) Repair of minor washouts, erosion scour and animal holes			
	iii) Sealing Cracks with Cement/ Epoxy Mortar			
	iv) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,387**
5	**Miscellaneous Items:**			
	i) Lettering, Painting of Km stones & kerbs, sign boards, hectometer stone etc.		Once in a Year	3639
	ii) Replacement and providing additional retro reflective signage	25%	Covering Total Network in 4-5 Years	9097
	iii) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1213
	iv) Traffic Census		Once in a Year	0
	v) Provision for roughness measurement		Twice in a Year	0

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Nelamangala - Devihalli Section of NH-75 from km. 28+200 to km. 110+000 in the State of Karnataka (hereinafter referred as "Project Road").

Nelamangala - Devihalli Expressway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for widening of Nelamangala - Devihalli Section (from km. 28+200 to km. 110+000) of NH-75 from 2-lane to 4-lane and its Improvement, Operation and Maintenance through a concession on Build, Operate and Transfer (BOT) basis. The project has been taken over by the Client on 11th January 2021 from M/s Lanco Devihalli Highways Private Limited (LDHPL), with a total concession period of 25 years (commencement of concession period is from 5th January 2008) in concurrence with National Highway Authority of India (NHAI). The length of Project Road is 80.262 kms with first toll plaza at Doddakarenahalli at km. 32+600 and second toll plaza at Karabylu at km. 100+850.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and filed investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance sstrategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted.
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyzing the same as per the best engineering / industry practices.

The site visit and inspection are carried out from **15th January 2025** to **17th January 2025**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Nelamangala Devihalli Expressway Private Limited**, is a company promoted by M/s Lanco Devihalli Highways Private Limited (LDHPL) or a Special Purpose Vehicle (SPV) formed for implementing this project on 9th July 2007. The Appointed Date for the Project Road is 5th January 2008. The project has been taken over by the Client on 11th January 2021 from M/s. Lanco Devihalli Highways Private Limited (LDHPL).

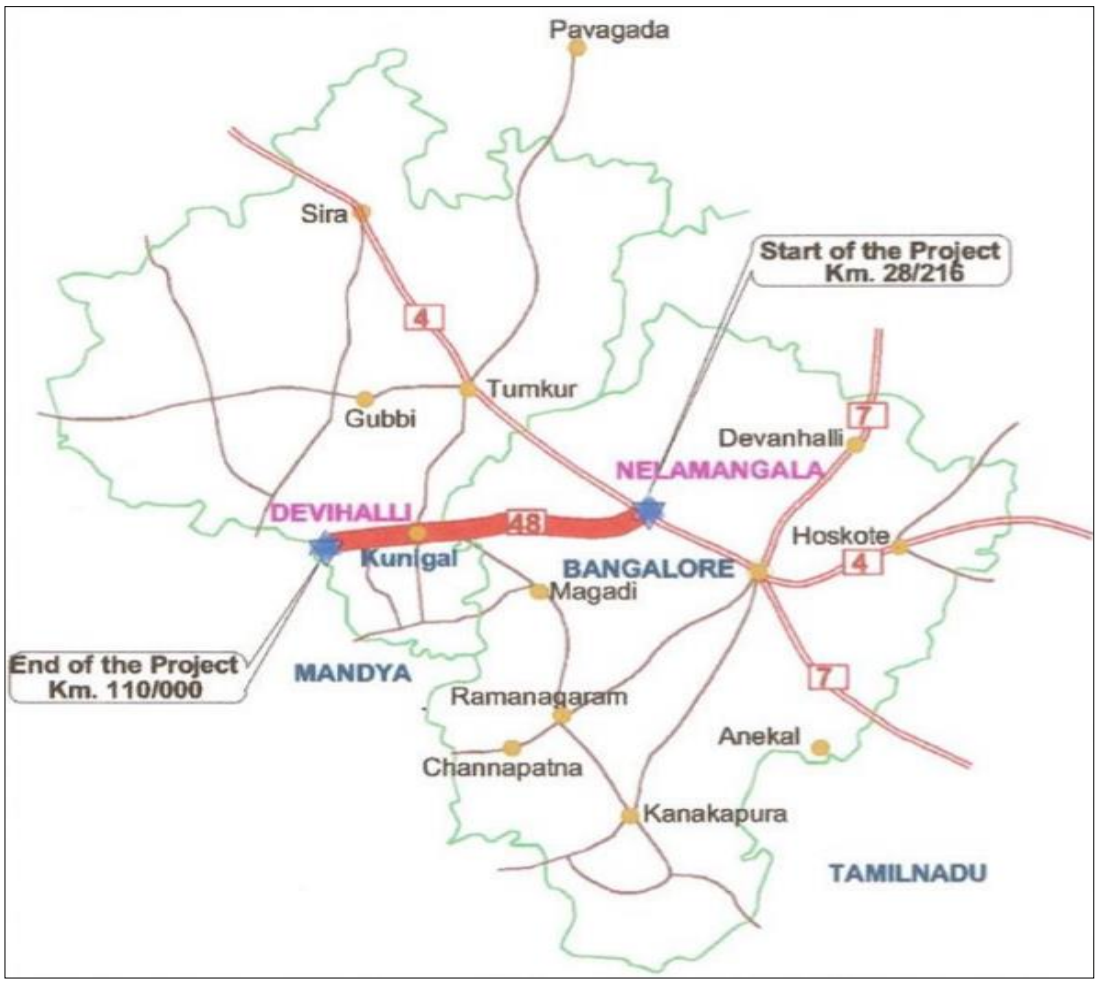
The project has been developed on Build, Operate and Transfer (BOT) basis with concession period of 25 years from the Appointed Date while O&M has started from 23rd June 2012, as PCOD for the project is granted on 23rd June 2012.

2.2 Location

The Project Road is part of National Highway No. 75 of Nelamangala - Devihalli section in the state of Karnataka. The total project length is 80.262 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map



The photographs taken during the site visit are presented below.

Figure 2-2 Start of Project Road

Figure 2-3 End of Project Road

2.3 Climate

The climate of the project area is generally dry except during the South-West monsoon season between June and September / October. The average annual rainfall in the area is around 600 mm. The driest month is January. Most precipitation falls in October. The average annual temperature of the project area is 28.00 C, April being the warmest month.

2.4 Terrain

The Project Road traverses through plain / rolling terrain.

2.5 Abutting Land Use

The land use along the highway is predominantly agriculture or barren and rocky.

2.6 Right of Way

The width of the existing Right of Way (RoW) throughout the project stretch is 60.0 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Nelamangala (km. 28+200) to Devihalli (km. 110+000) has been developed as a four-lane divided carriageway with a median width of 2 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	80.262	From June 2012
2	Construction of Service Road	km.	44.174	Both Side
3	Major Bridges	Nos.	02	
4	Minor Bridges - 03 lane	Nos.	17	
5	Minor Bridges - 06 lane	Nos.	06	
6	Repair & extending of Box Culvert	Nos.	09	
7	Repair & extending of Pipe Culvert	Nos.	73	
8	New Pipe Culvert construction	Nos.	17	
9	Repair of Pipe Culvert	Nos.	04	
10	Pedestrian Underpass	Nos.	06	
11	Vehicular Underpass	Nos.	09	
12	Cattle Underpass	Nos.	08	
13	ROB	No.	01	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has a paved carriageway of 9.0 m with an earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **15th January 2025** to **17th January 2025,** through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is found to be Fair to Good.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW)

km. 28+350

km. 28+250

km. 68+000

km. 89+600 - Patch work (RHS)

km. 103+700

3.2 Service Road / Slip Road

The service road with width of 5.5 m is constructed in built-up areas and adjoining underpass locations. The Project Road has total service road length of 48.127 kms and cart track length of 30.580 kms. The photographs taken during the site visit are presented below.

km. 42+950 to km. 43+500 (LHS)

km. 85+530 to km. 96+400 (LHS)

3.3 Major / Minor Junctions

There are 09 nos. of major junctions and 29 nos. of minor junctions on Project Road.

The photographs taken during site visit are presented below.

Figure 3-3 Photographs of Major Junctions

km. 65+400

km. 72+540

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Number of Structures
Major Structures:	
Road Over Bridge (ROB)	1
Overpasses	Nil
Flyover	Nil
Vehicular Underpass (VUP)	9

Type of Structure	Number of Structures
Pedestrian Underpass (PUP)	3
Cattle Underpass (CUP)	12
Major Bridges (MJB)	2
Minor Bridges (MNB)	24
Culverts:	
Pipe Culverts	114
Box Culverts	14
Total	**179**

The detailed condition survey of structures was carried out by visual inspection. The detailed condition survey of structures was carried out from **16th January 2025 to 17th January 2025**. The observations and findings are presented in table below.

Table 3-2 Condition Survey of Major Structure

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There are 23 Nos. of pipe culverts, 66 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations, which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, in case of some culverts, cement concrete pitching has been damaged which required to be addressed under routine repair work by the Concessionaire.

Figure 3-6 Photographs of Culverts

Pipe culvert at km. 55+482

Box culvert at km. 51+800

3.6 Drainage

There are RCC box drains at the built-up areas and earthen drain at rural areas provided for the Project Road. Lined median longitudinal drain is provided at super-elevated sections. Some of the photographs of the drains provided are presented as below.

Figure 3-7 Photographs of Drainage

km. 55+500 (RHS)

km. 49+650 (RHS)

km. 67+700 (LHS)

3.7 Slope Protection

Slope protection and chute drains are found on Project Road at required locations.

3.8 Road Furniture

The Concessionaire has provided additional road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C. Details of the items are provided below.

a) Lighting Along the Project Road

Lighting including fixing of poles and LED lights are provided at following locations on the Project Road in accordance with Clause 12.3 of IRC:SP:84-2014.

Table 3-3 Details of Lighting on Project Road

Sr. No.	Side	Installed/fitted at	No. of (LED) lights
1	Both Side	Highway lighting at 18 no. of locations	540
2	Both Side	Toll Plaza - 02 nos.	163
3	Both Side	Underpasses-12 nos.	72
		Total in (Nos.)	**775**

b) Transverse / Thermoplastic Bar Marking Locations

Transverse / thermoplastic bar markings on either side of carriageway on proposed service road / VUP / VUP approach locations are provided as per Section 11.2 of IRC:35-2015.

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D.

Some of the photographs of the pavement marking provided are presented as below.

Figure 3-8 Photographs of Pavement Marking

km. 30+450 (LHS)

km. 37+600 (RHS)

km. 39+600 (LHS)

km. 43+700 (LHS)

Road Studs

Road studs / Cat's eye for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Road studs / Cat's eye has been fixed at junction and zebra crossings.

Some of the photographs of the road studs provided are presented as below.

Figure 3-9 Photographs of Road Studs

km. 39+930

km. 82+180

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs includes roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Some of the photographs of sign boards are presented below.

Highway Lighting

Highway lighting is provided at underpasses, toll plaza, and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpasses.

Some of the photographs of highway lighting are presented below.

Figure 3-11 Photographs of Street Light

km.46+100

km. 39+930

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

Some of the photographs of metal beam crash barriers are presented below.

km. 31+000 (LHS)

km.32+100(LHS)

km. 91+915 (LHS)

km. 35+840 (RHS)

Delineators

816 No. of traffic delineators are provided by Concessionaire for the safety of road users along the Project Road.

Pedestrian Guard Rail

The pedestrian guard rails are provided between service road and main carriageway.

Some of the photographs of pedestrian guard rails are presented below.

Figure 3-13 Photographs of Pedestrian Guard Rail

km. 46+230 - Besides Service Road (LHS)

km. 54+150 - Besides Service Road (LHS)

Road Land Boundary

Road land boundary pillar is not found / available on Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantations is observed at some locations. Median plantation has been provided in the project length as per IRC specification.

The photographs taken during the site visit are presented below.

Figure 3-14 Photographs of Median Plantation

3.10 Toll Plaza

I. Toll Plaza-1 at km. 32+600

The construction of toll plaza is completed and is in operation. 10 (5+5) Nos. of lanes has been constructed and all are under operation. The Concessionaire has constructed administration, operation and maintenance facility at base camp. All required facilities are available at the toll plaza. Some of the photographs of toll plaza-1 are presented below.

Table 3-4 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 32+600
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for over dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for	Tunnel / no

Sr. No.	Particulars	Details
	Movement between Toll Lanes and Administrative Building	
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	6
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Figure 3-15 Photographs of Toll Plaza-1

Toll Plaza-1 at km. 32+600

Toll Plaza-1 at km. 32+600

Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which is connected to the common server and are capable of independent storage of data.

Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of camera based, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at TP

Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

Over Head Lane Signal (OHLS)

The Overhead Lane Signal (OHLS) for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

Toll Booth Equipment

- Toll Booth Hardware / Equipment provided are:
- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

The violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

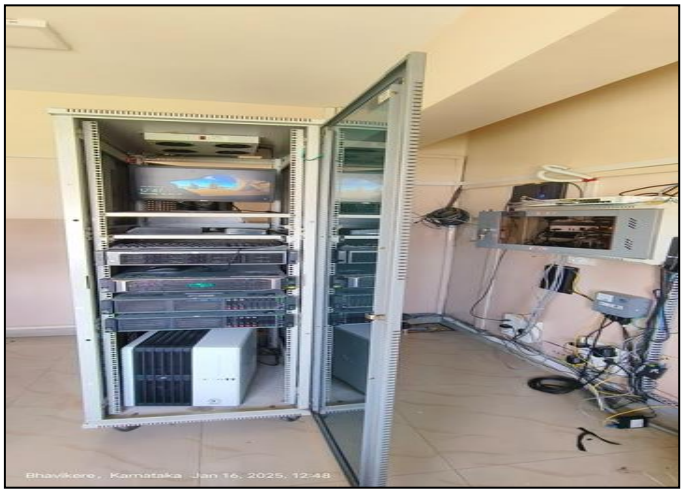
Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

Plaza Equipment

TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewalls with Sophos antivirus is provided.



55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides a view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

Workstations in Control Room, POS room

Workstations are available in the control room (lane monitoring, administration, and audit), cash room and PoS.

II. **Toll Plaza-2 at km. 101+250**

The construction of toll plaza is completed and is in operation. 10 (5+5) Nos. of lanes has been constructed and all are under operation. Concessionaire has constructed administration, operation and maintenance facility at base camp. All required facilities are available at the toll plaza. Some of the photographs of toll plaza - 2 are presented below.

Table 3-5 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 101+250
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for over dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel/no
10	Availability of Static Weigh Bridge	Yes

km. 32+150

km. 88+900

3.13 Toilet Block

Toilet blocks are provided at the Toll Plaza locations on the Project Road.

Toilet block at Toll Plaza

3.14 Balance Work Status

The Project Road has received Final Completion Certificate on 23rd June 2012 by completing all the works as mentioned in the Technical Schedules of Concession Agreement. There are no balance works to be executed as per Concession Agreement.

3.15 Operation and Maintenance

3.15.1 O&M Contract

As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable

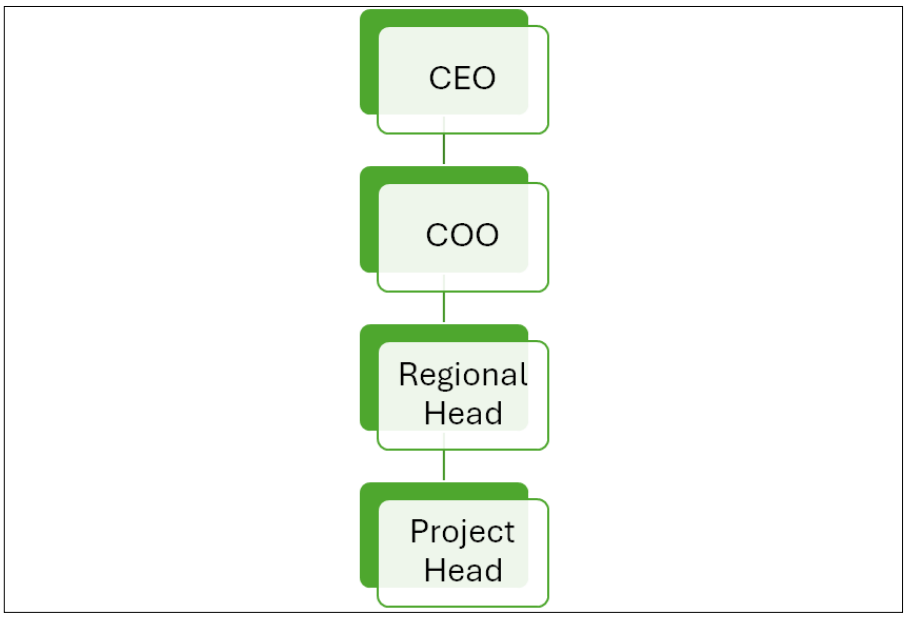
Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall conform to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

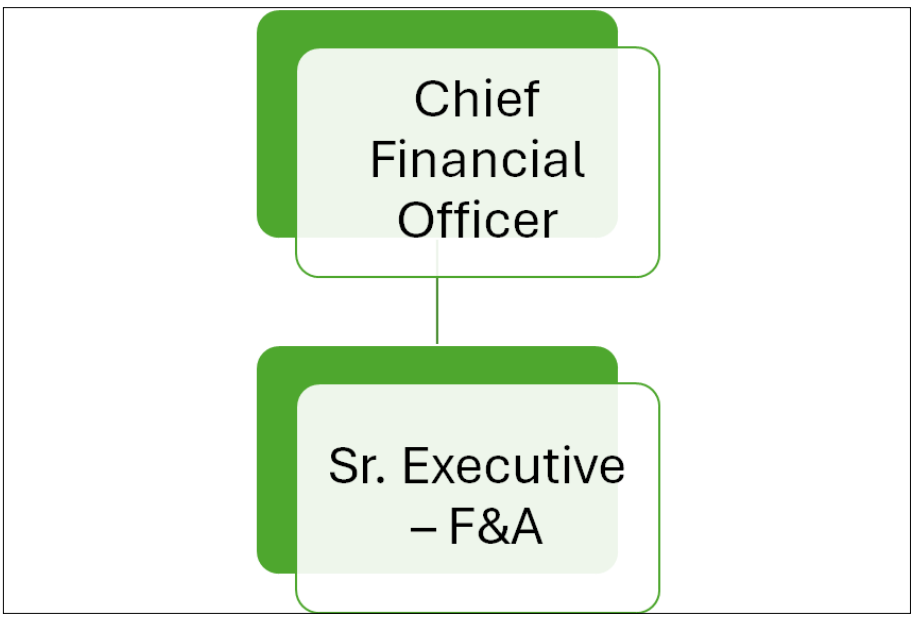
3.15.2 Organization Chart

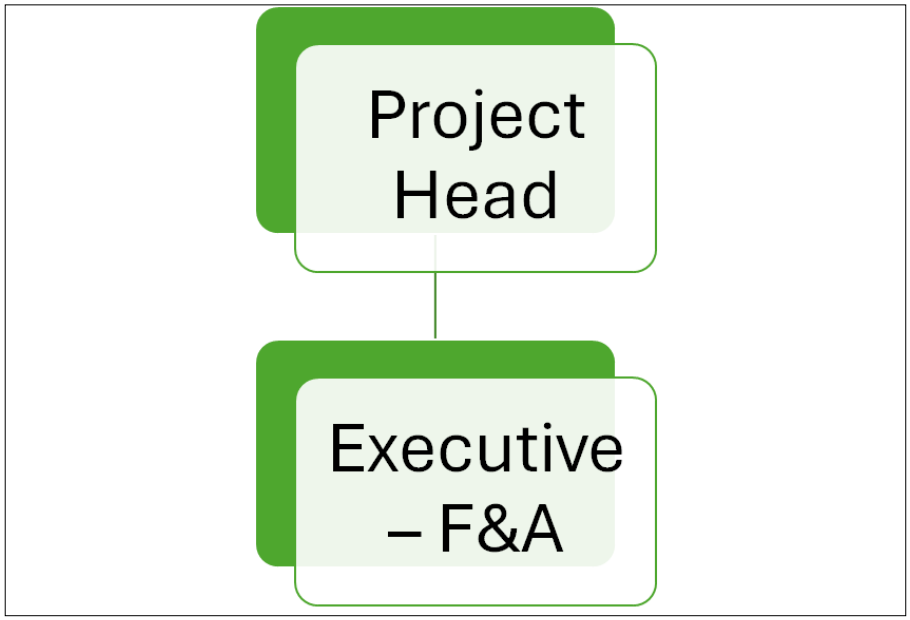
The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive (HR), 01 Assistant Manager (TMS / IT), 01 Executive (TMS / IT), 01 Plaza Manager, 01 Assistant Plaza Manager, 04 Cashiers and 04 validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

Organization Chart

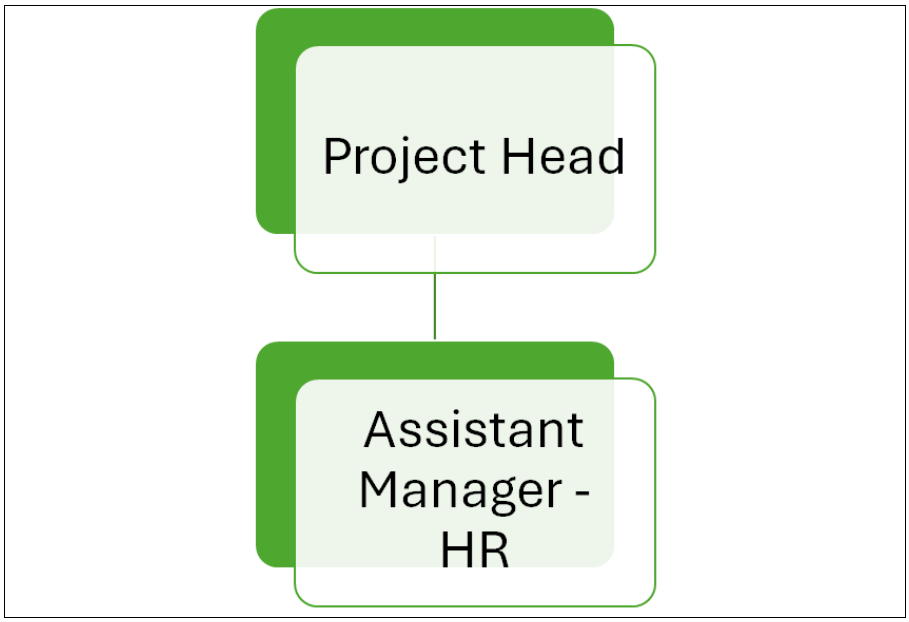


Finance & Accounts

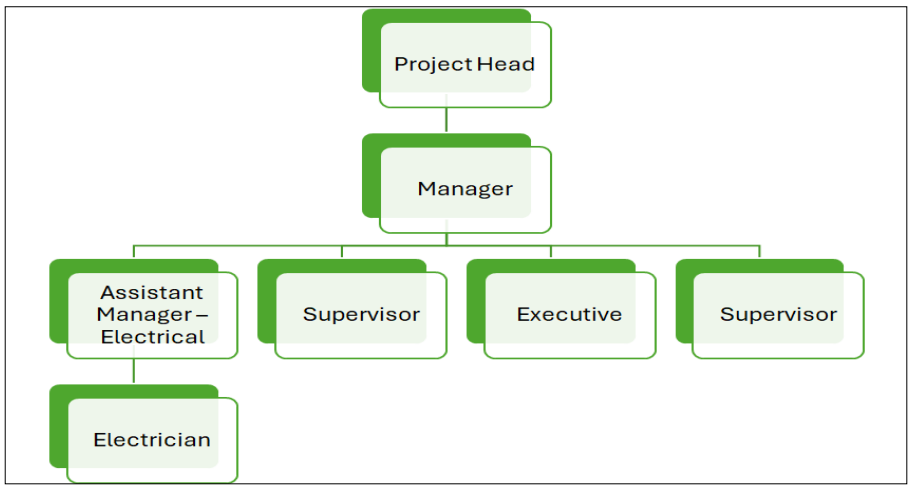




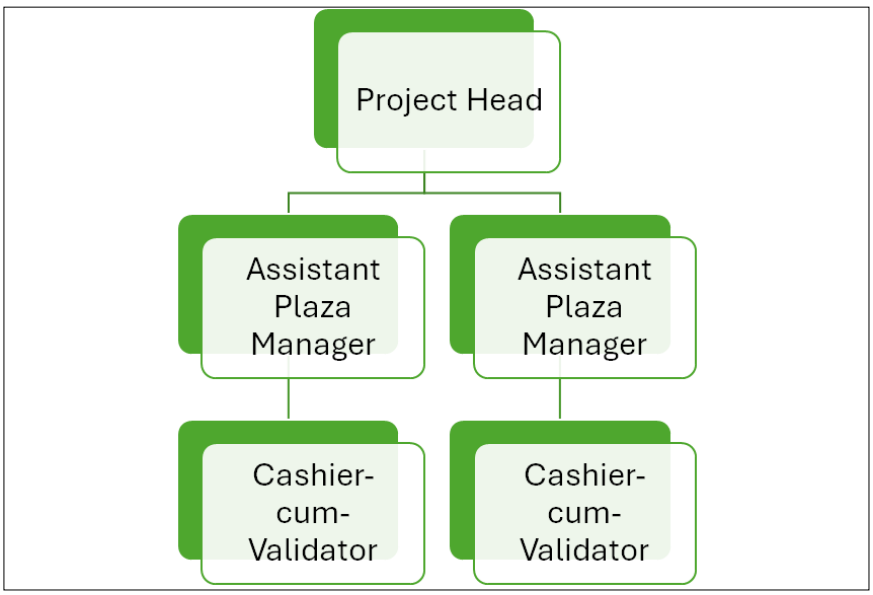
Human Resource



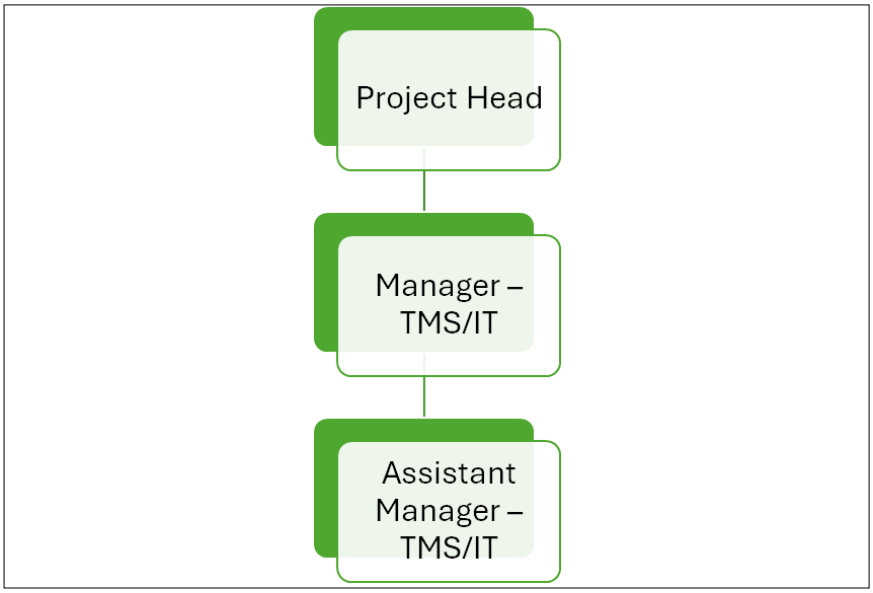
Maintenance



Operations



Operation Systems



Traffic & Road study

3.15.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.15.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Concessionaire received the Completion Certificate on 23rd June 2012.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 25 years from the Appointed Date including construction period of 30 months.

4.2 Axle Load and VDF

The Concessionaire has conducted the axle load survey on Project Road at km. 32+500 (near Doddakarenahalli Toll Plaza) and at km. 100+950 (near Karabylu Toll Plaza) from 29-Mar-2021 to 02-Apr-2021. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor (VDF)

Vehicle Category	Vehicle Damage Factor			
	At TP-1 (km. 32+500)		At TP-2 (km. 100+950)	
	LHS	RHS	LHS	RHS
Bus	1.049	1.036	1.034	1.051
LCV	0.738	1.238	0.874	1.231
2-Axle	2.533	4.52	3.281	3.133
3-Axle	4.932	15.218	7.076	8.977
MAV	7.471	11.848	15.92	18.081

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculation at TP-01					
Year	LHS		RHS		Remarks
	MSA	Cumulative MSA	MSA	Cumulative MSA	
FY25	-	**-**	-	**-**

FY28	3.01	**8.55**	3.42	**9.71**	
FY29	3.02	**11.57**	3.43	**13.14**	
FY30	3.26	**14.83**	3.69	**16.83**	
FY31	3.26	**18.09**	3.70	**20.53**	
FY32	3.51	**21.60**	3.98	**24.51**	
FY33	3.52	**25.12**	3.99	**28.51**	End of concession period

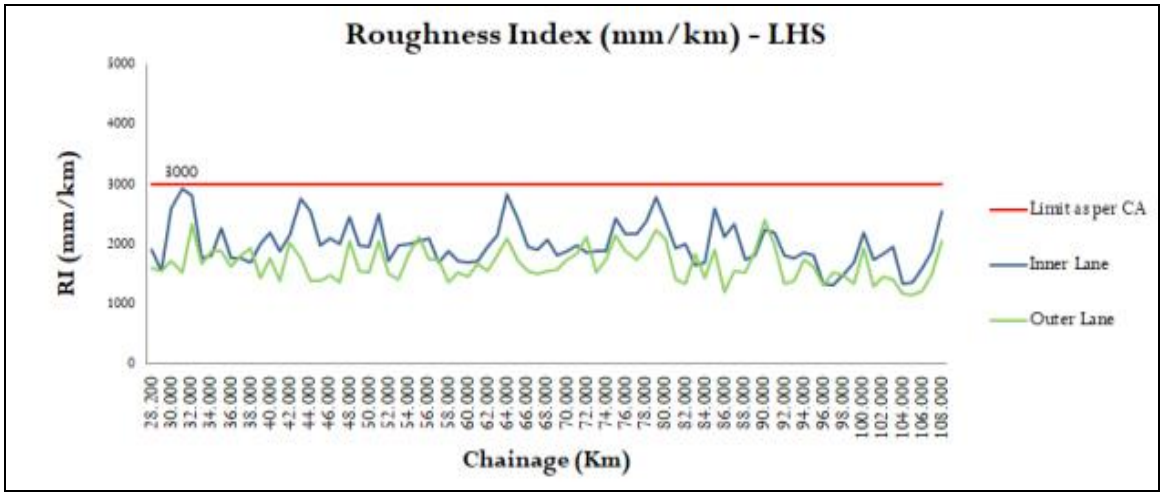
4.4 Network Survey Vehicles (NSV) Survey

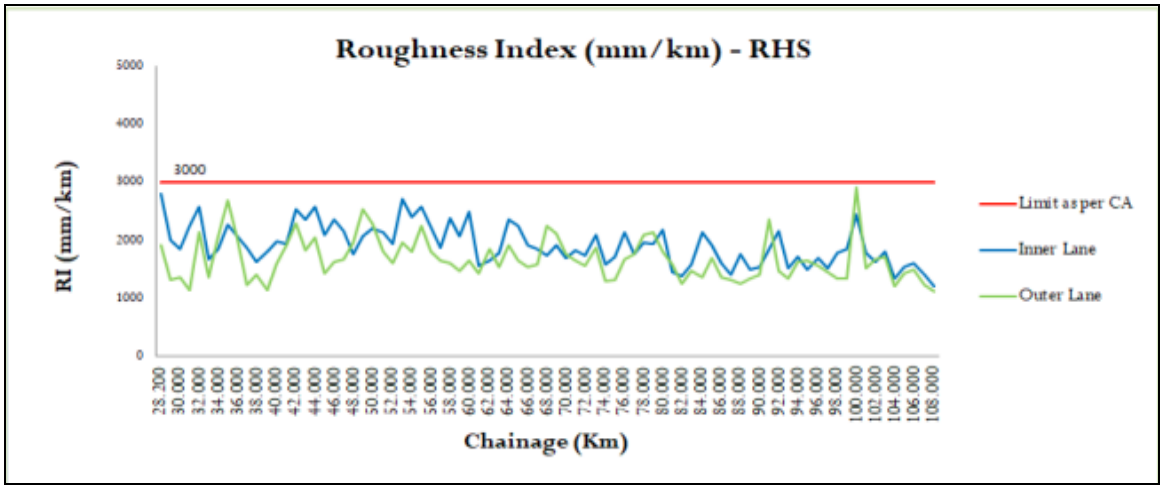
The Concessionaire has provided NSV survey data conducted in November 2024. The NSV data is used to assess the riding quality and pavement condition of Project Road. The summary of classification of pavement as per Schedule-L is given in the table below:

Table 4-3 Summary of NSV Survey

Riding Condition	Roughness Index (mm/km)	Length (km)			
		LHS		RHS	
		Inner	Outer	Inner	Outer
Good	<2000	46.80	68.80	50.40	65.20
Fair	2000-3000	33.40	11.40	29.80	15.00
Poor	>3000	0.00	0.00	0.00	0.00

From the above table it is observed that the overall condition of pavement is Good to Fair.





4.5 Structural Investigations

An evaluation of existing pavement using Falling Weight Deflectometer (FWD) survey was carried out from 10-Oct-2024 to 13-Oct-2024. Summary of FWD Survey report is presented in the table below:

Table 4-4 Summary of FWD Survey

Description	Length (km)			
	LHS		RHS	
	Inner Lane	Outer Lane	Inner Lane	Outer Lane
Less than 10 MSA	-	-	-	-
10-50 MSA	20.00	24.00	35.00	35.85
Above 50 MSA	61.47	57.47	46.47	48.62
Total Length Tested	**81.47**	**81.47**	**81.47**	**81.47**

From the above table, it is concluded that the residual life of the pavement is more than the design life of the Project Road. Hence, immediate major maintenance of the pavement is not required.

The strengthening/ overlay of pavement for Project Road are derived from 15th percentile of corrected E moduli of existing pavement, existing crust thickness etc. The combination of existing pavement and overlay will be analyzed as a four-layer system to ensure that fatigue and rutting criteria are satisfied for the calculated design traffic in terms of MSA. IITPAVE program is used to compute strain value at bottom of bituminous layer and top of subgrade in order to calculate design life of the proposed overlay. Poisson's ratio values used in overlay analysis from top to bottom of existing pavement layers are 0.5, 0.4 and 0.4 for existing bituminous, existing granular and existing subgrade layers respectively. Elastic modulus of 3000 MPa (VG-40) is used for the new bituminous layer.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below:

Table 4-5 Test Results Summary of Natural Ground Soil Samples

Sr. No.	Existing Road	Location (km)	Side (LHS/RHS)	Soil Classification as per IS: 1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)						Clay & silt content %	Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		Field Density		4-Days Soaked CBR (%)	Free Swell Index (%)	Degree of Compaction (%)
					19.0 mm	10.0 mm	4.75 mm	2.0 mm	425 micron	75 micron		Liquid Limit (LL) %	Plastic Limit (PL) %	Plasticity Index (PI)	Max. dry density gm/cc.	OMC (%)	Field Dry Density (gm/cc)	FMC (%)

4.7 Periodic Maintenance Strategy

Major Maintenance is required in order to comply requirement of Concession Agreement and to maintain performance level as defined in Schedule-L. As per schedule-L of Concession Agreement, periodic maintenance shall be carried out at least once every 5th year from COD and in the last year of concession period.

It is noted that Concessionaire has carried major maintenance in Year 2022-23. The table below shows the major / periodic maintenance cycle throughout the balance concession period for the Project Road. As per Concession Agreement, periodic maintenance shall be carried out in the last year of concession period. Hence, major maintenance is proposed in FY 2033 for the entire length. Before carrying out major maintenance, structural evaluation shall be done through surveys and investigation to determine the overlay requirement.

Table 4-8 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road	Cart Track
1	FY 2026 to FY 2027	-	-	-
2	FY 2028	30 mm BC (PMB) overlay in 50%, 50 mm DBM (VG-40) in 5% and Micro-surfacing in 50% length	30 mm BC overlay in 50% and Micro-surfacing in 50% length	30 mm BC overlay in 50% and Micro-surfacing in 50% length
3	FY 2029 to FY 2032	-	-	-
3	FY 2033	30mm BC (VG-40) overlay in 100% length, 50 mm DBM (VG-40) in 5%	30 mm BC overlay in 50% and Micro-surfacing in 50% length	30 mm BC overlay in 50% and Micro-surfacing in 50% length

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Work Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026 and FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years.

   Rate of polymer and modification cost were provided by the Client to workout BC rate with PMB.

   Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Barauni	VG-30	48,502	34,540
IOC Barauni	VG-40	51,242	36,492
CPC Chennai	VG-10	48,202	34,156
CPC Chennai	VG-30	49,002	34,723
CPC Chennai	VG-40	51,752	36,672

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from market rate.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.) (FY 26 onwards)
1	Dense Bituminous Macadam (VG-40)	Cum	9,365
2	Bituminous Concrete (PMB)	Cum	12,361
3	Bituminous Concrete (VG-40)	Cum	10,624
4	Bituminous Concrete (VG-30)	Cum	10,336
5	Milling	Sqm	110
6	Micro-surfacing	Sqm	176
7	Kerb Re-laying	Rmt	297
8	Road Marking-BC Surface	Sqm	423
9	Road Marking-Micro Surface	Sqm	603
10	Road Studs	Nos.	185

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, balance work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other

miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads:

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount
1	Salary and Welfare Expenses	1,98,00,000
2	Tolling Operations Services Outsourced	4,76,43,509
3	Toll Security Services Outsourced	91,44,273
4	Incident Management & Emergency Services	2,87,32,922
5	Electricity and Diesel Charges	84,49,247
6	TMS/System Expenses	36,10,800
7	Office Operating Expenses	22,12,525
8	Vehicle Running Expenses	43,20,000
9	Professional Fees Expenses	80,09,339
10	Community Development	12,39,014
11	Communication Expenses	7,08,008
12	Conveyance Expenses	3,98,254
13	Insurance Expenses	88,34,783
14	IE Fees	88,50,098
15	Routine Maintenance Cost (Project Road)	4,39,82,538
16	Horticulture & ROW Maintenance	3,36,39,742
17	Miscellaneous including Contingency	45,58,583
	Total Cost (Rs.)	**23,41,33,635**
	Total Cost (Cr.)	**23.41**
	Per km Cost (Lakhs)	29.17

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2028	86.18	
2	FY 2033	95.56	
Total Cost (Cr.)		**181.74**	

5.6 Periodic Replacement of TMS / System

Every 7 years, replacement of cost of major TMS / system is considered. The same is provided as below.

Sr. No.	Year	TMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2030	1.29	
Total Cost (Cr.)		**1.29**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%
2041	3.99%	**2057**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr)

Sr. No.	Year of expense	FY 26	FY 27	FY 28	FY 29	FY 30	FY 31	FY 32	FY 33
1	Routine O&M Cost								
1.01	Salary and Welfare Expense	1.98	2.09	2.20	2.31	2.41	2.51	2.61	2.72
1.02	Tolling Operations Services	4.76	5.03	5.29	5.55	5.79	6.04	6.29	6.55
1.03	Toll Security Services	0.91	0.96	1.02	1.06	1.11	1.16	1.21	1.26
1.04	Incident Management Services	2.87	3.03	3.19	3.35	3.49	3.64	3.79	3.95
1.05	Electricity and Diesel Charges	0.84	0.89	0.94	0.98	1.03	1.07	1.12	1.16
1.06	TMS/System Expenses	0.36	0.38	0.40	0.42	0.44	0.46	0.48	0.50
1.07	Office Operating Expenses	0.22	0.23	0.25	0.26	0.27	0.28	0.29	0.30
1.08	Vehicle Running Expenses	0.43	0.46	0.48	0.50	0.53	0.55	0.57	0.59
1.09	Professional Fees Expense	0.80	0.85	0.89	0.93	0.97	1.02	1.06	1.10
1.10	Community Development	0.12	0.13	0.14	0.14	0.15	0.16	0.16	0.17

4	Balance Works Cost	-	-	-	-	-	-	-	-
	Total Cost	**23.41**	**24.71**	**119.49**	**27.27**	**30.04**	**29.68**	**30.91**	**152.25**

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Ordinary Repair Cost for Flexible (with GST)	**4,39,82,538**
(Inclusive of GST)	**= 5.48 lakhs per km**

Sr. No.	Description for Flexible Pavement		Factor	Normal	Urban	Hilly	Project Length (km)		Per Year Project Maintenance Cost	
				More than 4500 CVD	More than 4500 CVD	More than 4500 CVD				
				2,85,788	**3,24,369**	**3,29,210**				
							Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	437255.00	496285.00	503691.00	-	-	-	-
		Paved shoulder	1.70	485839.00	551428.00	559657.00	58.40	-	2,83,71,540	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	571576.00	648739.00	658420.00	-	-	-	-
		Paved shoulder	2.20	628733.00	713613.00	724262.00	-	21.88	-	1,56,10,998
						TOTAL	**80.273**		**4,39,82,538**	

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Potholes repair (50 mm deep)	100 % Pothole free	As & when required	0.75%
	Volume (cum)			3.75
	Rs/m^3			10915
	Cost in Rupees			40,931
	ii) Patch repair	100 % Patch less	As & when required	1.50%
	Area (sqm)			150
	Rs/m^2			437
	Cost in Rupees			65,490
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	3.00%
	Area (sqm)			300
	Rs/m^2			70
	Cost in Rupees			20,886
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.50%
	Area (sqm)			187.5
	Rs/m^2			46
	Cost in Rupees			8,708
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	2.00%
	Area (sqm)			150
	Rs/m^2			437
	Cost in Rupees			65,490

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)

				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
	v) Road marking	14%	Once in 7th year & @ Repaired location	10558
	SUB TOTAL			**2,12,063**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6210
	ii) Jungle Clearance	100%	Twice in a Year	2038
	iii) Kuccha Drain Maintenance	100%	Twice in a Year	1092
	SUB TOTAL			**9,340**
3	**Maintenance of Cross Drainage works:**			
	i) Cleaning of culvert bed	100%	Once in a Year	2751
	ii) Repair of floors	100%	Once in a Year	4978
	iii) Repair of parapets	100%	As & when required	2074
	SUB TOTAL			**9,803**
4	**Maintenance of Minor & Major Bridges:**			
	i) Cleaning and removal of dirt & vegetation from pier caps, Bearings, Expansion Joints, Superstructure, Substructure and Retaining wall etc.	100%	As & when required	36,387
	ii) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints			
	iii) Repair of minor washouts, erosion scour and animal holes			
	iv) Sealing Cracks with Cement/ Epoxy Mortar			
	v) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**36,387**
5	**Miscellaneous Items:**			
	i) Turfing and Arboriculture		Once in a Year	2426

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Nanguneri to Kanyakumari Section of NH-44 from km. 180+000 to km. 243+470 in the State of Tamil Nadu (hereinafter referred as "Project Road").

Nanguneri Kanyakumari Tollway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Nanguneri to Kanyakumari Section (km. 180+000 to km. 243+470) of NH-44 or Project Road under TOT Bundle-3. The project was awarded to Concessionaire on 20th October 2020. The length of Project Road is 63.47 kms with one toll plaza at Nanguneri Village at km. 185+860.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and filed investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, aaxle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out from **22nd January 2025 to 23rd January 2025**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates**: The chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Nanguneri Kanyakumari Tollway Private Limited**, is a company promoted by Cube Highways or a Special Purpose Vehicle (SPV) formed for implementing this project on 27th December 2019. The Appointed Date for the Project Road is 20th October 2020.

The project is being developed under TOT (Toll Operate Transfer) Bundle-3 with concession period of 30 years from the Appointed Date. The end of the concession period is in the year 2050.

2.2 Location

The Project Road is part of National Highway No. 44 (old NH-7) of Madurai-Kanyakumari section in the State of Tamil Nadu. The total project length is 63.47 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start and End of Project Road

Start of the Project Road

End of the Project Road

2.3 Climate

The project being in the region southeast of the western ghats, the area is hot and dry. Temperatures range between a maximum of 37 °C and a minimum of 22 °C. April to June are the hottest months and December and January are the coldest with temperatures rising towards the end of February. Rainfall occurs mostly during the north-east monsoon in the months of October to December. However, the project stretch receives little rainfall, averaging 840 mm. Annual rainfall has ranged from 964 mm to 228 mm during past decades.

2.4 Terrain

This section of National Highway traverses through plain terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up area.

2.6 Right of Way

The width of existing Right of Way (RoW) throughout the project stretch is 60.0 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Nanguneri village (km. 180+000) to Kanyakumari (km. 243+470) has been developed as a four-lane divided carriageway with a median width of 2 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	Km.	63.47	
2	Construction of Service Road	Km.	2.74	(LHS+RHS)
3	Reconstruction of Pipe Culvert	Nos.	03	
4	Widening of existing Pipe Culvert	Nos.	02	
5	Widening of existing Slab Culvert	Nos.	01	
6	Repair & rehabilitation of Major Bridges	Nos.	02	
7	Repair & rehabilitation of Minor Bridges	Nos.	31	
8	Repair & rehabilitation of Box Culvert	Nos.	44	
9	Repair & rehabilitation of Pipe Culvert	Nos.	104	
10	Repair & rehabilitation of ROB	Nos.	02	
11	Repair & rehabilitation Vehicular Underpass (VUP)	Nos.	06	
12	Improvement of Major Junction	Nos.	05	
13	Improvement of Minor Junction	Nos.	15	
14	Provision of Drain	Km	2.74	(LHS+RHS)

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

The pavement condition survey was carried out from **22nd January 2025 to 23rd January 2025** through visual inspection for the entire project length. From the visual inspection, it is found that the pavement condition of the Project Road is found to be Good.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW)

km. 181+200

km. 208+880

km. 221+800

km. 237+900

km. 239+600

km. 243+400

3.2 Service Road / Slip Road

The service road with width varies from 5.5 m to 7.0 m and is constructed in built-up area and adjoining underpass locations. The Project Road has total service road length of 62.28 kms. The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

km. 180+250

km. 190+350

3.3 Major / Minor Junctions

There are 12 nos. of major junctions and 50 nos. of minor junctions along Project Road.

The photographs taken during site visit is presented as below:

Figure 3-3 Photographs of Junctions

Junction at km. 221+800

Junction at km. 225+750

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Major Structures:	
Major Bridges (MJB)	02
Minor Bridges (MNB)	31
Slab Culverts / Box Culverts	44
Pipe Culverts	104
Road over Bridges (ROB)	02
Vehicle / Cattle Underpass	06
Total	**189**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There are 104 Nos. of pipe culverts and 44 Nos. of box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, The cement concrete pitching or stone pitching has been provided for slope protection.

The photographs taken during site visit are presented below.

Figure 3-5 Photographs of Culverts

Pipe culvert at km. 186+991

Box culvert at km. 181+205

3.6 Drainage

A total length of 4.51 kms of pucca / concrete drain (which includes drain on both sides) is constructed along the Project Road. The photographs taken during site visit is presented as below.

Figure 3-6 Photograph of RCC Drain

3.7 Slope Protection

Slope protection and chute drains are found on Project Road at required locations.

3.8 Road Furniture

The Concessionaire has provided additional road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C. Details of the items are provided below.

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Some of the photographs of road marking are presented below.

Figure 3-7 Photographs of Pavement Marking

km. 180+050

km. 185+000

km. 220+000

km. 240+000

Road Studs

Road stud / cat's eye for the project Road is done as per the design standards indicated in section 12 of Schedule-D. Road studs / cat's eye has been fixed at junction and zebra crossings. Some of the photographs of road studs are presented below.

Figure 3-8 Photographs of Road Studs

km. 184+500

km. 194+600

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs includes roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations which will be rectified by the Concessionaire.

Some of the photographs of sign boards are presented below.

Figure 3-9 Photographs of Road Signages

km. 180+250

km. 182+020

km. 184+500

km. 193+800

km. 183+410

Highway Lighting

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers. Some of the photographs of highway lighting are presented below.

Figure 3-10 Photograph of Street Light

km. 239+800

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site. Some of the photographs of metal beam crash barriers are presented below.

Figure 3-11 Photographs of MBCB / Crash Barrier

km. 190+600

km. 180+300

Delineators

The traffic delineators are provided by Concessionaire for road users in abnormal condition of weather for the Project Road. The same is maintained by the Concessionaire. Some of the photographs of delineators are presented below.

Figure 3-12 Photograph of Delineator

km. 182+330

Pedestrian Guard Rail

The pedestrian guard rails are provided in the median. It is maintained by the Concessionaire. Some of the photographs of pedestrian guard rails are presented below.

Figure 3-13 Photographs of Pedestrian Guard Rail

km. 181+200

Road Land Boundary

Road land boundary pillars are available on Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantations are done only in forest land due to ROW issues and median plantation has been provided along the project length as per IRC specification.

Figure 3-14 Photographs of Median and Avenue Plantation

km. 181+200

km. 225+000

3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at km. 185.860 near Nanguneri village, with the following infrastructure.

Table 3-3 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 185+860
2	Number of Tolling Lanes	10 lanes for toll operation plus 2 lanes for over dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel/No
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	4
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Figure 3-15 Photographs of Toll Plaza

Toll Plaza at km. 243+200

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a camara based sensors, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Plaza

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC at Toll Plaza

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane "Open" and "Close" sign consists of a pair of "GREEN" (arrow) and "RED" (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at Toll Plaza

3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at Toll Plaza

3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

3.12.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the toll plaza location (km. 185.860). As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km. 185+860).

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.13.3 Emergency Call Boxes (ECB)

ECB's are not installed at site.

3.13.4 Portable Weigh in Motion (PWIM)

PWIM is provided at site.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km 185+860.

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 13 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

3.13.7 CCTV Surveillance Cameras

Surveillance cameras are installed at 50 locations along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

3.13.8 Video Incident Detection System

73 Nos. fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at 8 locations each on LHS and RHS.

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy-All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.

- Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

3.14 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are provided at Toll Plaza.

3.15 Toilet Block

There is 1 no. of Toilet Block constructed at site and the same is maintained by the Concessionaire. The details of the same is presented below.

Table 3-4 Details of Toilet Block

Sr. No.	Chainage (km)	Side		Remarks
		LHS	RHS	
1	185+860	Yes	-	

3.16 Bus Bays and Passenger Shelters

There are 30 Nos. of bus bays / shelter along the Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-16 Photographs of Bus Bay / Passenger Shelter

km. 182+100 (LHS)

3.17 Balance Work Status

During site visit it has been observed that construction work of 01 No. of VUP at km. 235+550 is in progress. The cost of Balance Work is presented in the subsequent chapter.

3.18 Operation and Maintenance

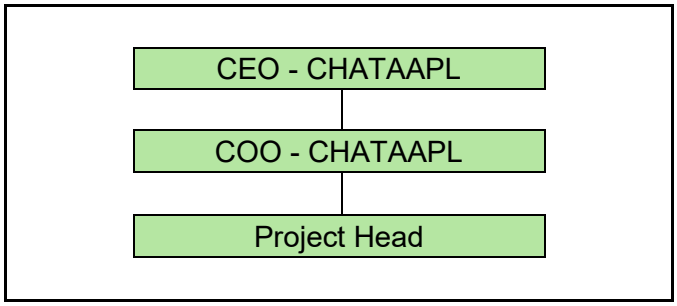
3.18.1 O&M Contract

As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall conform to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement. The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

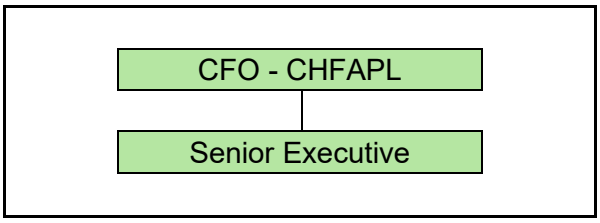
3.18.2 Organization Chart

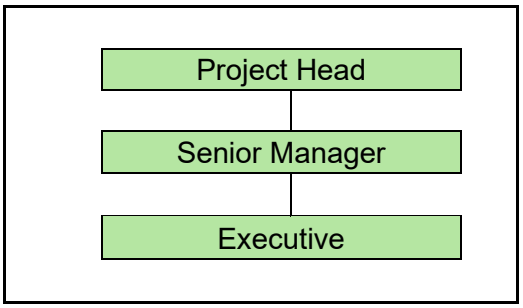
The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive (HR), 01 Manager (TMS / IT), 01 Executive (TMS / IT), 01 supervisor, 01 executive, 01 electrician 01 Plaza Manager, 01 Assistant Plaza Manager, 03 Cashiers and 04 validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

Organization Chart

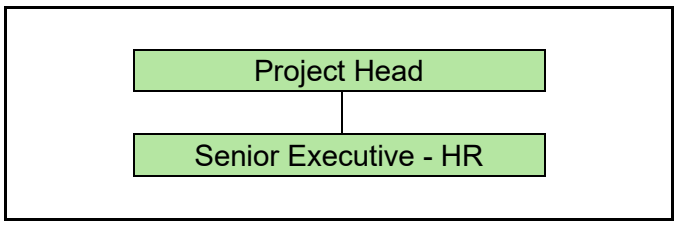


Finance & Accounts

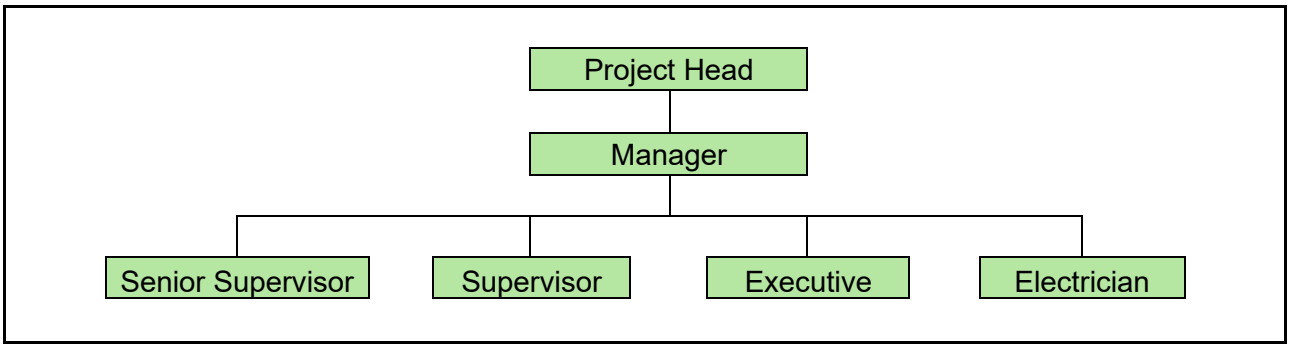




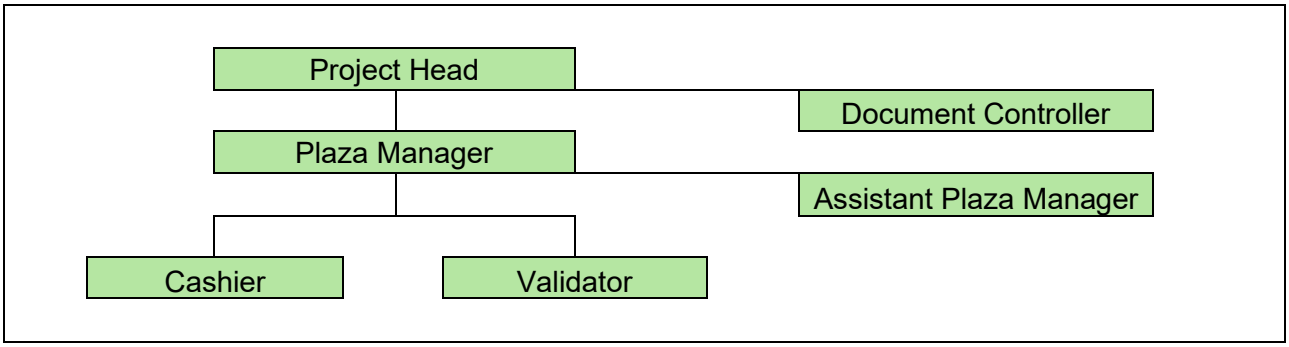
Human Resource



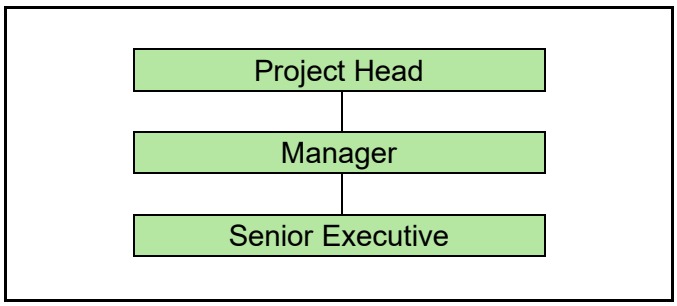
Operation & Maintenance



Operations System



Traffic and safety



3.18.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.18.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Article 15 and Schedule-F of the Concession Agreement defines the Operation and Maintenance requirement during the concession period.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 185+860 (near Toll Plaza) from 19th March 2020 to 21st March 2020. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor (VDF)

Sr. No.	Vehicle Type	Direction	
		Madurai - Kanyakumari	Kanyakumari - Madurai
1	BUS	0.725	0.869
2	LCV	0.800	0.570
3	2-Axle	2.850	2.599
4	3-Axle	7.108	3.805
5	MAV	14.429	6.201

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

MSA Calculations NKTPL Project					
Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
FY26	2.01	**2.01**	1.15	**1.15**

4.4 Network Survey Vehicles (NSV) Survey

Roughness Index

The Concessionaire has conducted pavement condition survey on each lane of carriageway through NSV. The NSV survey was conducted on the Project Road on 05th January 2025 to 18th January 2025. The summary of the same is presented below.

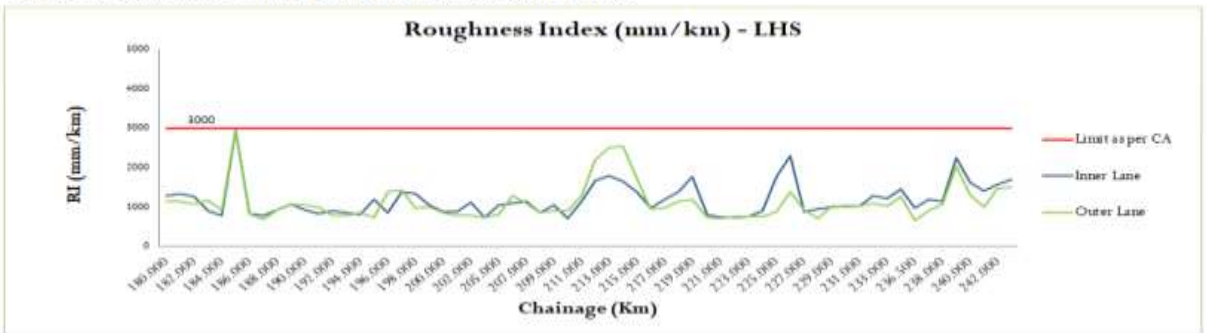
Table 4-3 Summary of Roughness Index

Table 2-1: Summary of RI Limit as per Schedule F of CA

Roughness Summary % as per Schedule F of CA (mm/km)					
Condition	Limit as per Schedule F of CA (mm/km)	LHS		RHS	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane
Good	<3000	100.00%	100.00%	100.00%	100.00%
Poor	>3000	**0.00%**	**0.00%**	**1.66%**	**1.66%**

Note: Higher Roughness values are observed from km 185.700 to km 185.900 at Toll Plaza.

Figure 2-3: Roughness Summary for NKTPL as per Schedule F of CA



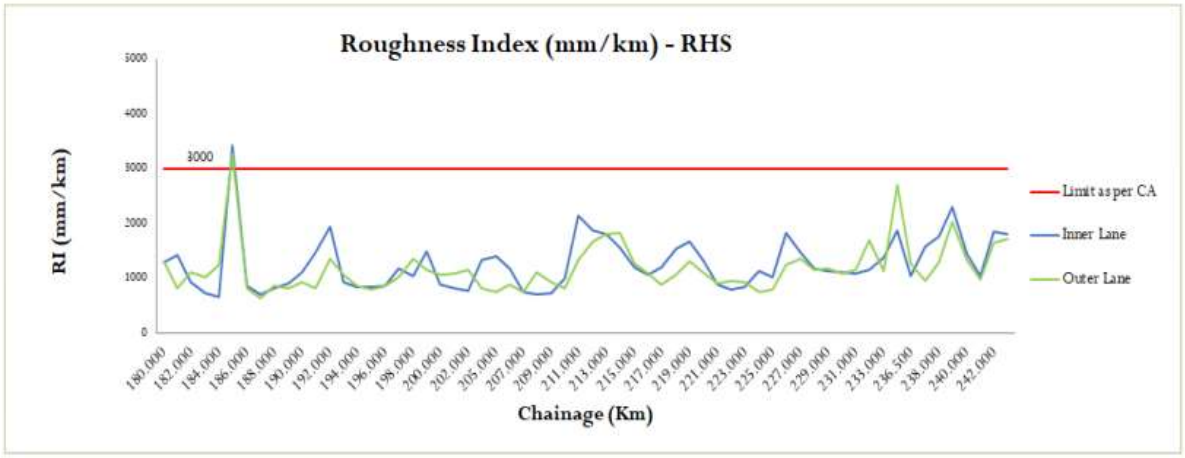


Figure 2-4: Roughness Index for NKTPL as per Schedule F of CA

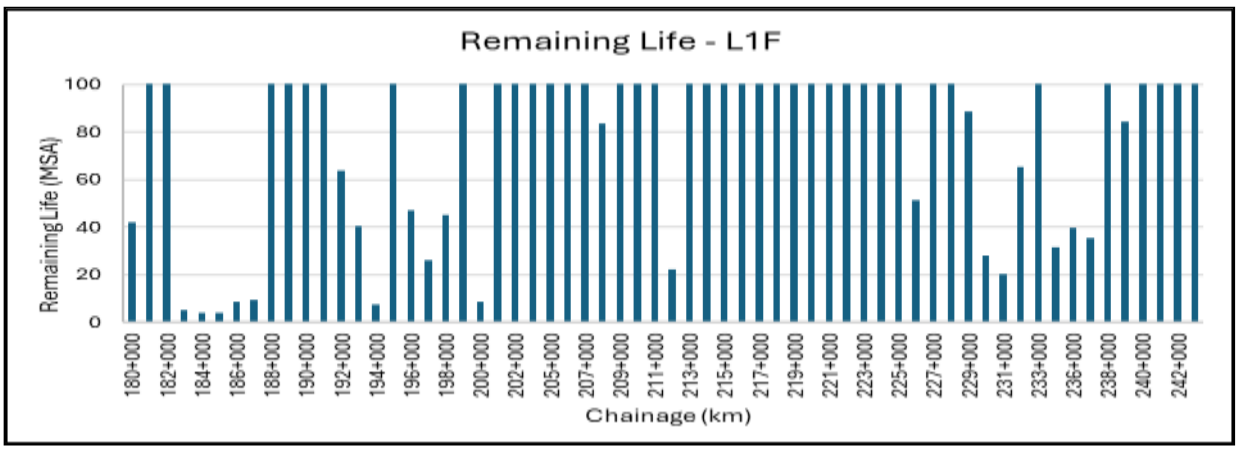
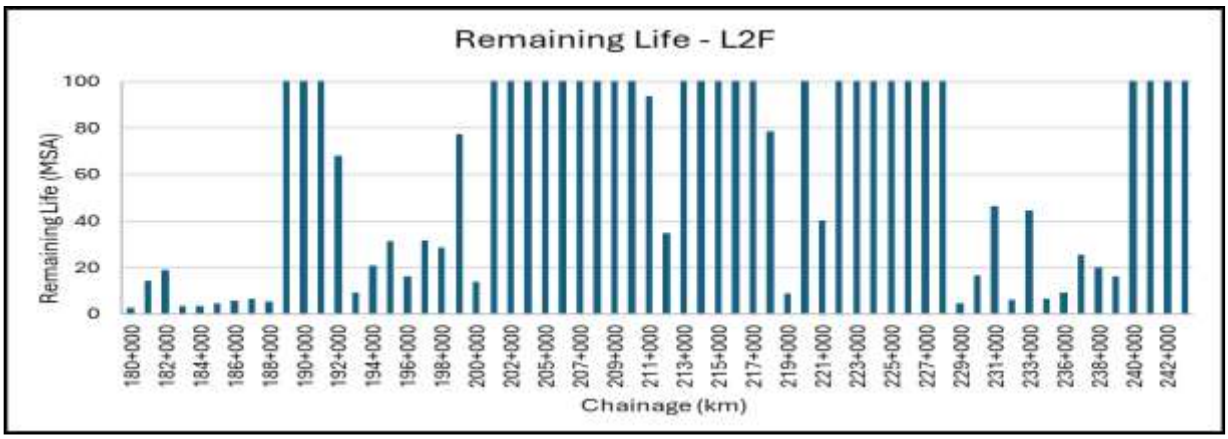
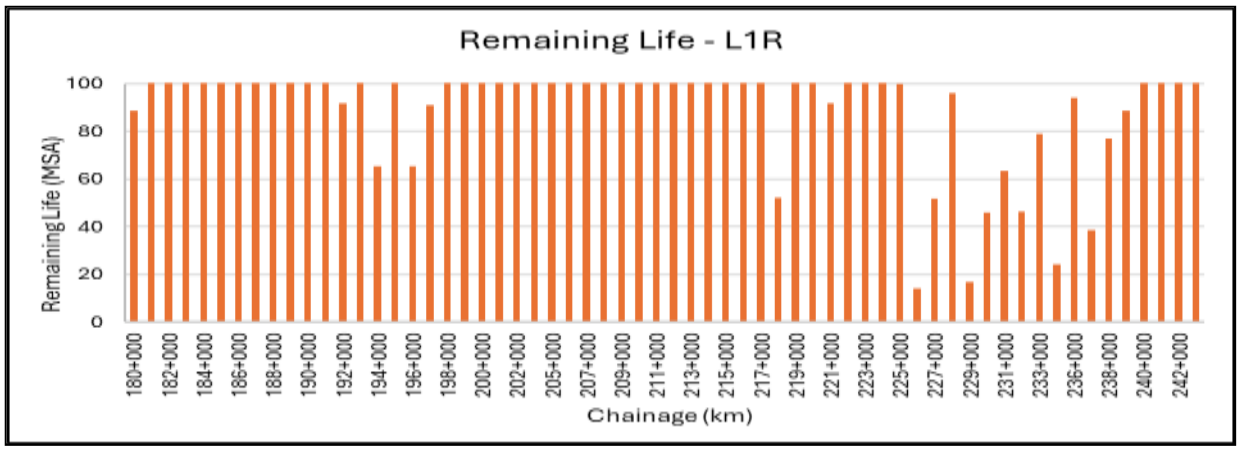
4.5 FWD Survey

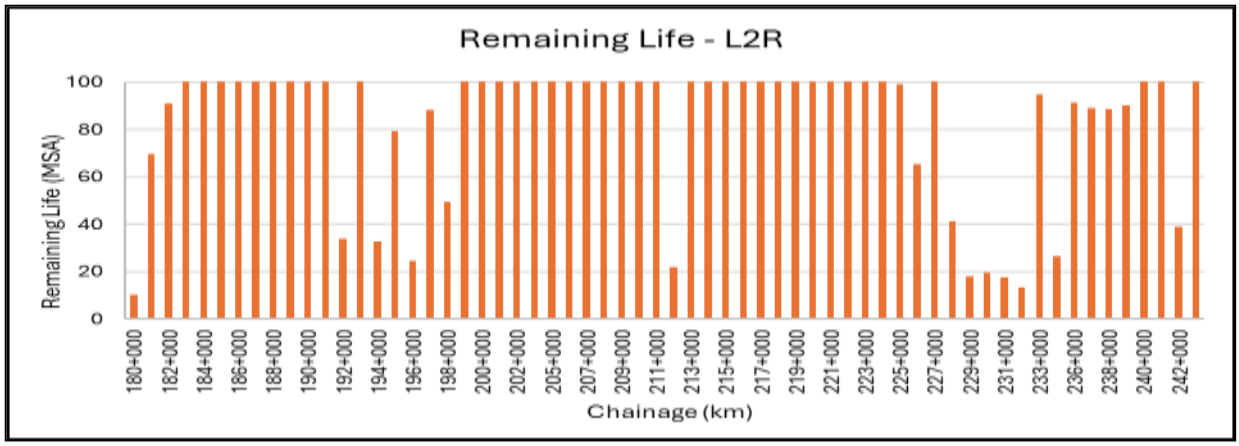
The structural evaluation and analysis of the remaining life of project was carried out in conformity with IRC:115-2014 "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique".

The FWD survey was conducted on the Project Road on 05th February 2025 to 10th February 2025. The summary of the same is presented below.









However, the maintenance can be carried out on as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. However, improvement in Riding Quality is expected if the roughness value exceeds 3000 mm/km.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Sr. No.	Road Name	Existing Chainage (km)	Side	DCP-CBR
1	NH-7	182+200	RHS	13.0
2	NH-7	184+800	LHS	10.6
3	NH-7	187+500	RHS	12.4
4	NH-7	192+400	LHS	28.0
5	NH-7	192+400	RHS	14.6
6	NH-7	194+800	LHS	13.8

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Overlay work is completed at site on both side of the carriageway in the month of October 2021 i.e., FY 2022. Thus, next cycle of the overlay is proposed in FY 2029 after 7 years from previous MM cycle.

As per Article 14 of CA, the Authority shall carry out capacity augmentation under EPC contract if traffic exceeds 40,000 PCU for three consecutive accounting years. As per the traffic study report submitted by the Company it is observed that, the project traffic crosses 40,000 PCU in FY 2040, FY 2041, FY 2042. Assumption has made that execution of 6-laning of Project Road will start in the year 2045 or 2046. It is also assumed that during 6-laning of Project Road, overlay of existing four lane road will be the part of the capacity augmentation. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-6 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2024 to FY 2028	-	
2	FY 2029	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (7%)	Major Maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
3	FY 2030 to FY 2035	-	
4	FY 2036	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (6%)	Major Maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
5	FY 2037 to FY 2042	-	
6	FY 2043	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (5%)	Major Maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
7	FY 2044	-	
8	FY 2045 to FY 2047	Assumption of Capacity Augmentation to Six Lane Configuration	
9	FY 2048 to FY 2051	-	
10	FY 2052	End of Concession Period	

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

      Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2025 and FY 2026. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2027 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971
IOC Barauni	VG-30	48,502	34,540
IOC Barauni	VG-40	51,242	36,492
CPC Chennai	VG-10	48,202	34,156
CPC Chennai	VG-30	49,002	34,723

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
CPC Chennai	VG-40	51,752	36,672

c. **Sand and Aggregate:** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25.

d. **Cement:** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25.

e. **Steel :** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, median filling rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam	Cum	8,567
2	Bituminous Concrete (VG40)	Cum	9,800
3	Bituminous Concrete (PMB)	Cum	11,106
4	Milling	Sqm	86
5	Micro-surfacing	Sqm	155
6	Kerb Re-laying	Rmt	316
7	Road Marking on BC surface	Sqm	571
8	Road Marking on micro surface	Sqm	682
9	Road Studs	Nos.	193

5.3 Balance Work Cost

As discussed in previous chapters, construction work of 01 Nos. of VUP at km. 235+550 is in progress. The Concessionaire has issued work order to PVC Infrastructure Pvt Ltd. for construction of VUP at km. 235+550. The cost of construction of VUP as per work order is Rs. 26.69 Cr. (including GST). The construction period is 15 months from the issued of work order.

Figure 5-1 Photographs of VUP (Work in progress)

Construction of VUP work is in progress

Construction of RE wall work is in progress

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I.**

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026 to FY 2047)	Amount FY 2048 to onwards
1	Salary and Welfare Expenses	1,34,44,358	1,34,44,358
2	Tolling Operations Services	2,22,71,855	2,22,71,855
3	Toll Security Services	51,81,540	51,81,540
4	Incident Management & Emergency Services	3,03,06,272	3,03,06,272
5	Electricity and Diesel Charges	39,79,944	39,79,944
6	TMS/HTMS/System Expenses	63,11,638	45,44,561
7	Office Operating Expenses	33,67,629	33,67,629
8	Vehicle Running Expenses	26,40,000	26,40,000
9	Professional Fees Expense	65,83,249	1,00,63,272
10	Community Development	11,00,000	11,00,000
11	Communication Expenses	3,32,063	3,32,063
12	Conveyance Expenses	3,62,250	3,62,250
13	Insurance Expense	62,47,418	62,47,418
14	IE Fees	75,67,344	75,67,344
15	Routine Maintenance Cost	3,15,06,173	4,09,28,339
16	Horticulture & ROW Maintenance	2,03,65,340	2,03,65,340
17	Miscellaneous including Contingency	43,87,822	44,56,340
	Total Cost (Rs.)	**16,59,54,895**	**17,71,58,525**
	Total Cost (Cr.)	16.60	17.72
	Per km Cost (Lakhs)	**26.15**	**27.91**

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

The summary of Major Maintenance Cost is provided as below.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2024 to FY 2028	-	
2	FY 2029	70.79	
3	FY 2030 to FY 2035	-	
4	FY 2036	78.21	
5	FY 2037 to FY 2042	-	
6	FY 2043	69.62	
7	FY 2044 to FY 2052	-	End of concession period
Total Cost (Cr.)		**218.62**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	7.54	
2	FY 2034	7.54	
3	FY 2041	7.54	

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
4	FY 2048	7.54	
Total Cost (Cr.)		**30.18**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2025	-	**2041**	3.99%
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	1.00%
	Volume (cum)			5.00
	Rs/m^3			10532
	Cost in Rupees			52,658
	ii) Patch repair	100 % Patch less	As & when required	1.00%
	Area (sqm)			100
	Rs/m^2			421
	Cost in Rupees			42,126
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	2.50%
	Area (sqm)			250
	Rs/m^2			76
	Cost in Rupees			18,907
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.50%
	Area (sqm)			187.5
	Rs/m^2			50
	Cost in Rupees			9,465
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			421
	Cost in Rupees			31,595
	v) Road marking	14%	Once in 7th year & @	14676

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Madurai to Kanyakumari section (Package-III) km. 116+500 to km. 180+000 in the State of Tamil Nādu (hereinafter referred as "Project Road").

Salaipudhur Madurai Tollway Private Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Madurai to Kanyakumari Section (from km. 116+500 to km. 180+000) of NH-44. The project was awarded to Concessionaire on 20th October 2020.The length of Project Road is 63.50 kms with one toll plaza at Salaipudhur Village at km. 125+350.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and filed investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period.
- Review of balance work cost for Project Road including estimation of quantities and item rates.

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets, mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out from **21st January 2025 to 22nd January 2025**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Salaipudhur Madurai Tollway Private Limited** is a company promoted by Cube Highways or a Special Purpose Vehicle (SPV) formed for implementing this project on 27th December 2019. The Appointed Date for the Project Road is 20th October 2020.

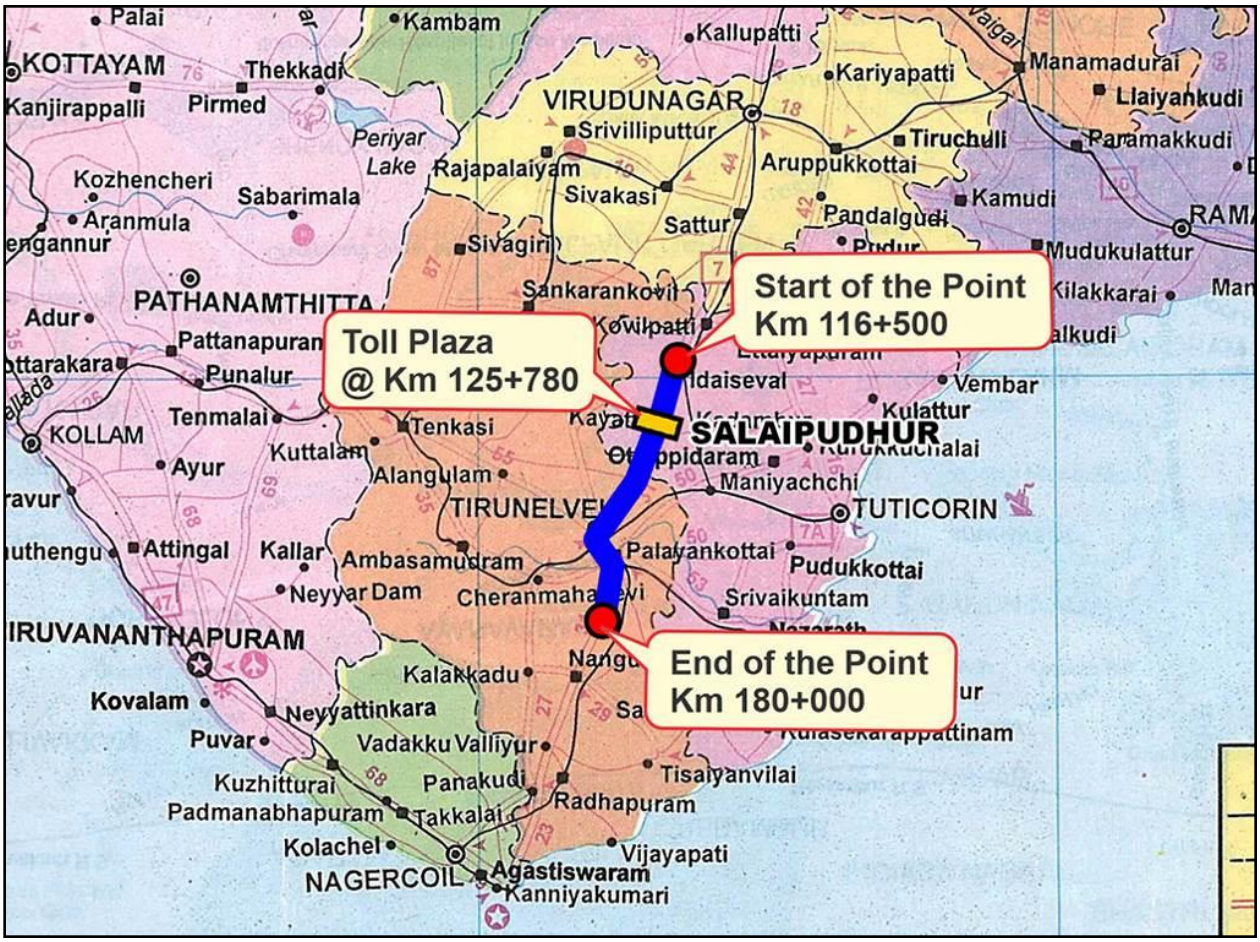
The project is being developed under TOT (Toll Operate Transfer) Bundle-3 with concession period of 30 years from the Appointed Date. The end of the concession period is 21st October 2050.

2.2 Location

The Project Road is part of National Highway No. 44 (old NH-7) of Madurai - Kanyakumari section in the state of Tamil Nādu. The total project length is 63.50 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map



The photographs taken during the site visit are presented below.

Figure 2-2 Start and End of Project Road

Start of Project Road at km. 116+500

End of Project Road at km. 180+000

2.3 Climate

The project area being in the region of southeast of the western ghats, the area is hot and dry. Temperatures range between a maximum of 37 °C and a minimum of 22 °C. April to June are the hottest months and December and January are the coldest with temperatures rising towards the end of February. Rainfall occurs mostly during the north-east monsoon in the months of October to December. However, the project stretch receives little rainfall, averaging 840 mm. Annual rainfall has ranged from 964 mm to 228 mm during past decades.

2.4 Terrain

The Project Road traverses through plain terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up area.

2.6 Right of Way

The width of the existing Right of Way (ROW) for the Project Road is 60 m throughout its length.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC cables, etc.

2.8 Development as per Schedule-B

The Project Road from Kayathar (km. 116+500) to Nanguneri village (km. 180+000) has been developed as a four-lane divided carriageway with median width of 2 m, service road at some built-up locations and other arrangements. The Project Road passes through rural as well as built-up sections.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	63.50	
2	Construction of Service Road	km.	3.02	Total (LHS+RHS)
3	Repair & rehabilitation of Major Bridges	Nos.	05	
4	Repair & rehabilitation of Minor Bridges	Nos.	17	
5	Repair & rehabilitation of Box Culvert	Nos.	24	
6	Repair & rehabilitation of Pipe Culvert	Nos.	86	
7	Repair & rehabilitation of Flyover	Nos.	01	
8	Repair & rehabilitation of ROB	Nos.	03	
9	Repair & rehabilitation Vehicular Underpass (VUP)	Nos.	16	
10	Junction Improvement	Nos.	10	
11	Provision of Unlined Drain	m	2501	Total (LHS+RHS)
12	Provision of RCC Cover Drain	m	150	RHS

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 9.0 m with earthen shoulder of 1.5 m on either side. The Project Road has a median width of 2.0 m throughout its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **21st January 2025 to 22nd January 2025**, through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is found to be Good.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW)

km. 145+000

km. 165+000

3.2 Service Road / Slip Road

The service road with a width of 5.50 m is constructed in built-up areas and adjoining underpass locations. The Project Road has a total length of 46.040 km of existing and new service road (which includes service road on both sides).

Figure 3-2 Photographs of Service Road / Slip Road

Service Road at km. 118+680 (LHS)

Service Road at km. 161+100 (RHS)

3.3 Major / Minor Junctions

There are 03 nos. of major junctions and 31 nos. of minor junctions along Project Road. The junction details are presented in the table below.

Table 3-1 Details of Major Junctions

Sr. No.	Chainage (km)	Type of Junction	Name of Access Road		Surface Type of Access Road	
			LHS	RHS	LHS	RHS
1	138+720	Y	Old NH	-	BT	
2	142+450	T		Village		BT
3	144+350	T		Renacon		ER+BT

The photographs taken during site visit is presented as below:

Figure 3-3 Photograph of Junctions

Major Junction at km. 138+720

Minor Junction at km. 139+980.

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, flyover, underpasses and culverts is presented in table as below:

Table 3-2 Details of Summary for Structures

Type of Structure	Total Number of Structures
Major Structures:	
Road Over Bridge (ROB)	03
Flyover	01
Major Bridges (MJB)	05
Minor Bridges (MNB)	17
Vehicular Underpass (VUP)	16
Culverts:	
Pipe Culverts	86
Box Culverts	24
Total	**152**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-3 Condition Survey of Major Structure

Sr. No.	Chainage (km)	Side	Span Arrangement (m)	Carriageway (m)	Deck Width (m)	Type of structure	Type of foundation	Remarks
Major Bridges

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and box culverts at various locations. There are 110 Nos. of culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations, which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Concessionaire. The cement concrete pitching or stone pitching has been provided for slope protection.

The culverts are maintained by the Concessionaire during O&M period. However, in case of few culverts, cement concrete pitching has been damaged which required to be addressed under routine repair work by the Concessionaire.

The photographs taken during site visit is presented as below.

Figure 3-5 Photographs of Culverts

Pipe culvert at km. 122+470

Box culvert at km. 127+263

3.6 Drainage

There are 6.030 kms of existing drain (which includes drain on both sides) of the Project Road. However, 0.150 kms of RCC drain is additionally constructed in locations where service roads are provided.

3.7 Slope Protection

Slope protection and chute drains are found on Project Road at required locations. A few of the slope protection and chute drains are damaged which need to be rectified by the Concessionaire.

3.8 Road Furniture

The Concessionaire has provided additional road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C. The details of the items are provided below.

a) Lighting Along the Project Road

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers.

b) Transverse / Thermoplastic Bar Marking Locations

Transverse / Thermoplastic Bar Markings on either side of carriageway is provided as per Section 11.2 of IRC:35-2015.

c) New Installation of Safety Barriers

There are 3015 m of new installation of safety barriers installed by the Concessionaire along the Project Road.

d) Additional Gantry / Cantilever Sign Board

As per schedule-B, additional gantry/ cantilever sign is provided at the following locations.

Table 3-4 Details of Additional Gantry / Cantilever Sign

Sr. No.	Chainage (km)	Side	Location	Type
1	130+600	BHS	Underpass	Cantilever Gantry Sign Board
2	140+500	BHS	Underpass	Cantilever Gantry Sign Board
3	159+000	BHS	Flyover	Cantilever Gantry Sign Board
4	166+550	BHS	Underpass	Cantilever Gantry Sign Board

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which will be rectified by the Concessionaire. Some of the photographs of road marking are presented below.

Figure 3-6 Photographs of Pavement Marking

km. 118+680

km. 144+500

km. 120+750

km. 156+200

Road Studs

Road studs / Cat's eye for the Project Road is provided as per the design standards indicated in section 12 of Schedule-D. Road studs / Cat's eye has been fixed at junction and zebra crossings. However, at a few locations some cat eyes have been damaged, which will be rectified by the Concessionaire.

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs includes roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Roadside signs, overhead signs, kerb mounted signs, Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are all in good condition.

Some of the photographs of sign boards are presented below.

Figure 3-7 Photographs of Sign Boards

Village name board at km.118+350

Kilometer stone at km.122+000

Direction name board at km. 122+700

Hectometer stone at km.125+400

Hazard marker board at km.130+100

Slow Speed indicative signage at km. 156+200

Highway Lighting

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers.

Figure 3-8 Photographs of Highway Lighting

km.125+400

km. 161+100

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

Some of the photographs of metal beam crash barriers are presented below.

Figure 3-9 Photographs of MBCB / Crash Barrier

km. 128+200 (LHS)

km.130+100 (RHS)

Delineators

The traffic delineators are provided by Concessionaire for road users in abnormal condition of weather for the Project Road. The same is maintained by the Concessionaire. Some of the photographs of delineators are presented below.

Figure 3-10 Photographs of Delineator

km. 118+380 (RHS)

km. 122+000 (LHS)

Pedestrian Guard Rail

The pedestrian guard rails are provided in the median. It is maintained by the Concessionaire.

Some of the photographs of pedestrian guard rails are presented below.

Figure 3-11 Photographs of Pedestrian Guard Rail

km. 118+680 (Service roadside)

km. 170+100 (Median portion)

Road Land Boundary

Road land boundary pillar has been found / available on Project Road.

3.9 Avenue Plantation and Median Plantation

Avenue plantations are done in open country location and median plantation has been provided in the project length as per IRC specification.

Some of the photographs taken during the site visit are presented below.

Figure 3-12 Photographs of Avenue Plantation

km. 133+500 (LHS)

km. 118+400 (LHS)

km. 128+200 to km. 129+100

3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at Salaipudhur Village at km. 125+350 with the following infrastructure.

Table 3-5 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 125+350
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for over dimensional vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	9 singles
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel/no
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	4
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Figure 3-14 Photographs of Toll Plaza

Toll Plaza at km. 125+350

Toll Plaza at km. 125+350

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction).

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

Lane Controller at Toll Plaza

3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at Toll Plaza

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Plaza

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at Toll Plaza

3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

Toll Booth at Toll Plaza

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

MSWIM at Toll Plaza

3.12 Plaza Equipment

3.12.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio WiFi module. Firewall with Sophos antivirus is provided.

3.12.2 55" LED screen for CCTV monitoring

55" LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installed for the Project Road is controlled by the ATMS center at the toll plaza location (km. 125.350). As per Concession Agreement, ATMS shall conform to ATMS Policy guidelines (2016) which comprises of the following:

- Automatic Traffic Counter cum Classifier (ATCC)
- Mobile Radio communication system
- Emergency Call Box
- Portable Weigh in Motion
- Meteorological Data system
- Variable Message Signboards (VMS)
- CCTV system

- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza (km. 125+350).

3.13.2 Mobile Radio communication System (MRCS)

Mobile Radio communication System (MRCS) is not yet installed. Application for MRCS UHF band has been sought from WPC, DoT, Ministry of Communications which is not yet allocated.

3.13.3 Emergency Call Boxes (ECB)

ECB's are not installed at site.

3.13.4 Portable Weigh in Motion (PWIM)

PWIM's are provided at site.

3.13.5 MET System

Meteorological sensors comprise of sensors to measure the atmospheric temperature, humidity, pavement surface temperature, visibility and equipment for measuring wind speed and direction and installed at Toll Plaza km 125.350.

3.13.6 Variable Message Signboards (VMS)

Variable message sign boards are installed at 10 locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

3.13.7 CCTV Surveillance Cameras

Surveillance cameras are installed at 34 locations along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

3.13.8 Video Incident Detection System

45 nos. fixed CCTV cameras are installed as part of Video incident detection system.

3.13.9 Vehicle Actuated Speed Display (VASD)

VASD is installed at 11 locations each on LHS and RHS.

3.13.10 Adequacy of Toll Collection System and ATMS

- Adequacy-All lanes are hybrid ETC system as stipulated by NHAI in Technical Specifications of Hybrid ETC system. NHAI has approved maintenance costs for TMS. TMS shall be upgraded every 5 years at the cost of the Authority.

- Advanced Traffic Management System (ATMS) installed is as per specifications required by the Authority and in working condition.

3.14 Truck Lay-bye

The truck lay-bye are provided at the following locations on Project Road.

Table 3-6 Details of Truck Lay-bye

Sr. No.	Chainage (km)	Remarks
1	130+100	LHS
2	139+500	RHS

3.15 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Posts are present in the toll plaza location at 125.350.

3.16 Toilet Block

Toilet blocks are provided at the Toll Plaza on Project Road.

3.17 Bus Bays and Passenger Shelters

There are 36 Nos. of bus bays / shelter along the Project Road.

The photographs taken during the site visit are presented below.

Figure 3-15 Photographs of Passenger Shelter

3.18 Balance Work Status

There are no balance works to be executed as per the Concession Agreement.

3.19 Operation and Maintenance

3.19.1 O&M Contract

As per Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall confirm to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement. The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.19.2 Organization Chart

The Concessionaire has shared the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive (HR), 01 Manager (TMS / IT), 01 Executive (TMS / IT), 01 supervisor , 01 executive, 01 electrician 01 Plaza Manager, 01 Assistant Plaza Manager, 03 Cashiers and 04 validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent subcontractors.

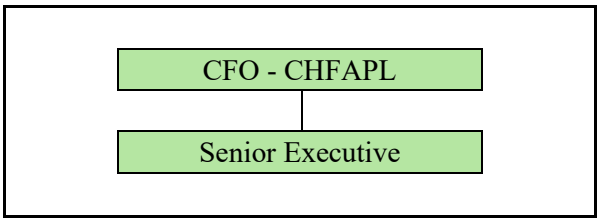
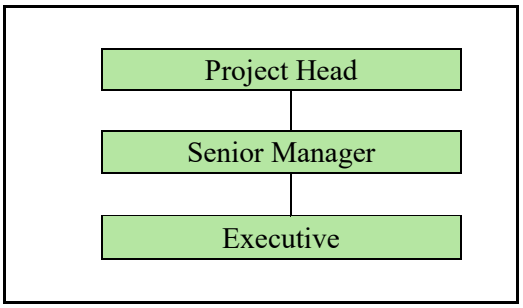
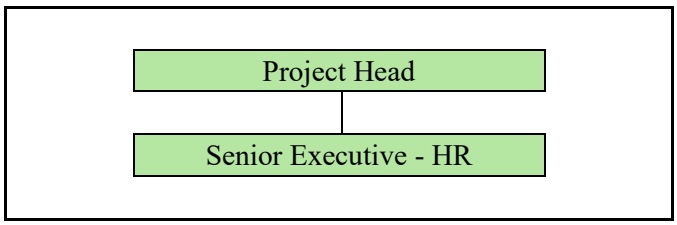
Finance & Accounts

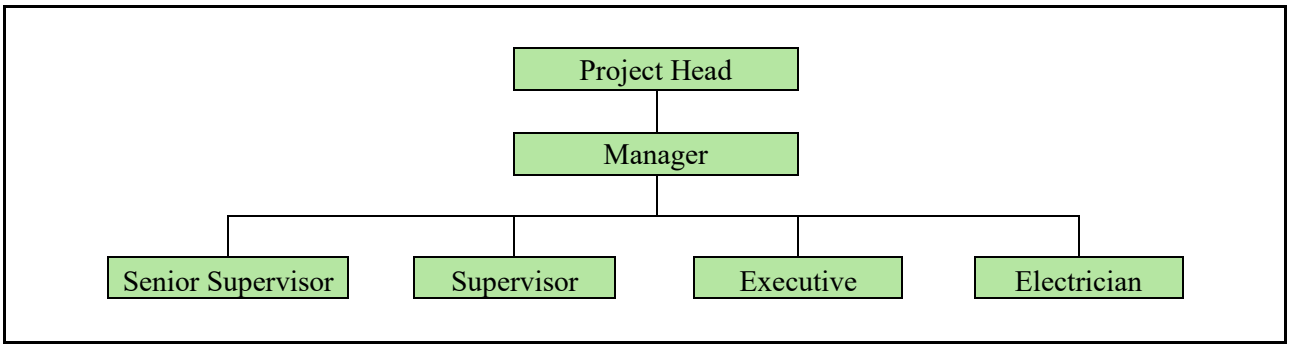




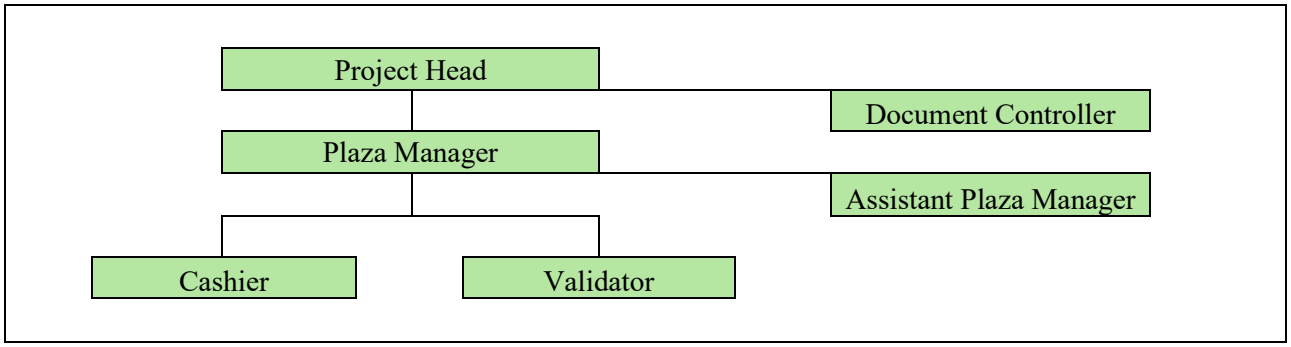
Human Resource



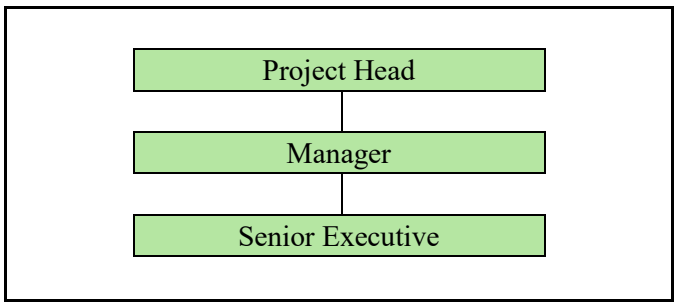
Operations & Maintenance



Operations System



Traffic and safety



3.19.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.19.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Article 15 and Schedule-F of the Concession Agreement defines the Operation and Maintenance requirement during the concession period.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 30 years from the Appointed Date (as TOT Package i.e., 20th October 2020) including construction period.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 125.780 (near Toll Plaza) from 17th March 2020 to 19th March 2020. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Weighted Average VDF Values			
Sr. No.	Vehicle Type	Direction	
		Madhurai - Kanyakumari	Kanyakumari - Madhurai
1	BUS	0.777	0.968
2	LCV	0.808	0.695
3	2-Axle	2.921	3.279
4	3-Axle	5.656	5.103
5	MAV	13.441	7.893

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

FY51	3.73	**83.13**	2.76	**62.08**	

4.4 Network Survey Vehicles (NSV) Survey

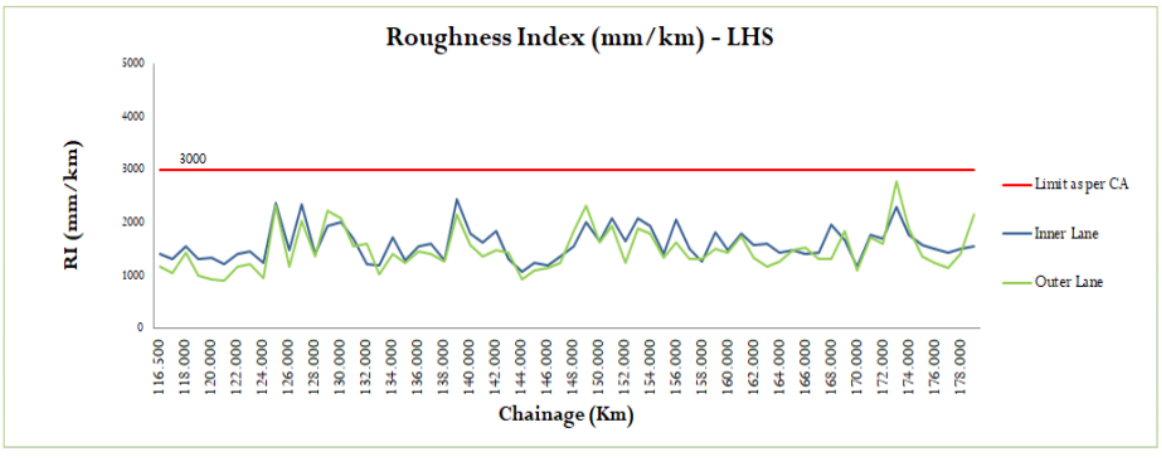
The Concessionaire has conducted pavement condition survey on each lane of carriageway through NSV. The NSV survey was conducted on the Project Road on 05th January 2025 to 18th January 2025. The summary of the same is presented below.

Table 2-1: Summary of RI Limit as per Schedule F of CA

Roughness Summary % as per Schedule F of CA (mm/km)					
Condition	Limit as per Schedule F of CA (mm/km)	LHS		RHS	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane
Good	<3000	100.00%	100.00%	100.00%	100.00%
Poor	**>3000**	**0.00%**	**0.00%**	**1.57%**	**0.00%**

Note: The section from km 173.000 to 174.000 where higher roughness is observed is a VUP which is still under defect liability period and therefore pavement rectification is not in Concessionaire's scope.

Figure 2-3: Roughness Summary for SMTPL as per Schedule F of CA



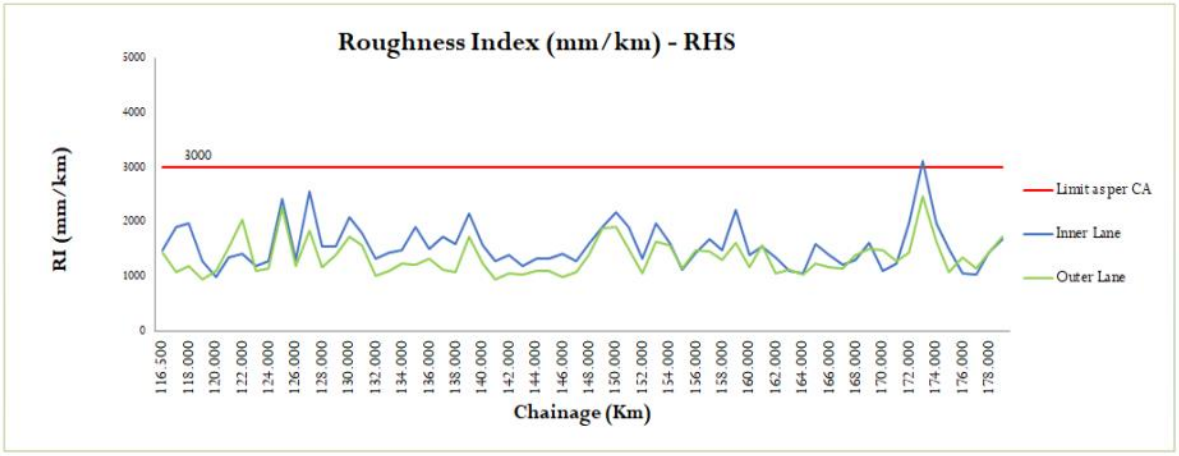


Figure 2-4: Roughness Index for SMTPL as per Schedule F of CA

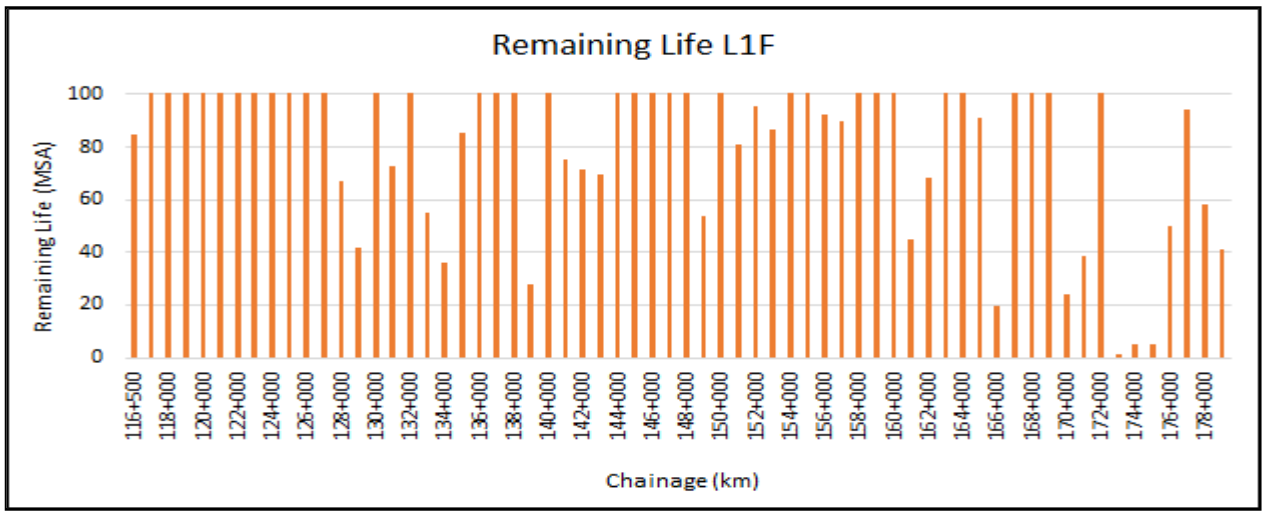
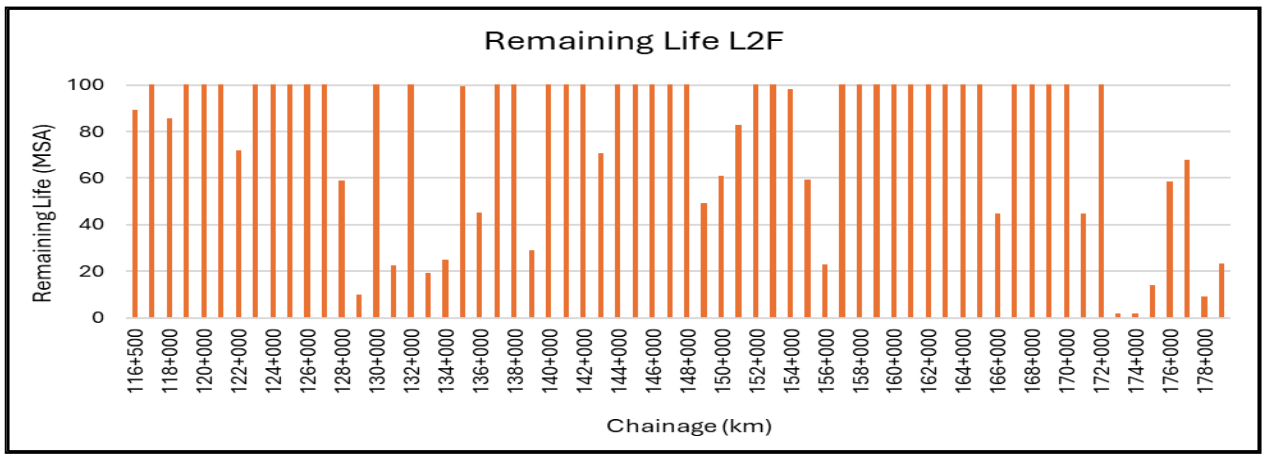
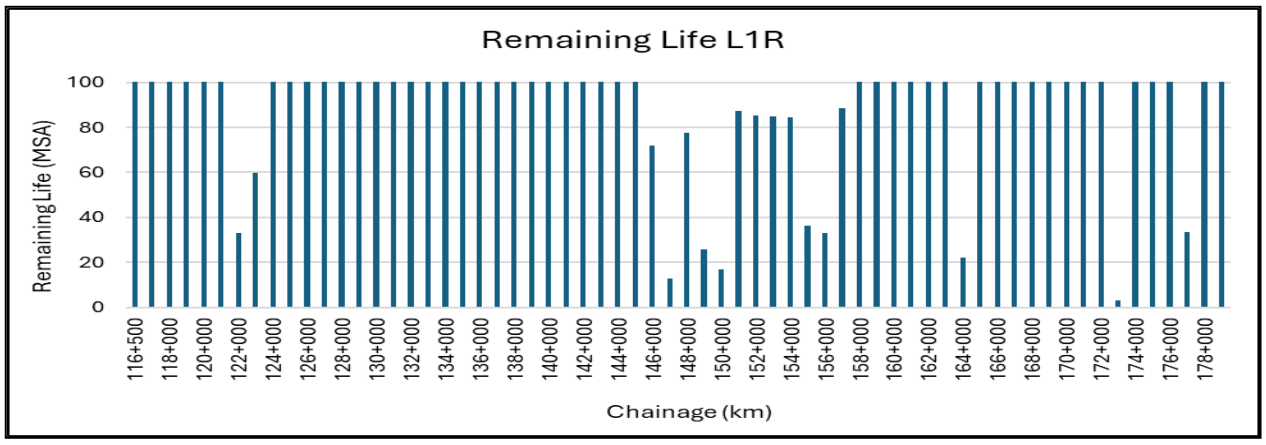
4.5 FWD Survey

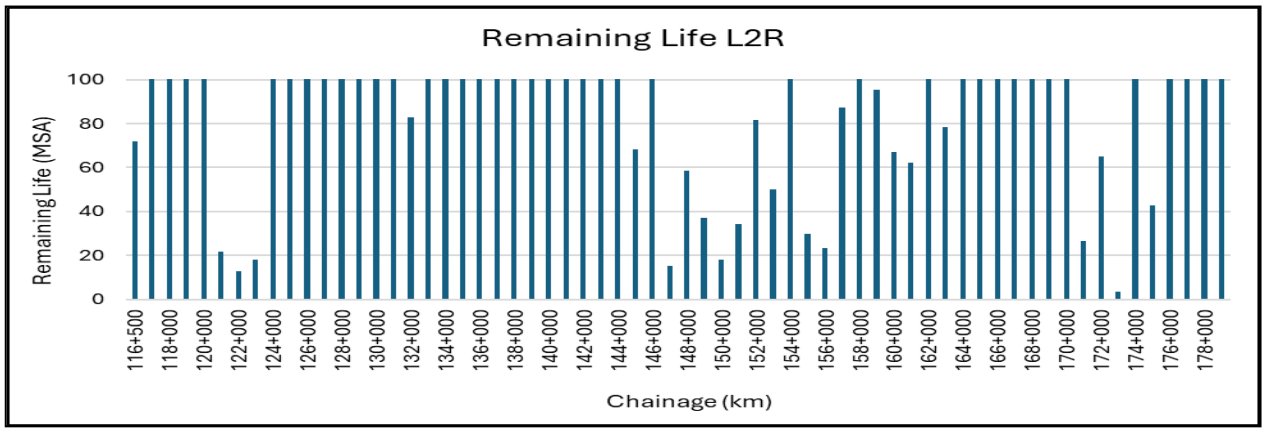
The structural evaluation and analysis of the remaining life of project was carried out in conformity with IRC:115-2014 "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique".

The FWD survey was conducted on the Project Road on 01st February 2025 to 06th February 2025. The summary of the same is presented below.









However, the maintenance can be carried out on as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. However, improvement in Riding Quality is expected if the roughness value exceeds 3000 mm/km.

4.6 Test pit and Subgrade Investigation

The Concessionaire has carried out the subgrade investigation for Project Road. The results of the same as provided by the Concessionaire are tabulated as below.

Sr. No.	Road Name	Existing Chainage (km)	Side	DCP-CBR
1	NH-7	117.500	RHS	13.1

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length periodic maintenance. Schedule-F of the Concession Agreement specifies the threshold limits and the timeline for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-F requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Overlay work is completed at site on both side of the carriageway in the month of October 2021 i.e., FY 2022. Thus, next cycle of the overlay is proposed in FY 2029 after 7 years from previous MM cycle.

As per Article 14 of CA, the Authority shall carry out capacity augmentation under EPC contract if traffic exceeds 40,000 PCU for three consecutive accounting years. As per the traffic study report submitted by the Company it is observed that the project traffic crosses 40,000 PCU in FY 2043, FY 2044, FY 2045. Assumption has made that execution of 6-laning of Project Road will start in the year 2048 or 2049. It is also assumed that during 6-laning of Project Road, the overlay of existing four lane road will be part of the capacity augmentation. Hence, the major maintenance cycle is adjusted accordingly.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-5 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2026 to FY 2028	-	-
2	FY 2029	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (6%)	Major Maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
3	FY 2030 to FY 2035	-	-
4	FY 2036	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (5%)	Major Maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
5	FY 2037 to FY 2042	-	-
6	FY 2043	Major maintenance with 30 mm BC with PMB (100%) + Milling & 50 mm DBM (5%)	Major Maintenance with 30 mm BC with VG-40 (50%) + Micro-surfacing (50%)
7	FY 2044 to FY 2047	-	-
8	FY 2048	Assumption of Capacity Augmentation to Six Lane Configuration	
9	FY 2049 to FY2050	-	-
10	FY 2051	End of Concession Period	

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026 and FY 2027. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971
IOC Barauni	VG-30	48,502	34,540
IOC Barauni	VG-40	51,242	36,492
CPC Chennai	VG-10	48,202	34,156

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
CPC Chennai	VG-30	49,002	34,723
CPC Chennai	VG-40	51,752	36,672

c. **Sand and Aggregate:** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25.

d. **Cement:** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25.

e. **Steel :** Rates are taken from Public works Department Tamilnadu SOR FY 2024-25.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, median filling rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam	Cum	8,519
2	Bituminous Concrete (VG40)	Cum	9,743
3	Bituminous Concrete (PMB)	Cum	11,050
4	Milling	Sqm	86
5	Micro-surfacing	Sqm	155
6	Kerb Re-laying	Rmt	316
7	Road Marking on BC surface	Sqm	571
8	Road Marking on micro surface	Sqm	682
9	Road Studs	Nos.	251

5.3 Balance Work Cost

As discussed in the previous chapter, the balance works cost for Project Road is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the

operating cost in the vicinity of the project area. Same has been divided into following major heads.

1 Salary and Welfare Expenses
2 Tolling Operations Services_Outsourced
3 Toll Security Services_Outsourced
4 Incident Management & Emergency Services_Outsourced
5 Electricity and Diesel Charges
6 TMS/HTMS/System Expenses
7 Office Operating Expenses
8 Vehicle Running Expenses
9 Professional Fees Expense
10 Community Development
11 Communication Expenses
12 Conveyance Expenses
13 Insurance Expense
14 IE Fees
15 Routine Maintenance Cost (Project Highway)
16 Horticulture & ROW Maintenance
17 Miscellaneous including Contingency

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026 to FY 2050)	Amount (FY 2051)
1	Salary and Welfare Expenses	1,50,06,270	1,50,06,270
2	Tolling Operations Services	2,15,54,472	2,15,54,472
3	Toll Security Services	51,81,540	51,81,540
4	Incident Management & Emergency Services	1,84,82,709	1,84,82,709
5	Electricity and Diesel Charges	25,07,747	25,07,747
6	TMS/HTMS/System Expenses	52,48,003	53,83,740
7	Office Operating Expenses	12,98,154	12,98,154
8	Vehicle Running Expenses	26,40,000	26,40,000
9	Professional Fees Expense	68,77,032	1,02,12,054
10	Community Development	2,41,500	2,41,500
11	Communication Expenses	3,32,063	3,32,063
12	Conveyance Expenses	3,62,250	3,62,250
13	Insurance Expense	70,23,498	70,23,498
14	IE Fees	75,67,344	75,67,344
15	Routine Maintenance Cost (Project Road)	3,13,10,590	4,05,21,474

Sr. No.	Particulars	Amount (FY 2026 to FY 2050)	Amount (FY 2051)
16	Horticulture & ROW Maintenance	2,03,74,966	2,03,74,966
17	Miscellaneous including Contingency	37,72,903	39,11,734
	Total Cost (Rs.)	**14,97,81,039**	**16,26,01,514**
	Total Cost (Cr.)	14.98	16.26
	Per km Cost (Lakhs)	**23.59**	**25.61**

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Table 5-4 Summary of Major Maintenance Cost

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2024 to FY 2028	-	
2	FY 2029	72.91	
3	FY 2030 to FY 2035	-	
4	FY 2036	80.82	
5	FY 2037 to FY 2042	-	
6	FY 2043	72.26	
7	FY 2044 to FY 2047	-	
8	FY 2048 to FY 2049	-	Capacity Augmentation in FY 2048 / FY 2049
9	FY 2050	-	
9	FY 2051	-	End of concession period
Total Cost (Cr.)		**226.00**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	7.29	
2	FY 2034	7.29	
3	FY 2041	7.29	
4	FY 2048	7.29	
Total Cost (Cr.)		**29.19**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-5 Escalation

Year	Escalation	Year	Escalation
2025	-	**2041**	3.99%
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%

Year	Escalation	Year	Escalation
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

Sr. No.	Year of expense	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45	FY46	FY47	FY48	FY49	FY50	FY51

ANNEXURES

ANNEXURE I : ROUTINE MAINTENANCE COST

Routine Maintenance Cost (4-Lane)	
Ordinary Repair Cost for Flexible (with GST)	**3,13,10,590**
(inclusive of GST)	**= 4.93 lakhs per km**

CONVERSION FACTORS								
National Highways / State Highways								
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders								
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)								
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal**	**Urban**	**Project Length (km)**		**Per Year Project Maintenance Cost**	
				More than 4500 CVD	More than 4500 CVD				
				2,40,859	**2,90,965**				
						Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	368515.00	445176.00	-	-	-	-
		Paved shoulder	1.70	409461.00	494640.00	40.48	-	1,65,74,981	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	481719.00	581930.00	-	-	-	-
		Paved shoulder	2.20	529890.00	640122.00	-	23.02	-	1,47,35,609
					TOTAL		**63.500**		**3,13,10,590**

Routine Maintenance Cost (6-Lane)	
Ordinary Repair Cost for Flexible (with GST)	**4,05,21,474**
(inclusive of GST)	**= 6.38 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	1.00%
	Volume (cum)			5.00
	Rs/m^3			10473
	Cost in Rupees			52,363
	ii) Patch repair	100 % Patch less	As & when required	1.00%
	Area (sqm)			100
	Rs/m^2			419
	Cost in Rupees			41,890
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	1.50%
	Area (sqm)			150
	Rs/m^2			75
	Cost in Rupees			11,266
	b) Width less than 3 mm	75 % Crack Less	As & when required	2.50%
	Area (sqm)			187.5
	Rs/m^2			50
	Cost in Rupees			9,399

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			419
	Cost in Rupees			31,418
	v) Road marking	14%	Once in 7th year & @ Repaired location	13428
	SUB TOTAL			**1,59,764**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6831
	ii) Jungle Clearance	100%	Twice in a Year	2241
	iii) Kuccha Drain Maintenance	100%	Twice in a Year	1201
	SUB TOTAL			**10,273**
3	**Maintenance of Cross Drainage works:**			
	i) Cleaning of culvert bed	100%	Once in a Year	3026
	ii) Repair of floors	100%	Once in a Year	5475
	iii) Repair of parapets	100%	As & when required	2282
	SUB TOTAL			**10,783**
4	**Maintenance of Minor & Major Bridges:**			
	i) Cleaning and removal of dirt & vegetation from pier caps, Bearings, Expansion Joints, Superstructure, Substructure and Retaining wall etc.	100%	As & when required	40,026

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per Km. as per Traffic Intensity** **More than 4500 CVD** **BT Surface**
1	**2**	**3**	**4**	**5**
	ii) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints			
	iii) Repair of minor washouts, erosion scour and animal holes			
	iv) Sealing Cracks with Cement/ Epoxy Mortar			
	v) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**40,026**
5	**Miscellaneous Items:**			
	i) Turfing and Arboriculture		Once in a Year	2668
	ii) Maintenance of gang hut store, sheds, animal & debries removal		Once in a Year	4003
	iii) Lettering, Painting of Km stones & kerbs, sign boards, hectometer stone etc.		Once in a Year	4003
	iv) Replacement and providing additional retro reflective signage	20%	Covering Total Network in 4-5 Years	8005
	v) Providing first aid kits, Umbrella, Safety Jackets, Vardi etc.		Once in a Year	1334
	vi) Traffic Census		Once in a Year	0
	vii) Provision for roughness measurement		Twice in a Year	0
	SUB TOTAL			**20,013**

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0 m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of Four Lane Highway of Meerut - Muzaffarnagar section of NH-58 from km. 52+250 to km. 130+560 on BOT Basis in the State of Uttar Pradesh (hereinafter referred as "Project Road").

M/s. Western UP Tollway Limited (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Improvement, Operation and Maintenance, Rehabilitation and Strengthening of existing 2-lane and widening it to 4-lane divided highway from km. 52+250 to km. 130+560 of NH-58, Meerut - Muzaffarnagar Section in the State of Uttar Pradesh on BOT Basis or Project Road. The project was awarded to Concessionaire (M/s. Western UP Tollway Limited, a Company promoted and incorporated by M/s. Nagarjuna Construction Company Limited and M/s. Maytas Infra Private Limited) on 9th September 2005 with a concession period of 20 years (including construction period) by National Highway Authority of India (NHAI). Cube Highway Group acquired the SPV **M/s. Western UP Tollway Limited** in the year 2016 and has been operating the Project Road since 2016. The length of Project Road is 78.310 kms with one toll plaza at km. 75+990.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and flied investigations. The same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyze the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **7th February 2025 to 10th February 2025**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **M/s. Western UP Tollway Limited**, a Company promoted and incorporated by M/s. Nagarjuna Construction Company Limited and M/s. Maytas Infra Private Limited. The Appointed Date of the project was 7th March 2006. The concession period of the project is 20 years including construction period. The project has received COD on 2nd June 2016.

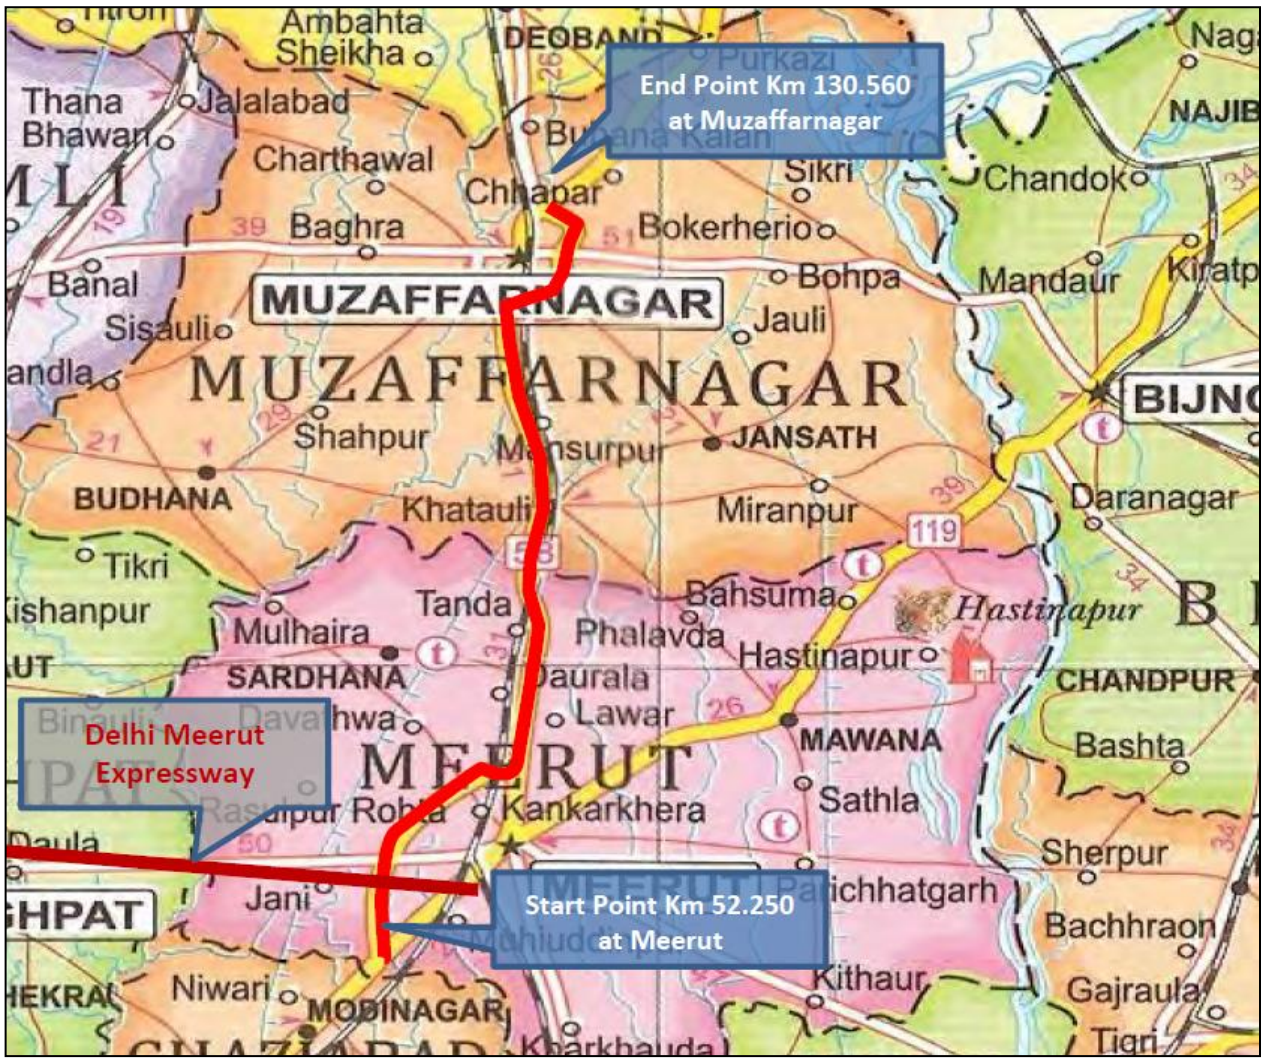
Cube Highways Group acquired the SPV **M/s. Western UP Tollway Limited** in the year 2016 and has been operating the Project Road since 2016 as per the scope of work mentioned in Concession Agreement.

2.2 Location

The Project Road is part of National Highway No. 58 of Meerut - Muzaffarnagar section in the state of Uttar Pradesh. The total project length is 78.310 kms.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map



The photographs taken during the site visit are presented below.

Figure 2-2 Start of Project Road

Figure 2-3 End of Project Road

2.3 Climate

The climate of the project area is generally arid, except during a brief span during the monsoon season. The corridor falls in the sub-tropical monsoon, dry-mild winter and hot summer climate classification zone. May is usually the hottest month with the average maximum temperature at 39.7 °C and average minimum at 24.1 °C. Maximum rainfall occurs during the monsoon period from June to September. There is a gradual decline in annual as well as monsoon rainfall from east to west along the corridor.

2.4 Terrain

The Project Road traverses through plain / rolling terrain.

2.5 Abutting Land Use

The land use along the Project Road is predominantly agriculture or barren with intermittent built-up areas.

2.6 Right of Way

The width of the existing Right of Way (ROW) throughout the Project Road is 40 to 60 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services were shifted to proposed ROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC cables, etc.

2.8 Development as per Schedule-B

The Project Road from Meerut (km. 52+250) to Muzaffarnagar (km. 131+560) has developed as a four-lane divided carriageway with median width of 2 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.

b) Build, Operate and Transfer of the Project Highway subject to and in accordance with the provisions of this Agreement.

c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	O&M of Main Carriageway	km.	78.31	
2	Construction of Service Road	km.	15.89	
3	Widening / Reconstruction of Culverts	Nos.	256	
4	Major Bridges	Nos.	02	
5	Minor Bridges	Nos.	03	
6	Underpasses (VUP+PUP)	Nos.	11	
7	Flyover	Nos.	01	
8	ROB	Nos.	03	
10	Additional cantilever Sign Boards	Nos.	09	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has a paved carriageway of 8.50 m with earthen shoulder of 2.0 m on either side. The Project Road has a median width of 4.50 / 2.0 m in its length.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

The pavement condition survey was carried out from **7th February 2025 to 10th February 2025**. through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is found to be Good to Fair. The overlay has done for entire stretch of Project Road in FY 2022. The continuous cracks observed in the MCW are being addressed by the company, which is filling them with emulsions to maintain the road. According to discussions with the company, they plan to begin major maintenance in April 2025.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW)

Pavement Condition at km. 63+500

Pavement Condition at km. 75+600

Pavement Condition at km. 84+250

Pavement Condition at km. 99+400

Pavement Condition at km. 109+000

Pavement Condition at km. 113+800

3.2 Service Road / Slip Road

The service road with width 5.5 is constructed in built-up area and adjoining underpass locations. The total service road length is 15.896 kms. The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

Service Road at km. 71+750 (LHS)

Service Road at km. 104+000 (LHS)

3.3 Major / Minor Junction

There are 12 Nos. of major junctions and 56 Nos. of minor junctions along Project Road.

The photographs taken during site visit is presented below.

Figure 3-3 Photographs of Major / Minor Junctions

Junction at km. 113+480 (LHS)

Junction at km. 101+630

3.4 Condition Survey of Bridge

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Road Over Bridge (ROB)	03
Flyover	01
Major Bridges (MJB)	02
Minor Bridges (MNB)	03
Vehicular Underpass (VUP)	08
Light Vehicular Underpass (LVUP)	-
Pedestrian Underpass (PUP)	03
Cattle Underpass (CUP)	-
Foot over Bridge	-
Culverts (Box / Slab / HPC)	249
Total	**269**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

Table 3-2 Condition Survey of Major Structure

Condition Survey of Major Bridges								
Sr. No.	**Chainage (km)**	**Side**	**Span Arrangement (m)**	**Carriageway Width (m)**	**Type of Sub-structure**	**Type of Super-structure**	**Type of foundation**	**Remarks**
1	95+686	B/S	1 x 20 + 3 x 30 + 1 x 20	1 x 9.5	Circular Pier	PSC Beam	Well	**New Bridge -** Structure is in sound condition. Expansion Joint, crash barrier and slope protection are in good condition.
2	98+653	B/S	1 x 20 + 2 x 30	1 x 12.4	Circular Pier	PSC Beam	Well	**New Bridge -** Structure is in sound condition. At Expansion Joint crack observed, crash barrier and slope protection are in good condition. Vegetation needs to be cleared.

Condition Survey of Minor Bridges

3.5 Condition Survey of Culverts

The cross-drainage structures include hume pipe culverts and box culverts at various locations. There are total 249 Nos. of culverts in which 221 Nos. are pipe culverts and 28 Nos. are box culverts along the Project Road. The height of culvert varies from 0.5 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway with service road on both side and construction of new four lane carriageway at proposed bypass location. The culverts beneath the existing alignment are either widened or reconstructed. The structural condition of box culverts is generally found to be in good condition and most of the HPC inlet and outlet are totally filled with soil. The quality of surface concrete of box culverts and slab culverts is found to be satisfactory. The RCC parapet, metal beam crash barrier or RCC railing has been provided at culvert locations which is maintained properly.

Vegetation growth and accumulation of debris at waterways need to be removed and cleaned by the Concessionaire on a regular basis.

3.6 Additional Structures

During the site visit, it was informed by the Concessionaire that some additional structures were constructed by Krishna Construction under the guidance of NHAI. The following are the details of the additional structures.

Sr. No.	Chainage (km)	Work Description	Side	Remarks
1	58+360	FOB	B/S	Structure is in sound condition.
2	66+280	FOB	B/S	Structure is in sound condition.
3	67+750	LVUP	B/S	Structure is in sound condition.
4	70+380	FOB	B/S	Structure is in sound condition.
5	71+970	Flyover	B/S	Structure is in sound condition.
6	88+690	VUP	B/S	Structure is in sound condition.
7	89+025	Box Culvert	B/S	Structure is in sound condition.
8	92+970	Flyover	RHS	Structure is in sound condition.
9	98+630	PUP	B/S	Structure is in sound condition.
9	98+385	Box Culvert	B/S	Structure is in sound condition.
10	101+630	Flyover	RHS	Structure is in sound condition.
11	104+550	LVUP	B/S	Structure is in sound condition.
12	103+961	Box Culvert	B/S	Structure is in sound condition.
13	105+700	FOB	B/S	Structure is in sound condition.
14	123+965	VUP	B/S	Structure is in sound condition.
15	123+853	Box Culvert	B/S	Structure is in sound condition.
16	124+148	Box Culvert	B/S	Structure is in sound condition.

3.7 Slope Protection, Drain

Slope protection, median drain, RCC drain, earthen drain and chute drains are found on Project Road at required locations.

Slope protection

Median drain

RCC drain

3.8 Road Furniture

The Concessionaire has provided road furniture along the Project Road as per the standards and specifications mentioned in Schedule-C.

Pavement Marking and Road Studs

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Pavement marking is faded at some locations which will be rectified by the Concessionaire. Some of the photographs of road marking are presented below.

Cat's eye / road studs for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Cat's eye / road studs have been fixed at junction and zebra crossings. However, at few locations some road studs have damaged which will be rectified by the Concessionaire.

Some of the photographs of road marking and road studs are presented below.

Figure 3-7 Photographs of Pavement Marking and Road Studs

Road Marking at km. 71+000 to km. 72+000

Road Marking at km. 86+000

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs includes roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of project highway and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations which will be rectified by the Concessionaire.

Some of the photographs of sign boards are presented below.

Figure 3-8 Photographs of Road Signages

Gantry sign board at km. 92+850 (LHS)

Gantry sign board at km. 95+200

Kilometer Stone at km. 64+000

Highway Lighting / Crash Barriers / Delineators

Highway lighting is provided at underpasses, flyovers, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass and flyovers.

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

The traffic delineators are provided by Concessionaire for road users in abnormal condition of weather for the Project Road. The same is maintained by the Concessionaire.

Some of the photographs of highway lighting, crash barrier and delineators are presented below.

Figure 3-9 Photographs of Highway Lighting / Crash Barrier / Delineator

Street Lighting at Structure Approach at km. 123+000

Blinker at Median opening at km. 90+000

Crash Barrier at km. 92+400

Crash Barrier at High Embankment at km. 71+000

Road Land Boundary

Road land (ROW) boundary demarcation is required to be maintained by the Concessionaire on the Project Road during the concession period. The road land boundary pillars are being fixed at required locations whenever required.

3.9 Avenue Plantation and Median Plantation

Avenue plantations are done only where ROW is available and median plantation has been providing in the project length as per IRC specification.

Figure 3-10 Photographs of Avenue and Median Plantation

Median Plantation on Project Road at km 78+000

Avenue Plantation on Project Road at km. 99+000

3.10 Toll Plaza

As per the Concession Agreement, there is one existing toll plaza at km. 75+990 with the following infrastructure.

The construction of toll plaza is completed and is in operation. 12 Nos. of lanes [2x(5+1)] has been constructed and all are under operation. Concessionaire has constructed administration, operation and maintenance facility at base camp. All required facilities are available at the toll plaza.

Some of the photographs of toll plaza are presented below:

Table 3-3 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 75+990
2	Number of Tolling Lanes	12 (6+6) lanes for toll operation for vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	12
6	Canopy	Present
7	Administrative Building	Present
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway for Movement between Toll Lanes and Administrative Building	Tunnel/Yes
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for	No

Sr. No.	Particulars	Details
	Overloaded Vehicles	
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	3
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Figure 3-11 Photographs of Toll Plaza

Toll Plaza at km. 75+990

Ambulance, Crane and Weigh Bridge at Toll Plaza at km. 75+990

Toll Plaza office and Generator Room at km. 75+990

3.11 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

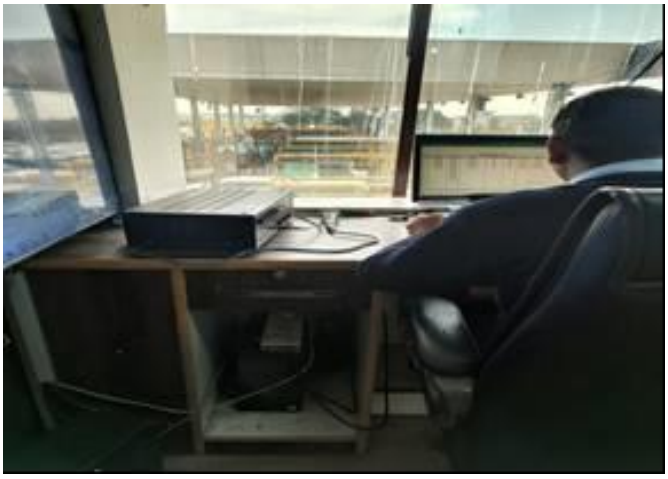
3.11.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID

3.11.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.



3.11.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at Toll Plaza

3.11.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

Automatic Lane Barrier at Toll Plaza

3.11.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

Lane Traffic Light (LTL) and User Fare Display (UFD) at Toll Plaza

3.11.6 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

AVC Camera

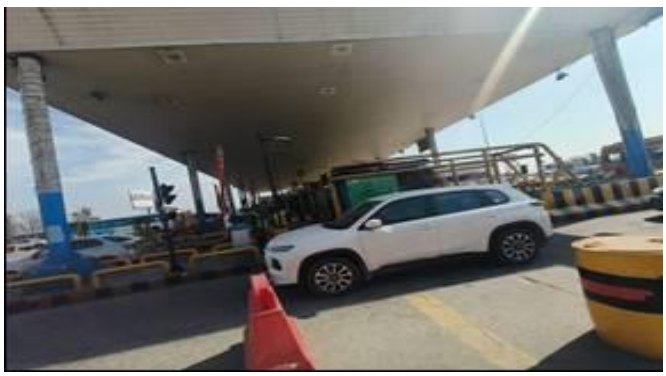
3.11.7 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC

3.11.8 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.



Over Head Lane Signal at Toll Plaza

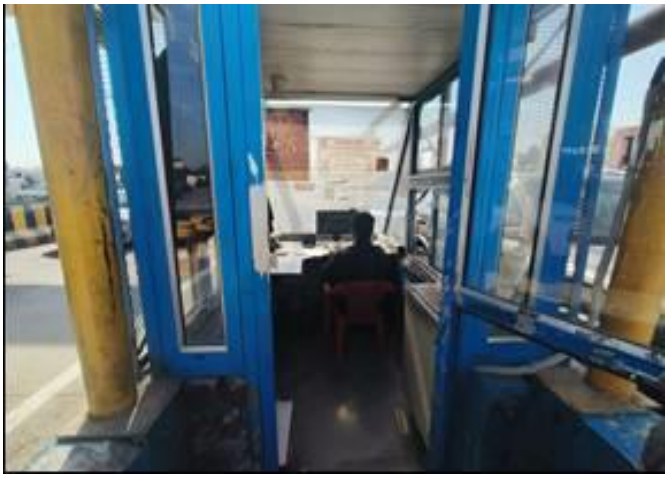
3.11.9 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.



Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11.10 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

Medium Speed Weigh in Motion at TP

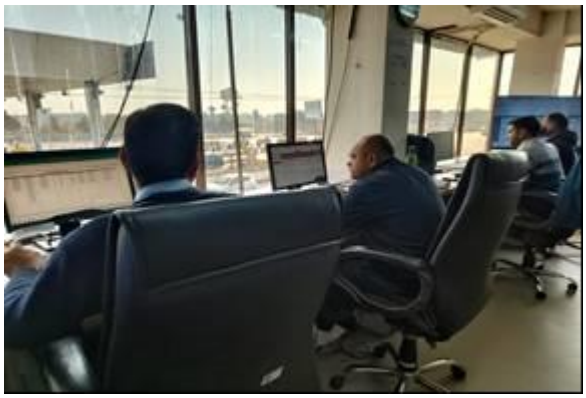
3.12 Plaza Equipment

3.12.1 TMS/ATMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewall with Sophos antivirus is provided.

3.12.2 55" LED screen for CCTV monitoring

55" LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).



The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.12.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.13 Advanced Traffic Management System (ATMS)

Advanced Traffic Management System (ATMS) installation is under progress. As informed by the Concessionaire, the same will be completed by end of June 2023. The ATMS is under COS. The following are installed / being installed at site.

- Automatic Traffic Counter cum Classifier (ATCC)
- Variable Message Signboards (VMS)
- CCTV system
- Video Incident Detection System (VIDS)
- Vehicle actuated Speed Display (VASD)

Status of these systems at site is described below:

3.13.1 Automatic Traffic Counter cum classifier (ATCC)

Automatic Traffic Counter cum Classifiers (ATCC) is installed at Toll Plaza.

3.13.2 Variable Message Signboards (VMS)

Variable message sign boards are installed at some locations. These display specific messages to the users based on the prevailing conditions on the highway. The message can be changed at any point of time from the HTMS centre. About 250 customised messages can be stored on the system.

3.13.3 CCTV Surveillance Cameras

Surveillance cameras are installed at various locations along the Project Road. The ATMS control room has video wall to monitor these locations through the cameras installed.

3.13.4 Video Incident Detection System

62 Nos. of fixed CCTV cameras are installed as part of Video incident detection system.

3.14 Truck Lay-bye

The Concessionaire has constructed truck lay-bye at the following locations.

Table 3-4 Details of Truck Lay-bye

Sr. No.	Design Chainage (km)	Side	Carriageway (m)
1	81+100	LHS	7.5
2	81+520	RHS	7.5
3	122+600	LHS	7.5
4	122+850	RHS	7.5

The photographs taken during the site visit are presented below.

Figure 3-12 Photographs of Truck Lay-bye

Truck Lay-Bye at km. 81+100 (LHS)

Truck Lay-Bye at km. 122+000 (RHS)

3.15 Traffic Aid Post and Medical Aid Post

Traffic Aid Post and Medical Aid Post are maintained by Concessionaire.

3.16 Toilet Block

The Concessionaire has constructed 02 Nos. of Toilet Blocks along the Project Road.

3.17 Bus Bays and Passenger Shelters

There are 18 Nos. of bus bays / shelter (LHS+RHS) along the Project Road.

3.18 Balance Work Status: Nil

The Project Road has received Final Completion Certificate on 2nd June 2016 by completing all the works as mentioned in the Technical Schedules of Concession Agreement. There are no balance works to be executed as per Concession Agreement.

3.19 Operation and Maintenance

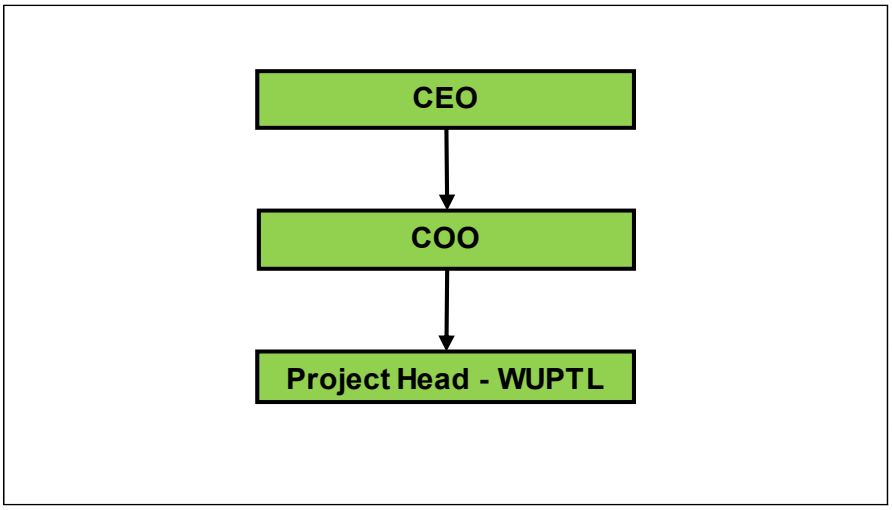
3.19.1 O&M Contract

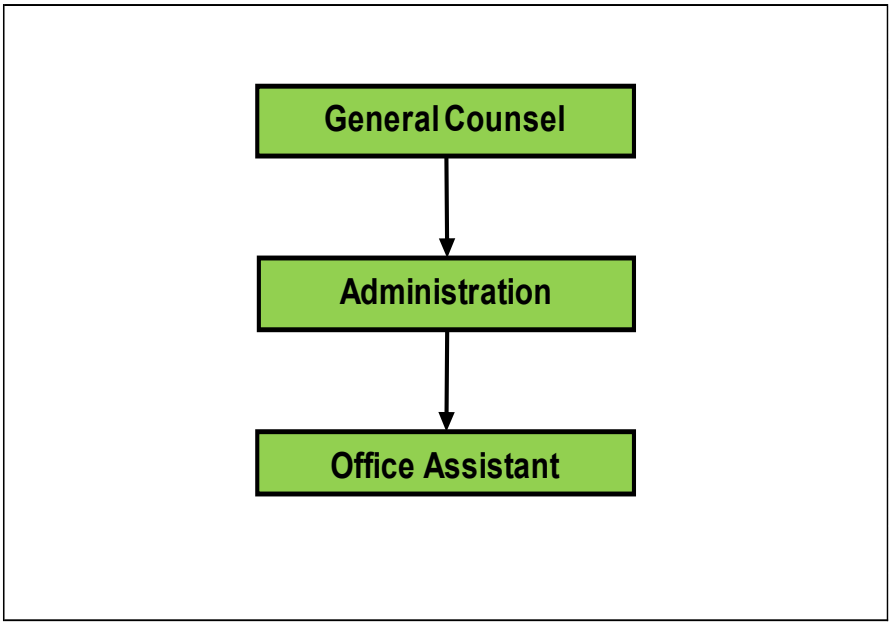
As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall confirm to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement. The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.19.2 Organization Chart

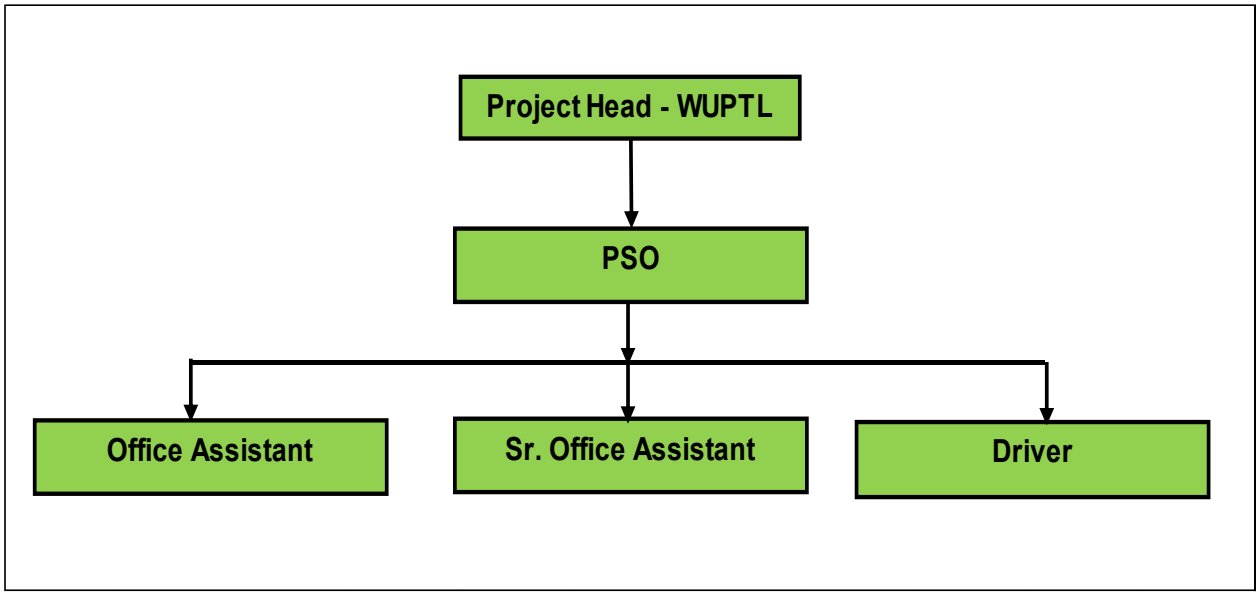
The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive (HR), 01 Assistant Manager (TMS / IT), 01 Executive (TMS / IT), 01 Plaza Manager, 01 Assistant Plaza Manager, 04 Cashiers and 04 validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.

Organization Chart

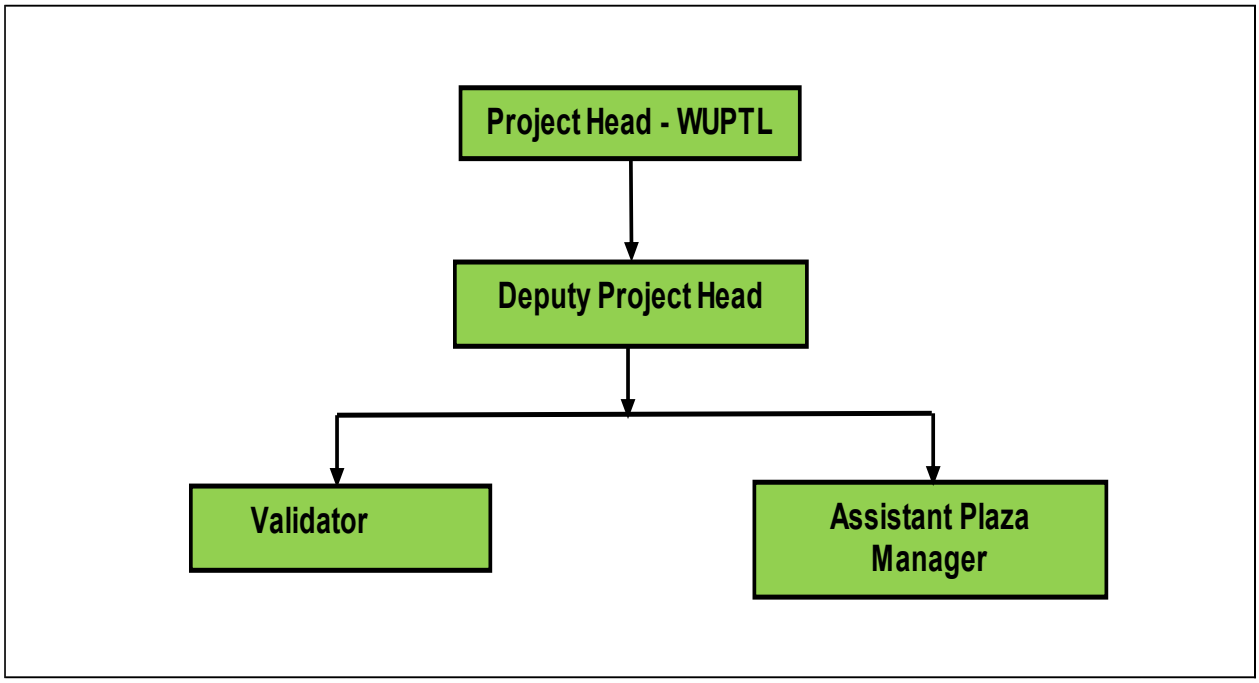




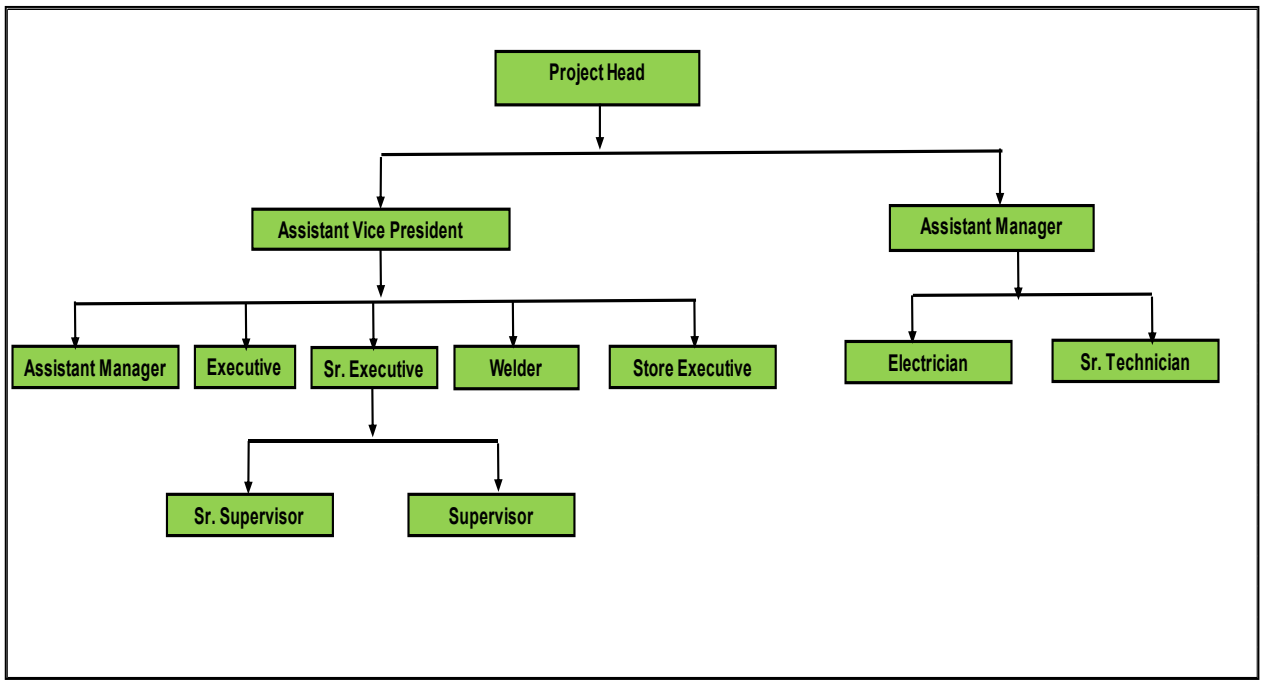
Head Office Administration



Site Administration



Site Operation System



Maintenance

3.19.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.19.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Concessionaire has received Completion Certificate on 2nd June 2016.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 20 years from the Appointed Date (as BOT Project i.e., 7th March 2006) including construction period. The end of concession period is on 6th March 2026.

4.2 Axle Load and VDF

The Concessionaire has conducted the Axle Load Survey on Project Road at km. 75+800 (near Toll Plaza) on 27th November 2019 and 28th November 2019. The summary of Vehicle Damage Factor (VDF) as calculated and provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor

Vehicle Category	Vehicle Damage Factor (VDF)	
	LHS	RHS
Bus	0.86	1.34
LCV	0.80	0.63
2A	1.76	2.38
3A	5.16	4.34
MAV	11.34	15.62

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

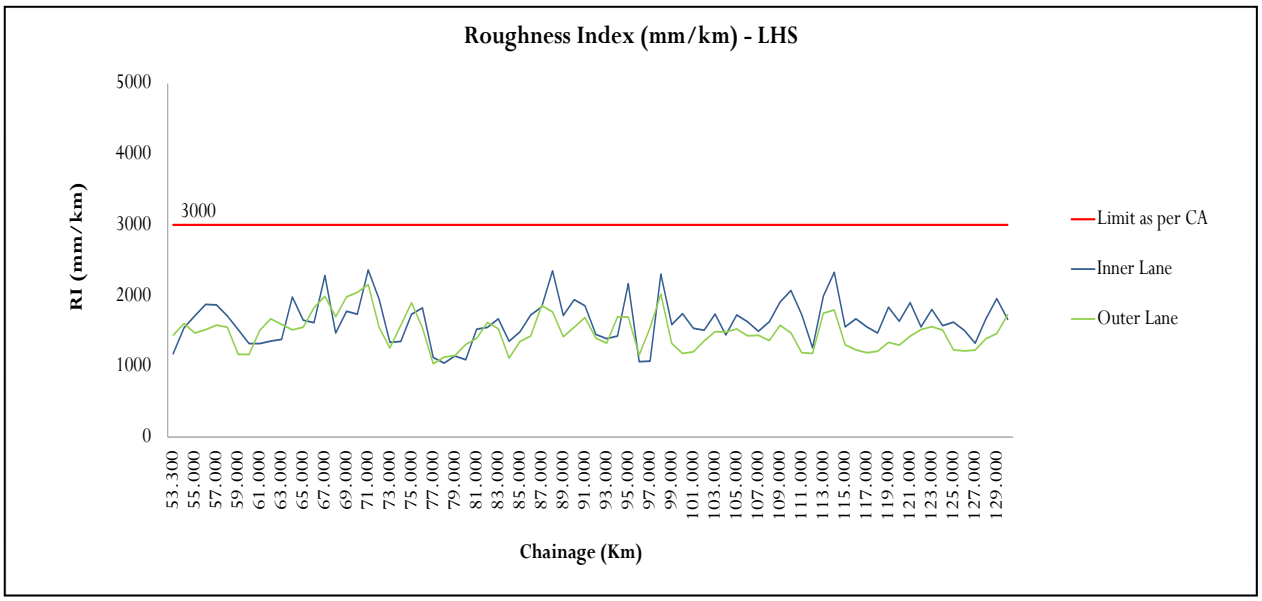
Year	LHS		RHS		Remarks
	MSA	Cumulative MSA	MSA	Cumulative MSA	
2024-25	2.34	**2.34**	3.02	**3.02**	
2025-26	2.32	**4.66**	3.01	**6.03**	End of Concession Period

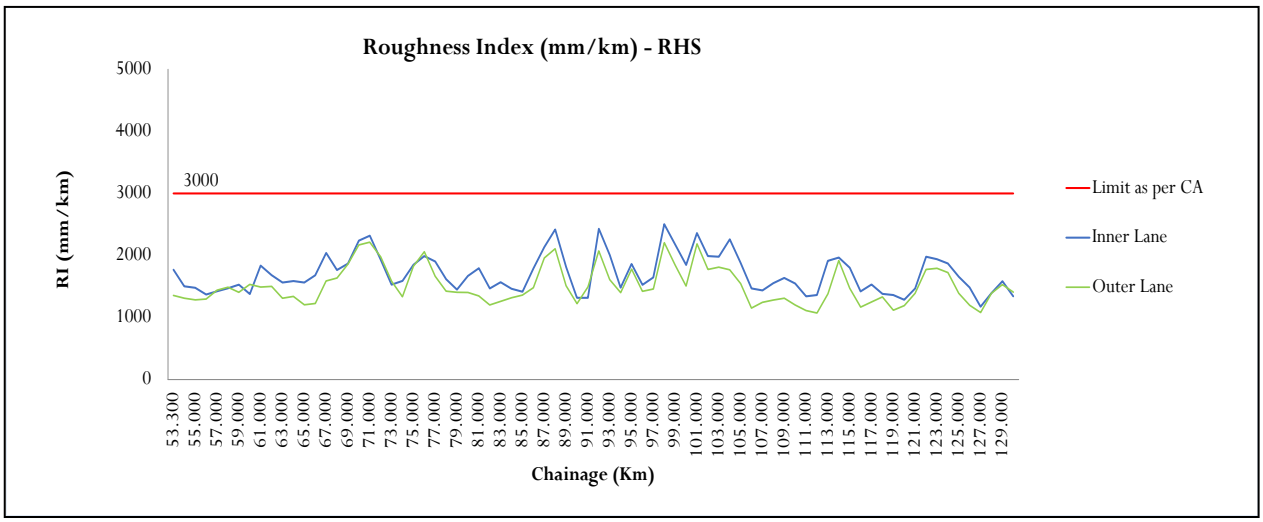
4.4 Network Survey Vehicles (NSV) Survey

The NSV Survey has been carried out by Concessionaire in April 2024. Result of the Survey is given in the below graphs.

Table 4-3 Roughness summary % as per Schedule-L of CA

Condition	Limit as per CA (mm/Km)	LHS		RHS	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane
Good	<3000	100.00%	100.00%	100.00%	100.00%
Poor	>3000	0.00%	0.00%	0.00%	0.00%

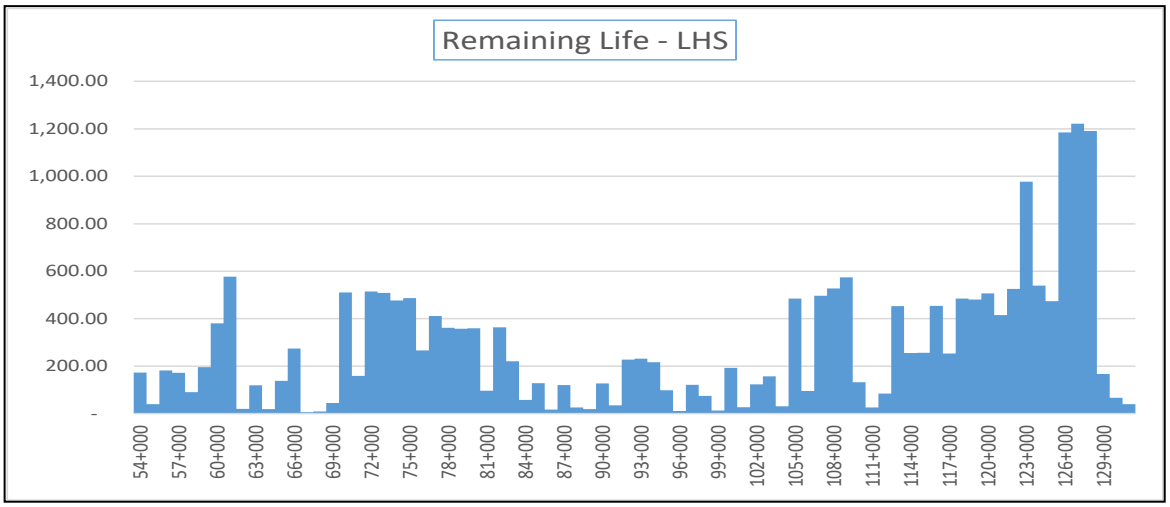


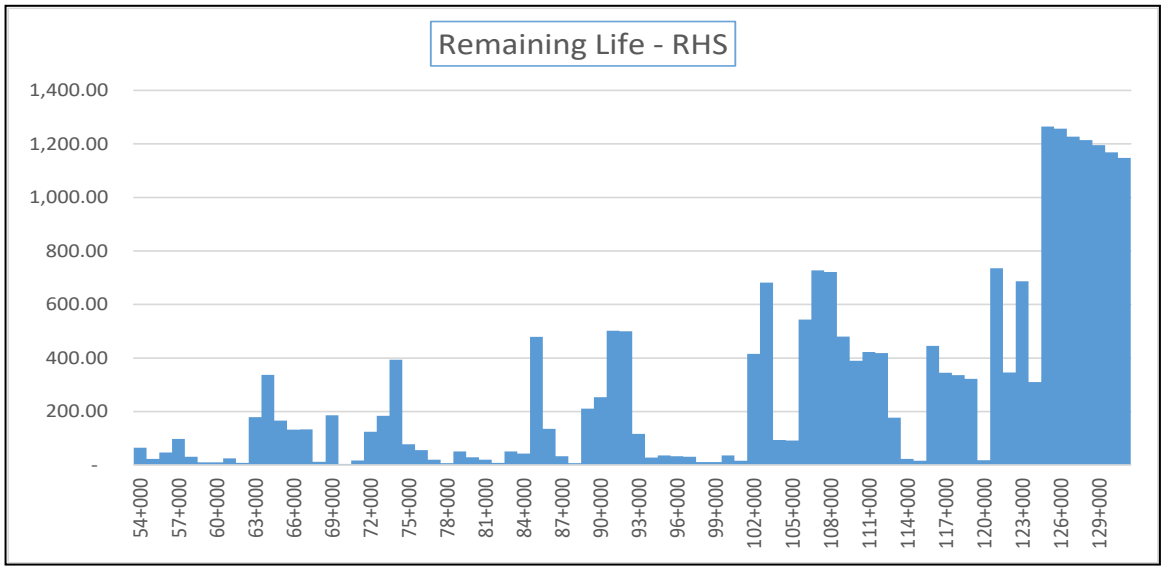


From the above graph, it is observed that the average BI value lies in the range from 1500 to 2500 mm/km. Hence, it is concluded that average road condition is Good and not required any immediate major maintenance. Moreover, Project Road had gone through major / periodic maintenance recently in FY 2022.

4.4.1 Structural Investigations

The FWD Survey has been carried out by the Concessionaire in April 2024. The results obtained from the FWD Test are shown in the following graphs.





4.4.2 Periodic Maintenance Strategy

As per the Schedule-L of the Concession Agreement, the Periodic Maintenance shall be carried out at least once in every 5th year from COD and in the last year of the concession period.

Currently, the Project Road has been maintained by Cube Highways since 2016. The Project Road has received COD on 2nd June 2016. As informed by Concessionaire, periodic maintenance for the Project Road is recently completed on 25th June 2021.

As the Concession Period of the Project Highway ends in March 2026, Major Maintenance work is in progress. As on date, around 30% of BC Overlay work is completed. Since the road condition is good to fair, the Concessionaire is doing BC overlay of 30 mm for 50% length and BC inlay of 30 mm for 50% length of the Project Highway. Wherever the distresses are observed, those stretches are being treated/repaired with milling and 50 mm DBM.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-4 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2025	-	
2	FY 2026	Major maintenance with 30 mm BC (VG-40) (100%) + Milling & 50 mm DBM (4%)	Major maintenance with 30 mm BC (100%)
		End of concession period	

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Work Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

   a. **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

   Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years.

   Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 2026 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971
IOC Barauni	VG-30	48,502	34,540

Refineries	Grade	Rate for FY 2026 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Barauni	VG-40	51,242	36,492
CPC Chennai	VG-10	48,202	34,156
CPC Chennai	VG-30	49,002	34,723
CPC Chennai	VG-40	51,752	36,672

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel:** Rate of steel is taken from SAIL.

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.

g. **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam (VG-40)	Cum	9,562
2	Bituminous Concrete (VG-40)	Cum	11,735
3	Bituminous Concrete (VG-30)	Cum	11,085
4	Milling	Sqm	95
5	Micro-surfacing	Sqm	173
6	Kerb Re-laying	Rmt	440
7	Road Marking	Sqm	596
8	Road Studs	Nos.	244

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, balance work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the

operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS / HTMS / System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026)
1	Salary and Welfare Expenses	1,68,30,000
2	Tolling Operations Services	2,53,41,939
3	Toll Security Services	1,49,96,502
4	Incident Management & Emergency Services	2,62,89,231
5	Electricity and Diesel Charges	98,55,171
6	TMS/HTMS/System Expenses	23,14,000
7	Office Operating Expenses	62,02,152
8	Vehicle Running Expenses	34,45,200
9	Professional Fees Expense	1,16,29,035
10	Community Development	19,38,173
11	Communication Expenses	11,19,833
12	Conveyance Expenses	26,70,371
13	Insurance Expense	78,38,831
14	IE Fees	72,78,915
15	Routine Maintenance Cost (Project Highway)	3,27,89,258
16	Horticulture & ROW Maintenance	2,19,55,618
17	Miscellaneous including Contingency	55,09,974
	Total Cost (Rs)	**19,80,04,203**
	Total Cost (Cr)	**19.80**
	Per km Cost (Lakh)	25.28

5.5 Major Maintenance Cost

As mentioned in earlier chapter, the end of concession period for the Project Road is on 6th March 2026. The Concessionaire has to carry out periodic maintenance before handing over of the project confirming the pavement parameters kept within the limits as per Table-1 (Maintenance Criteria for Pavements) of Schedule-F. Hence, the major maintenance cycle is proposed in FY 2026 i.e. at the end of concession period.

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2026	97.72	
Total Cost (Cr.)		**97.72**	

5.6 Periodic Replacement of TMS / ATMS System

Replacement of ATMS is not required because the same is under COS.

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2026	-	**2042**	3.99%
2027	5.25%	**2043**	3.99%
2028	4.86%	**2044**	3.99%
2029	4.44%	**2045**	3.99%
2030	4.24%	**2046**	3.99%
2031	4.13%	**2047**	3.99%
2032	4.08%	**2048**	3.99%
2033	4.01%	**2049**	3.99%
2034	4.00%	**2050**	3.99%
2035	4.03%	**2051**	3.99%
2036	4.01%	**2052**	3.99%
2037	3.98%	**2053**	3.99%
2038	3.98%	**2054**	3.99%
2039	4.00%	**2055**	3.99%
2040	3.99%	**2056**	3.99%
2041	3.99%		

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in clause 5.7.

Escalated O&M Cost (in INR Cr.)

Sr. No.	Year of expense	FY26
1	Routine O&M Cost	
1.01	Salary and Welfare Expense	1.68
1.02	Tolling Operations Services	2.53
1.03	Toll Security Services	1.50
1.04	Incident Management Services	2.63
1.05	Electricity and Diesel Charges	0.99
1.06	TMS/HTMS/System Expenses	0.23
1.07	Office Operating Expenses	0.62
1.08	Vehicle Running Expenses	0.34
1.09	Professional Fees Expense	1.16
1.10	Community Development	0.19
1.11	Communication Expenses	0.11
1.12	Conveyance Expenses	0.27
1.13	Insurance Expense	0.78
1.14	IE Fees	0.73
1.15	Routine Maintenance Cost	3.28
1.16	Horticulture & ROW Maintenance	2.20
1.17	Miscellaneous and Contingency	0.55
	Subtotal of O&M Cost	19.80
2	Major Maintenance Cost	97.72
3	Periodic Cost of TMS/HTMS Replacement	-
4	Balance Works Cost	-
	Total Cost	**117.52**

ANNEXURES

ANNEXURE I - ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Western UP Tollway	
Ordinary Repair Cost for Flexible (with GST)	**3,27,89,257.90**
(inclusive of GST)	**= 4.19 lakhs per km**

CONVERSION FACTORS									
National Highways / State Highways									
Reference cost taken for Two / four lane (7.0 or 14m or 21m) with 1.5m wide shoulders

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of National Highway No. 47 including the section from Walayar to Vadakkancherry (km. 182+250 to km. 240+000 of NH-47) - Package NS-2/BOT/KL-2 - on DBFOT (Toll) basis under NHDP Phase-II in the State of Kerala (approx. 54.00 kms) (hereinafter referred as "Project Road").

Walayar Vadakkencherry Expressways Private Limited (WVEPL) (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for development, maintenance and management of National Highway No. 47 including the section from Walayar to Vadakkancherry on DBFOT (Toll) basis under NHDP Phase-II.

The Date of Concession Agreement is 17th September 2012. The concession period of the project is 20 years commencing from the Appointed Date including implementation period. The Appointed Date of the project is 18th May 2013. The Provisional Completion Certificate was issued on 18th May 2015 and the Commercial Operation commenced from 23rd May 2015. The Completion Certificate was issued on 31st October 2015 for total length of the project i.e. 53.495 kms.

Sr. No.	Description	Date
1	Date of Signing the Concession Agreement	17th Sep 2012
2	Appointed Date	18th May 2013
3	Scheduled Project Completion Date	13th Nov 2015
4	Scheduled End of Concession	17th May 2033
5	Date of issue of Provisional Completion Certificate	18th May 2015
6	Date of Commencement of Commercial Operation	23rd May 2015
7	Date of Issue of Completion Certificate	31st Oct 2015

Presently, the project is under operation and maintenance and the Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. The same is according to presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.

- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets, mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimates.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Client. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyses the same as per the best engineering / industry practices.

The site visit and inspection of the project site was carried out during the period from **28th January 2025 to 31st January 2025**.

The report is organized with the following chapters for easy understanding of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for technical due diligence study.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development etc.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on the site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecast for O&M and major maintenance costs over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

National Highways Authority of India signed the Concession Agreement with **Walayar Vadakkencherry Expressways Private Limited (WVEPL),** is a company promoted by Cube Highways or company a Special Purpose Vehicle (SPV) formed for implementing this project on 20th October 2020.

2.2 Location

The Site of the Four-Lane divided Project Road comprises the section of National Highway 47 commencing from km. 182.250 (Design Chainage km. 182.250) at Walayar to km. 240.000 (Design Chainage km. 236.135) (Approx Length is 53.495 kms) at Vadakancherry in the State of Kerala.

The Location Map of the Project Road is presented below:

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start of Project Road

Start of Project at km. 182+207 (RHS)

Start of Project at km. 182+207 (LHS)

Figure 2-3 End of Project Road

End of Project at km. 236+130 (LHS)

End of Project at km. 236+130 (RHS)

Sign board at End of Project at km. 236+130 (RHS)

2.3 Climate

The project location has a tropical wet and dry climate. Temperatures remain moderate throughout the year with the exception in March and April being the hottest months. A very high amount of precipitation is received in project area, mainly due to the South-West monsoon. July is the wettest month, and the total annual rainfall is around 83 inches (210 cm).

2.4 Terrain

The Project Road traverses through plain / rolling terrain.

2.5 Abutting Land Use

The Project Road passes through residential and agricultural zones.

2.6 Right of Way

The width of existing Right of Way (RoW) throughout the project stretch is 60.0 m, except Toll Plaza area.

2.7 Existing Utilities

During the widening of the Project Road, various affected utility services located along the project road were shifted out at the edge of the ROW. The different types of utilities found along the road include, electrical poles, telephone poles, hand pumps, permanent structures, temples etc.

2.8 Service Road

The total length of service road on both side is 49.338 kms.

2.9 Development as per Schedule-B

The Project Road from km. 182+250 (Design Chainage km. 182+250) at Walayar to km. 240+000 (Design Chainage km. 236+135) at Vadakancherry (Approx Length is 53.495 kms) has been developed as a four-lane paved carriageway 17.5 m wide excluding median. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.
b) Tolling, operation, management, maintenance, and transfer of the Project Highway subject to and in accordance with the provisions of this Agreement.
c) performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of the Concession Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under the Concession Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Particulars	Unit	Scope as per Schedule-B	Constructed as per site
1	O&M of Main Carriageway	km	53.885	53.495*
2	Rail Over Bridge (ROB)	Nos.	01	01
3	Grade Separator	Nos.	02	02
4	Major Bridge	Nos.	02	02
5	Minor Bridge	Nos.	17	17
6	Vehicular Underpass	Nos.	08	08
7	Culverts	Nos.	165	165

*Difference of about 0.39 km in the project length is due to the missing chainage. Hence, the total construction length is 53.495 kms.

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The paved carriageway is 17.50 m wide excluding the median. The project is widened to a four lane-carriageway with a width of 17.50 m as per standard cross section including paved shoulders. Service Road of 7.0 m width has been provided on one side or both sides wherever required in the built-up area to cater for the local traffic.

The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the toll plaza including taper is of rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **28th January 2025 to 31st January 2025** through visual inspection for the entire project length. From the visual inspection, the pavement condition of the Project Road is found to be Good.

Some of the photographs taken during the site visit are presented as below:

Figure 3-1 Photographs of Pavement Condition (Main Carriageway)

Pavement Condition at km. 182+000 (LHS)

Pavement Condition at km. 188+000 (LHS)

Pavement Condition at km. 201+000 (LHS)

Pavement Condition at km. 222+000 (RHS)

Pavement Condition at km. 224+000 (LHS)

Pavement Condition at km. 230+000 (LHS)

3.2 Service Road / Slip Road

The service road of width 7.0 is constructed in built-up area and adjoining underpass locations. The Project Road has total service road length of 49.338 kms. The condition of service roads at under construction VUP locations are poor and need to be repaired. After the completion of VUP construction, NHAI will repair the service road and hand it over to the Concessionaire for maintenance.

The photographs taken during the site visit are presented below:

Figure 3-2 Photographs of Service Road

Service Road at km. 187+500 (LHS)

Service Road at km. 193+500 (RHS)

Service Road at km. 216+400

Service Road at km. 222+000

3.3 Major / Minor Junctions

There are 09 nos. of major junctions and 36 nos. of minor junctions along the Project Road.

The photographs taken during site visit are presented as below:

Figure 3-3 Photographs of Major Junctions

Major Junction at km. 191+980

Major Junction at km. 193+620 (LHS)

Y-Junction on Service Road at VUP at km. 213+500

3.4 Inventory and Condition Survey of Structures and Bridges

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Sr. No.	Type of Structure	Total Number of Structures as per Concession Agreement	Total Number of Structures as per site
1	Rail Over Bridge (ROB)	01	01
2	Grade Separator	02	02
3	Major Bridge	02	02
4	Minor Bridge	17	17
5	Vehicular Underpass	08	08
6	Culverts	165	165

All major structures and CD works were visually inspected. The structures are generally sufficient for storm water drainage. The waterway needs regular cleaning. All the old bridges are 2-lane and widened to 2 additional lanes. Old bridges have RCC railing. They are constructed in open foundation. Expansion joints in some of the bridges are observed to be damaged. Bearings of some of the bridges need to be re-inspected and repaired, if necessary. In case of some bridges, settlement in approaches and cracks in the pavement has been observed. New bridges are constructed in 2-lane with footpath keeping a provision of converting into 3-lane in future. Foundation is RCC pile foundation. The wearing course and expansion joints are found okay. Crash barriers are of RCC type and are in sound condition. Return wall are of RCC type and pitching has been provided in almost all bridges. ROB on Project Road is found in sound condition. Structures are of Box type and RCC type and are in sound condition. Expansion joints are in good condition. RE walls are provided for the approaches of the structure.

The detailed condition survey of ROB, major bridges, minor bridges, flyovers and culverts was carried out by visual inspection. The observations and findings are presented below.

3.4.1 Cross Drainage (Bridges and Culverts)

Slab culverts are visually inspected. Some culverts are old and widened. The old structures have been strengthened with repair and rehabilitation during widening. The widening is either concentric or eccentric. The quality of concrete of abutment, slab, and wing wall, or return wall, parapet wall is satisfactory except at some locations. Minor settlement on approach is observed at few culverts. The slope protection was done at a major location. The slopes are stable. Generally, all the slab culverts are found in sound condition. The waterway needs to be cleaned on both sides of the culverts. Box culverts are visually inspected. The RCC box culverts are retained and widened. The RCC quality of new box culverts is good. The structure number is painted on the parapet wall or crash barrier in most of the culverts. The waterway is clear in most of the culverts and needs to be cleared for a few culverts, particularly in urban areas.

Pipe culverts are visually inspected. The pipe culverts are either newly constructed or reconstructed and the pipe culverts are retained and widened. The widening is either concentric or eccentric. In most of the culverts, the ends are blocked by debris, garbage or vegetation, especially in urban areas or buried underground. These require regular cleaning of the waterway to avoid damage to pavement.

The following photographs were taken during the inspection of culverts.

Figure 3-5 Photographs of Culverts

Box culvert at km.183+050 (LHS)

Box culvert at km. 187+250 (LHS)

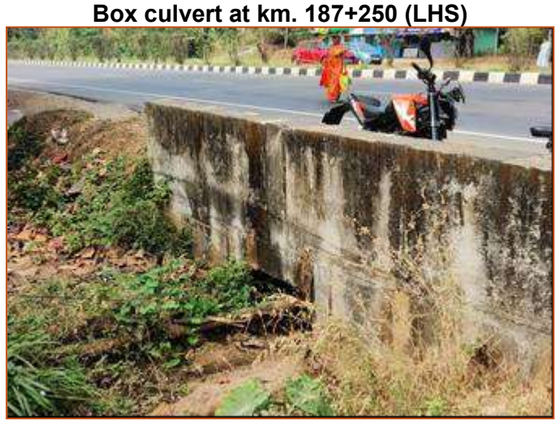
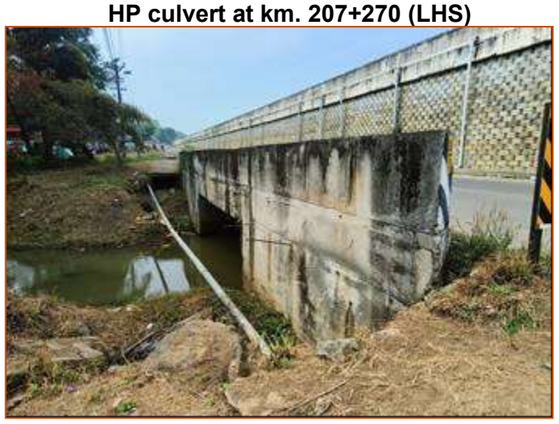
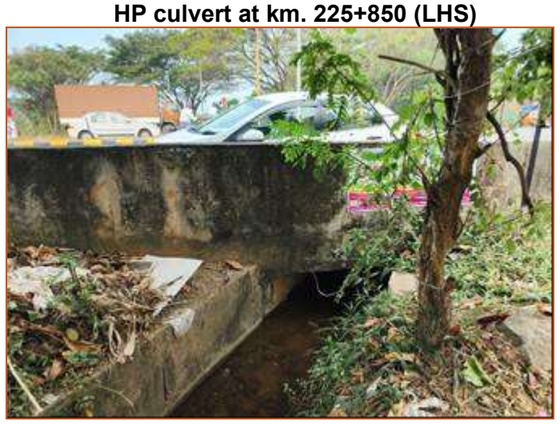
HP culvert at km. 225+400 (LHS)



Box culvert at km. 214+750 (LHS)



Box culvert at km. 215+700 (LHS)



Box culvert at km. 218+950 (LHS)

3.4.2 Minor Bridges

Table 3-2 Details of New Minor Bridges

Sr. No.	Existing Chainage (km)	Design Chainage (km)	Proposed structural configuration	Proposed Structure type	Proposed span arrangement (m)	Total width of the structure (m)	TDD Consultant's Remarks
1	182+236	182+237	2 lane c/w with footpath	RCC Structure	3 x 9.15	12.00	RR masonry pier & Solid slab structure is on LHS. The pavement is in good condition. The new structure of RCC pier, abutment & T-beam girder is on RHS. Expansion joints, crash barriers, pavement is in Fair condition. Vegetation is removed
2	190+940	190+970	2 lane c/w with footpath	RCC Structure	1 x 16.50	12.00	The new structure is on LHS. The structure is in good condition. Minor honeycomb is repaired. Condition of pavement, crash barrier, slope protection is in Fair condition.
3	194+390	194+470	2 lane c/w with footpath	RCC Structure	1 x 22.00	12.00	The new structure is on RHS. The structure condition is good. The overall structure of the old bridge is in good condition. Cleaning and vegetation removal are necessary. Further, expansion joint and drainage spout cleaning is necessary.
4	201+l25	201+295	2 lane c/w with footpath	RCC Structure	1 x 11.20	12.00	Old structure is on LHS. The structure is in good condition. The new structure is on RHS. The structure is in good condition.
5	204+539	204+680	2 lane c/w with footpath	RCC Structure	1 x 21.40	12.00	The new structure is on RHS. The structure condition is good. Vegetation and silt need to be removed. Cleaning of expansion joints is necessary for new structure.
6	209+350	209+950	2 lane c/w with footpath (Skew)	RCC Structure	2 x 13.00	12.00	The new structure is located on the right-hand side (RHS), and its condition is good. According to the NHAI proposal for the new construction of a Vehicular Underpass (VUP) at km. 209+900, the height of the minor bridge on both sides will be increased by another agency and the same work is in progress.
7	212+568	213+160	2 lane c/w with footpath	RCC Structure	1 x 20.00	12.00	Single span structure with girders on both sides. Silt needs to be removed from the bed portion. Further, vegetation needs to be removed. Cleaning of expansion joint needs to be done
8	214+252	214+272	2 lane c/w with footpath	RCC Structure	1 x 13.50	12.00	RCC old structure is on LHS which is in good condition. Single span structure with girders, RCC pier and solid slab. The new structure is on RHS. The overall structure condition is good on both sides. Removal of heavy, thick vegetation and silt on either side etc. to be done and waterway to be cleared.
9	221+895	219+570	2 lane c/w with footpath	RCC Structure	1 x 9.00	12.00	RCC old structure is on RHS which is in good condition. The new structure is in good condition. Cleaning is required as there is presence of vegetation in the waterway of canal.
10	224+531	222+165	2 lane c/w with footpath (Skew)	RCC Structure	3 x 9.00	12.00	RCC old structure is on LHS which is in good condition. The new structure which is in LHS is in good condition. Rehabilitation is required as there is presence of vegetation and silt.
11	227+358	224+902	2 lane c/w with footpath	RCC Structure	3 x 16.40	12.00	RCC old structure is on RHS where concrete crash barrier is reconstructed. The new structure which is in LHS is in good condition. Rehabilitation is required in the form of cleaning of expansion joints, removal of vegetation in waterway etc.
12	239+030	235+180	2 lane c/w with footpath	RCC Structure	3 x 16.40	12.00	RCC Old structure is on RHS. The new structure which is in LHS is in good condition, but exposure of steel is observed on the side of deck slab which need to be repaired. Vegetation / silt removal is also required for both structures apart from rehabilitation.

Construction of New Cross Drainage Structures on Service Road at Minor Bridge Locations

Sr. No.	Existing Chainage (km)	Design Chainage (km)	Proposed structural configuration	Proposed Structure type	Proposed span arrangement (m)	Side (LHS / RHS)	Total width of the structure (m)	TDD Consultant's Remarks
1	194+390	194+470	2 lane c/w	RCC Structure	1 x 22.00	Both sides	8.50	The new structure is on RHS. The structure condition is good. Overall structure condition of old structure is good. Debris and vegetation removal are necessary.
2	212+568	213+160	2 lane c/w	Causeway	10 x 1.2m dia. HP	LHS	8.50	Single span structure. Silting and vegetation grown need to be removed from the bed portion. Cleaning of expansion joints is required.
3	212+568	213+160	2 lane c/w (Skew)	RCC box culvert	3 x 3.00	RHS	8.50	Single span structure. Debris and silt deposition need to be removed from the bed portion. Cleaning and repairing of expansion joint is required.
4	227+358	224+902	2 lane c/w	RCC Structure	3 x 16.40	Both sides	8.50	RCC structure (old) is on RHS where removal of thick vegetation and cleaning of expansion joint is required. On LHS (new structure), cleaning of expansion joint is required. Further, on both side removal of thick vegetation and desilting is necessary for waterway.

Sr. No.	Existing Chainage (km)	Design Chainage (km)	Proposed structural configuration	Proposed Structure type	Proposed span arrangement (m)	Side (LHS / RHS)	Total width of the structure (m)	TDD Consultant's Remarks
5	239+030	235+180	2 lane c/w	RCC Structure	3 x 16.40	RHS	8.50	RCC masonry pier and solid slab structure. Parapet wall rehabilitation work and wearing course overlaying is done. Honeycombing is observed on piers. Further, steel is exposed / came out at slab level. Pier foundation protection work is damaged. Hence, rehabilitation measures are required to be carried out to correct the deficiency / deterioration.

The following photographs were taken during the inspection of Minor Bridges.

3.4.3 Major Bridge (length > 60 m)

There are 02 Nos. of Major Bridges on Project Road. Both Major Bridges were visually inspected. The structures are generally sufficient for the crossing of river water. The waterway needs regular cleaning. Old structures are present on the right side of both locations. All the old bridges are additional 2-lane lanes with footpaths. Old bridges have RCC railing. The sub-structures are constructed with RCC piers. Expansion joints on both the bridges need to be cleaned. Minor settlement in approaches and damage on pavement has been observed. New bridges are constructed in 2-lane with footpath. Old bridges on RHS have RCC pier and T-beam girders. The wearing course and expansion joints are found to be in good condition. W-beam and RCC type crash barriers are in sound condition. Drainage spouts and expansion joints need to be cleaned regularly. Further, vegetation and silt need to be removed from the waterway for smooth flow of water.

Table 3-3 Details of Major Bridges

Sr. No.	Design Chainage (km)	New Chainage (km)	Type of Structure	No. of Span	Span Arrangement (m)	No. of Lane with footpath	Side	Construction Scheme	TDD Consultant's Remarks
1	198+725	198+870	Major Bridge (Nagargampally River)	4	4 x 26.60	2	LHS	New Construction	The structure is in good condition. Pipe railing & Concrete crash barriers are in good condition.
				4	4 x 26.60	2	RHS	Old Construction	The structure is in fair condition. Apron Pitching needs to be repaired. Crash barriers are in sound condition. Rectification work of RHS is done with replacement of bearings.
2	207+260	207+900	Major Bridge (Yakkara River)	8	8x 21.40	2	LHS	New Construction	The structure is in good condition. Pipe railing and Concrete crash barriers are in good condition. Cleaning of Expansion joints is required.
				8	8x 21.40	2	RHS	Old Construction	The structure is in fair condition. In slope protection works vegetation needs to be clean. Drainage spouts cleaning is required. Bearings & Expansion joint replacement work is in progress as per IE requirement.

The following photographs were taken during the inspection of Major Bridges.

3.4.4 Underpasses

Table 3-4 Details of Vehicular Underpasses

Sr. No.	New Chainage (km)	Type of Structure	No. of Span	Span Width (m)	No. of Lane	Construction scheme	TDD Consultant's Remarks
1	197.730	VUP	1	17.50	4	New construction	The overall structure condition of all underpasses is found to be good. RCC crash barriers, W-beam crash barriers, slope protection work, wearing coat is found to be good. Minor settlement on approaches is noticed. In underpasses at km. 217+500 and km. 234+400 vegetation removal on RE wall portion and cleaning of drainage spout is required. At the old Vehicular Underpass at km. 209+076, a crack is observed on slope protection. Vegetation removal on slab / crash barrier needs to be removed on old underpass Approach at A1 side.
2(a)	209.076	VUP (L/S)	1	13.20	2	Old construction	
2(b)	209.076	VUP (R/S)	1	13.20	2	New construction	
3	217.500	VUP	1	25.00	4	New construction	
4	234.400	VUP	1	17.50	4	New construction	
Note: The Concessionaire has constructed two underpasses under Change of scope apart from regular scope shown above. The structures are constructed at km. 202+760 and km. 206+310 (Skew).

3.4.7 ROB

There is 01 No. of ROB on Project Road at km. 208+975. A new structure is constructed on the right side and the existing structure is on the left side. Old structure is RCC box type. Steel reinforcement is exposed to the wing wall of old ROB. The new structure is constructed with RCC girder of single span. The structure is in good condition. Wearing coat is in good condition. The crash barrier for new structure is found to be in good condition.

Table 3-7 Details of ROB

Sr. No.	Design Chainage (km)	Type of Structure	Side	No. of Span	Span Width (m)	Length (m)	No. of Lane	Construction scheme	TDD Consultant's Remarks
1	208+375 / 208+975	ROB	LHS	1	10.50	6.50	2	Old construction	The pavement is in good condition. kerbs are re-cast. Vegetation is observed at slope protection area. Chute drains are not provided on embankment, as per the provision of CA. So, all the lapses / defects mentioned above need to be attended.
			RHS	1	12.00	6.50	2	New construction	Overall, the structure is in good condition. The pavement & crash barrier condition is good.

The following photographs were taken during the inspection of ROB.

Condition of Abutment at New ROB

3.4.8 New Construction of VUP at Major Junction

The National Highways Authority of India (NHAI) has appointed a new agency for the construction of new Vehicle Underpass (VUP) with approaches at three major junctions located at km. 209+900, km. 215+750 and km. 226+700. The work is in progress.

The following photographs were taken during the inspection.

Figure 3-12 Photographs of New VUP (under construction)

Work is in progress at km. 209+700

Work is in progress at km. 226+000

VUP at km. 226+700

3.5 Drainage

Drains are to be constructed at the Project Road to have good drainage. Lined drains are provided at the sides of the service road and at some locations covered lined drains are provided at the separators between the main carriageway and service road. Median cut drains are provided at superelevation locations. The drainage condition of Project Road is in order. Silt deposits need to be removed during routine maintenance. Total 11.2 kms of covered / open line side drain is found on site. The condition of the same is good to fair.

Some of the photographs taken during the site visit are presented below.

Figure 3-13 Photographs of Drainage

Median Drain at km. 208+000

RCC Drain at km. 187+250 (LHS)

Drain at Median km. 240+000 (RHS)

Drain at km 209+800 (LHS)

Earthen Drain at km. 221+000 (LHS)

3.6 Slope Protection

Slope protection is found on Project Road at certain locations. At a few locations, the slope protection is damaged, which needs to be rectified by the Concessionaire.

Some of the photographs taken during the site visit are presented below.

Figure 3-14 Photographs of Slope Protection

Slope Protection at km. 194+500

Slope Protection at km. 196+000 (LHS)

Slope protection at km. 224+900 (LHS)

Slope protection at km. 234+000

3.7 Road Furniture

3.7.1 Pavement Marking

The design and marking for the Project Road are done as per the design standards as indicated in Schedule-D and the location for various treatments are drafted in consultation with the Independent Engineer.

Some of the photographs taken during the site visit are presented below.

Pavement Marking at km. 230+000

Pavement Marking at km. 208+500 (LHS)

3.7.2 Traffic Signage

Traffic signs include roadside signs, overhead signs, curb mounted signs and road marking along the Project Road. The design for the Project Road is done as per the design standard indicated in Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule 'D'. Overhead signs shall be installed ahead of major intersections, toll plazas and urban areas as per detailed design requirements.

3.7.3 Highway Lighting

Highway Lighting is provided in urban and semi-urban areas of the Project Road. Lighting is provided at the locations of truck lay-bye, rest areas, toll plazas, underpasses, ROBs, service road stretches and at intersections / interchanges. IS:1944 (Part I and Part II) is followed for lighting installations. High mast lighting systems are provided at major junctions, locations of ROB / Flyover / Underpass / Grade Separator.

Some of the photographs taken during the site visit are presented below.

Highway Lighting at km. 197+100

Highway Lighting at km. 217+600 (LHS)

3.7.4 Road Studs / Cat's eyes

The Concessionaire has provided road studs / cat's eyes as per Schedule-D on the curves, road junctions, zebra crossings, in municipal area and village settlement and ramps etc. to provide the proper visibility to the road users. All the road studs / cat's eyes on the Project Road are replaced.

Some of the photographs taken during the site visit are presented below.

Road Studs at km. 193+650 (Junction)

3.7.5 Pedestrian Guard Rail

The pedestrian guard rails are provided between main carriageway and service road at built-up locations. Damaged / missing pedestrian guard rails are replaced or repaired.

3.7.6 Avenue Plantation and Median Plantation

Avenue Plantation is available intermittently along the Project Road. However, the same requires regular maintenance. Median Plantation too needs proper regular maintenance.

Trees were planted in ROW and on either side of the road with staggered pitch as per IRC:SP:21. At present, replantation is in progress wherever required on Project Road. Arrangements for plantation of trees is in accordance with the MORT&H Technical Circle No. NH-41 (34) / 69. A spacing of 10 m - 15 m c/c is recommended for spacing of trees parallel to the roads. Set back distance of trees needed in different situations is as per the IRC:SP:21 and IRC:66. Shrubs in median is normally exceed 1 m - 1.5 m heights and as per IRC:SP:21. The landscaping is carried out as per the extent policy of NHAI as is being done on NHAI's public funded projects.

Some of the photographs taken during the site visit are presented below.

Median Plantation at km. 190+000 to 191+000

Avenue Plantation at km. 188+000 to 189+000

3.7.7 Traffic Signage / Median kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location and installation are as per relevant clauses of Schedule ‘D’. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards and median kerb paint are faded at few locations which will be rectified by the Concessionaire.

Some of the photographs of sign boards are presented below.

Figure 3-15 Photographs of Road Signages

ROW Piller at km. 221+590

Hazard marker at BXC at km. 218+950 (LHS)

3.7.8 Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site.

Some of the photographs of metal beam crash barriers are presented below.

Figure 3-16 Photographs of MBCB / Crash Barrier

MBCB at km. 217+000 to km. 216+000

Crash barrier at km. 215+000 to km. 216+000

MBCB at km.190+000 to km. 190+000

Crash barrier at km. 185+000 to km. 186+000

3.7.9 Delineators

The traffic delineators are provided by the Concessionaire on the Project Road for road users. The same are maintained by the Concessionaire.

Some of the photographs of delineators are presented below.

Figure 3-17 Photographs of Delineators

Delineator at km. 186+450

Delineator at km. 225+000

3.7.10 Pedestrian Guard Rail

The pedestrian guard rails are provided in the median. It is maintained by the Concessionaire.

Some of the photographs of pedestrian guard rails are presented below.

Figure 3-18 Photographs of Pedestrian Guard Rail

Guardrail at km. 201+950

3.8 Toll Plaza

As per the Concession Agreement, there is one toll plaza on the Project Road at km. 189+400. The details of the Toll Plaza are as follows.

Table 3-8 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details		Remarks
		LHS	RHS	
1	Number of Tolling Lanes	5	5	
2	Weigh in Motion Facility (Number of Lanes)	5	5	
3	No. of ETC lanes	5	5	
4	No of Toll booths	9 Singles		
5	Canopy	Present		
6	Administrative building	Present		
7	Parking cum Toilet block	Present		Toilet block available
8	Availability of Tunnel or Elevated walkaway for movement between Toll lanes and administrative building	Tunnel / Yes		
9	Availability of static weigh bridge	Yes		2 numbers
10	Availability of Loading/Unloading Facility for Overloading vehicles	No		
11	Storage facility for Overloaded material	No		
12	High mast light	Yes		
13	Streetlight	Yes		
14	Low mast light	No		
15	User fee boards	Yes		
16	Cantilever/Gantry boards	Yes		
17	Automatic boom barrier	Yes

Crane at Toll Plaza

Medical Facility at Toll Plaza

3.9 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver
2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.9.1 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

RFID at Toll Plaza

3.9.2 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data.

Lane Controller in Tunnel at TP

3.9.3 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

AVCC at Toll Plaza

3.9.4 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at Toll Plaza

3.9.5 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at Toll Plaza

3.9.6 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

OHLS at Toll Plaza

3.9.7 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.
The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Toll Booth at Toll Plaza

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Cameras are provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.9.8 Medium Speed Weigh in Motion (MSWIM)

Medium Speed Weigh in Motion (MSWIM) is installed on entry lanes of Toll Plaza.

SWIM at Toll Plaza

3.10 Plaza Equipment

3.10.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewall with Sophos antivirus is provided.

TMS Server at Toll Plaza

3.10.2 55" LED screen for CCTV monitoring

55" LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager can observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager can comprehend the situation at the lane by a zoomed view of the particular lane.

3.10.3 Workstations in Cash Room & POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and POS.

Cash Room at Toll Plaza

Point of sale room at Toll Plaza

3.11 Toilet Block

There is one toilet block provided at Toll Plaza. A photograph of the toilet block is presented below.

Photographs of Toilet Block

3.12 Bus Bays and Passenger Shelters

There are 43 Nos. of bus bays / passenger shelter along Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-20 Photographs of Bus Bays / Passenger Shelter

Bus bay at km. 213+050 (LHS)

Bus bay at km. 219+550

3.13 Balance Work Status

The project has received Completion Certificate on 31st October 2015 by completing all the works as mentioned in the Technical Schedules of Concession Agreement. Hence, there are no balance works to be executed as per CA.

3.14 Operation and Maintenances

3.14.1 O&M Contract

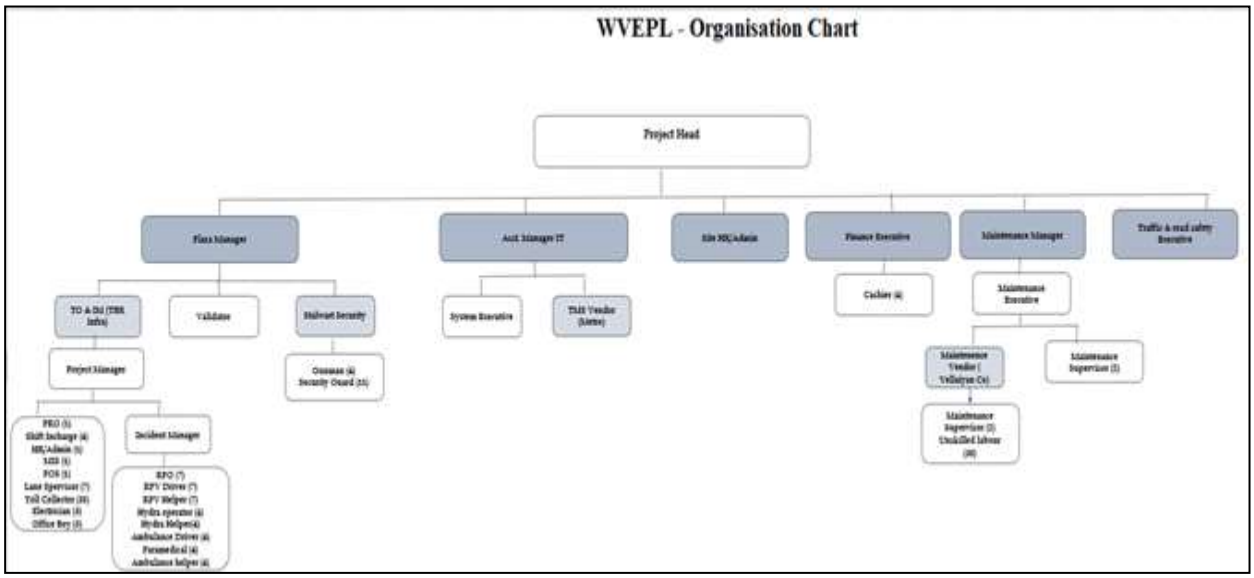
As per Clause 15.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, improve the Project Road to comply with Specifications and Standards, and other

requirements set forth in the Agreement through Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems. The Operation and Maintenance activities shall conform to all the requirements laid down in MoRT&H, IRC Specifications and the Concession Agreement.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services, AMC for TMC and AMC for DG set.

3.14.2 Organization Chart

The Concessionaire has given the Organization Chart at site for Operation and maintenance. Accordingly, there is 01 Project Head, 01 Senior Executive (F&A), 01 Senior Executive (HR), 01 Assistant Manager (TMS / IT), 01 Executive (TMS / IT), 01 Maintenance Manager, 01 Store Executive, 03 Supervisor, 02 Electrician, 01 Plaza Manager, 01 Document Controller, 04 Cashiers and 03 validators to carry out O&M activities. The team controls the maintenance activities. However, the maintenance work is undertaken and executed through competent sub-contractors.



3.14.3 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on the best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.14.4 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of Work. The Concessionaire has received Completion Certificate on 31st October 2015 for the complete Project stretch.

The project is currently under the Operation and Maintenance stage. The concession period of the project is 20 years from the Appointed Date 18th May 2013 including construction period of 2.5 years.

4.2 Surveys and Investigation

4.2.1 Pavement Condition Survey

Pavement condition survey was carried out by the Technical Consultant from **28th January 2025 to 31st January 2025** through visual inspection for the project road and for the entire length.

The summary of pavement condition based on the visual inspection is tabulated below.

Table 4-1 Summary of Pavement Condition

Sr. No.	Chainage (km)		Length (km)	Visual Condition (As per IRC:115-2014)	
	From	To		Left Carriageway	Right Carriageway
1	182.207	236.130	53.495	Good	Good

Observation and Conclusion:

From the above table, it is observed that the overall pavement condition for the entire project stretch is found to be Good.

4.2.2 Axle Load Survey

The Concessionaire conducted the Axle Load Survey on Project Road at km. 189+600 (near Toll Plaza) on 19th January 2021 and 20th January 2021. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-2 Vehicle Damage Factor

Vehicle Category	Vehicle Damage Factor at km. 189+600 (near Toll Plaza)	
	Walayar - Vadakkancherry	Vadakkancherry - Walayar
Bus	0.856	0.759
LCV	2.000	0.470
2A	3.856	1.503
3A	9.218	2.419
MAV	17.073	6.082

4.2.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-3 MSA Calculation

Year	LHS		RHS		Remarks
	MSA	Cumulative MSA (Walayar - Vadakkancherry)	MSA	Cumulative MSA (Vadakkancherry - Walayar)	
FY 2026	8.97	**8.97**	3.15	**3.15**	
FY 2027	9.59	**18.56**	3.38	**6.53**	
FY 2028	10.16	**28.72**	3.58	**10.11**	
FY 2029	10.84	**39.56**	3.82	**13.93**	
FY 2030	11.35	**50.91**	4.00	**17.93**	
FY 2031	11.87	**62.78**	4.19	**22.12**	
FY 2032	12.42	**75.20**	4.39	**26.51**	
FY 2033	13.03	**88.23**	4.60	**31.11**	
FY 2034	13.66	**101.89**	4.83	**35.94**	End of concession period as per appointed date & CA
FY 2035	14.32	**116.21**	5.07	**41.01**	
FY 2036	15.01	**131.22**	5.31	**46.32**	
FY 2037	15.73	**146.95**	5.57	**51.89**	
FY 2038	16.48	**163.43**	5.84	**57.73**	End of concession period as per target revenue

4.2.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has conducted a pavement condition survey on each lane of each carriageway with NSV. The NSV survey was conducted on the Project Road on 29th November 2024.

Roughness Survey

Roughness Survey results were provided by the Concessionaire for analysis and to assess the riding quality on each direction (each lane) of the carriageway of Project Road.

The side-wise results of Roughness Survey are presented as below.

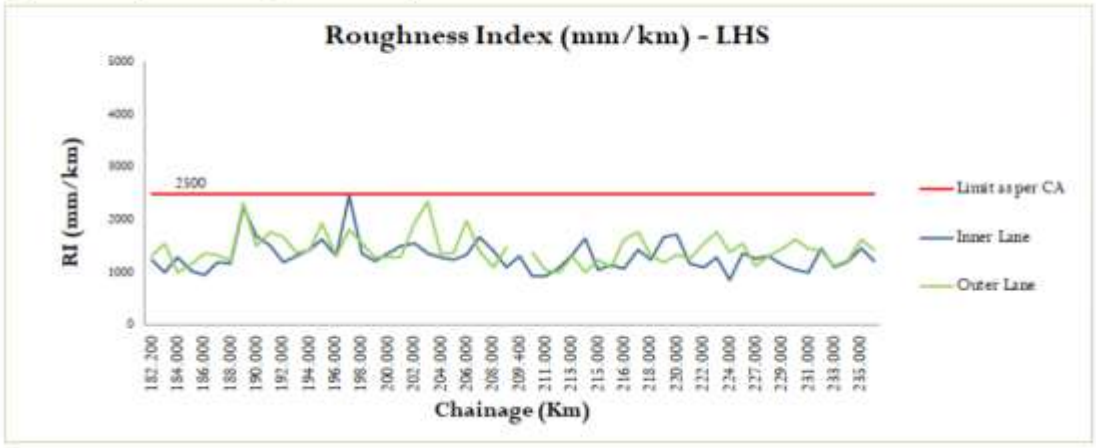
Table 4-4 Result of Roughness Survey

Table 2-1: Summary of RI Limit as per Schedule K of CA

Roughness Summary % as per Schedule K of CA (mm/km)					
Condition	Limit as per Schedule K of CA (mm/km)	LHS		RHS	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane
Good	<2500	100.00%	100.00%	100.00%	98.02%
Poor	>2500	**0.00%**	**0.00%**	**0.00%**	**1.98%**

Note: The roughness values of 1.98% on the RHS outer lane are higher due to the presence of the Toll Plaza.

Figure 2-3: Roughness Summary for WVEPL as per Schedule K of CA



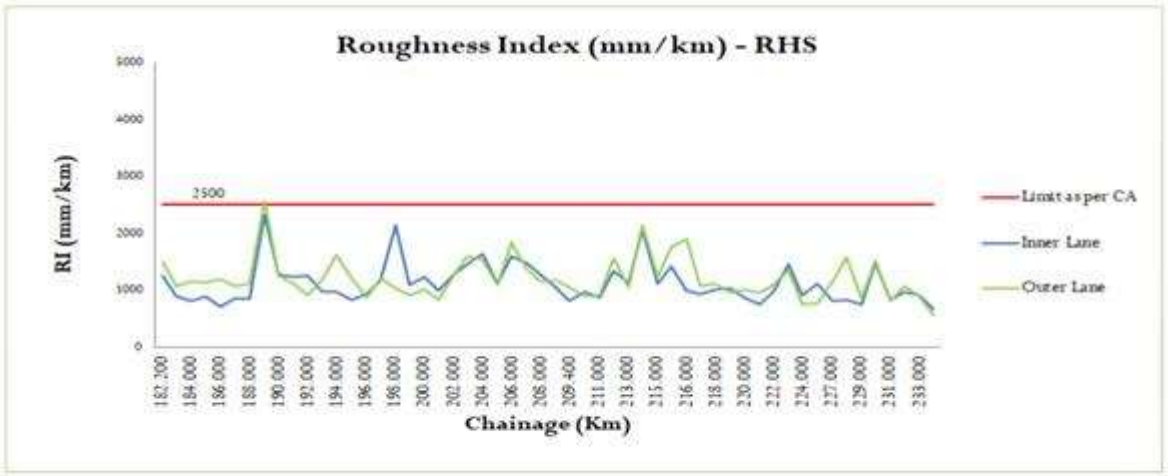


Figure 2-4: Roughness Index for WVEPL as per Schedule K of CA

Observation and Conclusion:

From the table of roughness survey result, it is observed that the overall pavement condition for the entire project stretch is found to be Good. The roughness is exceeded 2500 mm/km at Toll Plaza location as the pavement is Rigid type.

4.2.5 Structural Investigations

The structural evaluation and analysis of the remaining life of project was carried out in conformity with IRC:115-2014 “Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique”.

The FWD survey was conducted on the Project Road from 13th February 2025 to 19th February 2025. The summary of the same is presented below.

Remaining Life of pavement on LHS

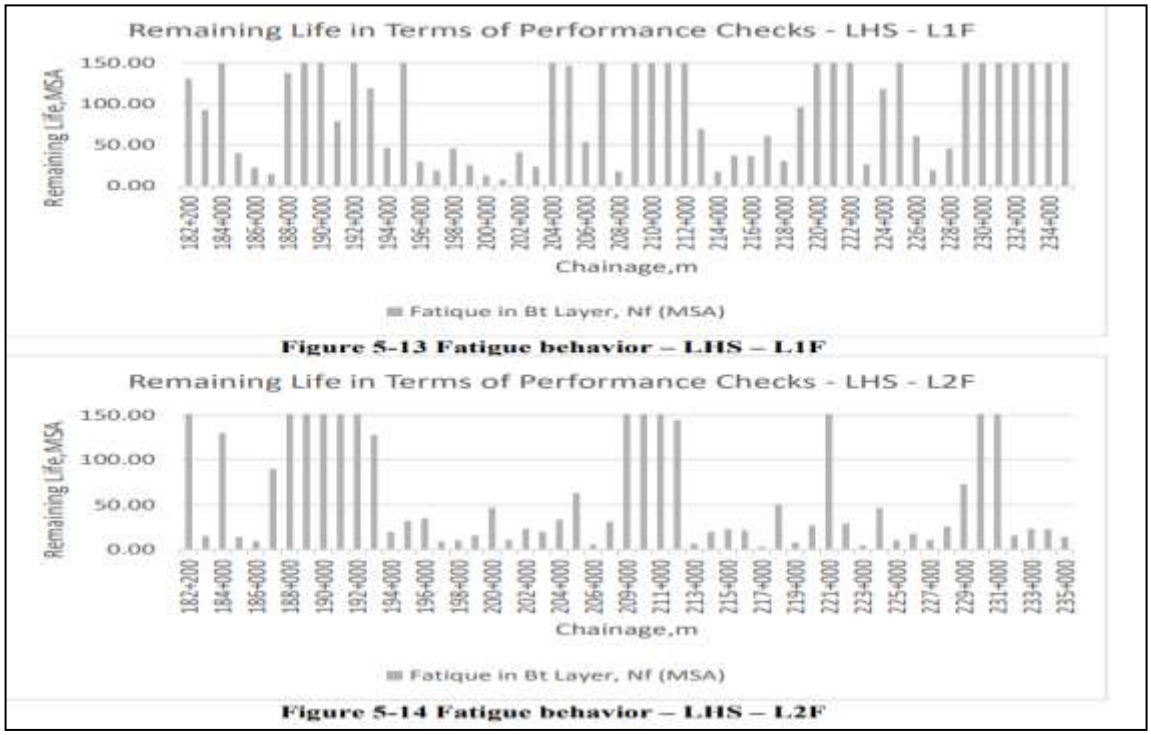

Figure 5-13 Fatigue behavior – LHS – L1F

Figure 5-14 Fatigue behavior – LHS – L2F

Remaining Life of pavement on RHS

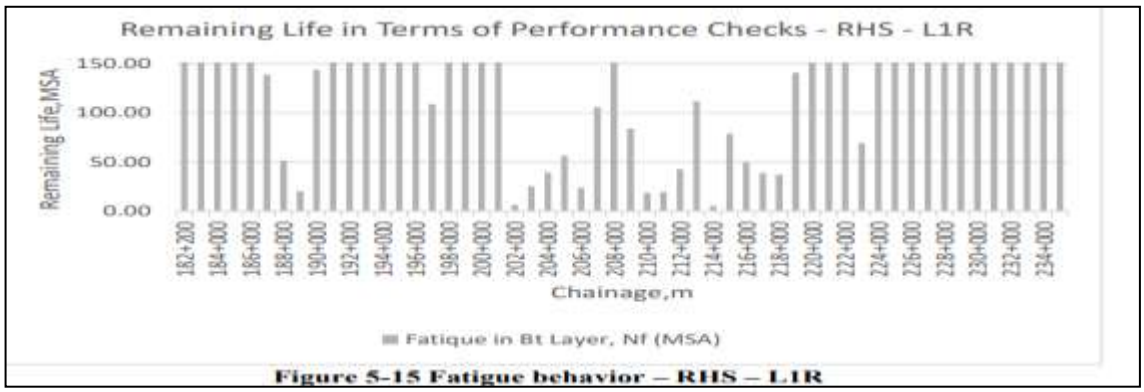

Figure 5-15 Fatigue behavior – RHS – L1R

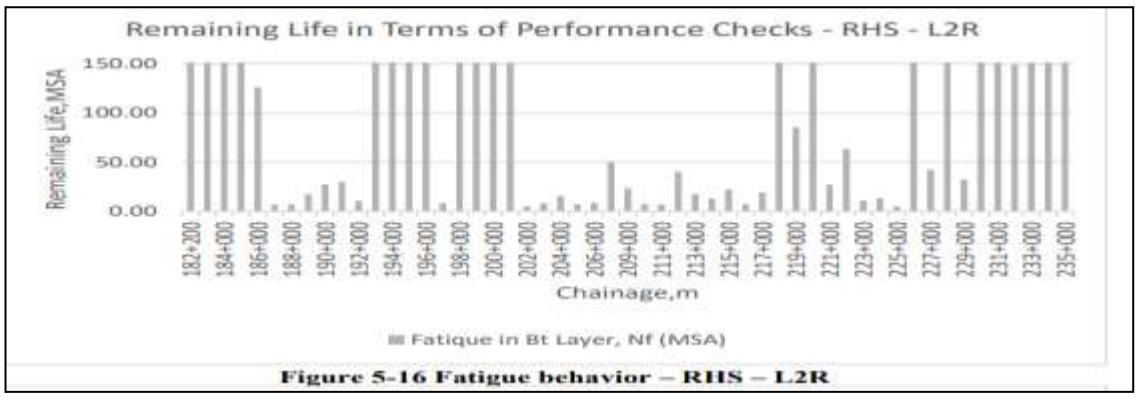

Figure 5-16 Fatigue behavior – RHS – L2R

However, the maintenance can be carried out on as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. However, improvement in Riding Quality is expected if the roughness value exceeds 2500 mm/km.

4.2.6 Test pit and Subgrade Investigation

The Concessionaire carried out the subgrade investigation for the Project Road in February 2021. The results of the same as provided by the Concessionaire are tabulated below.

Table 4-5 Test Results Summary of Natural Ground Soil Samples

S. No.	Existing Chinage (Km.)	Side (LHS/RHS)	Soil Classification as per IS: 1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)		Clay & silt content %	Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		In-situ Density		4-Days Soaked CBR (%)	Free Swell Index	Degree of Compaction (%)
				19.0 mm	4.75 mm		Liquid Limit (LL) %	Plastic Limit (PL) %	Plasticity Index (PI)	Max. dry density gm/cc.	OMC (%)	FDD (gm/cc)	FMC (%)

4.2.7 Periodic Maintenance Strategy

The Concessionaire has completed an overlay on both sides of project MCW throughout the entire project length and in Service Road, BC Overlay of 30 mm / 40 mm has been provided on both sides at distress locations in FY 2023.

The maintenance can be carried out as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. Only improvement in the Riding Quality is to be made if the roughness value exceeds 2500 mm/km.

The table below shows the major / periodic maintenance cycle throughout the concession period for the Project Road.

Table 4-6 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2023	Overlay completed for Project Length	Overlay completed at distress locations
2	FY 2024 to FY 2028	-	-
3	FY 2029	Major Maintenance with 30 mm BC (75%) and 40 mm BC (25%) + Milling & 50 mm DBM (11%)	Major Maintenance with 30 mm BC (50%) + Micro-surfacing (50%)
4	FY 2030 to FY 2035	-	-
5	FY 2036	Major Maintenance with 30 mm BC (100%)	Major Maintenance with 30 mm BC (50%) + Micro-surfacing (50%)
6	FY 2037	-	-
7	FY 2038	End of Concession Period as per traffic study	

**Actual end of concession period as per Concession Agreement is May 2033. However, as per traffic details submitted by the Concessionaire, the revised concession period is up to FY 2038 as per provision of Article 14 of CA.*

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Work Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

1. Unit rates of different items (Tack Coat, BC, DBM etc.) are calculated as per the PRICE (kerala.gov.in).

   a. **Manpower and Labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

   b. **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

      Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2025 and FY 2026. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2027 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex-MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
IOC Mathura	VG-10	45,202	33,038
IOC Mathura	VG-30	47,502	34,719
IOC Mathura	VG-40	50,242	36,721
IOC Haldia	VG-10	47,702	33,971
IOC Haldia	VG-30	48,502	34,540
IOC Haldia	VG-40	51,242	36,492
IOC Barauni	VG-10	47,702	33,971
IOC Barauni	VG-30	48,502	34,540
IOC Barauni	VG-40	51,242	36,492
CPC Chennai	VG-10	48,202	34,156

Refineries	Grade	Rate for FY 2026 and FY 2027 (Rs. / MT)	Rate for FY 2028 onwards (Rs. / MT)
CPC Chennai	VG-30	49,002	34,723
CPC Chennai	VG-40	51,752	36,672

c. **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.

d. **Cement:** Market rates are considered from the nearest local market.

e. **Steel :** Rate of steel is taken from SAIL

f. **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PRICE (kerala.gov.in).

g. **Rates of items as per Work Order:** The rates of road marking, kerb raising, micro-surfacing, milling, road stud etc. are considered as per the Work Order issued to Contractor at Site shared by the client.

2. Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below.

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.)
1	Dense Bituminous Macadam	Cum	8,856
2	Bituminous Concrete	Cum	9,902
3	Milling	Sqm	89
4	Micro-surfacing	Sqm	160
5	Kerb raising	Rm	265
6	Road Marking	Sqm	465
7	Road Studs	Nos.	185

5.3 Balance Work Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, the balance work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have been made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management Services
5. Electricity and Diesel Charges
6. TMS / HTMS / System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Horticulture & ROW Maintenance
16. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation Cost is presented as below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026-38)	Remarks
1	Salary and Welfare Expenses	1,17,48,000	
2	Tolling Operations Services	2,35,60,481	
3	Toll Security Services	48,33,289	
4	Incident Management & Emergency Services	2,62,22,395	
5	Electricity and Diesel Charges	69,07,891	
6	TMS / HTMS / System Expenses	37,72,897	
7	Office Operating Expenses	31,31,651	
8	Vehicle Running Expenses	60,25,800	
9	Professional Fees Expense	1,44,38,597	
10	Community Development	13,74,376	
11	Communication Expenses	3,48,666	
12	Conveyance Expenses	3,80,362	
13	Insurance Expense	1,48,34,137	
14	IE Fees	1,30,00,790	
15	Routine Maintenance Cost (Project Road)	2,29,25,729	
16	Horticulture & ROW Maintenance	1,69,14,734	
17	Miscellaneous including Contingency	52,23,173	

Sr. No.	Particulars	Amount (FY 2026-38)	Remarks
	Total Cost (Rs.)	**17,56,42,969**	
	Total Cost (Cr.)	**17.56**	
	Per km Cost (Lakhs)	32.83	

5.5 Major Maintenance Cost

As informed by the Concessionaire, overlay has been completed in FY 2023 as a part of major maintenance. The Concessionaire has completed overlay of 40 mm BC (100%) on LHS and 30 mm BC (100%) on RHS. The pavement is also treated with 50 mm DBM on RHS at distressed section. As per the NSV test report conducted at site on 29th December 2023, MCW is in good condition and same has been verified during site visit.

The summary of Major Maintenance Cost is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remarks
1	FY 2024 to FY 2028	-	
2	FY 2029	62.44	
3	FY 2030 to FY 2035	-	
4	FY 2036	60.51	
5	FY 2037 to FY 2038	-	
Total Cost (Cr.)		**122.95**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	HTMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2027	0.61	
2	FY 2034	0.61	
Total Cost (Cr.)		**1.22**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Escalation	Year	Escalation
2026	-	**2039**	4.00%
2027	5.25%	**2040**	3.99%
2028	4.86%	**2041**	3.99%
2029	4.44%	**2042**	3.99%
2030	4.24%	**2043**	3.99%
2031	4.13%	**2044**	3.99%
2032	4.08%	**2045**	3.99%
2033	4.01%	**2046**	3.99%
2034	4.00%	**2047**	3.99%
2035	4.03%	**2048**	3.99%
2036	4.01%	**2049**	3.99%

Year	Escalation	Year	Escalation
2037	3.98%	**2050**	3.99%
2038	3.98%	**2051**	3.99%

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in Clause 5.7.

Escalated O&M Cost (in INR Cr.)

Sr. No.	Year of expense	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38

Chapter 1.

Introduction and Scope of Services

Chapter 1. INTRODUCTION AND SCOPE OF SERVICES

1.1 BACKGROUND

Cube Highways Fund Advisors Pvt Ltd (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an infrastructure investment trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt Ltd has appointed **M/s Knight Frank India (KFI)** (hereinafter referred as "Technical Consultant" or "KFI") to carry out Technical Due Diligence of Rehabilitation, Strengthening and Four Laning of Jammu - Udhampur Section from Km 15.00 (Jammu Bypass) To Km 67.00 of NH-1A on BOT (Annuity) Basis on DBFOT Pattern in the state of Jammu & Kashmir (hereinafter referred as "Project Road").

1.2 SCOPE OF SERVICES

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below –

Exhibit 1 Scope of TDD Services

S. No	Terms of Reference
1	A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
2	Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, as built drawings, O&M manual, COD/PCOD certificate, Punch list, previous major maintenance etc.
3	Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle Load, material investigations etc.
4	Formulation of future major maintenance Strategy.
5	Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
6	Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period

S. No	Terms of Reference
7	Estimation of Annual Operation expenses along with Systems cost (TMS/HTMS) till the end of concession period.
8	Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Approach

Approach followed for this Due Diligence study is to understand the requirement of the client and terms of reference set forth. Our aim is that the study report should assist the clients in achieving their objectives.

1.4 Methodology

Methodology adopted is broadly outlined as under:

- Objectives of the client were identified from discussions and terms of reference spelt out for the study.
- Available data was collated and analysed by desk study.
- Requirements were identified to augment information/ data as available.
- Detailed List of data required was sent to Concessioner team from time to time
- Personal discussions were carried out with Clients by senior executives from KF to explain data requirements.
- Extensive interaction was made by KF with Clients and data was collected.
- Information to be gathered from Client head office & team were listed
- Relevant documents regarding project highway, including CA Agreement and other documents were collected and the provisions studied in detail.
- All data as collected was duly collated and arranged in the order as required for preparation of the report.

1.5 Study

- Data collected from all sources was duly collated and disseminated to concerned experts in KF.
- Project documents such as CA Agreement, O&M Costing details, O&M Manual etc were studied in detail.
- The data made available was analysed, and comments formulated for inclusion in the report.

1.6 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

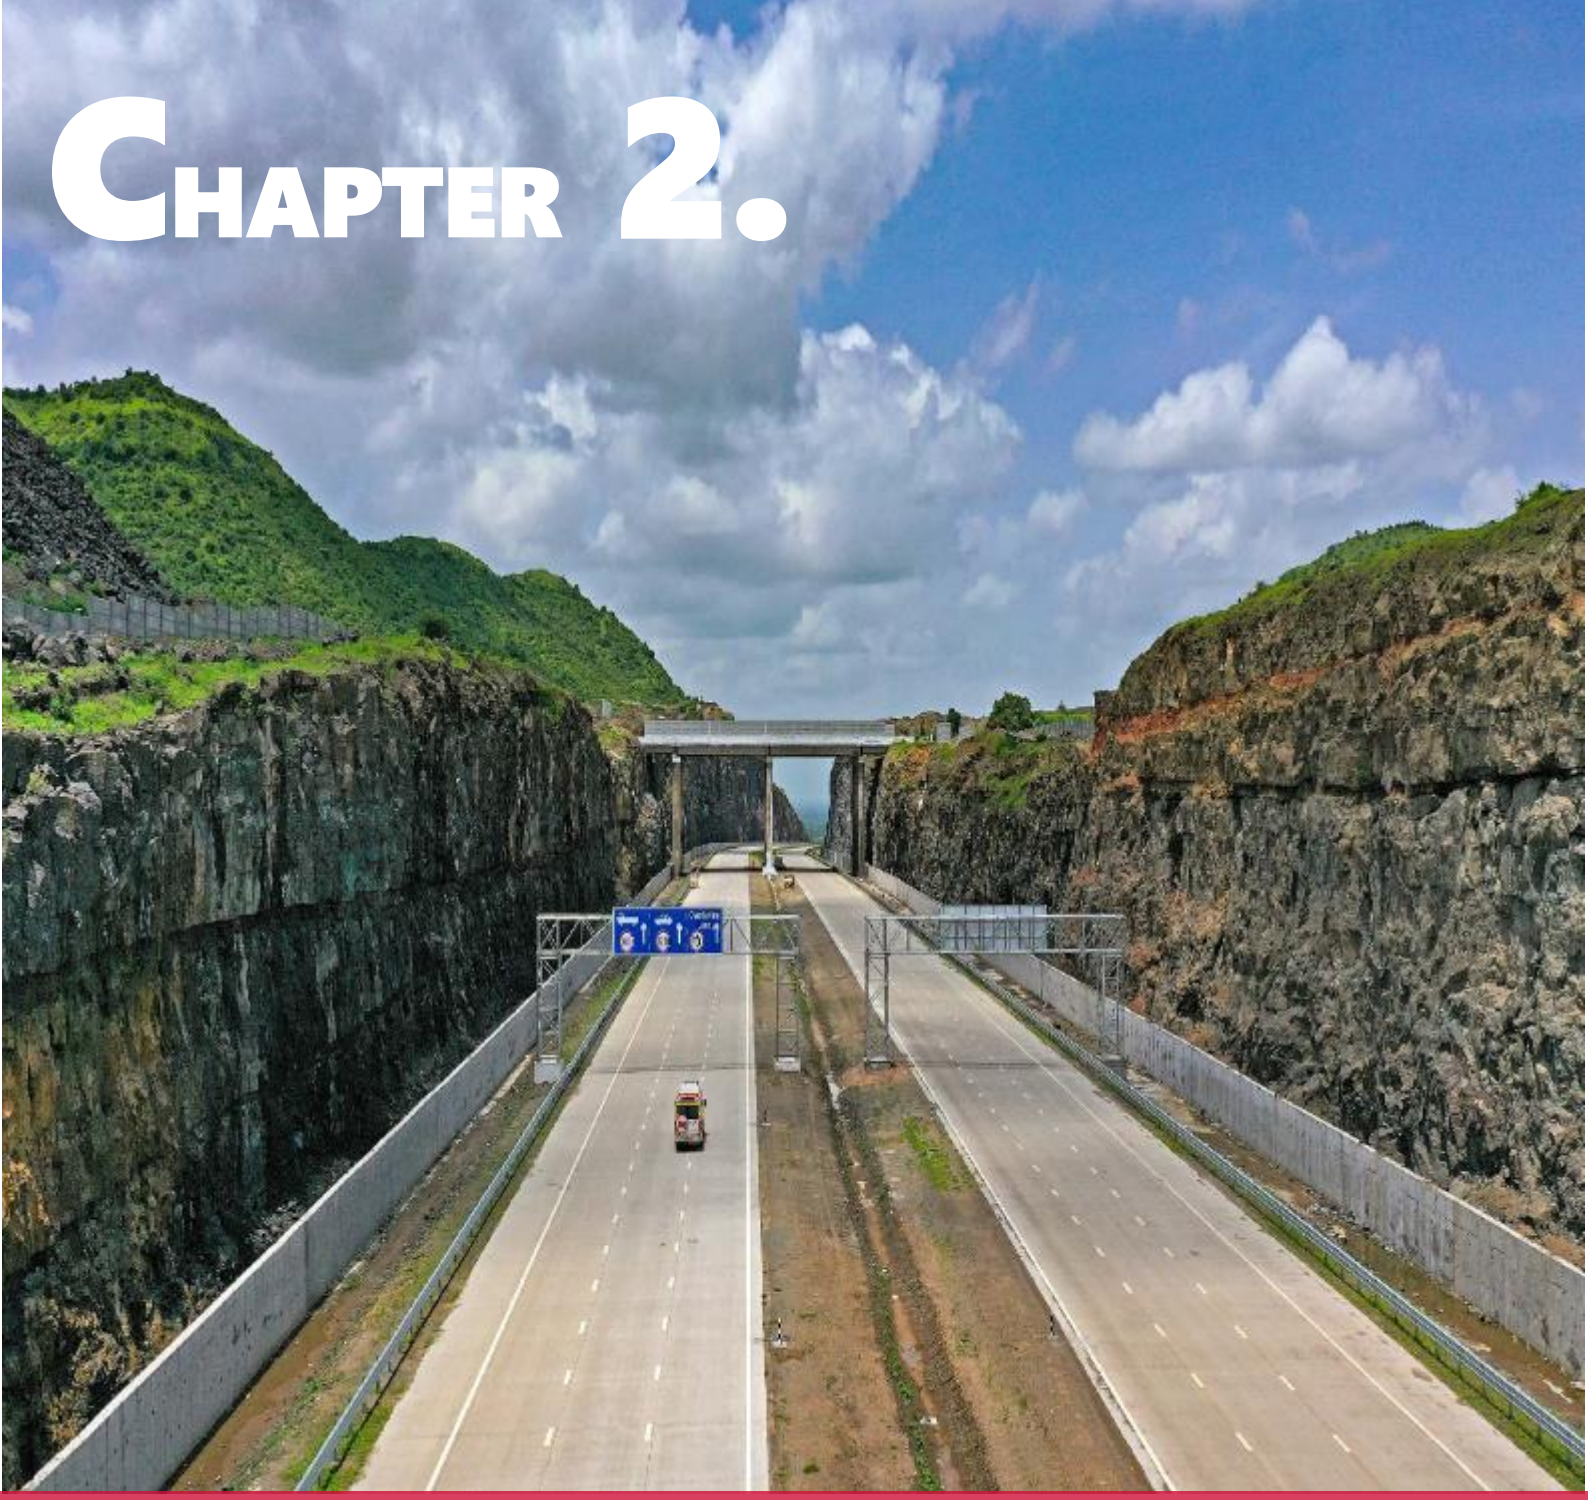
The site visit and inspection were carried out between the periods from 08th October 2025 to 10th October 2025.

The report is organized with the following chapters for easy understanding of various issues –

Exhibit 2 Structure of the Report

S.nos	Chapter	Description
1	**Chapter 1**	**Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**
2	**Chapter 2**	**Project Description:** The chapter describes existing project features, overview of project development.
3	**Chapter 3**	**Review of Agreements:** The chapter describes review of CA, Supplementary, State Support Agreement, Settlement Agreement & Various O & M Agreements.
4	**Chapter 4**	**Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**
5	**Chapter 5**	**Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance
6	**Chapter 6**	**Cost Estimates**: This chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period

Chapter 2.



Project Description

Chapter 2. PROJECT DESCRIPTION

2.1 Project Road

National Highway-1A (NH-1A) is presently known as National Highway-44 (NH-44). This highway is a four lane road in Jammu and Kashmir that connects city of Udhampur with Jammu City passing through mountain terrain. This road connects important Army and Air bases in the state of J & K and passes along the international border. The highway also serves as the main pilgrimage and tourist route for pilgrims going to Amarnath Shrine and to Katra for Vaishno Devi Shrine and tourists going to Kashmir valley and even further up to Leh Ladakh.

The project corridor passes through following urban stretches namely Sidhra, Nagrota, Suketar, Jhajjarkotli, Tikri, Mand and Udhampur. The terrain of this project corridor is mostly mountainous except at Jammu bypass, which has rolling terrain. The state of Jammu & Kashmir is accessed by only one major highway, this National Highway-1A linking Uri in the north of J&K with the rest of the country via the cities of Jammu and Srinagar.

The highway runs through Nandini Wildlife Sanctuary. The highway enables seamless movement of traffic and goods, with enhanced inter-region connectivity and a significant reduction of travel time between the hilly cities.

To execute the project, NHAI issued a Request for Qualification (RFQ) on February 27, 2009, inviting bids for the project. Shapoorji Pallonji & Co. Ltd. was selected as the successful bidder and received the Letter of Award (LOA) on April 30, 2010. A Special Purpose Vehicle (SPV), M/s SP Jammu Udhampur Highway Limited, was incorporated for project implementation. The Concession Agreement was signed on July 19, 2010.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and flied investigations. Same is presented in this report.

The project achieved Provisional Completion (PCOD) on June 1, 2014, and the Final Completion Certificate was issued on May 31, 2018. The project is currently in the Operation & Maintenance (O&M) phase with toll collection ongoing.

Subsequently, ***NIIF acquired SP Jammu Udhampur Highway Limited on July 30, 2022***. The project has since been managed by Athaang Infrastructure, NIIF's proprietary roads platform, and the company was renamed ***M/s Athaang Jammu Udhampur Highway Limited***. The **current proposed acquisition** of the project is by ***M/s Cube Highways Trust.***

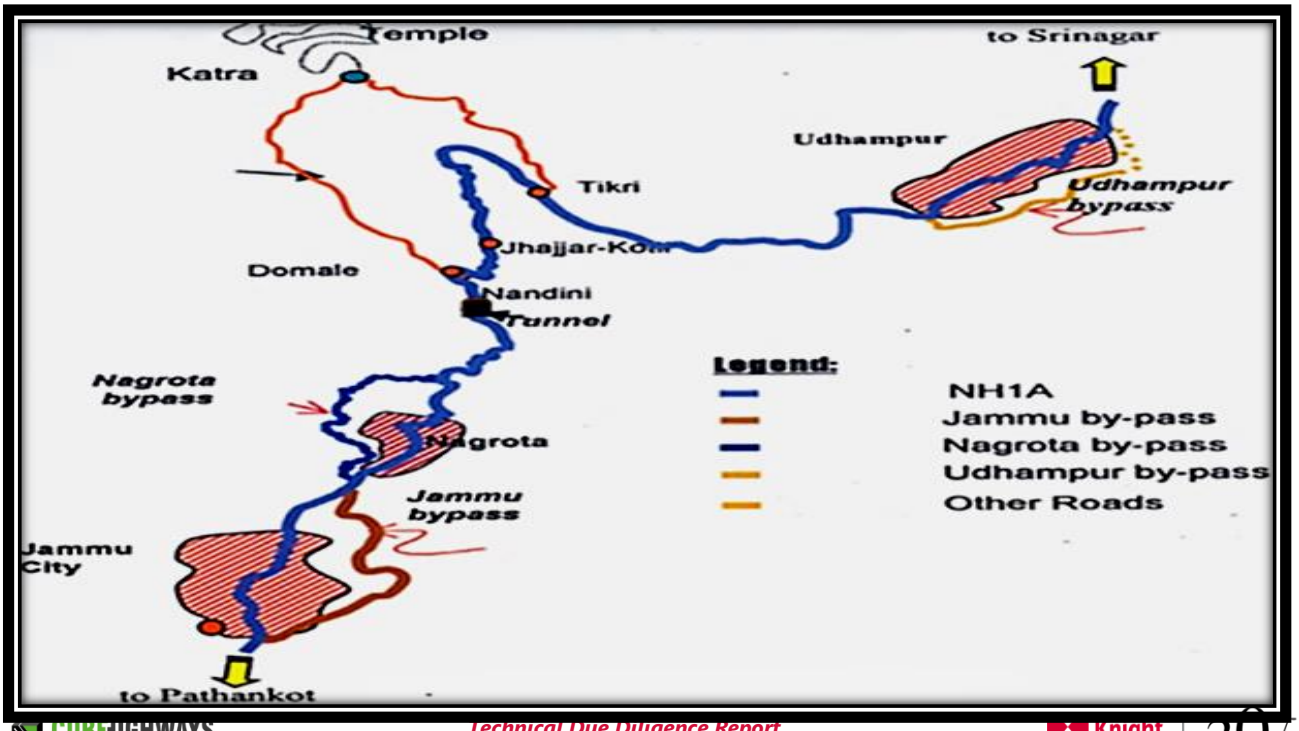
The total project length is **64.58 km**, commencing from **Km 15.00 near Jammu** to **Km 67.00 near Udhampur**, comprising **one toll plazas** located at **Ban (Km 22.00)**. The project plays a crucial role in enhancing connectivity between **Jammu and Srinagar**, ensuring improved traffic flow, safety, and overall highway efficiency.

The Project Location Map in wider context and Specific Project Road Context is shown below at **Exhibit 3.** The Project Location Map is shown below in

Exhibit 4

Exhibit 3 Project Location Map

Exhibit 4 Key Location Map



As per the CA, the corridor has different design chainage systems, which are presented in the table below.

Exhibit 5: Project Chainage Details

Referencing System	Section	Chainage		Length	Total Length (km)
		From	To	(km)	
CA Design Chainage	Jammu Bypass (JBP)	15.2	20.3	5.1	5.1
CA Design Chainage	Main Road (MR)	9.35	9.9	0.55	
	Nagrota Bypass (NBP)	9.9	21.78	11.88	43.027
	Main Road (MR)	21.78	50.33	28.55	
	Realignment Udhampur Bypass	50.33	52.377	2.047	
	Udhampur Bypass (UBP)	0	16.452	16.452	16.452
Total length				64.579	
Descope length				16.995	
Actual length (kms)				47.584	

2.2 Climate

The project corridor experiences a **sub-tropical to temperate climate**, influenced by its varying elevation along the Himalayan foothills. The region is characterized by **hot summers, moderate monsoons, and cold winters**.

During the **summer months (April to June)**, the temperature ranges between **25°C to 40°C**, while in **winter (November to February)**, it may drop to **4°C to 10°C**, with occasional frost in elevated zones. The **monsoon season (July to September)** brings considerable rainfall, contributing to high surface runoff, landslides, and localized flooding in low-lying stretches.

Relative humidity generally varies from **40% to 90%**, depending on season and altitude. The **annual average rainfall** in the region is approximately **1,100–1,400 mm**, predominantly concentrated during the monsoon months.

Due to these climatic conditions, special attention is required in the **design and maintenance of pavement, drainage structures, slope protection works, and erosion control measures**, to ensure long-term performance and serviceability of the project road.

2.3 Terrain

The terrain along the project alignment is **predominantly hilly and undulating**, traversing through the lower Himalayan ranges. The topography exhibits **sharp gradients, steep slopes, and deep valleys**, especially in the middle and northern sections of the corridor.
The **southern stretch** of the alignment, near Jammu, consists of **rolling terrain with moderate gradients**, while the **northern portion towards Udhampur** features **rugged terrain with significant elevation differences**, requiring multiple **cutting and filling operations, retaining structures, and slope stabilization measures**.
Geotechnically, the area comprises **sedimentary and metamorphic rock formations**, with occasional exposure of shale and sandstone. The soil is generally **silty clay to sandy loam**, prone to erosion during heavy rainfall.
The complex topography and geotechnical conditions necessitate careful consideration of **geometric design standards, drainage planning, and slope protection works**, along with **regular geotechnical monitoring** to mitigate risks of slope instability and landslides.

2.4 Administrative details of the Project

The Concession stands granted to operate the road from the Appointed date for the concession period with the obligation on concessionaire to maintain the road in the same period. Administrative details of projects are as at Exhibit 2 below.

Exhibit 6: Administrative Details of Project

S. No	Particulars	Details
1	Project Corridor	Rehabilitation, Strengthening and Four Laning of Jammu - Udhampur Section from Km 15.00 (Jammu Bypass) To Km 67.00 of NH-1A on BOT (Annuity) Basis on DBFOT Pattern in the state of Jammu & Kashmir
2	Employer	National Highways Authority of India
3	Concessionaire	**M/s Athaang Jammu Udhampur Highway Limited**
4	Independent Engineer (During O & M)	M/s TPF Getinsa Euroestudios SL in association with Segmental Consulting Infrastructure Advisory Pvt Ltd.
5	EPC Contractor	Afcons Infrastructure Limited

S. No	Particulars	Details
6	Project Road Length	Total Length 64.579 kms Descope: 16.995 kms Actual length: 47.584 Kms
7	Project Cost	₹1814 Cr.
8	Annuity Bi-annually	34 installments of ₹201.90 Crores each, every 6 months
9	Date of LOA	30-Apr-10
10	Date of Concession Agreement	19-Jul-10
11	Appointed Date	16-Jun-11
12	Concession Period	20 years (including construction period of 1095 days from appointed date)
13	Construction Period	1095
14	Schedule Date of COD	16-Jun-14
15	Schedule End to Concession Period	22-Jul-31
16	PCOD	01-Jun-14
17	Final COD	31-May-18
18	No. of Toll Plazas (Number and Location)	Ban Toll Plaza: Ch. 22+700

2.5 Salient Features of the Project

Salient features of the project are covered at **Exhibit 7** below.

Exhibit 7:Salient Features of Project

S. No	Particulars	Description and details
1	Main Carriageway	Total Length: 64.579 Kms Descope Length: 16.995 Kms **Actual Length: 47.584 Kms**
2	Existing Slip / Service Road	20.18 Km
3	Major Bridges	36 Nos
4	Minor Bridges	31 Nos
5	Causeway	01 no
6	Box Culverts	177 Nos
7	Pipe Culvert	45 Nos
8	Underpass	12 Nos
9	FOB	02 Nos
10	VOP	02 Nos
11	No of Toll Plaza & Location of Toll Plaza (chainage) & Toll Lanes	1 No (Ban Ch. 22+700) Toll Plaza with 8 lanes
12	Tunnels	4 nos Twin Tunnels
13	Traffic Control and Management	• Ambulance – 3 nos. • Tow away cranes - 3 nos. • Corridor Management Vehicle – 3 nos
14	Length of RCC Crash Barrier	31.588 km
15	Length of W-Beam Crash Barrier	21.007 km
16	Brifen Wire Rope	12.292 km
17	Length of Median Drain	30.536 km
18	RCC Cover Drain	9.407 Km
19	Toe Drain	56.577 km
20	Median Width	1.5m/4.00m
21	Toll Plaza Sign Boards	8 Nos
22	Sign Boards	3412 Nos
23	Overhead Gantry	2 Nos
24	Solar Blinkers	62 Nos
25	Highway Lighting	26 Nos (single arm poles), 71 Nos (double arm poles)
26	Highway Mast Lighting	32 Nos
27	Toilets and Drinking water facility	12 Nos

S. No	Particulars	Description and details
28	DG Set	15 Nos (11 nos at Tunnels, 1 no at Toll Plaza & 3 nos at office & medical aid post)
29	Major Intersection	13 Nos
30	Minor Intersection	15 Nos
31	Median Opening	44 Nos
32	Bus Bay with Shelter	28 nos
33	Truck Lay Bye	13 nos
34	Rest Area	Nil
35	Breast Wall	23.607 Km
36	Gabion Wall	1.576 km
37	RCC Retaining wall	10.231 KM
38	Stepped Wall	1.060 Km
39	Concrete Railing	19.379 Km
40	Transformers	22 Nos
41	5th Kilometre/ Kilometre/ HM Kilometre stones	320 Nos
42	Delineators	336 nos

2.6 Tunnel Details

The highway features four twin-tube tunnels with a combined length of 2.77 km. An overview of the tunnel details for the project is provided below.

Exhibit 8:Salient Features of Project

Tunnel No.	Section	LHS/RHS	Design Chainage		length(m)
T-1	Main Road	LHS	23.72	23.89	170
		RHS	23.715	23.88	165
T-2	Main Road	LHS	24.48	24.711	231
		RHS	24.533	24.8	267
T-3	Main Road	LHS	24.94	25.37	430
		RHS	24.916	25.39	474
T-4	Main Road	LHS	25.49	26.02	530
		RHS	25.49	26.00	510

2.7 Pavement Composition

The pavement has been designed in accordance with IRC:37-2001. The concessionaire has based the design on CBR values of 8% and 10%. Although the design traffic on the RHS is relatively lower than on the LHS, the concessionaire has opted to provide the same pavement thickness for both directions.

As mentioned in Pavement Design Report, design consultants summarized the calculated design traffic for the next 20 years for BT and Base and subbase layer respectively.

Exhibit 9: Design traffic in MSA for New Construction & Overlay Section

As per Concessionaire			
S. No	**Section Type**	**Design Traffic MSA for 20 years (Jammu to Udhampur)**	**Design Traffic MSA for 20years (Udhampur to Jammu)**
1	New Construction	41	16
2	Overlay	47	19

Pavement Configuration for Project is given in **Exhibit 24**

Exhibit 10: Pavement Composition-Main Carriageway

S. No	Design MSA	As built drawings
Flexible Pavement		
1	**Adopted MSA – 10**	
2	BC in mm	40
3	DBM in mm	110
4	WMM in mm	250
5	GSB in mm	200
Rigid Pavement		
	PQC	**DLC**
1	300	150
Overlay Works		
The Overlay thickness proposed for design traffic of 50 MSA for the project corridor. Based on the BBD Test Result Concessionaire Proposed Overlay of 50 mm thickness with DMB of 50 mm thickness.		

As per the Preliminary Design Report (PDR), the concessionaire has stated that the existing bituminous layer in the JBP, NBP, and MR sections ranges between 140 to 150 mm, with a granular layer thickness of 325 to 330 mm. In contrast, the Udhampur Bypass section has a thinner bituminous layer of only 80 mm but a thicker base/sub-base layer of approximately 430 mm.

As per Approved Pavement Design Report the service road has been designed for 10 MSA & CBR-10%. The Pavement layer adopted for service road as given below:

Exhibit 11: Pavement Composition -Service Road

S. No	Design MSA	
	Adopted MSA – 10 years	**25**
1	BC in mm	40
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	200

2.8 Project Completion Certificate and PCOD & FCOD

A. Partial Commercial Operation Date (PCOD):

- The scheduled completion date was 1 June 2014. (Letter attached as annexure)

B. Final Commercial Operation Date (COD):

- The final COD achieved date was 31st May 2018. (Letter attached as annexure)

2.9 Extension of Time

There is no extension of the concession period on the project.

2.10 Penalty

There is no penalty on project as of now.

2.11 Annuity Payment

As per the Concession Agreement, an annuity amount of ₹201.90 crore is payable every six months. To date, a total of 22 annuity payments has been made by the Authority. The detailed breakdown of these annuity payments is provided below

Exhibit 12: Details of Annuity Payments

Annuity No.	Amount Payable (₹-Crore)	Deductions (₹-Crore)	Amount Received (₹-Crore)	Remarks
1st Annuity	197.93	-	197.93	
2nd Annuity	201.90	-	201.90	
3rd Annuity	201.90	0.17	201.73	
4th Annuity	201.90	0.08	201.82	
5th Annuity	201.90	0.13	201.77	
6th Annuity	201.90	0.10	201.80	
7th Annuity	201.90	0.20	201.70	
8th Annuity	201.90	-	201.90	
9th Annuity	201.90	-	201.90	
10th Annuity	201.90	0.09	201.81	
11th Annuity	201.90	-	201.90	
12th Annuity	201.90	0.10	201.80	
13th Annuity	201.90	-	201.90	
14th Annuity	201.90	-	201.90	
15th Annuity	201.90	-	201.90	
16th Annuity	201.90	-	201.90	
17th Annuity	201.90	0.01	201.89	
18th Annuity	201.90	0.26	201.64	
19th Annuity	201.90	0.20	201.70	
20th Annuity	201.90	-	201.90	
21st Annuity	201.90	0.02	201.88	
22nd Annuity	201.90	-	201.90	01-06-25
23rd Annuity			-	01-12-25
Total Amount (₹-Crore)	**4,438**	**1.35**	**4,436**	
Deduction %		**0.030%**		

Based on the above, Knight Frank is of the opinion that the cumulative deductions amounting to only ₹1.35 crore across all 22 annuity payments reflect the consistently high standard of maintenance maintained by the concessionaire over the 11-year duration of the project.

2.12 Change of Scope

Following items considered under Change of scope.

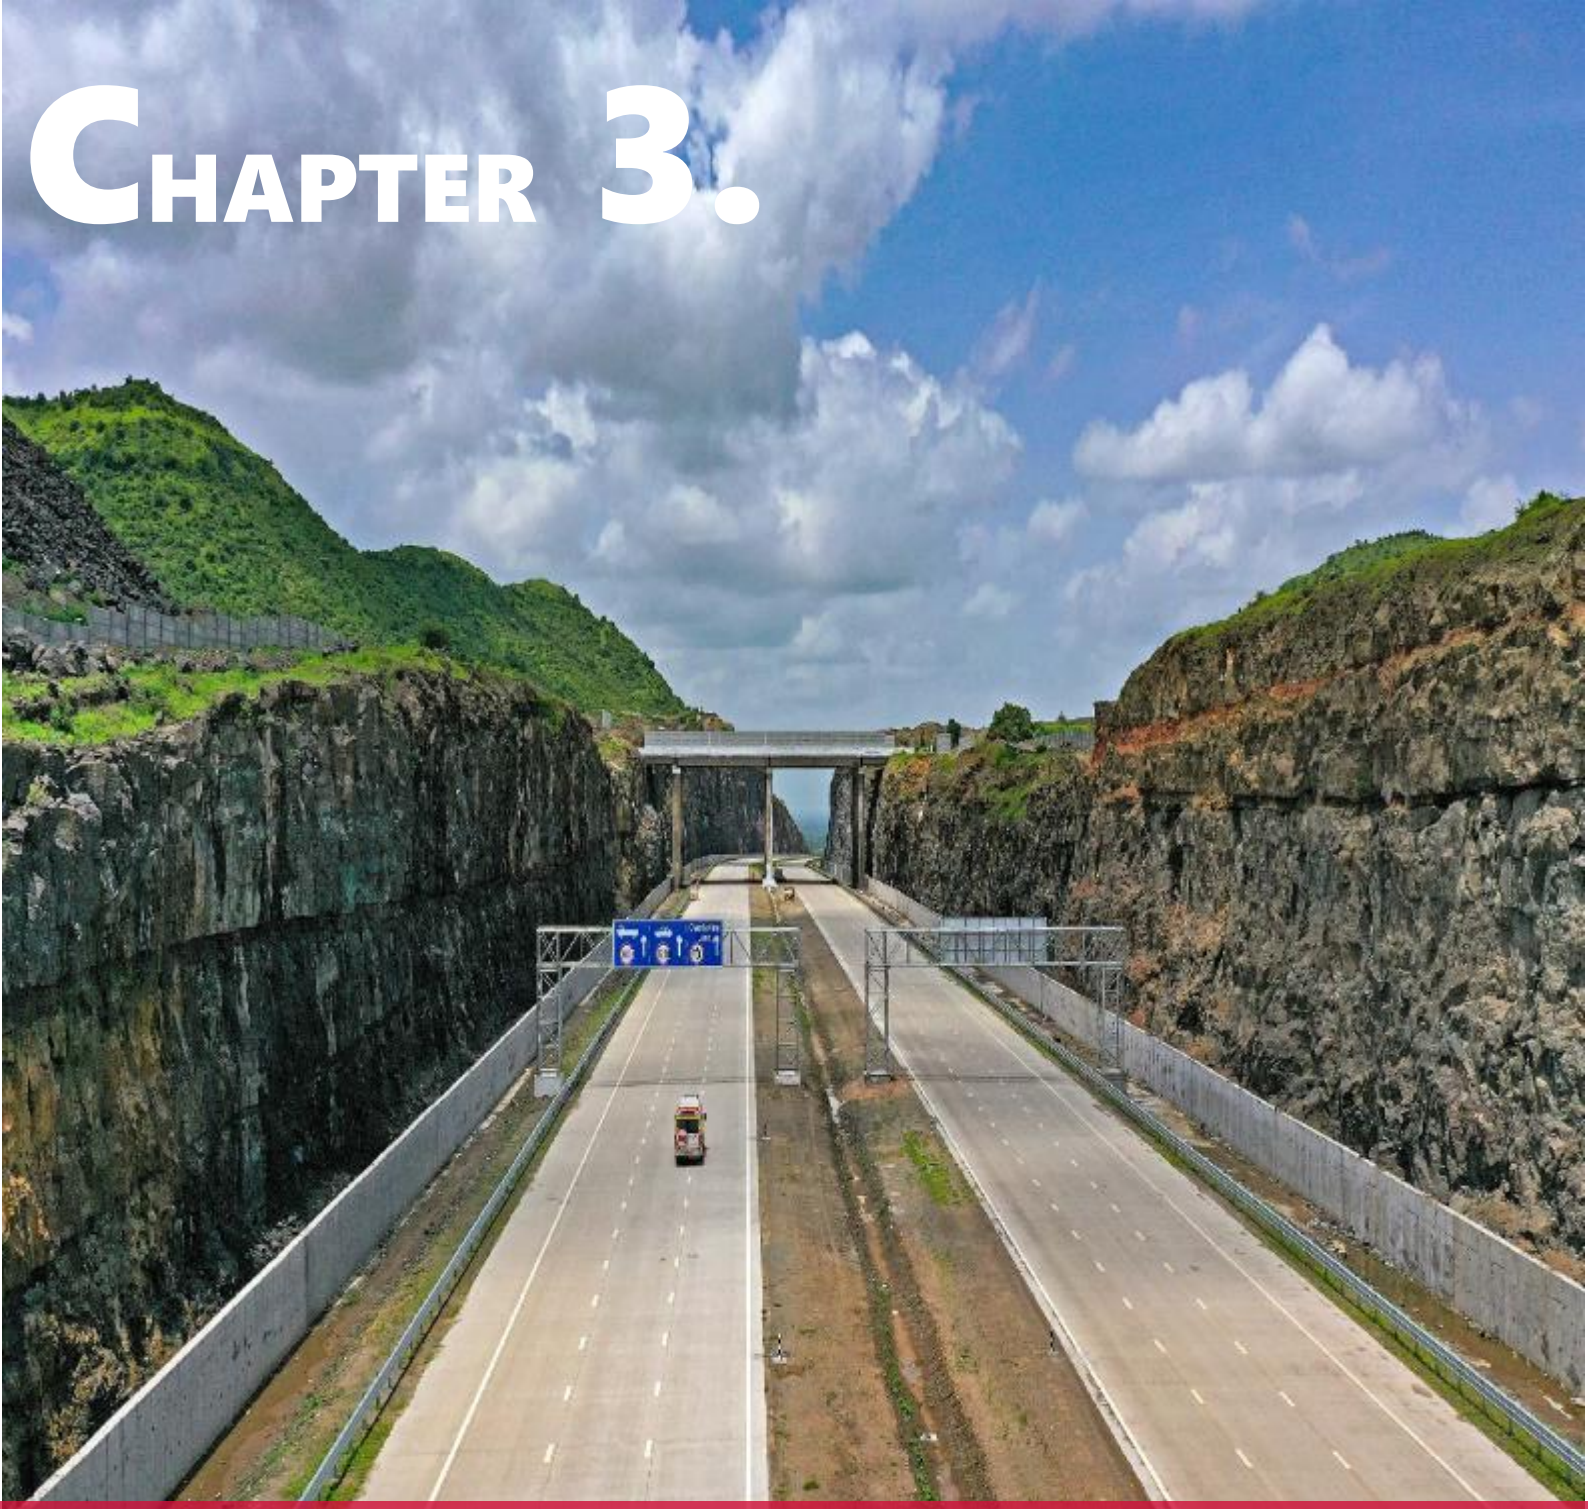
Exhibit 13: Change of Scope Details

S. No.	Structure Type	Location (Chainage)	Change Details
1	Major Bridge (MJB)	Ch. 20+690 (MNB-V/2B)	Span changed from 55m (as per CA) to 150m (executed as MJB)
2	Major Bridge (MJB)	Ch. 11+886 (BHS, UBP Section)	Flyover constructed and considered under MJB
3	Major Bridge to Causeway	Ch. 9+928 (CD1 at NBP)	Executed as Causeway instead of MJB under Negative COS
4	Major Bridge (MJB) / Minor Bridge (MNB)	Ch. 36+923 (V-12)	RHS converted to MNB; LHS remains as MJB
5	Minor Bridge (MNB)	Ch. 12+607 (B31A at RHS)	Additional MNB executed at site
6	Minor Bridge (MNB)	Ch. 13+545 (B32 at LHS)	Additional MNB executed at site
7	Vehicular Overpass (VOP)	Not specified	Executed under COS
8	Foot Over Bridge (FOB)	Not specified	Executed under COS

2.13 Approvals & Permits

Since Project is in O & M stage therefore all necessary approvals required are in place with concessionaire.

Chapter 3.



Review of Project Agreement

Chapter 3. Review of Project Agreements

3.1 Review of Concession Agreement

Concession Agreement was executed on **19th July 2010** between:

- **National Highways Authority of India (NHAI)**, (hereinafter referred to as the "Authority"); and **SP Jammu Udhampur Highway Private Limited**, (hereinafter referred to as the "Concessionaire").

The Agreement relates to the *Rehabilitation, Strengthening and Four Laning of Jammu–Udhampur Section from Km 15.000 (Jammu Bypass) to Km 67.000 of NH-1A in Jammu & Kashmir on DBFOT (Annuity) basis under NHDP Phase-II.*

Exhibit 14: Key Terms of Concession Agreement

Parameter	Details
Date of Agreement	19th July 2010
Appointed Date	Declared by NHAI after Conditions Precedent are fulfilled 16th June 2011
Employer (Authority)	**National Highways Authority of India (NHAI)**, Ministry of Road Transport & Highways, GoI
Concessionaire	**M/s Athang Jammu Udhampur Highway Private Limited**
Concession Period	20 years from Appointed Date
Length of Project	**Total Length: 64.579 km** (Km 15.000 to Km 67.000, NH-1A, J&K)
Total Project Cost	**₹1814 crore** (as per definition in Concession Agreement)
Project Milestones	Linked to Right of Way & completion schedule
Construction/Scheduled Completion	COD on achieving Completion Certificate
Premium / Concession Fee	₹1 per year (token concession fee)
Annuity Payment	₹201.90 crore per half year, payable by NHAI to Concessionaire post COD
Performance Security	₹90.70 crore Bank Guarantee, valid until 1 year from Appointed Date; replenishable if encashed
Extension of Time / COD	Permitted in case of NHAI default / Force Majeure
PCOD	Provisional Commercial Operation Date (partial completion)

Parameter	Details
FCOD	Final Commercial Operation Date (full completion & tests)
Respective Rights & Obligations	NHAI: ROW, support, annuity payment. Concessionaire: DBFOT design, construction, O&M, financing
Change in Ownership	No dilution below 51% during construction & 2 years post COD (without NHAI approval)
Dispute Resolution	Arbitration under ICADR Rules, New Delhi
Governing Law & Jurisdiction	Laws of India; Courts at Delhi

3.1.1 Obligations of the Authority & Concessionaire

Exhibit 15: Key Obligations of Parties

Authority	Concessionaire
Provide Right of Way (ROW) for the Project Highway, free from encumbrances	Design, engineer, finance, procure, construct, operate, and maintain the Project Highway on DBFOT (Annuity) basis
Assist in obtaining statutory approvals, permits, and clearances from Government authorities	Achieve Financial Close within 180 days (extendable with damages) and furnish Performance Security
Pay annuity of ₹201.90 crore (half yearly) post COD, as per Article 27	Maintain the Project Highway in accordance with Specifications, Standards, and O&M requirements (Schedule K)
Maintain existing highway during the development period until Appointed Date	Comply with safety requirements, traffic regulations, and emergency response obligations
Provide assistance for utilities shifting, police support, medical aid posts, and land acquisition (if required)	Ensure timely achievement of project milestones and Scheduled Completion Date (COD within 1,095 days of Appointed Date)
Not levy any additional local tax/toll on the Project Highway	Hand back the Project Highway to NHAI at the end of Concession Period or upon termination, free of encumbrances
Cooperate with Independent Engineer for monitoring construction and O&M	Bear project risks, costs, and liabilities, except as specifically allocated to NHAI under the Agreement

3.1.2 Financial Covenants

The Agreement (Articles 28, 29; Schedules L & R) sets out strict financial safeguards to protect cash flows and lender interests. All revenues and annuities flow through an escrow with defined payment priority, equity is locked in to ensure sponsor commitment, and lenders hold substitution rights in case of default. Provisions on insurance, change in law, and regular financial reporting further enforce financial discipline. **The detailed covenants are presented in the exhibit below.**

Exhibit 16: Key Financial covenants detail

Aspect	Details
Escrow Account	All project revenues, annuity payments, insurance proceeds, and other receivables to be deposited in an **Escrow Account** maintained with an Escrow Bank. Disbursements in priority order: (i) statutory dues, (ii) O&M expenses, (iii) senior debt servicing, (iv) reserve creation, (v) equity distribution.
Annuity Payments	NHAI to pay fixed annuity of **₹201.90 crore (semi-annually)** post COD. Payments routed through Escrow, first applied to debt servicing.
Debt Service Coverage	Senior lenders have priority rights over project cash flows. Any shortfall to be funded by Concessionaire through sponsor support until COD achieved.
Equity Lock-In	Minimum **51% equity shareholding** of lead sponsor (SP group) to be maintained during construction period and for **2 years after COD** without NHAI's prior approval.
Change in Law Compensation	Financial impact of change in law to be compensated on **Net Present Value (NPV)** principle, adjusted via annuity or concession period extension.
Insurance	Comprehensive insurance cover required during construction and O&M periods, with assignment of benefits to lenders and NHAI.
Substitution Rights	Lenders empowered to substitute Concessionaire in case of persistent default, through a **Substitution Agreement** (Schedule R).
Financial Reporting	Concessionaire to furnish audited accounts, progress reports, and financial statements to NHAI and Lenders periodically.

3.1.3 Delay Damages and Penalties under the Concession Agreement

Exhibit 17: Key Terms of Damages/ Penalty

Clause / Article	Situation	Damages / Penalty	Remarks
Clause 4.2 & 10.3	Delay by Authority in providing Right of Way beyond 90 days from Appointed Date	₹50 per day per 1,000 sq. m. of land delayed	Payable to Concessionaire until ROW is given
Clause 4.3 & 24.1	Delay by Concessionaire in achieving **Financial Close** within 180 days	0.1% of Performance Security per day (extendable up to 120 days); further extension possible at 0.2% per day; max 20% of Performance Security	Weekly advance payment required for extension
Article 15.2 (COD Delay)	COD not achieved within 91 days after Scheduled Completion Date (Appointed Date + 1095 days)	0.1% of Performance Security per day until COD	If not achieved within 270 days, Authority may terminate
Article 17.7.3 (Lane Closure)	Delay in reopening lanes after repair/maintenance	0.1% of Average Daily Annuity per 250 m stretch/day	Independent Engineer approval required for closures
Article 35 (Compensation for Breach)	Breach by Concessionaire or Authority (other than those with specified damages)	Compensation = direct costs incurred by non-defaulting party	Does not include consequential losses
Article 49 (Transitional Arrangements)	Delay in completing Affected Stretch (wildlife clearance pending) beyond 180 days after Scheduled COD	₹57,250 per day	Recoverable by deduction from annuity

3.1.4 Legal and Operational Framework:

- **Force Majeure Events:**
    - Covers natural events, political events, and indirect events.
    - Relief is available only if reported within 7 days.
    - Time extensions granted for achievement of milestones and COD.
    - Compensation limited to actual costs, no claim for indirect losses.
- **Compensation for Breach of Agreement**
    - Sets principles for damages due to breach.
    - Damages are pre-estimated, not penalties.
    - Both parties are obligated to mitigate costs/losses.
- **Termination:**
    - Covers natural events, political events, and indirect events.
    - Relief is available only if reported within 7 days.
    - Time extensions granted for achievement of milestones and COD.
    - Compensation limited to actual costs, no claim for indirect losses.
- **Divestment of Rights and Interest**
    - On termination, Concessionaire must hand over project assets free of encumbrance.
    - Obligations include O&M records, designs, clearances, contracts, and project facilities.
- **Defects Liability after Termination**
    - Concessionaire remains liable for construction defects discovered post-termination.
    - Liability period typically one year from termination/transfer date.

3.2 Review of Supplementary Agreement

The Concession Agreement of **19.07.2010** was modified through three Supplementary Agreements. The first, dated **14.03.2011**, revised termination and delayed payment provisions by linking payouts to debt due, adjusted equity, and 10-year Government Security (G-Sec) yield, thereby strengthening financial clarity. The second, dated **18.06.2015**, addressed delays in land availability by obligating completion of ~9.5 km balance works, waiving annuity interest claims, and proportionally extending the O&M period. The third, dated **15.05.2018**, implemented the **Hybrid ETC system**, mandating installation and O&M of RFID and tolling infrastructure under Change of Scope, with costs reimbursable and periodic escalation. Together, these agreements ensured financial certainty, addressed construction delays, and modernized project operations.

Exhibit 18: Summary of Supplementary Agreements

Date	Parties	Purpose / Context	Key Terms / Amendments
14.03.2011	NHAI & SP Jammu Udhampur Highway Pvt. Ltd.	Early Supplementary Concession Agreement	• Revised termination payment structure (Force Majeure, Defaults). • Linked delay interest to 10-year Government Security (G-Sec) yield. • Termination payments = full & final settlement.
18.06.2015	NHAI & SP Jammu Udhampur Highway Ltd.	Addressing ROW delays & pending works post COD	• Identified ~9.5 km "Remaining Sites". • Completion window: 18 months max. • No annuity reduction if admissible. - Extended maintenance obligations proportionately. • Concessionaire waived interest on delayed annuity.
15.05.2018	NHAI & SP Jammu Udhampur Highway Ltd.	Implementation of Hybrid ETC System	• Scope expanded for ETC installation & O&M. • Hybrid ETC to reduce congestion. • 5-year O&M cycle with NHAI cost. - Equipment handover at concession end. • Quarterly O&M charges with escalation.

3.3 Review of State Support Agreement

State Support Agreement was executed on **28th November 2011** between:

- **The Governor of Jammu & Kashmir**, (the *State Government*), and
- **The President of India**, represented by the Joint Secretary, Ministry of Road Transport & Highways (the *Authority*).

This agreement provides the framework for support from the State Government to ensure smooth implementation and operation of the *Jammu–Udhampur Highway Project* under the Concession Agreement.

Exhibit 19: Key Terms of the State Support Agreement

Parameter	Details
Date of Agreement	28th November 2011
Parties	The Governor of Jammu & Kashmir (State Government) & The President of India (Authority)
Purpose	To ensure State Government support for implementation and operation of the Jammu–Udhampur Highway BOT (Annuity) Project
Support by State Government	• Provide continued access to Site/ROW • Assist in obtaining permits & approvals • Facilitate shifting of utilities • Ensure no barriers/taxes imposed by local authorities • Provide police, traffic, and medical aid support • Prohibit competing roads or tollways except as per Agreement
Restriction on Competing Roads	State shall not construct any competing roads violating Concession Agreement; exceptions only if notified annually to Authority
Restriction on Additional Tollways	No additional Tollway construction except as per Concession Agreement
Restriction on Local Taxes	State Government shall not levy local taxes/tolls on project highways; existing revenue interests at Lakhanpur & Lower Munda protected
Substitution of Concessionaire	State acknowledges lenders and Authority's right to substitute Concessionaire under Concession Agreement
Obligations of Authority	Ensure Concessionaire complies with laws, permits, and Concession Agreement

Parameter	Details
State Default	Failure by State Government/Agency to cure breach within 60 days constitutes *State Default*; treated as breach under Concession Agreement
Compensation & Termination Payments	State Government liable for compensation/damages/termination payments arising from its breach or default, payable within 60 days (with interest for delay at Bank Rate +3%)
Duration	Effective from date of signing; continues till termination of all related Concession Agreements
Indemnity	Both Authority and State indemnify each other against losses due to their respective breaches
Dispute Resolution	First conciliation (under Arbitration & Conciliation Act, 1996), failing which arbitration under ICADR Rules, New Delhi
Governing Law & Jurisdiction	Laws of India; Courts at Delhi
Miscellaneous	• Waiver of sovereign immunity by State Govt • Agreement binding on successors/assigns • Notices to be in writing - Agreement in English

3.4 Review of Settlement Agreement

Settlement Agreement was executed on **15th March 2022** at NHAI HQ, New Delhi, between:

- **National Highways Authority of India (NHAI** (Authority); and **SP Jammu Udhampur Highway Limited**, (Concessionaire).

The Agreement was signed under **Section 73 of the Arbitration and Conciliation Act, 1996**, following conciliation proceedings by the Conciliation Committee of Independent Experts (CCIE-2). It records the settlement of disputes arising from the Concession Agreement dated 19.07.2010, including arbitration awards, counterclaims, and change in law claims.

Exhibit 20: Key Aspects of Settlement Agreement

Parameter	Details
Parties	National Highways Authority of India (NHAI) & SP Jammu Udhampur Highway Ltd.
Context	Settlement under Section 73 of Arbitration and Conciliation Act, 1996, resolving disputes from Concession Agreement (2010)
Reference 1 – Arbitration Award (25.02.2021)	Tribunal award ~₹333.55 Cr → Settled at **₹282.67 Cr**
Reference 2 – Pending Arbitration	Concessionaire claims ~₹275.48 Cr → Settled at **₹36.28 Cr**
Total Settlement Amount	**₹318.95 Cr (₹282.67 + ₹36.28)**
Financial Impact	Reduction of ~₹290 Cr (~48%) vs. total arbitral awards/claims
O&M Extension	Concessionaire to perform O&M for **36 days beyond concession end** (16.06.2031–22.07.2031)
NHAI Obligations	Pay settlement amounts; withdraw Section 34 & 36 petitions
Concessionaire Obligations	Withdraw claims; record settlement in arbitration award; indemnify NHAI from third-party claims
Finality	Full and final settlement; no residual claims or litigation permitted
Governing Law	Laws of India; Courts at Delhi

3.5 Review of Final Settlement Agreement

The **Final Settlement Agreement** was executed on **30th April 2025** at **NHAI HQ, New Delhi**, between:

- **National Highways Authority of India (NHAI)** – *Authority*
- **Athaang Jammu Udhampur Highway Pvt. Ltd.** – *Concessionaire*

This Settlement Agreement addresses the **financial settlement arising due to descoping of 16.995 km of maintenance obligations** from the Concessionaire's scope, following the **overlapping construction of Delhi–Amritsar–Katra (DAK) Expressway Packages 17 & 18** over the existing **Jammu–Udhampur NH-44 corridor**.

Exhibit 21: Overlapping Stretch Between DAK Expressway and Jammu–Udhampur NH-44

Section / Package	Chainage (Start – End)	Overlapping Length
DAK Expressway – Package 17	528.100 to 528.900 550.900 to 552.300	**0.8 km + 1.4 km**
DAK Expressway – Package 18	530.000 to 543.100 544.000 to 545.300	**13.395 km + 1.4 km**
Jammu–Udhampur Section (as per CA)	15.200 to 16.000 17.100 to 19.475 28.400 to 29.800 21.864 to 23.264	—
Total Overlapping / Affected Length	—	**2.2 km + 14.795 km = 16.995 km**

It implements a **financial reconciliation mechanism through annuity deductions**, based on the **Lenders' Financial Model shared by Standard Chartered Bank**, with **bi-annual recovery linked to Annexure-1 of Final Settlement Agreement (30 April 2025)**.

Exhibit 22: Key Aspects of Final Settlement Agreement

Parameter	Details
Parties	National Highways Authority of India (NHAI) & Athaang Jammu Udhampur Highway Pvt. Ltd.
Legal Basis	Settlement under **Section 73** of Arbitration & Conciliation Act, 1996 (Conciliation Outcome – Binding as Arbitral Consent Award)

<table>
<tr><th>Parameter</th><th>Details</th></tr>
<tr><td>Project Reference</td><td>Concession Agreement dated 19.07.2010 – NHDP Phase-II/BOT/VI/J&K, Jammu–Udhampur Highway Section</td></tr>
<tr><td>Trigger for Settlement</td><td>DAK Expressway (Pkg-17 & 18) overlap leading to descoping of 16.995 km maintenance length</td></tr>
<tr><td>Formal Descoping Notification</td><td>NHAI Letter No. 13020/1/2022/PIU-Udp/Cont./2227 dated 07.03.2024</td></tr>
<tr><td>Scope Affected</td><td>16.995 km out of original 65 km O&M stretch</td></tr>
<tr><td>Financial Model Applied</td><td>Standard Chartered Bank Financial Model (as used by Lenders)</td></tr>
<tr><td>Recovery Mechanism</td><td>• Regular Recovery of ₹61.09 Cr from 07.03.2024 till end of concession on a bi-annual basis for reduced costs of maintenance, insurance, IE fees, and toll O&M for the descoped 16.995 km, as per the Standard Chartered Bank financial model.
• Periodic renewal costs to be recovered in the year major maintenance is carried out by the Concessionaire for the non-descoped section, based on the lender's financial model.
• The Authority also agreed that routine maintenance costs will not be levied in the year when major maintenance is done by the Concessionaire.</td></tr>
<tr><td>Routine Maintenance Recovery</td><td>Regular Recovery of ₹61.09 Cr from 07.03.2024 till end of concession on a bi-annual basis for reduced costs of maintenance, insurance, IE fees, and toll O&M for the descoped 16.995 km, as per the Standard Chartered Bank financial model.

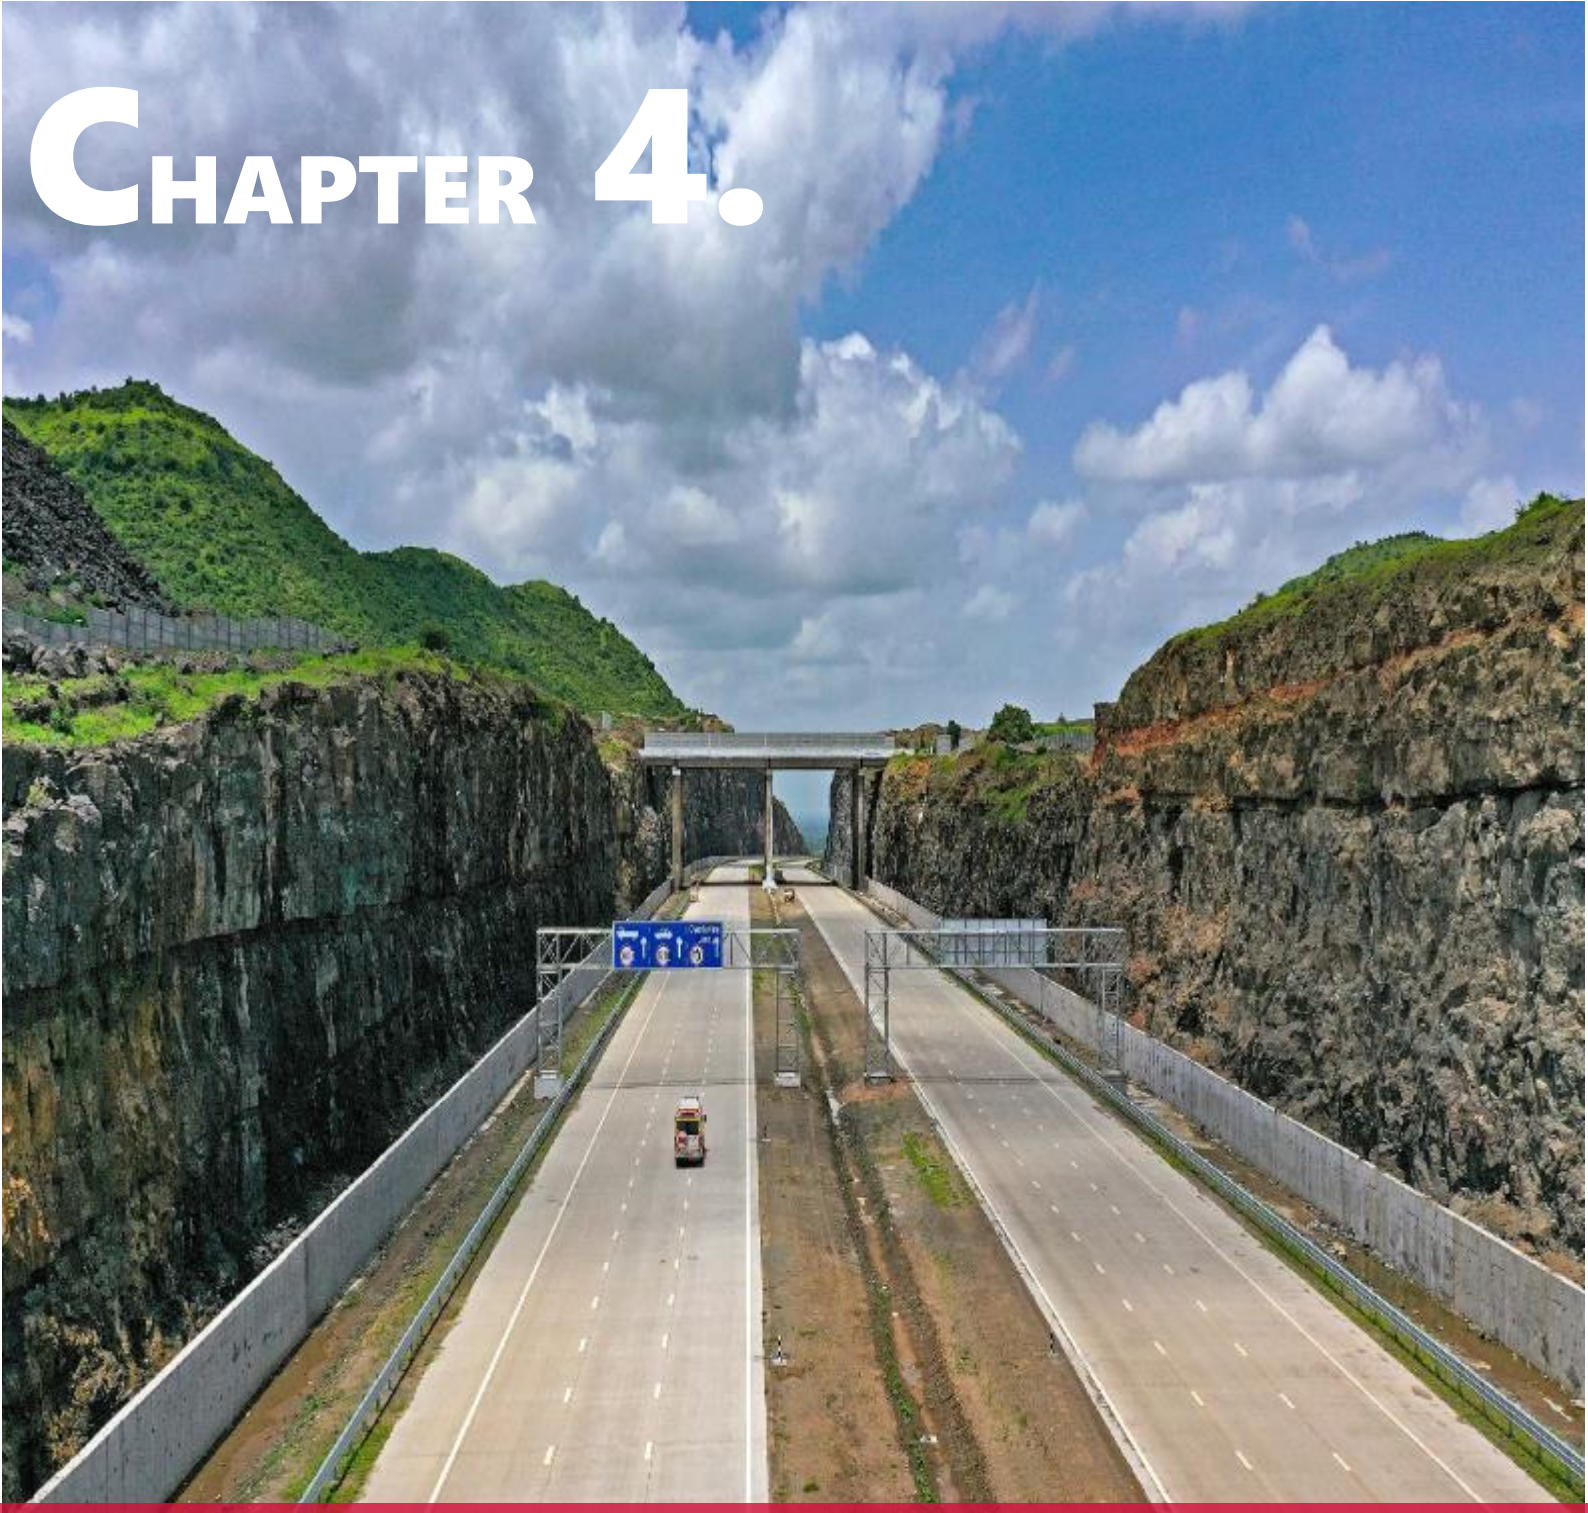
Knight Frank reviewed and noted that an amount of ₹7,63,87,976/- towards IE Fees has been deducted by the Independent Engineer from the 22nd Annuity Bill, in accordance with the provisions of the Settlement Agreement-2 Signed on 30.04.2025. The deduction was made vide letter reference LION-HCPT/O&M1124/Athaang/Jammu-Udhampur/0239, dated 07.05.2025, issued by the Independent Engineer to the Concessionaire.

Chapter 4.



Condition Assessment of Project Road

Chapter 4. CONDITION ASSESMENT OF PROJECT ROAD

4.1 General

This chapter presents a detailed assessment of the existing condition of the Jammu–Udhampur Project Highway in accordance with the provisions of the Concession Agreement and relevant IRC guidelines. The objective of this assessment is to evaluate the current condition and performance of the pavement, structures, tunnels, toll plaza facilities, service roads, drainage systems, safety installations and other highway assets. The observations are based on site inspections, maintenance records, annuity performance, and interaction with the concessionaire's O&M team.

This section presents the findings of the **condition assessment** of the **Jammu–Udhampur Section of NH-44** (Km 15+000 to Km 67+000) in the **Union Territory of Jammu & Kashmir**. The assessment has been prepared based on **field observations** recorded during the **site inspection conducted on 08 October 2025** & Based on Result of **Falling Weight Deflectometer (FWD) survey** carried out in **June 2023**, and the **Mobile Bridge Inspection Unit (MBIU) survey** conducted in **November 2023**.

The integration of these three key datasets — **pavement deflection study (FWD)**, **structural evaluation of bridges (MBIU)**, and **visual field inspection** — provides a **comprehensive and reliable representation** of the current **structural and functional condition** of the project highway and its associated assets.

The **project corridor** traverses the **Shivalik foothills** of the outer Himalayas, characterized by **steep terrain, deep cuttings, and landslide-prone zones**, with sections passing through high embankments, tunnels, and major structures. The alignment commences near **Jammu (Km 15+000)** and terminates near **Udhampur (Km 67+000)**, covering the **Jammu Bypass, Nandni and Jakhani Hills**, and the **Udhampur Bypass**. The stretch forms a vital component of **NH-44**, serving as a strategic link for all-weather connectivity between **Jammu and Srinagar** and facilitating both civil and defense transport movement.

The assessment integrates **instrumental evaluations** (FWD and MBIU) and **visual observations** to provide a holistic appraisal of pavement condition, bridge integrity, drainage, and highway appurtenances.

This assessment has been carried out in accordance with the following key references:

- **IRC:115-2014** – Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements using FWD Technique
- **IRC:117-2014** – Guidelines for Structural Evaluation of Rigid Pavements
- **IRC:37-2018** – Guidelines for the Design of Flexible Pavements
- **IRC: SP:35-2015** – Code of Practice for Inspection and Maintenance of Bridges
- **IRC:83-2019 (Part I & II)** – Guidelines for Design and Condition Assessment of Bridge Components
- **IRC: SP:16** and **IRC: SP:83** – Guidelines for Maintenance and Management of Highways and Toll Facilities

4.2 Pavement Composition

The pavement has been designed in accordance with IRC:37-2001. The concessionaire has based the design on CBR values of 8% and 10%. Although the design traffic on the RHS is relatively lower than on the LHS, the concessionaire has opted to provide the same pavement thickness for both directions.

As mentioned in Pavement Design Report, design consultants summarized the calculated design traffic for the next 20 years for BT and Base and subbase layer respectively.

Exhibit 23: Design traffic in MSA for New Construction & Overlay Section

As per Concessionaire			
S. No	**Section Type**	**Design Traffic MSA for 20 years (Jammu to Udhampur)**	**Design Traffic MSA for 20years (Udhampur to Jammu)**
1	New Construction	41	16
2	Overlay	47	19

Pavement Configuration for Project is given in **Exhibit 24**

S. No	Design MSA	
	Adopted MSA – 10 years	**25**
1	BC in mm	40
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	200

4.3 Assessment of Highway

Knight Frank carried out a detailed review and assessment of the **project highway assets**, which included **Service Roads (SR), Intersections, TLBs, BLBs, Sign Boards, MBCBs, and other related infrastructure components**. The assessment was undertaken through **comprehensive visual inspections** along the entire project stretch, supplemented by a **review of relevant reports and maintenance records** shared by the Client during site visit.

The objective of this exercise was to evaluate the **existing physical condition, functionality, and maintenance requirements** of each asset category. Based on the observations and data collected, a **maintenance strategy** has been formulated covering **regular repair, preventive, and routine maintenance activities** to ensure the long-term sustainability and serviceability of the highway assets.

Furthermore, the **pavement condition** was assessed through a combination of **visual inspection, Network Survey Vehicle (NSV) survey, and Falling Weight Deflectometer (FWD) testing**, providing a comprehensive understanding of surface condition, structural strength, and performance.

Overall, the review indicates that the **project highway assets are in satisfactory condition**, with all key components performing as intended. Minor deficiencies identified during the inspection can be addressed through routine and preventive maintenance measures as part of the recommended asset management plan.

a) Service Road/Slip:

Total length of service road is 20.180 kms. The width of service road is 5.50m to 7.00m. Service Road / Slip Roads is constructed along the project as flexible pavements. The overall pavement condition is good. Pavement Markings are also found in service roads but are faded at some places

b) Highway Lighting:

Highway lighting has been provided at key locations such as junctions, flyovers, tunnels, and toll plazas to ensure adequate visibility and road safety during night hours. High mast lighting systems are installed specifically at junctions and toll plaza areas for enhanced illumination. Additionally, solar-powered blinker signals have been installed at selected median openings to alert and guide motorists at potential conflict points.

c) Drainage:

As per CA, lined between MCW and Service Road to be provided and at outer edge of slip road at approach of grade separated structures.

Drainage arrangements are provided in the project. But these Roadside drainage along the Highway as well as lined drains at median needs appropriate maintenance by cleaning debris and vegetations to make the arrangement working. Total 9.47 Kms of RCC covered drains available at site.

The project includes a total drainage network comprising 30.536 km of median drain, 9.407 km of RCC cover drain, and 56.577 km of toe drain, ensuring effective surface water management along the highway.

d) Metal Beam & Wire Rope Safety Barrier:

The project stretch includes 31.588 km of RCC crash barriers, 21.007 km of W-Beam crash barriers, and 12.292 km of Brifen wire rope barriers, ensuring road safety across various sections of the highway.

Metal Beam Crash Barriers (MBCBs) have been installed along the main carriageway, at underpasses, on approach sections, and at high embankment locations along the inner side of service roads to enhance road safety and prevent vehicular run-off. During the inspection, it was observed that at a few locations, the wire ropes appear slightly loose. These minor deficiencies can be rectified through routine maintenance activities to restore the barriers to their optimal functional condition.

e) Bus Bays /Bus Shelters & Truck Lay Byes:

There are 28 numbers bus-bays both side along the project road, out of these at 02 locations bus bays are not there. Lighting has not been provided at any bus bay locations. Pavement condition of bus bays is satisfactory.

There are 13 Truck lay byes provided along the project highway.

f) Major/Minor Junctions

Intersections are the places where one or more roads shares the common space. These includes major and minor intersections. There is total 28 junctions along the project road. Out of these, there are 13 major junctions and 15 minor junctions. Junctions are provided with flexible pavement.

g) Traffic Signs Boards:

The project highway is equipped with various types of road signs, including roadside signs, overhead gantry-mounted signs, kerb-mounted signs, and median signs. The stretch features approximately 1,873 signboards, 15 overhead gantry signboards, and 19 cantilever gantry signboards.

h) Plantation

Landscaping and avenue plantation are present along the project highway; however, they are observed to be sparse and unevenly distributed. Shrubs and flowering plants have been intermittently planted within the median, though the variety of species is limited. Median plantation is available at certain stretches of the corridor, comprising a mix of shrubs and ornamental plants, but the overall continuity and density of plantation remain inconsistent throughout the project road.

i) Median & Median Opening:

Width of median is 1.5m/4.00m

Median openings have been provided in accordance with the Concession Agreement (CA) provisions and the requirements of local authorities and nearby residents along the project highway. These openings are generally equipped with pavement markings to guide traffic movement. A total of 46 median openings were identified during the site inspection. However, it was observed that at a few locations, blinker lights and signboards are missing, which should be reinstated as part of regular maintenance activities to ensure road safety and compliance with standards.

KF View:

Overall, the project highway is in satisfactory condition, with all major assets performing as intended. Minor deficiencies such as faded markings, missing blinkers, and loose barriers can be addressed through routine maintenance to ensure continued safe and efficient operation.

4.4 Assessment of Structures

A **visual condition survey** of all bridge and culvert structures was carried out jointly by the **Knight Frank (KF) team** and the **Concessionaire**, with the objective of **identifying and quantifying structural deterioration** arising from various factors such as **dead load, live load, wind load**, and **physical or chemical influences** exerted by the environment. In addition to examining **damages caused by unpredictable natural events** or **vehicular collisions**, the inspection also aimed to detect or monitor the impact of any **construction-related imperfections** that may affect long-term performance. Such periodic inspections play an important role in **enhancing the service life and safety** of both existing and newly built bridge structures.

Knight Frank reviewed the **structural condition assessment** of bridges and culverts along the **Jammu–Udhampur Section of NH-44 (Km 15+000 to Km 67+000)** during the **Operation & Maintenance phase**, based on **visual inspection** and findings from the **Mobile Bridge Inspection Unit (MBIU) survey** carried out in **November 2023 (attached as Para 5.4.2)**. The assessment encompassed all **major and minor bridges**, as well as **underpasses** along both the **left-hand and right-hand carriageways** of the corridor.

The objective of the inspection was to evaluate the **structural integrity, durability, and functional safety** of bridge assets through a **systematic visual examination**, supplemented by **limited Non-Destructive Testing (NDT)** wherever required. The assessment methodology adhered to the provisions of **IRC: SP:35-2015** (Code of Practice for Inspection and Maintenance of Bridges) and **IRC:83-2019 (Part I & II)** pertaining to bridge design and inspection standards.

A total of **335 structures** were covered under this assessment, comprising:

- **4 Major Bridges** – PSC Box Girder / PSC T-Beam Type
- **24 Minor Bridges** – RCC T-Beam and RCC Slab Type
- **1 Vehicular/Non-Vehicular Underpass** – RCC Box Type
- **44 Arch Culverts** – Masonry Arch / RCC Type
- **3 Pipe Culverts** – RCC Pipes (1.0–1.5 m dia.)
- **261 Slab Culverts** – RCC Slab Spans (2–6 m)
- **1 Grade Separator** – RCC Box Configuration

Most bridges are of **RCC T-Beam or PSC Box Girder construction**, supported by **reinforced concrete abutments and piers** with open foundations and **stone-pitched protection works**. The **superstructure and substructure** elements were generally found to be **structurally sound** and **stable**, with no significant distress reported.

KF View:

Overall, based on the review of the previous MBIU survey reports (conducted by the SPV in November 2023) and a comprehensive visual examination during the site visit, it was observed that most structures are in sound structural condition and maintained in a fair state of serviceability.

4.5 Assessment of Tunnels

The **Kashmir Himalaya** is divided into three main physiographic zones from south to north — the **Siwalik Himalaya**, the **Middle Himalaya**, and the **Greater Himalaya**. The project area primarily lies within the **Siwalik formation** of the Outer Himalaya, part of the **Siwalik Himalayan Belt (Foreland Basin)** comprising the **Siwalik and Murree formations**, which overlie the northern margin of the Indian shield.

The **Siwalik group** is subdivided into **Lower, Middle, and Upper Siwalik**, consisting mainly of **fine to medium-grained sandstone** (light grey to reddish brown), **siltstone**, **claystone**, and **shale**. The **Lower Murree formation** is predominantly **argillaceous** with hard sandstone bands, while the **Upper Murree** is **arenaceous**, comprising fine to medium-grained sandstone.

Tunnels 1, 2, 3, and 4 traverse through the **Middle Siwalik**, except for a portion of **Tunnel 4 (near Portal 2)**, which passes through the **Lower Siwalik**. **None of the tunnels in the Jammu–Udhampur section of NH-44 intersect major fault zones such as the Reasi Thrust.** All tunnels are located along the **southern limb of the Suruin–Mastgarh anticline**, whose axial plane passes through **Jhajjar Kotli**.

The highway features four twin-tube tunnels with a combined length of 2.77 km. An overview of the tunnel details for the project is provided below.

Exhibit 26: Details of Tunnel

Tunnel No.	Section	LHS/RHS	Design Chainage		length(m)
T-1	Main Road	LHS	23.72	23.89	170
		RHS	23.715	23.88	165
T-2	Main Road	LHS	24.48	24.711	231
		RHS	24.533	24.8	267
T-3	Main Road	LHS	24.94	25.37	430
		RHS	24.916	25.39	474
T-4	Main Road	LHS	25.49	26.02	530
		RHS	25.49	26.00	510

4.5.1 Power Supply & Substations in Tunnels:

- **Each tunnel portal is supported by a dedicated substation, totaling four substations across the project.**
    - **Substation 1** (Tunnel 1) receives an 11 KV HT power supply from JDPL, which also feeds **Substations 2 and 3**.
    - **Substation 4** (Tunnel 4) receives an independent 11 KV HT power supply from JDPL dedicated solely to that substation.
- **Tunnel Ventilation System & Safety Features**:

The tunnels at lengths of 530 m and 510 m operate using a longitudinal ventilation system. Both tubes are interconnected via a cross passage, which serves as an emergency escape route. Each tube is equipped with 8 jet fans to support ventilation. Additionally, 4 carbon monoxide (CO) sensors and 4 nitrogen dioxide (NO_2) sensors are installed on either side of the tunnel to monitor air quality. The entire ventilation system is currently operating on diesel generator (DG) power supply

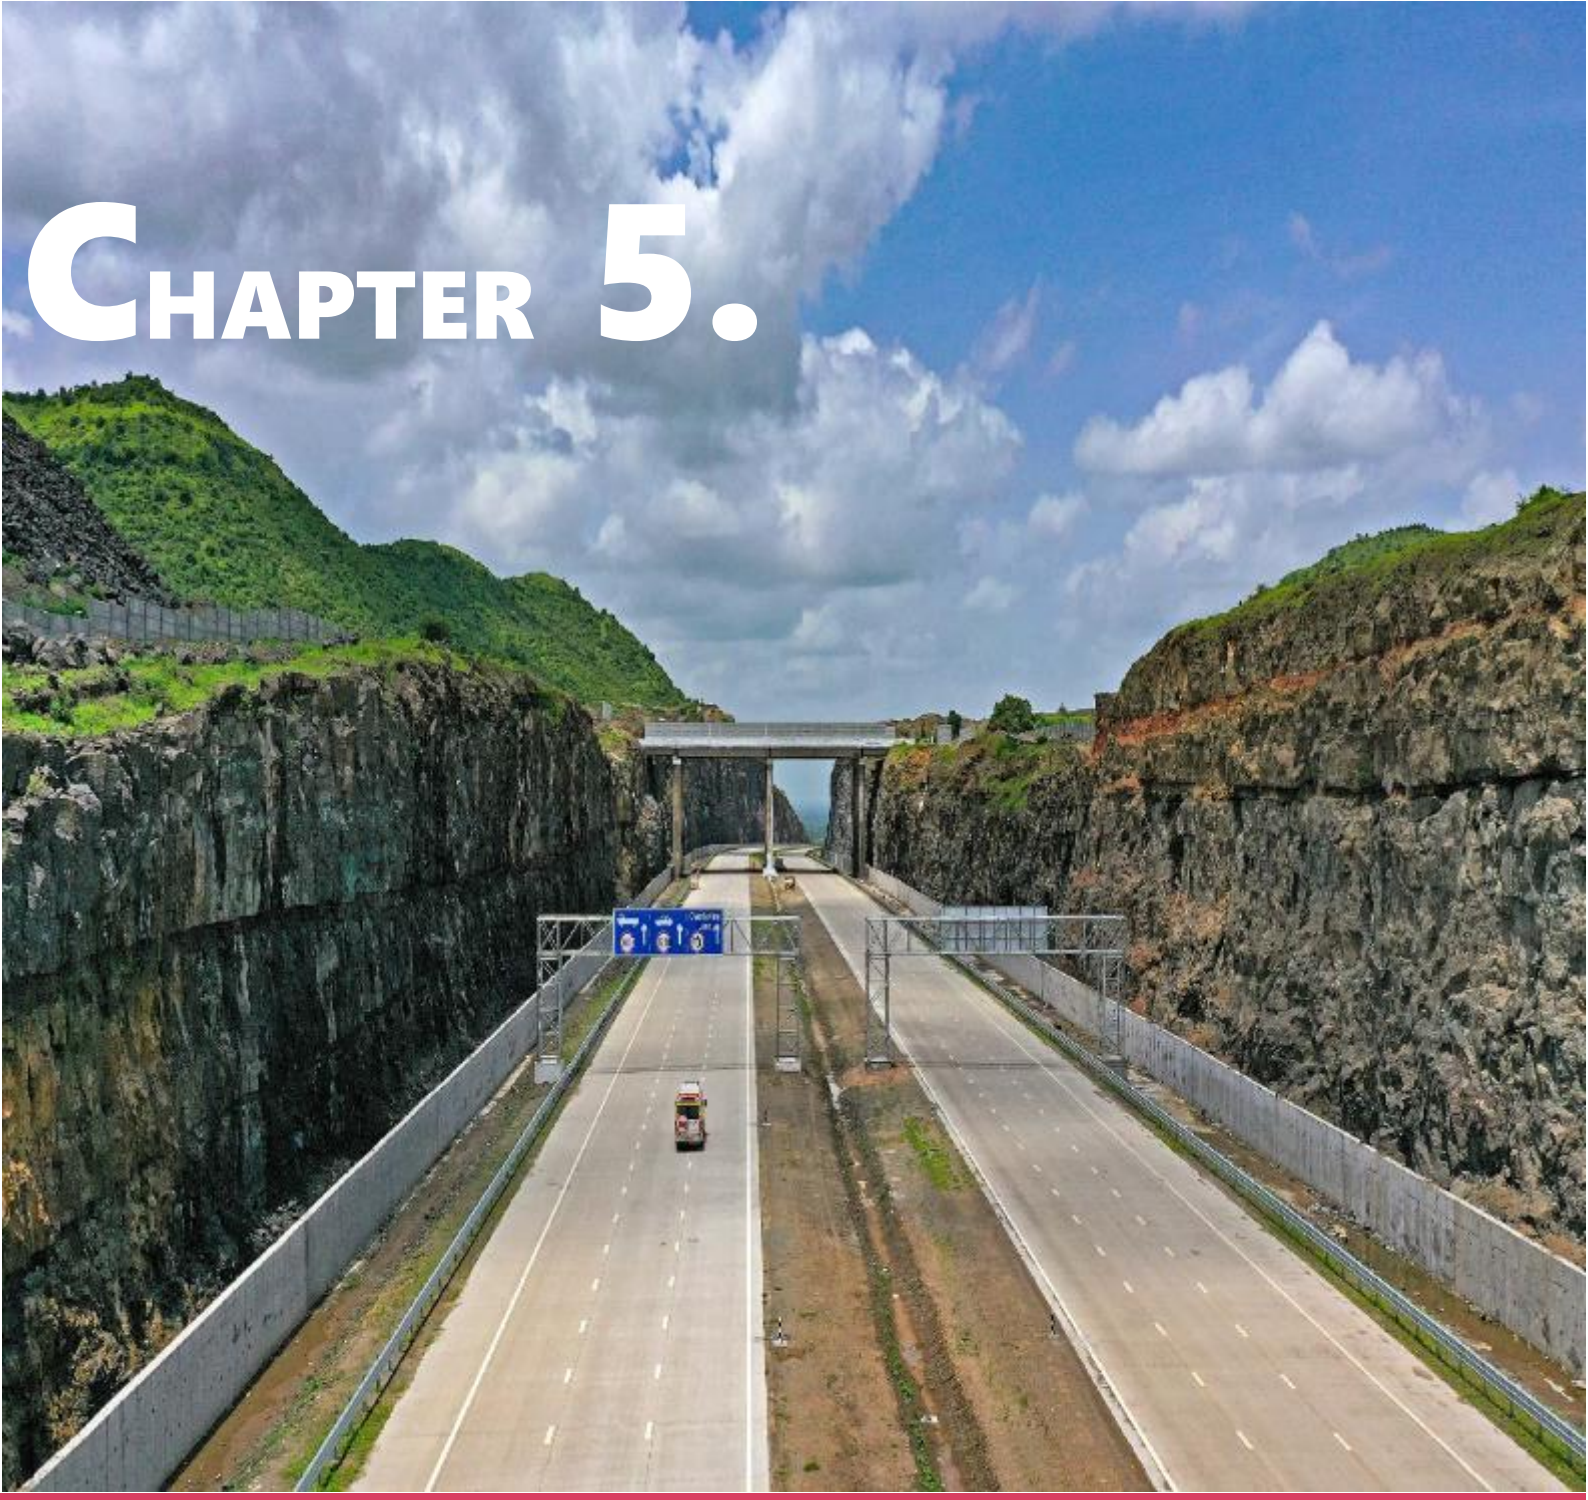
The tunnels are equipped with a comprehensive ventilation system that includes:

- 2 nos. of 500 KVA DG sets
- 1 DG synchronizing panel (with 3 nos. of 1600A ACBs)
- 1 ventilation panel (comprising 3 nos. of 1600A ACBs and 6 nos. of 400A MCCBs)
- 4 sub-panels (each with 1 no. 400A MCCB and 6 nos. of 100A MCCBs)
- 16 nos. of VFD (Variable Frequency Drive) panels

KF View:

The Jammu–Udhampur section of NH-44 has been operational for over nine years, and no major issues related to tunnel or slope stability have been reported during this period.

- ***During Site Visit, Minor erosion and distress of shotcrete have been observed, but no major mass movements were detected. The subsurface drainage system is functional and in good condition.***
- ***The false portal is protected with shotcrete wire mesh and berm, while longitudinal drains on both sides are in satisfactory condition.***



Chapter 5.

Review of Pavement Condition & Design

Chapter 5. REVIEW OF PAVEMENT CONDITION & DESIGN

5.1 Pavement Condition

The life of the Pavement has a co-relation with both its structural as well as Functional Condition. Inspecting and tracking of pavement condition, scheduling maintenance, and treating distress can have serious ramifications impinging on safety of road users and enhancing functional efficiency in end use of the Facility. It is therefore essential to carry out the assessment of the condition of the pavement on a given date taking into cognizance a variety of data to arrive at well-considered decisions and drawing up of the maintenance strategy and taking appropriate course of action to apply funds and resources in optimizing the desired levels of operations on the road assets. Condition data can include factors like roughness, specific distresses, friction, and overall structural health.

Once measurements of road condition are available, they are interpreted in such a way that allows the decision-making process to occur in a logical fashion. This might involve converting multiple physical parameters into a single index, allowing different sections of a road network to be directly compared against one another etc.

Pavement performance under prevailing environmental conditions is crucial as it has a direct bearing on the economic returns from the project development. While an under-designed pavement will fail prematurely, imposing undesirable Cost Over runs on the Project. It is therefore necessary to ensure the pavement layer thicknesses; configurations and materials are adequately designed and require minimal maintenance under the anticipated traffic loading throughout the life cycle of the project.

To achieve this objective and thereby to predict the performance of any pavement structure, it is necessary to analyze material characteristics, traffic condition, present physical condition of the pavement layers, local environment, and its impacts.

Due to the variety of variables involved, it is essential to determine the exact level of pavement performance through the project life. But, based on the assessment of present condition of pavement, analysis of available survey data, and estimations regarding the pavement life, future maintenance requirements can be estimated.

This part of the report deals with the details of the series of field investigations and analysis carried out to find out the present condition of pavement as well as to determine the future maintenance requirements for sound pavement performance throughout the project life.

5.2 Objectives

- Collect data regarding physical conditions of pavement.
- Prepare a plan for rectification as required for damaged/poor sections in consonance with requirements of the CA.
- Project maintenance requirement in physical and monetary terms over the life cycle of the project road.

5.3 Review of Pavement Design

A. Design Period

As per the four-laning manual and IRC: SP:84-2009, the sub-base and base layers of the pavement should be designed for a minimum period of 15 years, while the initial bituminous surfacing should be designed for a minimum of 10 years. ***However, the concessionaire has opted to design the flexible pavement for an extended design life of 20 years.***

B. Design CBR

As per the pavement design report, concessionaire considered the 8% and 10% CBR for pavement design. However, during execution time only 8% CBR is used.

C. Design MSA

As stated in the Pavement Design Report, the design consultants have provided a summary of the projected design traffic for the next 20 years, separately for the bituminous (BT) layer and the base and sub-base layers. The design of the new traffic construction and overlay is as detailed below:

Sl. No	Section Type	Design Traffic MSA for 20years (Jammu to Udhampur)	Design Traffic MSA for 20years (Udhampur to Jammu)
1	New Construction	41	16
2	Overlay	47	19

D. Pavement Crust of Main Carriageway

The adopted pavement crust for the Main Carriageway meets the requirements of IRC 37-2001 Concessionaire carried out the pavement design with 8% & 10% CBR values. Even though the design traffic in RHS direction is relatively less compared to the LHS direction, but the concessionaire is providing the same thickness for both directions

The crust thicknesses are as follows:

Exhibit 27 Pavement Design Composition of Main Carriageway

S. No	Design MSA	As built drawings
Flexible Pavement		
1	**Adopted MSA – 10**	
2	BC in mm	40
3	DBM in mm	110
4	WMM in mm	250
5	GSB in mm	200
Rigid Pavement		
	PQC	**DLC**
1	300	150
Overlay Works		
The Overlay thickness proposed for design traffic of 50 MSA for the project corridor. Based on the BBD Test Result Concessionaire Proposed Overlay of 50 mm thickness with DMB of 50 mm thickness.		

E. <u>For Service Road/Slip Road</u>

As per the Preliminary Design Report (PDR), the concessionaire has stated that the existing bituminous layer in the JBP, NBP, and MR sections ranges between 140 to 150 mm, with a granular layer thickness of 325 to 330 mm. In contrast, the Udhampur Bypass section has a thinner bituminous layer of only 80 mm but a thicker base/sub-base layer of approximately 430 mm.

As per Approved Pavement Design Report the service road has been designed for 10 MSA & CBR-10%. The Pavement layer adopted for service road as given below:

Exhibit 28: Pavement Composition -Service Road

S. No	Design MSA	
	Adopted MSA – 10 years	**25**
1	BC in mm	40
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	200

F. Pavement Overlay design for Existing Carriageway

As per the Pavement Design Report (PDR), the concessionaire noted that the existing bituminous layer thickness ranges from 140 to 150 mm, and the granular layer thickness is around 325 to 330 mm in the JBP, NBP, and MR sections. In contrast, the Udhampur Bypass has a thinner bituminous crust of 80 mm, but a thicker base/sub-base layer of approximately 430 mm. A Benkelman Beam Deflection test was conducted on the existing surface in April 2011, and based on the analysis, the concessionaire proposed overlay thicknesses, details of which are provided in the below

Exhibit 29: Pavement Composition -Overlay Works

Section	Design Chainages	Jammu to Udhampur direction		Udhampur to Jammu direction	
		BC (mm)	DBM (mm)	BC (mm)	DBM (mm)
Main Road	21+940 to 26+710 27+250 to 33+971 34+975 to 41+695	50	50	50	50
	42+850 to 52+340	50	65	50	50
Nagrota Bypass	10+400 to 21+730	50	50	50	50
Udhampur Bypass	0+225 to 2+650 3+220 to 7+310 8+055 to 15+025	50	55	50	50
	15+540 to 16+550	50	50	50	50
Jammu Bypass	15+200 to 20+000	50	50	50	50

5.4 Pavement Evaluation by Falling Weight Deflectometer (FWD) Technique

FWD surveys were carried out to determine the present condition of pavement as well as finding out the future maintenance requirements.

a) Introduction:

The **Falling Weight Deflectometer (FWD) survey** was conducted in 2023 for the Jammu–Udhampur section of NH-44, covering chainage **Km 15+000 to Km 67+000**. The primary objective of this exercise was to evaluate the **structural strength of the in-service pavement**, determine the **moduli of individual pavement layers**, and estimate the **remaining life** of the pavement with respect to fatigue and rutting criteria.

This evaluation was carried out as per the provisions of **IRC:115-2014 "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer"**. The survey results form a critical input for deciding the overlay requirements and long-term maintenance strategy of the project highway.

b) Project Road

The Jammu–Udhampur section of NH-44 serves as a vital north–south corridor, connecting Jammu city with Udhampur and further to Srinagar. The project alignment includes three distinct segments:

1. **Section I: Jammu Bypass (Km 15+200 to Km 20+260) -** Urban and peri-urban stretch with relatively high mixed traffic.
2. **Section II: MR & NBP (Km 9+380 to Km 52+450) -** A long intermediate stretch carrying a large share of heavy commercial vehicles.
3. **Section III: Udhampur Bypass (Km 0+000 to Km 16+352) -** A bypass section designed for smoother passage of highway traffic avoiding city areas.

The section passes through rolling to hilly terrain, experiencing climatic variations including hot summers and cold winters, both of which impact pavement performance

c) Falling Weight Deflectometer

The FWD survey was carried out using standard equipment with the following parameters:

- **Load Applied:** Equivalent to 40 kN impulse load (representing 80 kN standard axle).

- **Deflection Measurement:** At 7 radial offsets (D0 to D7) up to 1200 mm from the load center.
- **Survey Spacing:** 250–500 m interval along both carriageways.
- **Temperature Correction:** All bituminous layer moduli corrected to a reference temperature of 35°C.
- **Seasonal Correction:** Since the survey was conducted in winter (November 2023), appropriate seasonal correction factors were applied to granular and subgrade moduli.
- **Back-calculation Software:** KGPBACK (Genetic Algorithm based) used for determining layer moduli; IITPAVE used for fatigue and rutting life analysis

5.4.1.1 FWD Analysis

The FWD data collected has been analysed as per IRC:115-2014 guidelines with the suggested ranges for in-service pavements.

Description	Range
Subgrade Modulus	5 CBR to 20 CBR
Granular Layer Modulus	100 MPa to 500 MPa
Bituminous Layers –Thick without distress	750 MPa to 3000 MPa
Bituminous Layers in distressed condition	400 MPa to 1500 MPa

The above suggested ranges are for guidance only and pavement engineer shall use his judgment based on available data while fixing the above ranges. By looking at the age, condition and performance of the pavement following different set of ranges have been used in the analysis:

Layer	Bituminous Layers	Granular Layer Modulus	Subgrade
Modulus Value (MPa)	750-3000	100-500	50-75

Bituminous layer Moduli obtained from back calculations shall be corrected for a standard pavement temperature of 35°C using given equations. Whereas, for back calculated moduli values obtained for granular and subgrade layer shall be corrected for seasonal variations (using winter and summer equations). As FWD tests are performed during winter, accordingly winter correction factor is applied for granular and subgrade layers.

Remaining life in base year and overlay requirement (with VG-40 mix for >20 MSA) has been estimated in accordance with IRC: 115-2014 and IRC: 37-2018. The summary of the results is shown in tables below.

Exhibit 30 Remaining life of the existing pavement,

The FWD survey results demonstrate that the Jammu–Udhampur corridor is **structurally sound and serviceable** for current and near-future traffic. The majority of sections have long fatigue and rutting lives, well above the design traffic demand. However, **localized deficiencies in Section II** require corrective overlays and rehabilitation to ensure uniform serviceability across the entire stretch.

This evaluation reinforces that **targeted strengthening, rather than uniform overlays**, is the most cost-effective maintenance approach for this corridor**.**

5.4.2 MBIU survey

a. Introduction:

The **Mobile Bridge Inspection Unit (MBIU) survey** was conducted in **November 2023** for the Jammu–Udhampur Section of NH-44, covering **Km 15+000 (Jammu Bypass) to Km 67+000 (Udhampur)**. This was undertaken as part of Independent Engineer services during the O&M period, in accordance with **Clause 6.4 of the Terms of Reference** of the Concession Agreement.

The primary objective of the inspection was to assess the **structural and functional condition of bridges and culverts**, covering superstructure, substructure, bearings, deck, joints, drainage spouts, crash barriers, and approaches. The inspection was carried out with the aid of a **truck-mounted Palfinger PK1901 articulated unit**, enabling access to the underside of bridge decks and otherwise inaccessible elements

b. Project Corridor:

The inspected section forms a crucial part of the North–South corridor. The Jammu–Udhampur stretch includes **Jammu Bypass, MR & Nagarota Bypass, and Udhampur Bypass**, covering a mix of **major bridges, minor bridges, vehicular underpasses (VUPs), pedestrian underpasses (PUPs), and causeways**.

The bridges traverse rivers, streams, and gorges, many of which are subject to **siltation, waterlogging, heavy monsoon flows, and vegetation growth** along slopes. Accessibility issues in high-level bridges made the MBIU indispensable for systematic inspection.

c. Instrumentation & Methodology:

Instrument: Palfinger PK1901 MBIU, electro-mechanically operated articulated arm system mounted on truck.

Working Range: Allows horizontal, vertical, and underneath access across long spans.

Supporting Equipment: Laser densitometer, crack measurement card, tape (5 m, 30 m), ladders, torches, hammer, and digital cameras.

Inspection Standard: Observations recorded in accordance with **IRC SP-35 (Guidelines for Inspection and Maintenance of Bridges) and IRC SP-52 (Bridge Condition Survey Manual).**

Procedure:

- Visual examination of deck slab, girders, expansion joints, spouts, parapets, crash barriers.
- Recording of defects like honeycombing, spalling, exposed reinforcement, vegetation growth, clogged drainage, cracks, silting at abutments and pier caps.
- Photographic evidence taken for all critical observations

Exhibit 31 List of Bridge Inspected

S.No	Chainage (km)	Type of Structure	Side	No. of Spans	Total length (m)	Carriage way Width (m)	Deck Width (m)	Superstructure	General Observations

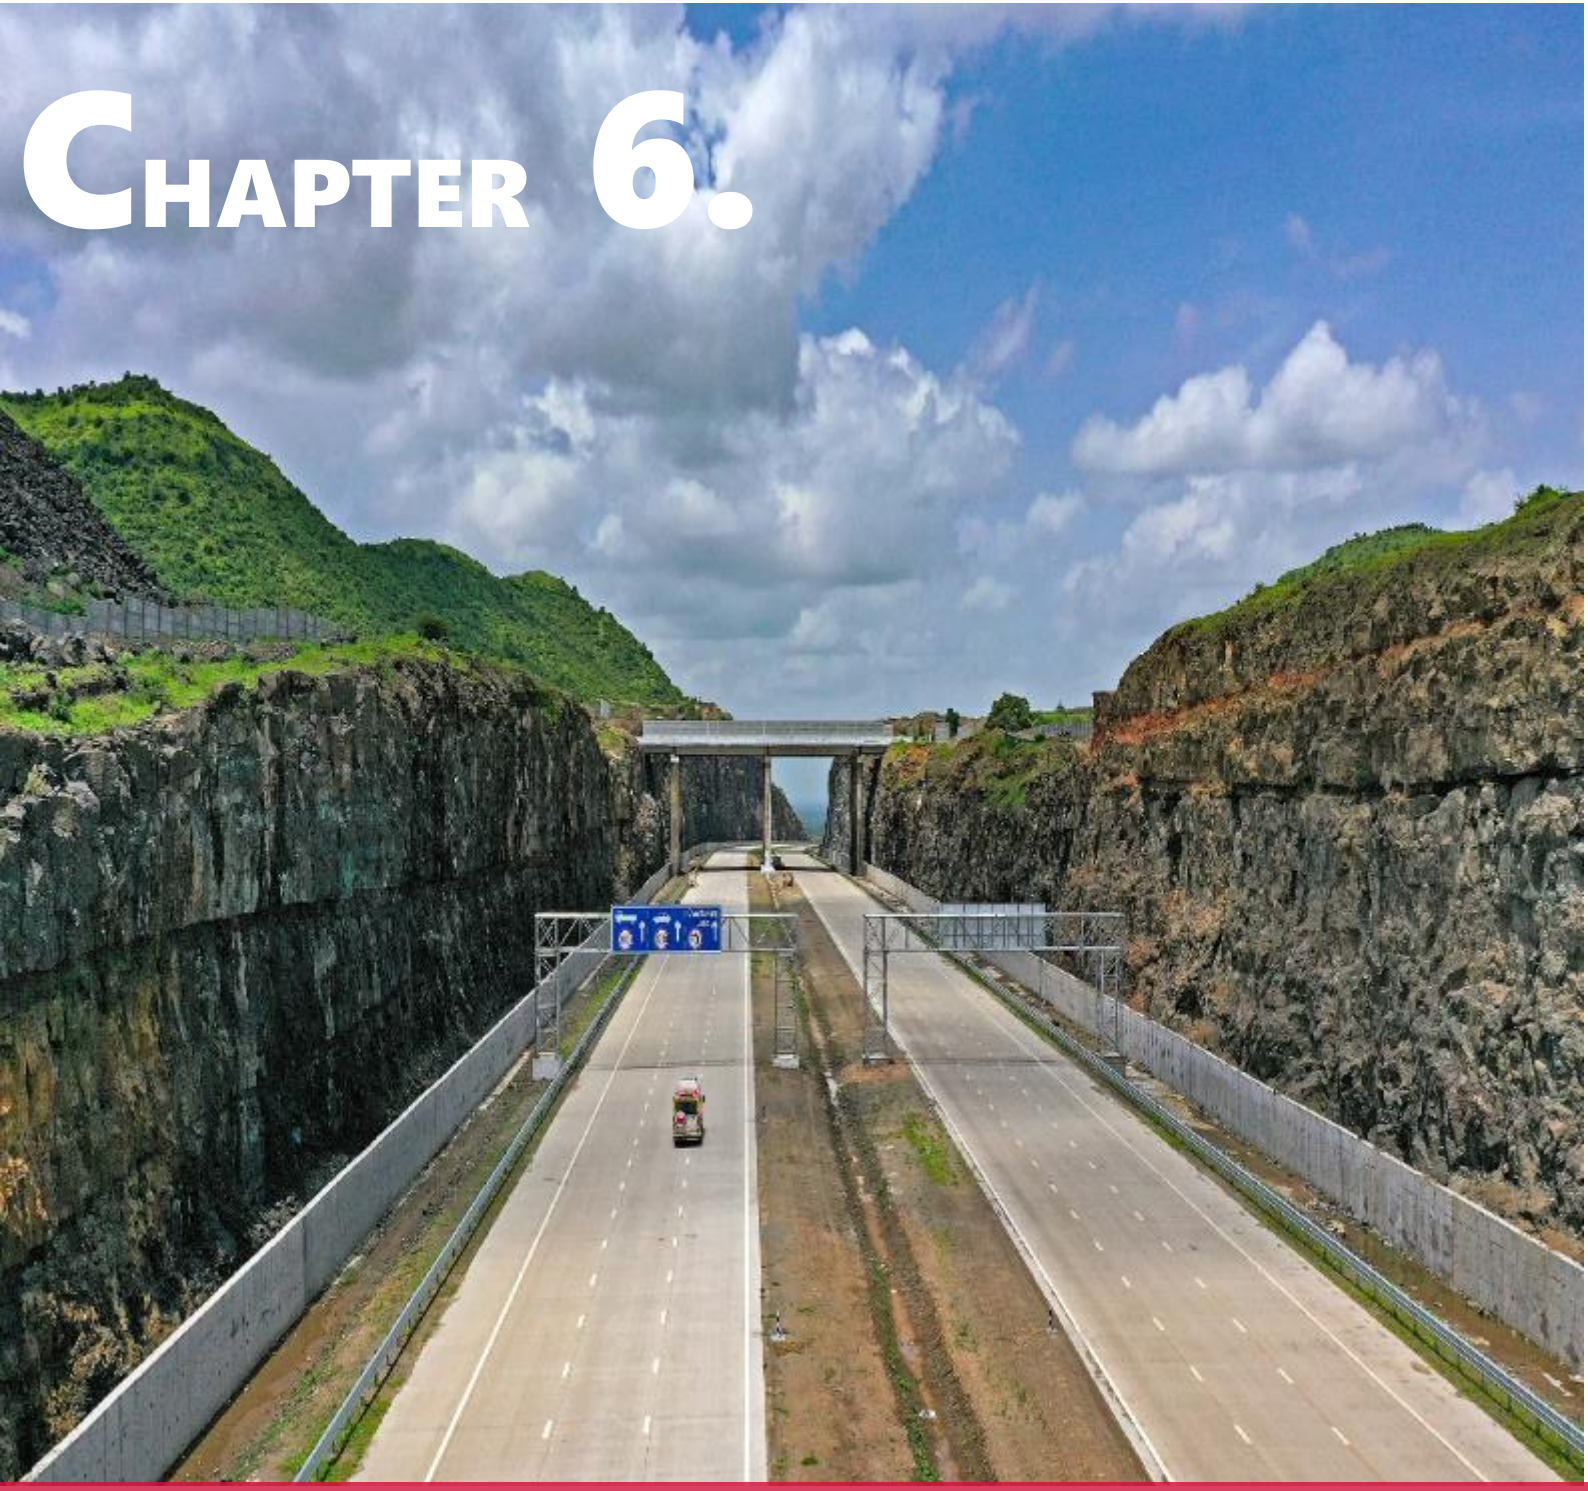
The MBIU survey of November 2023 has provided a comprehensive assessment of the bridge and culvert inventory of the Jammu–Udhampur section. The findings highlight that while the overall load-carrying capacity of structures remains adequate, the functional and durability-related deficiencies are substantial. Timely maintenance interventions are necessary to ensure the safety, serviceability, and long-term performance of the structures throughout the concession period.

5.5 Major Maintenance of Pavement

All pavements require maintenance. Stresses from traffic, weather, and moisture change effects on the Surface. Regardless of the reason, without maintenance, pavement deteriorates at a fast pace. An asphalt pavement is an essential asset which must always be maintained. Allowing the pavement to have minor problems will grow into major ones. No road user likes to hit potholes or step into a puddle of water. Sun, rain, and wind age the pavement. Friction from tires rolling wears away the asphalt glues and line stripping. Sunlight oxidizes and draws all the essential oils which results in the pavement breaking away. Water enters the lower layers of the pavement through cracks damaging the foundation which leads to potholes and failure. The summary of required overlay thickness in LHS direction as per FWD (MCW)

Major Maintenance details discussed at **Chapter 6**

Chapter 6.



Cost Estimate

Chapter 6. COST ESTIMATE

Based on the assessment carried out in above chapters, various costs were worked out by Knight Frank. The costs are divided into following categories

- Routine Maintenance
- Major Maintenance Cost
- Periodic Replacement of TMS/ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and Escalation.

6.1 Assumptions

The cost estimates are based on the following assumptions:

Following assumptions are considered for unit rates of various items while estimating the cost –

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard data book. The input rates for MoRTH standard data book were adopted as below
   a) **Manpower and labor** – As per applicable minimum wages published by Ministry of Labour & Employment, Government of India
   b) **Bitumen** – Bitumen rates are considered to be sourced from IOCL Panipat Refinery. The distance (to- from) from the midpoint of Project Highway is considered as 550 kms. VG-30 and VG-40 grades of bitumen are considered in our cost estimate.

☛ ***Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.***

Therefore, Bitumen prices are considered as per the client's forecast. Current published of bitumen are considered for unit rates calculation for FY26 and FY27. Average 10 years of price of bitumen are considered for unit rates calculation for FY28 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered

Exhibit 32 Bitumen Rates (in INR/MT) - Ex-MI supply excluding discount and GST

Refineries	Grade	Rate for FY24 and FY25	Rate for FY26 onwards
IOC Mathura	VG10	45522	33955
IOC Mathura	VG30	46322	34552
IOC Mathura	VG40	48652	36290
IOC Haldia	VG10	45922	33258
IOC Haldia	VG30	46722	33838
IOC Haldia	VG40	49052	35525
IOC Barauni	VG10	46952	34004
IOC Barauni	VG30	47752	34584
IOC Barauni	VG40	50082	36271
CPC Chennai	VG10	44922	33541
CPC Chennai	VG30	45722	34138
CPC Chennai	VG40	48052	35878
IOCL Panipat	**VG10**	**45,830**	**33,915**
IOCL Panipat	**VG30**	**46,630**	**34,506**
IOCL Panipat	**VG40**	**48,960**	**36,230**

c) **Sand and Aggregate** are sourced from the nearest quarry located on project highway.

d) **Cement** is procured from the nearest local market.

e) **Machinery Hire charges** of Plant and Machinery for various items of works have been considered from J&K SOR 2022 and some rates are considered from MORT&H Standard Data Book 2001-2002. Escalation has been considered on MORT&H Plant and Machinery rates to arrive at the present rates of 2024-25.

f) **Material Rates** are obtained from SOR of J&K, PWD 2021-22.

g) Some of the rates are based on Consultant's experience on similar ongoing projects in adjacent locations.

h) **Overheads and profits** have been considered based on MORT&H Standard Data Book. Applicable taxes have been considered in the Rate Analysis.

i) **Goods and Service Tax (GST)** is considered as 18% as per the latest Government Guidelines.

Exhibit 33: Adopted Unit Rates for Key items

S.nos	Items Description	Unit	Rates (₹)
1	Bituminous Concrete	Cum	11,518
	DBM	Cum	9,942
2	Milling	Cum	100
3	Tack Coat	Sqm	13
4	Road Marking	Sqm	485
5	Earthen Shoulder	Cum	330
6	Kerb Raising	Rm	350
7	Kerb Painting	Sqm	130
8	Road Studs	Nos.	215

- *The above unit rates are excluding GST.
- The unit rate of each item includes 10 % overhead for road works, 15 % overhead for structure works and 10 % contractor's profit.
- Details of components considered in rate analysis & quantification are presented in below **Exhibit 34.**

Exhibit 34: Major components detail for Key items

Sr. No.	Particular	Source	Reference
1	Rate Analysis	MORTH	Standard Data Books published by MORTH
2	**Material**		
A	Aggregate Rates	Nearby Project Corridor	As per Local Market Rates
B	ATMS, TMS cost		As per Vendor offer.
C	Cement	As provided in Local market	As per Local Market Rates
3	Equipment hire cost	Nearby project location	Standard Data Books published by MORTH
4	Labour	As per minimum wages	As per minimum wages

6.2 Routine Operation & Maintenance (O& M) Cost

Operations and Routine Maintenance work required as per the CA. During the concession period, the Concessionaire is fully responsible for Operation & Maintenance of Project Highway. Schedule K elaborates the requirements of various service factor desirable level and acceptable level during O & M period along with time if any parameter level of service beyond acceptable limit.

The CA Stipulates that the Concessionaire shall Operate and Maintain the Project Highway in accordance with Article 17 – Operation & Maintenance & Schedule –K Maintenance Requirements of Concession Agreement. The obligation of Concessionaire as per Article 17 is as follows:

- permitting safe, smooth, and uninterrupted flow of traffic on the Project Highway during normal operating conditions; collecting and appropriating the Fee.
- minimizing disruption to traffic in the event of accidents or other incidents affecting the safety and use of the Project Highway by providing a rapid and effective response and maintaining liaison with the emergency services of the State.
- carrying out periodic preventive maintenance of the Project Highway.
- undertaking routine maintenance including prompt repairs too, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices.
- undertaking major maintenance such as replacement of panels in rigid pavement and associated activities
- preventing, with the assistance of concerned law enforcement agencies, any unauthorized use of the Project Highway
- preventing, with the assistance of the concerned law enforcement agencies, any encroachments on the Project Highway
- protection of the environment and provision of equipment and materials therefore
- operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- maintaining a public relations unit to interface with and attend to suggestions from the Users, government agencies, media, and other agencies; and
- Complying with Safety Requirements in accordance with Article 18.

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operating cost. The estimates are projected based on best industry practices and are compared with the operation cost in the vicinity of the project area. Same has been divided into following major head

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS/HTMS/System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

6.2.1 O & M Strategy

Important Operations and maintenance work have been outsourced by the SPV. Details of important work orders outsourced are listed below **Exhibit 35**

Exhibit 35: Work outsourcing for Operations and Maintenance work.

Sn	Activity	Strategy
1	Routine Maintenance	In-house
2	Preventive Maintenance	In-house
3	Management and Supervision Staff	In-house
4	Security	Outsource
5	Corridor Management	Outsource

6.2.2 Routine Maintenance

Routine and Preventive maintenance encompasses work that is performed in reaction to an event, season, or overall deterioration of the transportation asset. This work requires regularity and reoccurring in nature. Routine and Preventive Maintenance is essential to maintain the condition of the highway asset or to respond to specific conditions or events that restore the highway system to a functional state of operation.

Total Routine Maintenance cost estimated by Knight Frank is ₹ 19.15 Crore for the balance concession period of 06 years. The routine and preventive maintenance covers maintenance of the following assets:

- Cleaning of Main Carriageway, service road, bridge deck
- Pruning of median plantation, watering
- Maintenance of Avenue Plantation
- Cleaning of debris from carriageway and shoulder
- Plantation and Landscaping
- ROW Cleaning
- Cleaning of all road asset, Toll Plaza
- Tunnel, MEP & Slope Protection

The average cost for Routine Maintenance is ₹41,180/ km/ month including GST. Based on our previous projects experience & based on the thumb rule method routine maintenance costs are reasonable.

Exhibit 36: Routine Maintenance Cost

Sr. No.	Item Description	As per Knight Frank	Remarks
1)	Routine Maintenance Cost (₹-Crore) (6 Years Concession Period)	19.15	
2)	Routine Maintenance Cost Per Year (₹-Crore)	3.19	
3)	Routine Maintenance Cost Per Km/Year (₹-Lakh)	4.94	

Above cost is including of GST

6.2.3 Preventive Maintenance

Total Preventive maintenance cost considered is ₹8.40 Crore for balance concession period of 06 years & following items considered for preventive maintenance work:

- Repair cost of pavement as and when pavement distress occurred.
- Repair of road Kerb, crash barrier, metal beam crash barrier and guard rail
- Repair of faded road marking
- Fixing of damaged sign boards, KM stones
- Shoulder maintenance
- Repair and maintenance of structure – bearing, expansion joint.
- Repair of crossroad junction
- Maintenance of Truck lay-bys

Average cost considered for Preventive Maintenance is ₹ 18,068/km/ month including GST. Based on our previous projects' experience & based on thumb rule method, preventive maintenance cost is reasonable.

Exhibit 37: Preventive maintenance Cost

Sr. No.	Item Description	As per KF	Remarks
1	Preventive Maintenance Cost (₹-Crore) (20 Years Concession Period)	8.40	
2	Preventive Maintenance Cost Per Year (₹-Crore)	1.40	
3	Preventive Maintenance Cost Per Km/Year (₹-Lakh)	2.17	

Above cost is including of GST

6.3 Highway Lighting

Electricity charge and maintenance cost of highway lighting is calculated as follows:

a) Each lighting post has counted from site and consider having LED light will be operated for 12 hours a day round the year.

b) Lighting post at median / separator are having with two halogen/LED lamp and service road shall be with single lamp only.

c) Tunnel & MEP OPEX

The O & M Cost estimated towards highway lighting is ₹2.23 Crore per year including GST.

6.4 Corridor Management

The following equipment along with operation manpower is required to provide as per Concession agreement.

a) 3 nos. of Crane

b) 3 nos. of route patrol vehicle

c) 3 nos. of Ambulance

O & M Cost estimated towards incident management with operation manpower is ₹1.12 Crore per year including GST.

6.5 Manpower Cost

The requirement of manpower is worked out to function all activity at project road for compliance of CA requirement, toll collection and security of asset. Requirement of manpower is classified into following broad division:

a) Management, Administration/HR and Supervision Staff: in-house manpower (**Cost considered towards SPV Manpower is ₹1.50 Crore per year)**

b) Toll Operation Manpower: outsource/In-house for providing 24-hour uninterrupted traffic flow at toll plaza and collection of tolls. Due to Nationwide implementation of Hybrid-ETC System, it is expected drop in toll collection manpower. However, where collection of overloading is expected, manpower for toll collection is not possible at this stage. The company is expecting revenue from overloading in this asset therefore curtailment of toll collectors is not expected. (**Cost considered towards SPV 3rd Party Manpower is ₹4.05 crore per year)**

The cost of manpower is estimated as ₹5.56 crore per year.

6.6 Office Expenses

Cost towards operation of office, insurance premium, professional fees for carrying out traffic, asset condition survey etc., IE fees, AMC for equipment installed at office, communication charge,

conveyance cost etc. are considered under Office Expenses. **The cost considered regarding office expenses & operation are ₹5.59 crore per year which is bifurcated as follows.**

- ***₹1.57 crore per year for Independent Engineer (IE)/Authority Engineer (AE) and professional fees covering legal, arbitration, and audit certification during the O&M period***
- ***Actual cost of insurance policy: ₹3.63 crore per year (inclusive of 18% GST)***
- ***Survey and investigation charges: ₹0.09 crore per year (inclusive of 18% GST)***

6.7 Major Maintenance

As mentioned in earlier chapter, Currently, the Project Highway is maintained by existing Annuity Concessionaire.

Based on RI & FWD Test results, SPV team made 02 MM cycles for the overlay of projects. Following items were considered during each MM cycle based on the ground requirements.

A. Flexible Pavement

- Overlay of 30-40 mm BC on MCW based on ground conditions and Test results.
- Overlay of 30 mm BC on service road considered.

B. Rigid Pavement

- Dismantling for existing PQC
- Relaying of dismantled panels
- Grouting with cement mortar
- Replacement and relaying of joints
- Diamond grinding with texturing

C. Replacement of Wearing Coat on structures

It is assumed that the pavement will be overlaid before handing over of the project confirming the pavement parameters kept within the limits as per Detailed strategy at **Exhibit 38.** Hence, the major maintenance cycles are proposed between year 2029 and end of concession period.

6.8 Major Maintenance items

Based on detailed highway inventory carried out during site investigation and data provided by the concessionaire following items considered during major maintenance work

- Bituminous concrete for MCW using VG-40
- Dense Bituminous Macadam for MCW using VG-40
- Bituminous concrete for Service Road using VG-40
- Dense Bituminous Macadam for MCW using VG-40
- Micro surfacing
- Repair of Transverse & Longitudinal joints on MCW & Service Road for Rigid pavement area
- Joint Sealant replacement of rigid area
- PQC taxing for rigid pavement area
- Removal & Relaying of Panels
- Crack Sealing

6.9 Major Maintenance Cycles & Cost

Major maintenance works to be considered in 02 cycles up to the year 2032. A total Cost of ₹69.23 crore (Without Escalation) considered for major maintenance work Upto end of Concession period. Major maintenance Strategy is shown in **Exhibit 38. Detailed Cost Estimate attached as Annexure A.**

Exhibit 38: Major Maintenance Cycles & Cost

Major Maintenance Strategy & Cost Details for Jammu Udhampur Project				
Cycle	**Year**	**Strategy**	**KF Cost (₹-Crore)**	**Remarks**
MM Cycle-01	**(Year 2028-2029)**	**A) Main Carriageway:** 01. 40 mm BC on LHS: 100% Length & 30mm BC on 20% length RHS 02. DBM Rectification: 5% Area 50 mm 03. Milling 04. Tack Coat: 100% LHS and 20% RHS 05. Road Marking: (100% LHS and 20% RHS) 06. Kerb Raising: 50% length 07. Kerb Painting: 100% Length 08. Road Studs: 100% **B) Service Road:** 01. 30 mm BC on 100% length 02. Road Marking 100% length	**39.18**

Road Studs: 50% ***B) Service Road:*** 01. 30 mm BC on 50% length 02. Tack Coat 50% Length	**30.05**	
Total MMR Cost (₹-Crore)			**69.23**	

*** Above cost is without escalation & inclusive of GST**

6.10 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period as below.

Exhibit 39: Summary O & M Cost for Remaining Concession Period

Summary of O & M Cost (₹-Crore)									
S.nos	**Type/Year of Expenses**	**2025***	**2026**	**2027**	**2028**	**2029**	**2030**	**2031****	**Total Cost**
1	**Routine O & M Cost**								
1.01	Preventive Maintenance	0.96	1.31	1.53	1.41	1.45	1.44	0.30	**8.40**

Chapter 1.

Introduction

Chapter 1. INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt Ltd (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an infrastructure investment trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt Ltd has appointed M/s Knight Frank India (KFI) (hereinafter referred as "Technical Consultant" or "KFI") to carry out Technical Due Diligence of **Rehabilitation, Strengthening, and Four-Laning of the Quazigund to Banihal section (from km 189.350 to km 205.618), including construction of two 2-lane tunnels spanning a total of 8.45 km,** was conceptualized in the Union Territory of Jammu & Kashmir. This project was structured on a DBFOT (Annuity) model.

1.2 Scope of Work

Exhibit 1 Scope of TDD Services

S. No	Terms of Reference
1.	A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
2.	Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, as built drawings, O&M manual, COD/PCOD certificate, Punch list, previous major maintenance etc.
3.	Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle Load, material investigations etc.
4.	Formulation of future major maintenance Strategy.
5.	Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
6.	Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period

S. No	Terms of Reference
7.	Estimation of Annual Operation expenses along with Systems cost (TMS/HTMS) till the end of concession period.
8.	Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Approach

Approach followed for this Due Diligence study is to understand the requirement of the client and terms of reference set forth. Our aim is that the study report should assist the clients in achieving their objectives.

1.4 Methodology

Methodology adopted is broadly outlined as under:

- Objectives of the client were identified from discussions and terms of reference spelt out for the study.
- Available data was collated and analysed by desk study.
- Requirements were identified to augment information/ data as available.
- Detailed List of data required was sent to Mapple team from time to time
- Personal discussions were carried out with Clients by senior executives from KF to explain data requirements.
- Extensive interaction was made by KF with Clients and data was collected.
- Information to be gathered from Client head office & team were listed
- Relevant documents regarding project highway, including CA Agreement and other documents were collected and the provisions studied in detail.
- All data as collected was duly collated and arranged in the order as required for preparation of the report.

1.5 Study

- Data collected from all sources was duly collated and disseminated to concerned experts in KF.
- Project documents such as CA Agreement, O&M Costing details, O&M Manual etc were studied in detail.
- The data made available was analysed, and comments formulated for inclusion in the report.

1.6 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

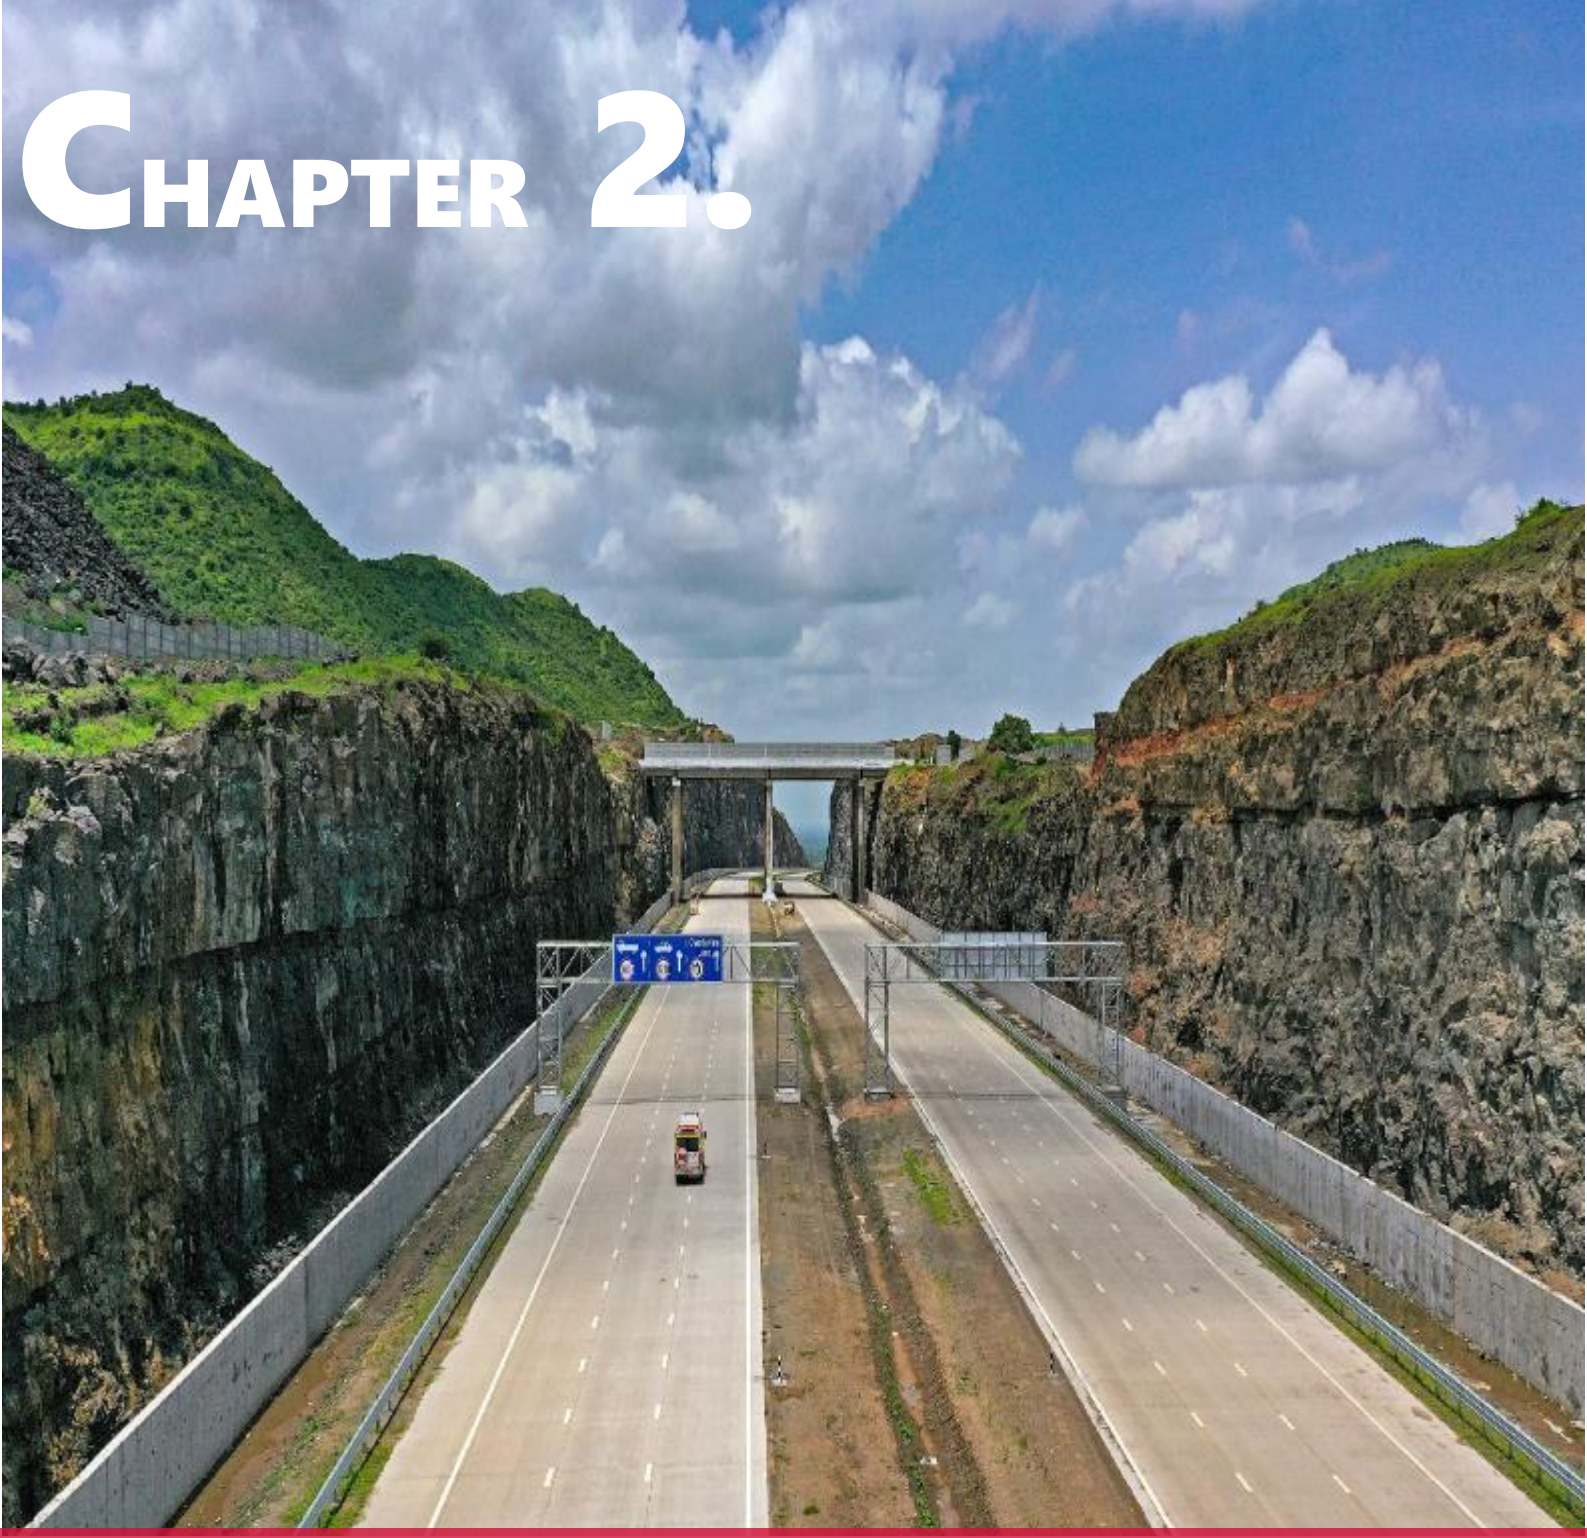
The site visit and inspection were carried out between the periods from 08th October 2025 to 10th October 2025.

The report is organized with the following chapters for easy understanding of various issues –

Exhibit 2 Structure of the Report

S.nos	Chapter	Description
1	**Chapter 1**	**Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**
2	**Chapter 2**	**Project Description:** The chapter describes existing project features, overview of project development.
3	**Chapter 3**	**Review of Agreements:** The chapter describes review of CA, Supplementary, State Support Agreement, Settlement Agreement & Various O & M Agreements.
4	**Chapter 4**	**Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**
5	**Chapter 5**	**Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance
6	**Chapter 6**	**Cost Estimates**: This chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period

Chapter 2.



Project Description

Chapter 2. PROJECT DESCRIPTION

2.1 Location of Project Road

This asset is a DBFOT (Annuity) project that involves the operation and maintenance of a four-lane stretch from Quazigund to Banihal, covering km 189.350 to km 205.618 of NH-44, including two tunnels (2-lane each) with a combined length of 8.45 km on NH-1A, situated in the Union Territory of Jammu & Kashmir. The Banihal–Quazigund Road Tunnel, spanning approximately 8.45 km, is positioned at an elevation of 1,790 meters (5,870 feet) beneath the Banihal Pass in the Pir Panjal range of the lower Himalayas. This vital infrastructure connects Anantnag and Ramban districts, significantly improving regional connectivity by reducing the distance between Srinagar and Jammu by 16 km and cutting travel time from 6 hours to approximately 5.5 hours.

As one of the longest road tunnels in India, it serves as a key all-weather route, bypassing the previously troublesome Jawahar Tunnel and Shaitan Nalla—areas often rendered impassable during winter due to snowfall and landslides. Its lower elevation compared to the Jawahar Tunnel (by 400 meters) makes it less susceptible to avalanches, ensuring year-round connectivity between Kashmir and the rest of India.

The tunnel is equipped with advanced features including forced ventilation for air circulation, 126 jet fans to prevent harmful gas buildup, cross passages every 500 meters for emergency evacuation, and state-of-the-art safety and monitoring systems. These include 234 CCTV cameras and a comprehensive fire-fighting system installed throughout the twin tubes. Constructed using the Austrian tunnelling method, the tunnel exemplifies modern engineering and plays a vital role in enhancing transportation efficiency and strategic connectivity in the region.

Following a competitive bidding process, the contract was awarded to a consortium comprising **M/s Navayuga Engineering Company Limited and M/s Krishnapatnam Port Company Limited,** with Navayuga Engineering serving as the lead member. In order to implement the project, the consortium incorporated a Special Purpose Vehicle (SPV) named M/s Navayuga Quazigund Expressway Private Limited. The Concession Agreement was signed on 13th July 2010.

The project road achieved Provisional Completion (PCOD) on 31st July 2021, followed by the receipt of the Completion Certificate on 15th December 2022. Currently, the project is in the Operations and Maintenance (O&M) phase

The project was subsequently acquired by the National Investment and Infrastructure Fund (NIIF) through its NIIF Master Fund in 12th July 2022.

The project has since been managed by Athaang Infrastructure, NIIF's proprietary roads platform, and the company was renamed ***M/s* Quazigund Expressway Private Limited**. The **current proposed acquisition** of the project is by ***M/s Cube Highways and Infrastructure V Pte. Ltd.***

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and flied investigations. Same is presented in this report.

Exhibit 3 Project Location Map

2.2 Terrain

The valleys flanking the Pir Panjal range lie at an elevation of around 1800 meters, while the highest peak directly above the planned tunnel alignment rises to approximately 3000 meters above sea level. Near the northern portal, quaternary soft rocks such as clayey silt are anticipated at shallow depths, only a few tens of meters deep. However, the majority of the tunnel will be excavated through a diverse array of hard rocks with varying lithological characteristics.

During geological field investigations, various rock types and structural features were identified. The sequence of lithologies observed follows a south-to-north trend, moving from older to younger formations.

Quartzite

Quartzite encountered in the region is fine to medium-grained, typically grey to white in color, and appears in thick beds, occasionally interbedded with shale. The rock is siliceous and extremely hard, with bedding planes often lacking joints. Quartzite is predominantly found in the southern section near the south portal, although interbedded quartzite layers also appear within the shale-dominated Mesozoic sedimentary sequence in the northern section. Near the south portal, quartzite exhibits several transitional features, including layers and gradations into conglomerates, indicating complex depositional processes within the massive quartzite formation.

2.3 Climate

The Quazigund–Banihal project corridor, located in the Pir Panjal range of the lower Himalayas in Jammu & Kashmir, experiences a cold mountain climate with significant seasonal variations. Winters, from December to March, are long and harsh, with temperatures often dropping below freezing — average lows near –5°C and highs around 3–5°C — accompanied by heavy snowfall. Summers, from May to August, are mild and pleasant, with daytime temperatures ranging between 15°C and 25°C. The region receives moderate to heavy precipitation throughout the year, averaging between 900 mm and 1,200 mm annually, primarily from western disturbances in winter and monsoon rains from June to September. Humidity levels remain moderate to high, typically between 60% and 80%. Due to its elevation of about 1,790 m above sea level, the area often experiences fog, frost, and occasional strong valley winds. Despite these challenging conditions, the Banihal–Quazigund tunnel ensures reliable, all-weather connectivity by mitigating the impacts of snow and landslides that commonly affect higher-altitude routes

2.4 Development as per Schedule B

As per **Schedule–B (Development of the Project Highway)** of the Concession Agreement for the **Quazigund–Banihal Section of NH-44 (Km 189.350 to Km 204.700)**, the Concessionaire is required to undertake the **design, engineering, construction, and development** of the following works:

The project involves **four-laning** of the existing two-lane highway, including the construction of **two parallel tunnels**—one of **0.69 km** and another of **8.45 km** length—along with approaches and associated infrastructure. The scope of development includes:

- **Main Carriageway:** Four-lane divided highway with appropriate pavement composition and geometric standards.
- **Tunnels:** Two 2-lane tunnels with modern ventilation, lighting, fire-fighting, drainage, and safety systems.
- **Bridges and Structures:** Construction and rehabilitation of bridges, culverts, retaining and breast walls as per design requirements.
- **Drainage Works:** Longitudinal and cross-drainage systems for efficient stormwater discharge.
- **Slope Protection:** Embankment stabilization, retaining structures, and erosion control measures.

- **Roadside and Safety Works:** Provision of crash barriers, traffic signage, road markings, boundary stones, kilometer and hectometer stones, and delineators.
- **Ancillary Facilities:** Construction of toll plazas at Km 193.760 and Km 203.880, bus bays, truck lay-bys, rest areas, pedestrian facilities, and landscaping.
- **Mechanical & Electrical Systems:** High-mast and tunnel lighting, communication systems, traffic management and surveillance systems, and emergency call boxes.
- **Environmental Works:** Tree plantation, slope greening, and environmental protection structures as per the Environmental Management Plan.

All works are to be executed in conformity with the **Manual of Specifications and Standards for Four-Laning of Highways (IRC:SP-84-2009)** and the **technical specifications provided in Schedule-D**.

2.4.1 Roadway and Geometric

Exhibit 4 Roadway and Geometric

Component	Chainage (km)	Description	Specifications
Four-Lane Main Highway	189.350–193.792 & 203.865–204.700	New 4-lane carriageway connecting Banihal to Quazigund	2 × 7.5 m lanes + 2 × 1.5 m paved shoulders + 4.0 m median
Twin Tube Tunnel		**Twin Tube Tunnel**	• **Tube 1 – 8457.70 meter Tube 2 – 8463.38 meter**
Viaduct	194.236 to 195.660		• ***Viaduct of length 1526m approved by NHAI HO***
Intervening 2-lane Rigid Pavement Road	194.488–195.425	Rigid pavement between tunnels	Width: 2 × 3.75 m + 2 × 1.5 m paved shoulders

The total project length is **15.35 km**, consisting of **two tunnels (9.146 km total length)** and **6.204 km of approach and open road sections.**

2.5 Administrative details of the Project

The Concession stands granted to operate the road from the Appointed date for the concession period with the obligation on concessionaire to maintain the road in the same period. Administrative details of projects are as at Exhibit 2 below.

Exhibit 5 Administrative Details of Project

Feature	Description
Project Name	Augment the Rehabilitation, Strengthening and Four Lanning of Quazigund to Banihal Section from km 189.350 to km 205.618 of NH1A, Including 2-Tunnels (2-Lane) of 8.45 km Length on NH-1A, on DBFOT(Annuity) basis, in the UT of Jammu & Kashmir.
Mode of the Execution (BOT Toll/ BOT Annuity	BOT Annuity
Scheme / Phase	Operation, Maintenance and Transfer
No. of Lanes/ Configuration	4 (Twin tunnel 2 lane)
Length of the Project (in Km)	As per CA: 15.35 Kms Actual Construction: 16.268 Kms
Total Project Cost (in Cr)	₹1987 Crore
Annuity Bi-annually	34 installments of INR 245 Crores each, every 6 months
NH No. (New / Old)	NH 44 / NH 1A
Concessionaire	**M/s Quazigund Expressway Private Limited.**
EPC Contractor	NAVAYUGA QUAZIGUND EXPRESSWAY PRIVATE LIMITED
Independent Engineer (O&M phase)	M/S ISAN Corporation in JV with M/S Chaitanya Projects Consultancy Pvt. Ltd.
Date of Award of Work (LOA)	13.07.2010
Date of Signing of Concession Agreement	13-Jul-10
Appointed Date	05-Jun-11
Concession Period	20 years (including 5 Years construction period from appointed date)
Construction period	1825 Days

Feature	Description
PCOD Date	31.07.2021
Final Completion Date	15.12.2022
End Date of Concession period	Year 2031
No. of Toll Plazas (Number and Location)	Two (One on Banihal side and one on Quazigund side) ○ Lamber Toll Plaza @ Ch: 193+760 (7 Lanes) ○ Ujroo Toll Plaza m 204+563 (7 Lanes)

2.6 Salient Features of Project

Salient features of the project are covered at **Exhibit 6** below.

Exhibit 6 Salient Features of Project

Sl. No.	Particulars	As per Schedule-B	As Built
1	Project Road Start	Km 189+350 at Banihal	Km 189+350 at Banihal
2	Project Road End	Km 204+700 at Quazigund	Km 205+618 at Quazigund
3	Project Length	15.35 km	16.268 km
4	Rigid Pavement	17+1 Kms	
Tunnel			

1	Tunnel	• **Short Tunnel** –
		  ○ Length 696 m
		  ○ From Km 193.792 to Km 194.488
		• **Long Tunnel** –
		  ○ Length 8.45 Km Single Tube Tunnel
		  ○ From Km 195.425 to Km 203.865
			• **Twin Tube Tunnel**
			• **Tube 1 – 8457.70 meter**
			• **Tube 2 – 8463.38 meter**

2	Length (Excavation) (Portal to Portal)	• **1st Tube: 8442.51m** • **2nd Tube: 8457.45 m,**	*Both tunnels relate to Vehicular cross passages at an interval of 500m*
3	Tunnel Details	• **Clearance above pavement: 5.0 meters** • **Tunnel type: Uni-directional twin tube** • **Clear width: 7.0 meters** • **Driving lane width: 3.750 meters** • **Emergency lane width: 3.250 meters** • **Tunnel height from pavement level: 8.58 meters**	

Sl. No.	Particulars	As per Schedule-B	As Built
		• **Intermediate slab height: 5.55 meters** • **Slab thickness: 200 mm**	
Twin tube solution approved by NHAI vide letter no. NHAI/BOT/11019/5/2010/QB/38 dated 26.05.2011			
5	Cross Passage	16 nos.	
6	Functional Cross Section	○ 7.0m single lane carriage way with an emergency lane, ○ Driving Lane 3.75m wide and emergency lane 3.25m wide, Vertical clearance 5.50m	
6	Firefighting and Scudder system	SCADA System, Fire Fighting system	
Structures			
1	Viaduct	1 no. Length: 1424 m	Viaduct at km 194.236 to 195.660
Viaduct of length 1526m approved by NHAI HO & conveyed vide PD's letter no. PD/SGR/14001/2014/Gen/049 dated 30.10.2014, in lieu of short tunnel T-1 (696 m length & viaduct of length 270 m)			
2	RUB (Road Under Bridge)	1 no. Length: 79.95 m	RUB on Katra-Quazigund New B.G. Railway line at Ch. 191.107 (Railway Chainage Ch. 151.710).
3	Minor Bridges	6 Nos South End- (Span-110.85 M, 22.854M, 9.940M,25M,10.82M,9.22M.)	
4	Major Bridges -	1 no. Length: 110.95 m	Four Lane Bridge across River Bichlari at Ch.189.440
5	Minor Bridges	05 nos.	
6	Culvert	20 nos. (Box Culvert)	
Misc.			
1	Toll Plaza	2 Nos. (for north side and south side traffic	Ch: 193+760 and Km 204+563 having 7 lanes

Sl. No.	Particulars	As per Schedule-B	As Built
2	Drainage pipe in tunnel Tube I	8.450 km (4 nos.)	
3	Drainage pipe in tunnel Tube II	8.450 Km (4nos.)	
4	Drainage pipe in Cross passages	32 Nos. (On both the ends)	
5	Slope Protection works at South Portal	100 mts	
6	Slope Protection works at North Portal	150 mts	
7	Lay bays	2 Nos.	
8	Firefighting Niches	66 Nos.	
9	Vehicular emergency exit	11 Nos.	
10	Ventilation Building	02 Nos.	
11	Tunnel Control Centre (Building)	02 Nos.	
12	Toll Plaza Building	02 Nos	

Exhibit 7 Tunnel Layout

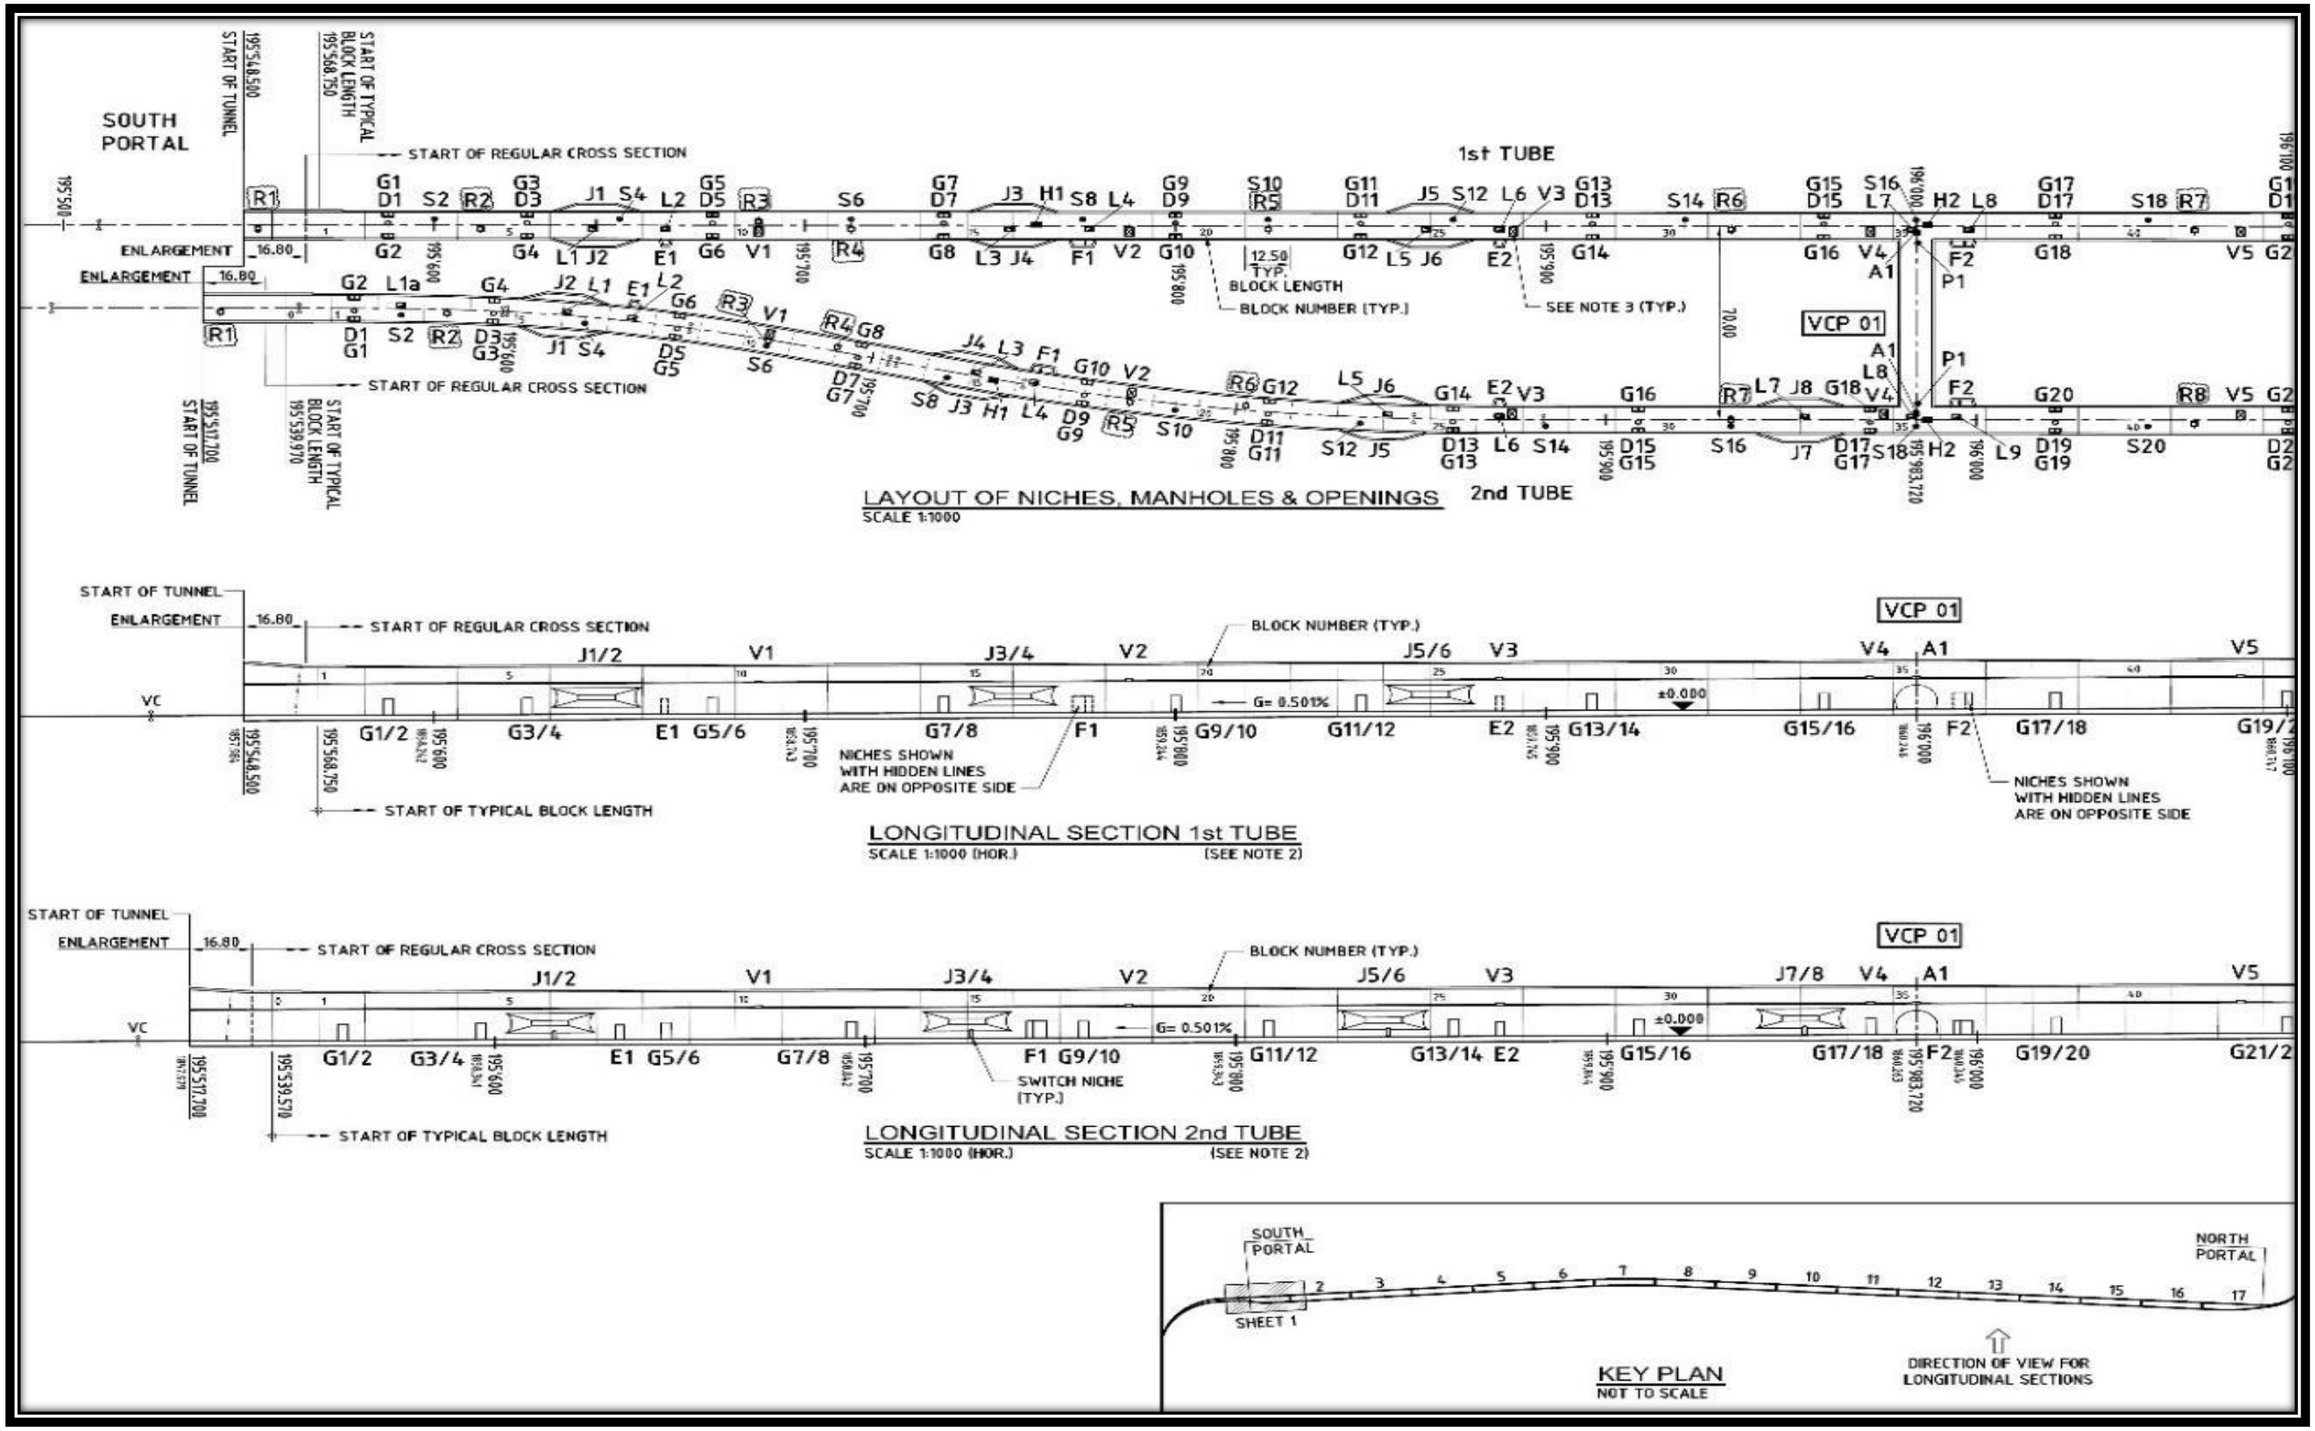


Exhibit 8 Vehicular Cross Passage Details

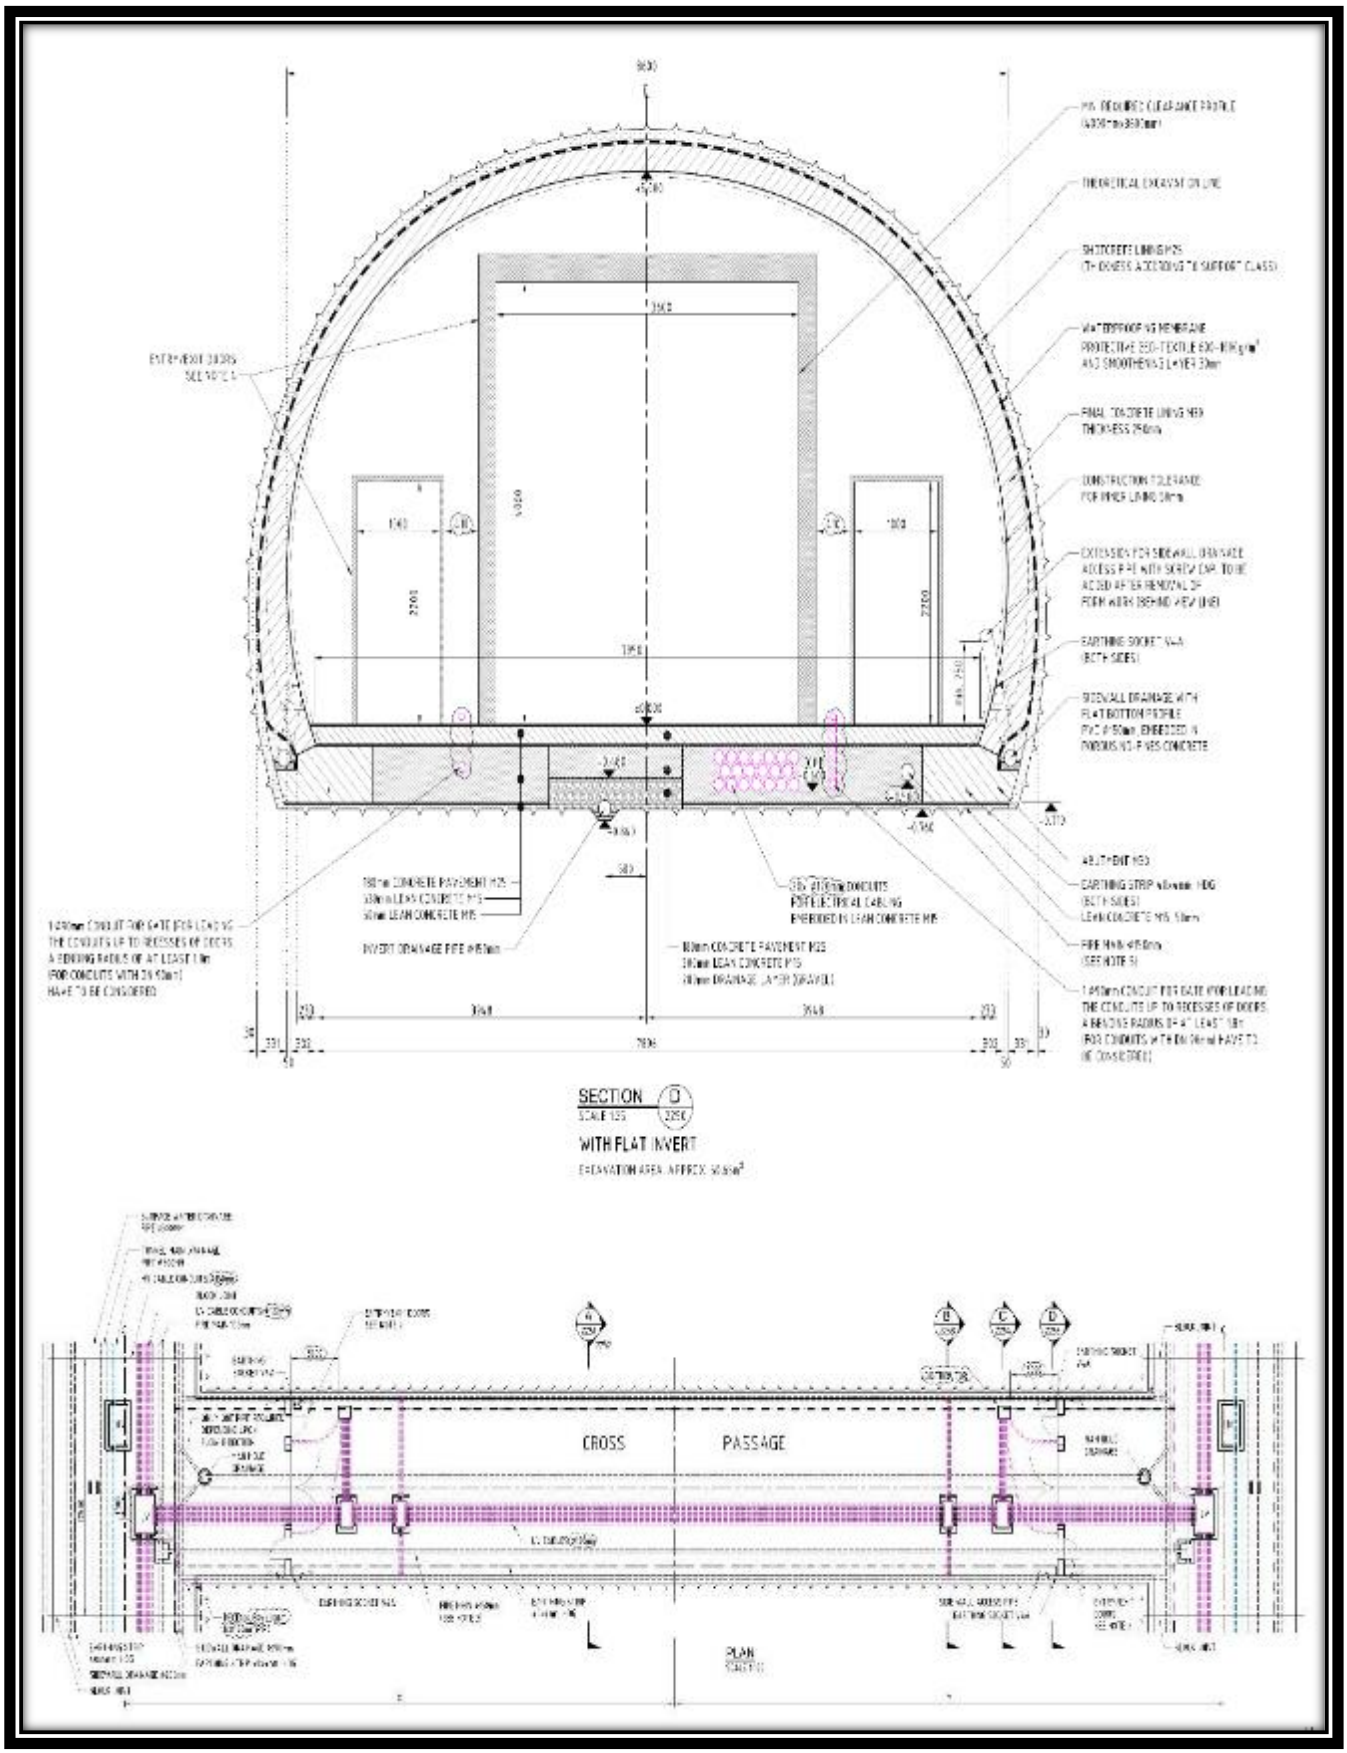

Exhibit 9 Electrical Cross Passage Details

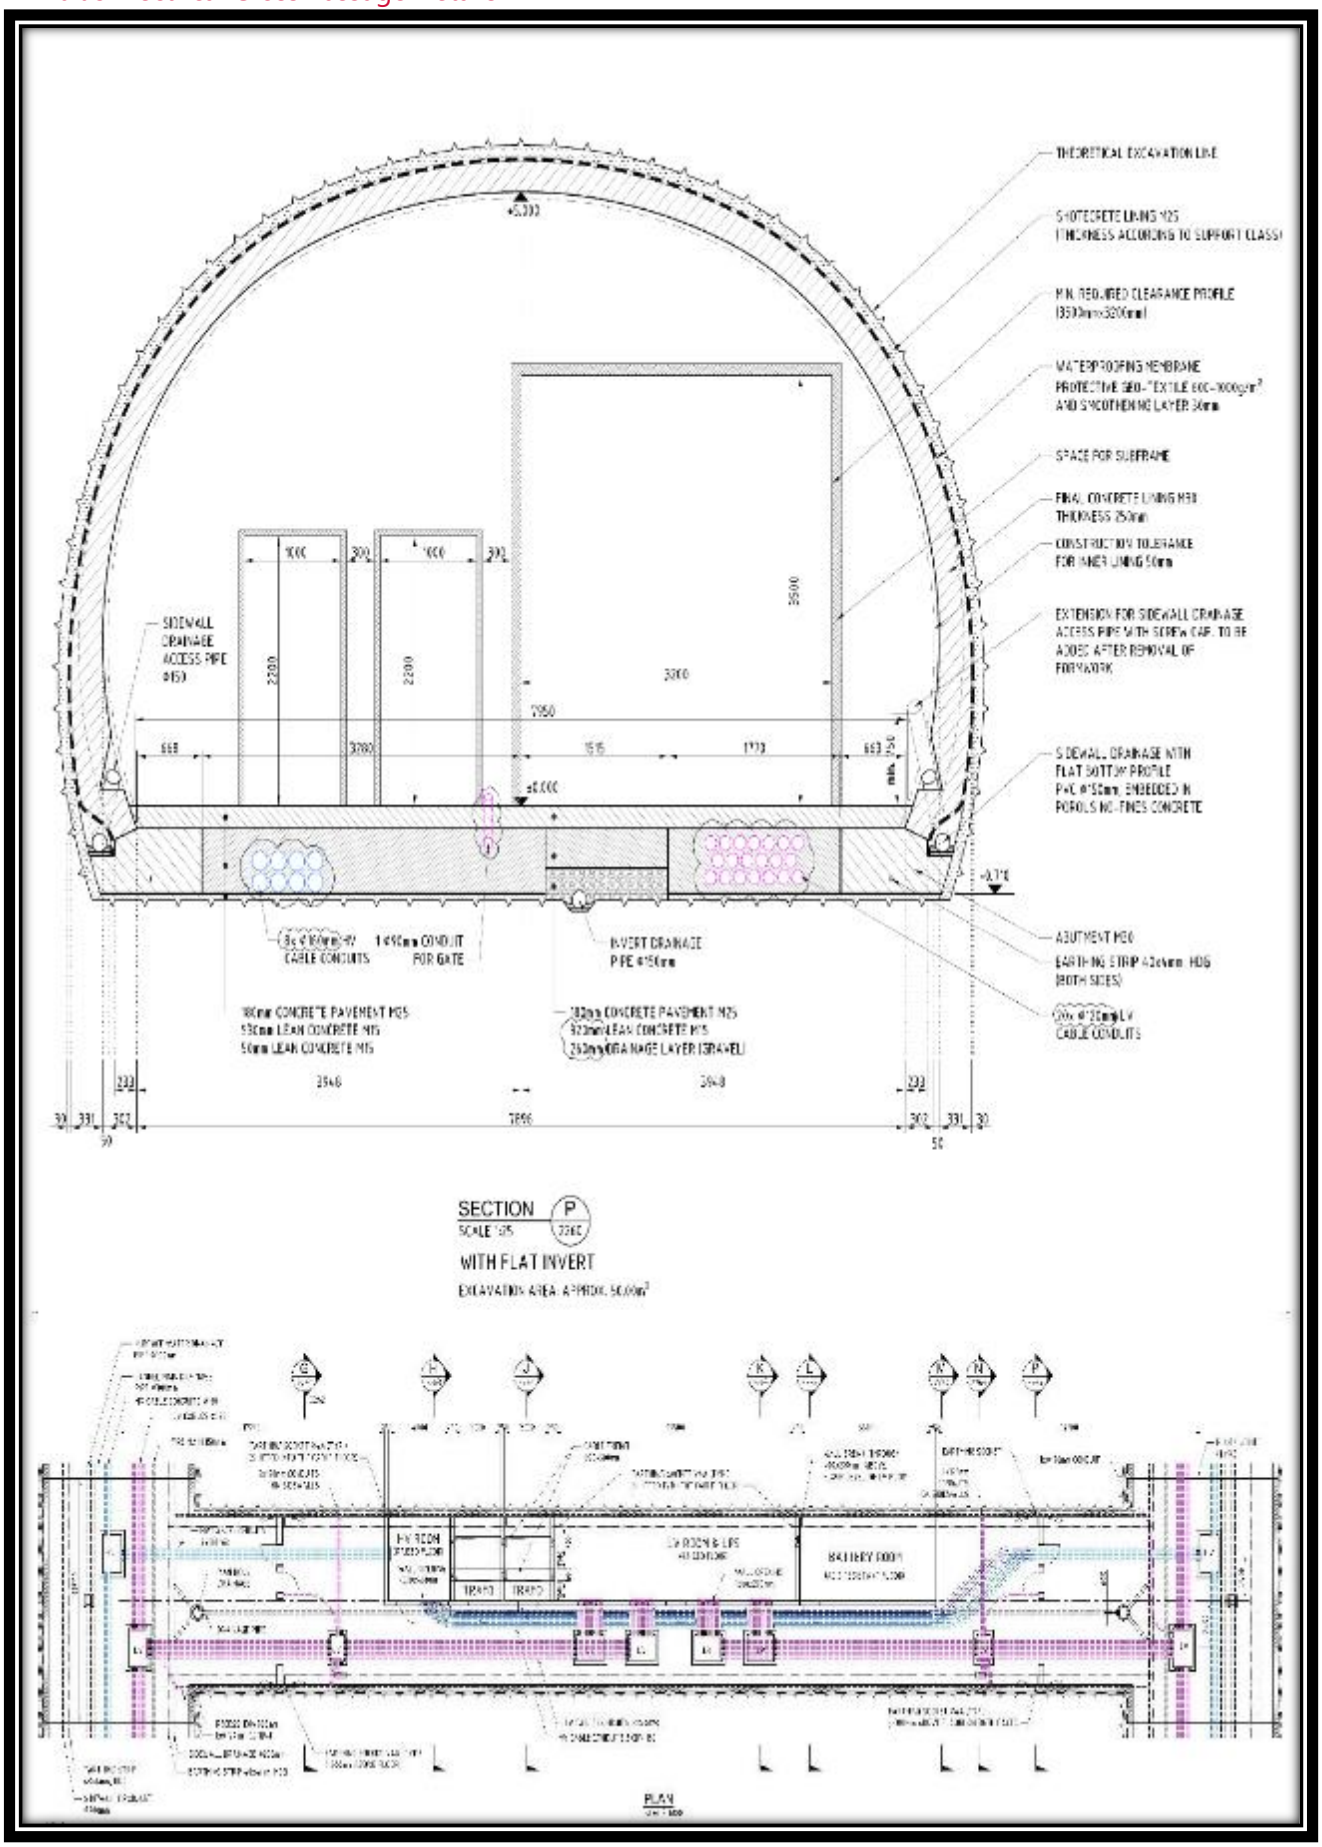


2.7 Project Completion Certificate and PCOD & FCOD

A. Partial Commercial Operation Date (PCOD):

- The scheduled completion date was 31.072021.

B. Final Commercial Operation Date (COD):

- The IE issued the Completion Certificate on 15.12.2022.

2.8 Annuity Details

As per the Concession Agreement, an annuity amount of ₹201.90 crore is payable every six months. To date, a total of 22 annuity payments have been made by the Authority. The detailed breakdown of these annuity payments is provided below

Exhibit 10 Details of Annuity Payments

Sr. No.	Annuity	Annuity Due On	Amount Claimed	Ded. by IE	Annuity Received	Remarks
1	1st Annuity	30-07-2022	245	0	245	
2	2nd Annuity	30-01-2023	245	0.34	244.66	Deduction for Descope items
3	3rd Annuity	31-07-2023	245	0	245	
4	4th Annuity	30-01-2024	245	0.38	244.62	Deduction for Maintenance works
5	5th Annuity	30-07-2024	245	0	245	
6	6th Annuity	30-01-2025	245	0	245	
Total Amount (₹-Crore)			**1470**	**0.72**	**1469.28**	
Deduction (%)				**0.05%**		

Based on the above, Knight Frank is of the view that the total deductions of just ₹0.72 crore across six annuity payments—including ₹0.35 crore for descoped items—indicate the concessionaire's consistently high standard of maintenance over the three-year project period

2.9 Extension of Time

There is no extension of time for the concession period on the project

2.10 Penalty

There is no penalty on project as of now.

2.11 Approvals & Permits

Since Project is in O & M stage therefore all necessary approvals required are in place with concessionaire.

2.12 Change of Scope

As informed, the Concessionaire submitted a cost estimate for street lighting along the viaduct and highway section between Km 193+600 and Km 195+366 via letter no. NQEPL/1239/JK/21-22/300 dated 06.09.2021 to the then Independent Engineer under the Change of Scope (CoS). The Independent Engineer provided comments on the proposal to the Authority through letter no. CPC/OM-03/2021/HO/GEN/015/4642 dated 12.01.2022. Subsequently, the Contractor referred the matter back to the Independent Engineer through letter no. NQEPL/1239/JK/21-22/402 dated 24.01.2022. Following further review, the Change of Scope proposal was recommended to the Authority via the Independent Engineer's letter no. CPC/OM-03/NQE/2021/HO/CON/049/5960 dated 04.05.2022.

2.13 Power Availability of Project

Exhibit 11 Power Details of Project

Location	DPR Status	33KV Line	33/11 KV Substation	Remarks
Status 33/11kv sub-station (permanent)				
North Portal	Approved	23 Kms from Wanpoh Anantnag Grid, work under progress	12.5MVA capacity (OLTC AVR, with +45% to -3% voltage correction)	Substation work completed
South Portal	Approved	3 Kms from nearest Grid (line installed). To be extended by 1 Km to SPVB permanent station later	Proposed 12.5MVA OLTC AVR, with +45% to -3% voltage correction	Concessionaire should approach NHAI for further course of action
Present Power availability.				
North Portal	Local receiving station at Hiller (Augmented to 10MVA). Independent power transformer for tunnel uses with automatic voltage correction up to 15%.	At 11KV level (dedicated line), 2 KM line length, Dog (100mm^2) conductor installed and commissioned.	From Local Area 33/11KV Sub-Station	In use for tunnel equipment operation till permanent 12.5MVA station is in place.
South Portal	3.15MVA (Augmented to 10MVA) with 15% voltage correction.	At 33KV level (dedicated line), 11KV line with 2X50 sqmm conductor used for overhead line from 33/11KV Sub-station to SPVB	From Tethar 80MVA, 33/11KV Substation	In use for tunnel equipment operation till permanent 12.5MVA station is in place.

☛ **Currently, both North and South Portals are operating on temporary power arrangements using augmented substations (10MVA) with voltage correction. While the permanent 12.5MVA substations are either completed or proposed, they are not yet commissioned for operational output. Timely commissioning and coordination with NHAI are essential to ensure uninterrupted long-term power supply for tunnel operations.**

2.14 Special Features of Project

Each tunnel tube ensures uninterrupted traffic flow, featuring a 3.75-meter-wide main carriageway and a 3.25-meter-wide emergency lane, which is designated for use during vehicle breakdowns and rescue operations.

An Integrated Tunnel Control System (ITCS) has been implemented to oversee and manage various tunnel facilities and utilities. The ITCS includes:

1. Monitoring and control of traffic management systems inside and outside the tunnel.
2. Monitoring and control of the tunnel's ventilation systems.
3. Monitoring and control of the power supply systems within and outside the tunnel.
4. Monitoring of the emergency call system within the tunnel.
5. Monitoring of the Linear Heat Sensing System inside the tunnel and the fire alarm system in external buildings.
6. Monitoring and control of video surveillance systems both inside and outside the tunnel.

2.15 Tunnel Safety and Operations Systems Overview

- ***Traffic Control System***

The Traffic Control System includes traffic lights, message signs, and road signs positioned at the north and south roundabouts, tunnel portals, and inside the tunnel. These components regulate traffic under normal, congested, and emergency conditions. All traffic devices are monitored and operated using Programmable Logic Controllers (PLCs) through the Integrated Tunnel Management System (ITMS), with both automatic and manual operation modes available.

- **CCTV Monitoring & Video Surveillance**

The CCTV system monitors vehicle movement and road conditions inside and around the tunnel. It supports live viewing, recording, and playback functionalities.

  - Fixed cameras installed inside the tunnel enable incident detection.
  - Rotating cameras are positioned 50 meters before each portal.
  - A traffic counting system is integrated with the video feed.
  - Automatic Incident Detection is included.
  - All devices are connected via CAT6 on a TCP/IP network, managed through a Video Management System (VMS).
  - The system provides server redundancy and 24-hour recording capacity.

- **Linear Heat Sensing (LHS) and Fire Alarm System**

- LHS systems with optical sensors are installed in both portals, control rooms, and ECP LV rooms.
- Evaluation units trigger zone alarms, interfaced with the ITCS SCADA system via Modbus.
- Addressable fire alarm panels are located in the north and south control rooms and admin buildings.
- Conventional smoke detectors are installed in ECP LV rooms at ~1.5 km intervals and connected via RIOs using hardwired NO/NC contacts.

- **Emergency Communication System (ECS) & Public Address (PA) System**
  - SOS call boxes are installed every 250 meters along the emergency lanes within the tunnel.
  - The system allows verbal communication between tunnel users and operators. All calls are recorded and stored for 30 days.
  - PA speakers with noise-sensing microphones are located in ECP LV rooms and buildings to broadcast emergency or general messages.

- **Networking Infrastructure**

The tunnel network is structured in three rings:

- **Major Ring**: Four core switches (two each at Main Control Centre and Backup Control Centre), configured with redundancy protocols.
- **Sub Rings**: Two rings connecting MCC and BCC via ten distribution (aggregation) switches to ensure continuity even if a cross-passage is down.
- **Access Rings**: Eight rings (four per tunnel side) connecting SOS points via access switches (E1–E34), ensuring localized failure does not disrupt the entire network.

- **Telephone System**

The telephone network facilitates emergency communication between Tunnel Control Centre (TCC), Backup Control Centre (BCC), and tunnel staff at ECP LV rooms. It remains operational during fire events and supports emergency coordination.

- **Rigid Height Barriers**

Rigid height restriction barriers are installed at:

- South Portal railway junction
- Junction near the North Portal

These prevent entry of oversized vehicles into the tunnel.

- **Ventilation System**

A combination of semi-transversal and longitudinal ventilation systems is installed to ensure safety and air quality. Key functions include:

- Smoke control and safe evacuation during fire events
- Maintaining visibility and clear escape routes
- Effective smoke extraction during firefighting

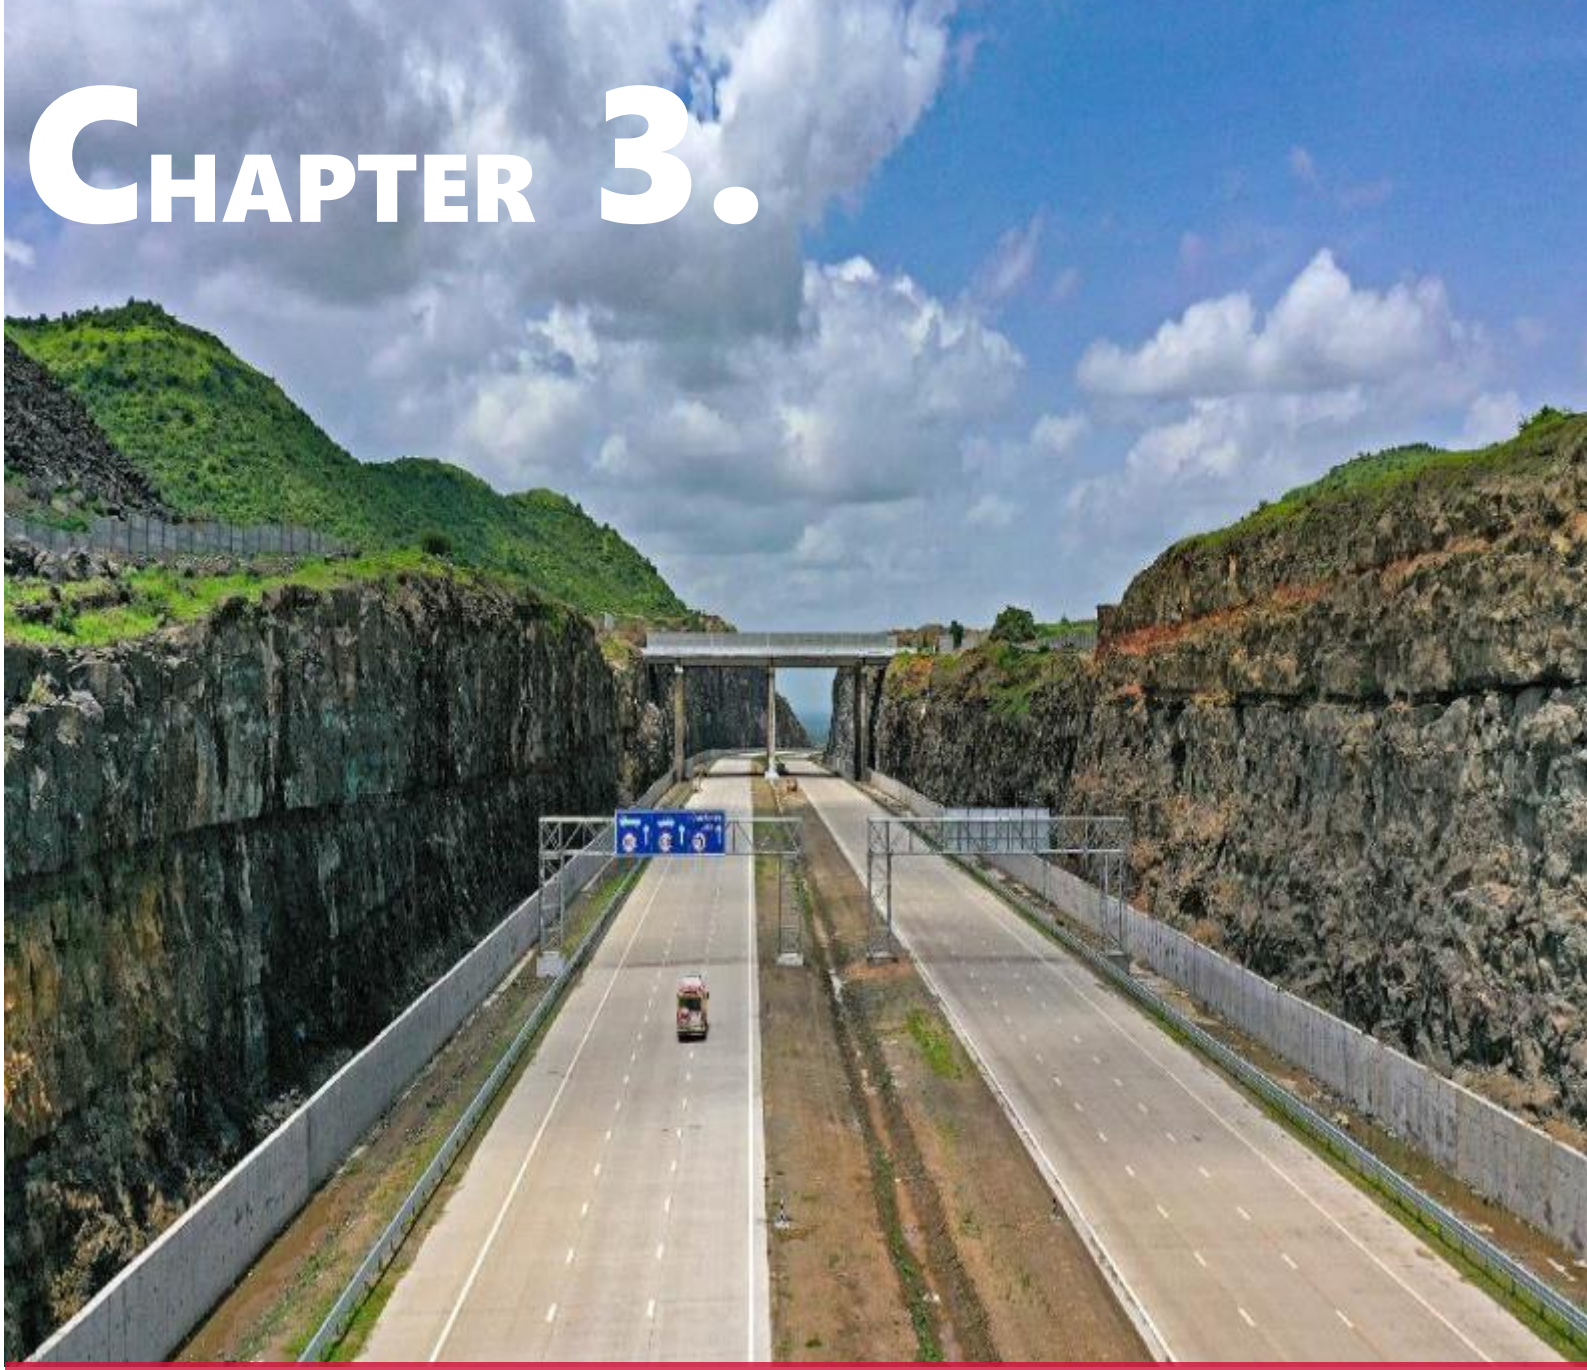
The system is designed to manage a fire heat release rate of 50 MW (as per HBI Technical Report I6007-13-R-04/01 – 04/00).

During early fire stages, smoke stratifies and spreads bi-directionally at ~1–2 m/s. After 5 minutes and at ~600 m from the source, smoke cools, descends, and reduces visibility if not ventilated.

KF View:

The tunnel is equipped with a comprehensive, integrated safety and operations system including traffic control, surveillance, emergency response, ventilation, and communication networks. These systems are designed with redundancy, automation, and real-time monitoring to ensure uninterrupted tunnel operations and quick response in case of emergencies, thereby enhancing safety, reliability, and user experience.

Chapter 3.



Review of Project Agreements

Chapter 3. REVIEW OF PROJECT AGREEMENTS

3.1 Review of Concession Agreement

The Concession Agreement was executed between NHAI and Navayuga Quazigund Expressway Pvt. Ltd. (NQEPL) on 13 July 2010 for Rehabilitation, Strengthening and Four-Laning of the Quazigund–Banihal section of NH-1A from Km 189.350 to Km 204.700, including two tunnels (≈0.69 km and 8.45 km) on a DBFOT (Annuity) basis under NHDP in the Union Territory of Jammu & Kashmir.

Exhibit 12 Key Terms of Concession Agreement

Particulars	Description
Date of Agreement	13 July 2010 (execution following LOA dated 30.04.2010).
Appointed Date	05 June 2011
Employer	NHAI (National Highways Authority of India)
Concessionaire	Quazigund Expressway Private Limited (NQEPL).
Concession Period	**20 years** from Appointed Date, covering construction, O&M, and eventual transfer
Length of the Project, Total project Cost	Length of Project: 15.35 km stretch including 2 tunnels (0.69 km & 8.45 km) Total Project Cost **₹2070 crore**.
Achievement of Project Milestones	Linked to Right of Way & completion schedule. **Project Milestones – Quazigund–Banihal CA (Schedule G)** The project has a **5-year (1825 days) construction period** from Appointed Date. Milestones are defined with deadlines and minimum expenditure thresholds of the **Total Project Cost (TPC)**.
Construction Period/ Scheduled completion date	• **1825 days (5 years) from Appointed Date.** • 04 June 2016
Premium / Fee	Concession Fee obligations exist (Art. 26), but **no toll right**; revenue is **Annuity** (Art. 27)

Particulars	Description
Annuity Payment	₹245 crore per half year, payable by NHAI to Concessionaire post COD
Performance Security	**₹99.35** crore Bank Guarantee, valid until 1 year from Appointed Date; replenishable if encashed
Extension of Time COD	Allowed in case of **Force Majeure** (Article 34) or **Authority default** (delays in ROW, approvals).
Escrow	**Escrow Account** before Appointed Date; deposits include **Financial Package, Annuities, other revenues/receipts**; detailed in **Article 31/Schedule-S.**
PCOD	The **Provisional COD was achieved on 31 July 2021**. It was recognized formally in the **Settlement Agreement dated 24 June 2022**, after RO Jammu recommended EOT till 30 June 2021.
FCOD	The **Final COD was achieved and certified on 15 December 2022**. This milestone was formally recorded in the **Supplementary Agreement dated 10 November 2023**.
Respective rights and obligations of the Parties	NHAI: ROW, support, annuity payment. Concessionaire: DBFOT design, construction, O&M, financing
Change in Ownership	**Equity lock-in (≥51% for construction period + 2 years' post-COD)**
Dispute Resolution Process	Tiered: conciliation (Article 44.2) arbitration (Article 44.3) under Arbitration Act, 1996.
Governing Law and Jurisdiction	Agreement governed by Indian Law; jurisdiction vested with Delhi courts. (**Article 47**).

3.1.1 Obligations of the Authority & Concessionaire

Exhibit 13: Key Obligations of Parties

Authority	Concessionaire
Provide Right of Way (ROW) for the Project Highway, free from encumbrances	Design, engineer, finance, procure, construct, operate, and maintain the Project Highway on DBFOT (Annuity) basis
Assist in obtaining statutory approvals, permits, and clearances from Government authorities	Achieve Financial Close within 180 days (extendable with damages) and furnish Performance Security
Pay annuity of ₹201.90 crore (half yearly) post COD, as per Article 27	Maintain the Project Highway in accordance with Specifications, Standards, and O&M requirements (Schedule K)
Maintain existing highway during the development period until Appointed Date	Comply with safety requirements, traffic regulations, and emergency response obligations
Provide assistance for utilities shifting, police support, medical aid posts, and land acquisition (if required)	Ensure timely achievement of project milestones and Scheduled Completion Date (COD within 1,095 days of Appointed Date)
Not levy any additional local tax/toll on the Project Highway	Hand back the Project Highway to NHAI at the end of Concession Period or upon termination, free of encumbrances
Cooperate with Independent Engineer for monitoring construction and O&M	Bear project risks, costs, and liabilities, except as specifically allocated to NHAI under the Agreement

3.1.2 Financial Provisions and Settlements:

The Agreement (Articles 28, 29; Schedules L & R) sets out strict financial safeguards to protect cash flows and lender interests. All revenues and annuities flow through an escrow with defined payment priority, equity is locked in to ensure sponsor commitment, and lenders hold substitution rights in case of default. Provisions on insurance, change in law, and regular financial reporting further enforce financial discipline. **The detailed covenants are presented in the exhibit below.**

Exhibit 14: Key Financial covenants detail

Aspect	Details
Escrow Account	All project-related revenues, including annuity payments from NHAI, insurance proceeds, and any other receivables, are deposited into a designated **Escrow Account** maintained with an Escrow Bank. Disbursements follow a defined priority sequence: (i) statutory dues, (ii) O&M expenses, (iii) senior debt servicing, (iv) reserve creation, and (v) equity returns/distributions. *(Ref: Article 31, Schedule S)*
Annuity Payments	The project operates on a **DBFOT (Annuity)** basis. NHAI pays a **fixed semi-annual annuity of ₹245 crore** to the Concessionaire for **20 years from COD/PCOD**, irrespective of traffic volume. Payments are routed through the **Escrow Account**, with deductions only for **O&M or lane-availability shortfalls**, as per **Article 27 and Schedule M**.
Toll Fees	The Concessionaire has **no right to collect tolls** from road users. Under **Article 25**, the right to levy and collect tolls rests with **NHAI**, which may collect directly or through its appointed agencies under the **National Highways Fee Rules, 2008**. The Concessionaire's revenue stream consists solely of **annuity payments**, making it **traffic independent**.
Debt Service Coverage	Senior lenders have **first charge** over project cash flows routed through the Escrow Account. In the event of a shortfall in debt servicing, the Concessionaire is required to provide **sponsor support** until sufficient project cash flows are achieved post-COD.
Equity Lock-In	The lead sponsor is required to maintain a **minimum 51% equity shareholding** in the Concessionaire during the **construction period** and for a further **two years post-COD**, unless otherwise approved by NHAI. *(Ref: Article 5.2.5)*

Aspect	Details
Change in Law Compensation	Under **Article 41 (Change in Law)**, if any legislative or regulatory change materially impacts project costs or revenues, the affected party is compensated to maintain **financial neutrality**. Compensation is determined on a **Net Present Value (NPV)** basis and may be implemented through **annuity adjustments or concession period extensions**.
Revenue Shortfall Loan	Not applicable. The Concession Agreement does **not provide for a Revenue Shortfall Loan**, as the project's annuity structure ensures fixed payments from NHAI irrespective of traffic performance.
Total Project Cost (TPC)	The **Indicative Project Cost** defined at the Invitation for Qualification (IFQ) stage is **₹1,987 crore**, used for determining limits for Change of Scope (COS) and related financial covenants. *(Ref: Article 48.1)*
Insurance	The Concessionaire must maintain comprehensive **insurance coverage** for construction, third-party liability, O&M, and force majeure events, naming **NHAI and lenders as co-insureds**. Certificates must be furnished periodically as per **Article 32**.
Substitution Rights	In case of persistent Concessionaire default, **lenders have the right to substitute** the Concessionaire with a nominated entity under a **Substitution Agreement (Schedule R)**, ensuring continuity of operations and debt protection.
Financial Reporting	The Concessionaire is required to submit **periodic financial statements, progress reports, and audited accounts** to **NHAI and lenders**, in compliance with Articles **29 and 33** of the Concession Agreement.

3.1.3 Delay Damages and Penalties under the Concession Agreement

Exhibit 15: Key Terms of Damages/ Penalty

Clause / Article	Situation	Damages / Penalty	Remarks
Clause 4.2 & 10.3	Delay by Authority in providing Right of Way beyond 90 days from Appointed Date	₹50 per day per 1,000 sq. m. of land delayed	Payable to Concessionaire until ROW is given
Clause 4.3 & 24.1	Delay by Concessionaire in achieving **Financial Close** within 180 days	0.1% of Performance Security per day (extendable up to 120 days); further extension possible at 0.2% per day; max 20% of Performance Security	Weekly advance payment required for extension
Article 15.2 (COD Delay)	COD not achieved within 91 days after Scheduled Completion Date (Appointed Date + 1095 days)	0.1% of Performance Security per day until COD	If not achieved within 270 days, Authority may terminate
Article 17.7.3 (Lane Closure)	Delay in reopening lanes after repair/maintenance	0.1% of Average Daily Annuity per 250 m stretch/day	Independent Engineer approval required for closures
Article 35 (Compensation for Breach)	Breach by Concessionaire or Authority (other than those with specified damages)	Compensation = direct costs incurred by non-defaulting party	Does not include consequential losses
Article 49 (Transitional Arrangements)	Delay in completing Affected Stretch (wildlife clearance pending) beyond 180 days after Scheduled COD	₹57,250 per day	Recoverable by deduction from annuity

3.1.4 Legal and Operational Framework:

- **Force Majeure Events:**
    - Covers natural events, political events, and indirect events.
    - Relief is available only if reported within 7 days.
    - Time extensions granted for achievement of milestones and COD.
    - Compensation limited to actual costs, no claim for indirect losses.
- **Compensation for Breach of Agreement**
    - Sets principles for damages due to breach.
    - Damages are pre-estimated, not penalties.
    - Both parties are obligated to mitigate costs/losses.
- **Termination:**
    - Covers natural events, political events, and indirect events.
    - Relief is available only if reported within 7 days.
    - Time extensions granted for achievement of milestones and COD.
    - Compensation limited to actual costs, no claim for indirect losses.
- **Divestment of Rights and Interest**
    - On termination, Concessionaire must hand over project assets free of encumbrance.
    - Obligations include O&M records, designs, clearances, contracts, and project facilities.
- **Defects Liability after Termination**
    - Concessionaire remains liable for construction defects discovered post-termination.
    - Liability period typically one year from termination/transfer date.

3.2 Review of Supplementary Agreements

The **Concession Agreement of 13.07.2010** was modified through **four Supplementary Agreements** and one **Annex Undertaking**. The first, dated **27.06.2011**, revised termination payment provisions under Force Majeure, clarifying payout formulas linked to Debt Due and Insurance Cover, thereby strengthening financial transparency and lender assurance. The second, dated **25.08.2014**, approved tunnel design modifications to twin unidirectional tubes and redefined cost responsibilities, ensuring project continuity without altering concession terms. The third, dated **06.10.2020**, partially modified the 2018 Settlement Agreement by restructuring timelines and confirming the ₹575 crore advance repayment terms. The fourth, dated **10.11.2023**, formally recorded project completion milestones and corporate restructuring, while the **Annex-2 Undertaking** dated **08.11.2023** reaffirmed the concessionaire's commitment to complete all residual works. Together, these agreements enhanced contractual clarity, reinforced financial stability, and ensured smooth transition from construction to operation.

Exhibit 16: Summary of Supplementary Agreements

Date	Parties	Purpose / Context	Key Terms / Amendments
27 June 2011	NHAI & Navayuga Quazigund Expressway Pvt. Ltd.	***Supplementary Concession Agreement (Termination Clauses)***	•Amended **Article 34.9** concerning termination payments during Force Majeure events. Clarified financial compensation for **Non-Political**, **Indirect Political**, and **Political** Force Majeure. • Non-Political FM: payout = **90% of Debt Due minus Insurance Cover**. • Established clear termination formulas improving **lender protection** and **financial certainty**.
25 August 2014	NHAI & NQEPL	***Second Supplementary Agreement – Viaduct and Twin Tunnel Design Modification***	• Approved alternate tunnel configuration: **twin unidirectional tubes** (8.45 km and 0.69 km). • Tunnel component constituted ~**86%** of total civil cost; redesign added ~₹207 crore (~10% of TPC). • Concessionaire agreed to **bear entire additional cost**, exceeding the 5% COS threshold. • Improved **safety and operational efficiency**; minor time extension allowed for design approval and execution.
6 October 2020	NHAI & NQEPL	***Supplementary Agreement – Modification of 2018 Settlement***	• Adjusted timelines following construction delays and fund infusion. • Revised interim completion date to **10 July 2020** (from 31 December 2019).

Date	Parties	Purpose / Context	Key Terms / Amendments
			• Confirmed interest on **₹575 crore advance** at **Bank Rate + 2% p.a.** • Both parties waived pending claims upon achieving COD within revised timeline. • Ensured continued project funding and completion certainty.
8 November 2023	Quazigund Expressway Pvt. Ltd. (formerly NQEPL) → NHAI	***Annex-2 Undertaking***	• Concessionaire undertook to **complete all pending punch-list and maintenance items** identified by the Independent Engineer. • Committed to completion within stipulated timelines. • Served as **final compliance assurance** during transition to O&M phase.
10 November 2023	NHAI & Quazigund Expressway Pvt. Ltd.	***Post-Completion Supplementary Agreement***	• Formally acknowledged **project completion** and **corporate restructuring**. • Recorded milestones: Appointed Date – **05 June 2011**; EOT – **30 June 2021**; PCOD **31 July 2021**. COD **15 December 2022**. • Confirmed transition from construction to full O&M phase and validated revised schedules.

3.3 Review of State Support Agreement

The **State Support Agreement** was executed on **28th November 2011** between:

- **The Governor of Jammu & Kashmir** (the *State Government*), acting through the **Public Works Department (PWD)**, and
- **The President of India**, represented by the **Ministry of Road Transport & Highways (MoRTH)** and the **National Highways Authority of India (NHAI)** (the *Authority*).

This agreement provides the framework for **State Government support** to ensure the **smooth implementation, operation, and maintenance** of the **Quazigund–Banihal Highway Project** under the **Concession Agreement dated 13 July 2010** between NHAI and **Navayuga Quazigund Expressway Pvt. Ltd. (NQEPL)**.

Exhibit 17: Key Terms of the State Support Agreement

Parameter	Details
Date of Agreement	28th November 2011
Parties	The Governor of Jammu & Kashmir (State Government) & The President of India (Authority), represented by MoRTH/NHAI
Purpose	To provide State Government support and facilitation for the implementation and operation of the **Quazigund–Banihal Highway Project** under the **DBFOT (Annuity)** model
Support by State Government	• Provide continuous **Right of Way (ROW)** and unhindered site access.• Assist in obtaining all **applicable permits, clearances, and local approvals**.• Facilitate **utility shifting** (electricity, water, telecom, etc.).• Ensure **no local levies, barriers, or municipal taxes** are imposed on the project highway.• Provide **police support** for traffic control, removal of encroachments, and ensuring project security.• Establish **traffic aid posts, mobile patrol units, medical aid posts, and ambulance services** as per government standards.
Restriction on Competing Roads	The State shall not develop or permit any **competing road or Tollway** that adversely affects project traffic, except as allowed under the Concession Agreement and with annual notification to NHAI.
Restriction on Additional Tollways	No additional or parallel Tollway to be constructed except as permitted by the Concession Agreement.

Parameter	Details
Restriction on Local Taxes	The State Government shall not impose **local tolls, taxes, or levies** on the project highway; however, existing State revenue interests at **Lakhanpur and Lower Munda** shall remain unaffected.
Substitution of Concessionaire	The State acknowledges the **lenders' and Authority's rights** to substitute the Concessionaire in the event of persistent default, as per the Substitution Agreement (Schedule-R of CA).
Obligations of Authority	The Authority shall ensure that the Concessionaire **complies with applicable laws, permits, and the Concession Agreement** in coordination with the State Government.
State Default	Failure by the State Government or its agencies to **cure a breach within 60 days** of notice constitutes **State Default**, treated as a breach under the Concession Agreement.
Compensation & Termination Payments	The State Government is liable for **compensation or termination payments** resulting from its default, payable within **60 days**, with **interest at Bank Rate + 3%** for delays.
Duration	Effective from the date of execution and valid until **termination or expiry** of all related Concession Agreements under the project.
Indemnity	Both the State and the Authority mutually **indemnify each other** against losses or liabilities arising from their respective breaches or defaults.
Dispute Resolution	Initial resolution through **conciliation** under the **Arbitration and Conciliation Act, 1996**; failing which, disputes shall be settled by **arbitration under ICADR Rules, New Delhi**.
Governing Law & Jurisdiction	Governed by the **laws of India**; jurisdiction lies with **Courts at Delhi**.
Miscellaneous	• Includes **waiver of sovereign immunity** by the State Government. • Agreement **binding on successors and assigns**. • All notices to be in **writing**. • The agreement is executed in **English**.

3.4 Review of Settlement Agreements

3.4.1 First Settlement Agreement (2018)

The **Settlement Agreement** was executed on **11th December 2018** at **NHAI HQ, New Delhi**, between:

- **National Highways Authority of India (NHAI)** (*Authority*), and
- **Navayuga Quazigund Expressway Pvt. Ltd. (NQEPL)** (*Concessionaire*).

The Agreement was signed under **Section 73 of the Arbitration and Conciliation Act, 1996**, following conciliation by the **Conciliation Committee of Independent Experts (CCIE-2)**. **It was executed to resolve project delays, financial constraints, and claims arising under the Concession Agreement dated 13.07.2010**, including disputes related to land acquisition, Force Majeure events, and One-Time Fund Infusion (OTFI) support.

Exhibit 18: Key Aspects of the 2018 Settlement Agreement

Parameter	Details
Date of Agreement	11th December 2018
Parties	NHAI (Authority) & Quazigund Expressway Pvt. Ltd. (Concessionaire)
Context	Settlement under Section 73 of the Arbitration and Conciliation Act, 1996, following CCIE-2 conciliation to address delays, cost overruns, and fund infusion for project completion
Background	• Concession Agreement signed 13.07.2010.• Appointed Date: 05.06.2011; scheduled completion: 04.06.2016. • Project delayed due to land acquisition, utility shifting, weather, law & order, and Force Majeure events.
NHAI Support	• Approved **One-Time Fund Infusion (OTFI)** of ₹575 Cr as advance loan .• Carried interest: **Bank Rate + 2% p.a.** • Recovery mechanism: from future annuities.
EOT & Compensation	• Extension of Time up to **31.12.2019**.• **880 days** delay recognized as not attributable to Concessionaire. • **424 days** (2.327 annuities) deducted for Concessionaire default. • Restored Annuities = ₹1,180.90 Cr (against 880 days).
Settlement Scope	• All pending claims and disputes till date of signing fully settled. • Concessionaire waived all cost overrun, IDC, escalation, and overhead claims.

Parameter	Details
Utilization Conditions	• ₹575 Cr to be used **only for physical completion**; not for IDC, debt servicing, or administrative costs. • To be disbursed in tranches based on verified progress.
Monitoring Mechanism	• Oversight by a **Monitoring Committee** comprising NHAI CGM (Tech), RO Jammu, and lender's representative. • Concurrent audit by NHAI-appointed auditor. • Sub-escrow account established for fund flow control.
Concessionaire Obligations	• Achieve **COD by 31.12.2019**. • Resume and complete stalled works .• Indemnify NHAI for any claims linked to land or delay.
NHAI Obligations	• Release ₹575 Cr advance loan. • Restore eligible missed annuities (880 days). • Grant time extension and finalize closure of all pending disputes.
Finality	Full and final settlement of all disputes up to 11.12.2018; no residual claims permissible.
Governing Law & Jurisdiction	Laws of India; Courts at Delhi.

3.4.2 Second Settlement Agreement (2022)

The **Settlement Agreement** was executed on **24th June 2022** at **NHAI HQ, New Delhi**, between:

- **National Highways Authority of India (NHAI)** (*Authority*), and
- **Quazigund Expressway Pvt. Ltd. (NQEPL)** (*Concessionaire*).

The Agreement was signed under **Section 73 of the Arbitration and Conciliation Act, 1996**, after review by **CCIE-2** and approval of the **Empowered Committee (MoRTH)**. It settled all remaining disputes till **Provisional COD (31.07.2021)**, including annuity restoration, change in law claims, and VAT reimbursement.

Exhibit 19: Key Aspects of the 2022 Settlement Agreement

Parameter	Details
Date of Agreement	24th June 2022
Parties	NHAI (Authority) & Quazigund Expressway Pvt. Ltd. (Concessionaire)
Context	Conciliation under Section 73 of the Arbitration & Conciliation Act, 1996 (CCIE-2), resolving all disputes till PCOD (31.07.2021)
Reference – 2018 SA	Original Settlement Agreement (11.12.2018) established OTFI & 880-day compensation; 2022 SA finalized reconciliation of missed annuities, O&M claims, and VAT liabilities.
Disputes Resolved	Claims under Clause 35.2 & 35.3 of CA, delays in 100% land availability, restoration of annuities, VAT impact, O&M cost reimbursement, interest reconciliation.
Settlement Amount	**₹863.24 Cr** (against total claim ₹2,223 Cr) comprising: • ₹719.81 Cr – 2.938 annuities restored (after 0.23 annuity deduction for 42-day delay). • ₹143.43 Cr – reimbursement for VAT, O&M, power supply, and excess TDS on interest.
Financial Impact	~61% reduction versus total claim value.
PCOD & Schedule	• **PCOD Date**: 31.07.2021. • Revised **Schedule M** finalized accordingly. • No change in total concession period.
NHAI Obligations	• Pay ₹863.24 Cr within 30 days of signing (by 30.06.2022). • Recognize PCOD and revised Schedule M. • Close all pending claims.

Parameter	Details
Concessionaire Obligations	• Maintain project highway per CA terms till concession end. • Waive all claims (cost overrun, IDC, escalation, O&M expenses). • Indemnify NHAI from third-party or statutory authority claims.
Legal Validation	Authenticated by **CCIE-2 (Justice I.P. Vasishth, Mr. A.K. Upadhyay, Mr. V.V. Ranganathan)** confirming voluntary and fair settlement.
Finality	Full and final closure of all disputes and claims till 31.07.2021; no residual claims or litigations permissible.
Governing Law & Jurisdiction	Laws of India; Courts at New Delhi.

3.5 Review of Major O&M Contracts

3.5.1 Review of Integrated Tunnel Management System (ITMS) Annual Maintenance Contract (AMC) Agreement

The Annual Maintenance Contract (AMC) for the Integrated Tunnel Management System (ITMS) at the Banihal Tunnel Project, Jammu & Kashmir, was executed between Athaang Infrastructure Pvt. Ltd. and Honeywell Automation India Ltd. in August 2023. The agreement covers comprehensive maintenance of key tunnel safety, control, and communication systems under a structured one-year service framework.

Exhibit 20: Key Terms of ITMS Annual Maintenance Contract (AMC) Agreement

Parameter	Details
Date of Work Order	07th August 2023
Parties	**Athaang Infrastructure Pvt. Ltd.** (Employer) & **Honeywell Automation India Ltd.**, Ground Floor, United Trade Centre, Sector 43, Gurgaon, Haryana (Contractor)
Contract Reference	Offer Ref.: HBS/North/2023/AIPL/New Contract/0039
Contract Value	**Basic AMC:** ₹1,25,10,000/- **GST @18%:** ₹22,51,800/- **Total: ₹1,47,61,800/- (Rupees One Crore Forty-Seven Lakh Sixty-One Thousand Eight Hundred Only)**
Project / Location	Banihal Tunnel Project, Jammu & Kashmir
Contract Period	1 Year (Service 180° Program) from date of award; extendable based on performance
AMC Type	Non-Comprehensive – includes manpower, maintenance, and software support; excludes hardware/spare replacement (chargeable basis)
Scope of Works	• Maintenance of **Integrated Tunnel Management System (ITMS)** comprising:– SCADA and PLC Systems– Fire Detection & Linear Heat Sensing (LHS)– CCTV Surveillance Network– Emergency Call & Telephone Systems– Traffic Management and Networking Systems

Parameter	Details
	• Software patching and bug fixes • Preventive and corrective maintenance • 4 preventive visits per year and SLA-based breakdown response
Support Model	• **On-site Team:** First-line troubleshooting (2 engineers on site) • **Technical Support Group (TSG), Pune HQ:** Advanced diagnosis and configuration • **Global Assistance Centers (Australia/USA/Germany):** Escalation and specialized support
Service Response & SLA	• **Minor Faults:** Within 24 hours • **Major Faults (CCTV/SCADA):** Within 24–48 hours • **Uptime Commitment:** ≥95% per quarter
Penalty for Downtime	• ≥95% uptime – Nil • 90–95% – 1% of quarterly AMC • 85–90% – 2%• 80–85% – 3% • <80% – 5% (maximum annual cap 5%)
Manpower Deployment	Two (2) full-time engineers at site (9×6 shift), supported by Honeywell's regional service network; PPE and equipment provided by Contractor
Payment Terms	• Quarterly advance payment against invoice within 30 days of receipt • No escalation permitted except statutory variations • Applicable deductions: TDS, GST, and other statutory levies
Mobilization Period	Within 15–20 days from the date of award
Cooling / Grace Period	120 days from contract commencement (no penalties during this stabilization phase)
Reports & Documentation	• Maintenance service report after each visit • Quarterly system health and uptime reports• Performance logbook maintained at site
Exclusions	Replacement of major hardware components, PCs, cabling, batteries, consumables, and civil/electrical works
Inspection & Quality	Subject to inspection by Employer, Independent Engineer, or Authority (NHAI); defects to be rectified at Contractor's cost

Parameter	Details
Liability & Indemnity	Contractor responsible for safety of personnel, equipment, and work quality; indemnifies Employer against any losses due to negligence or misconduct
Insurance	Contractor must insure workmen, materials, tools, and equipment; failure to maintain insurance may result in withholding of payments
Termination	Either party may terminate with **30 days' written notice**; Employer may terminate for non-performance, subcontracting without consent, breach, or safety violations
Suspension of Payments	Employer may suspend payments if Contractor fails to rectify defaults within 7 days of notice
Special Conditions	• Contractor bound by **Step-in Rights** of NHAI/Lenders • Replacement of unfit or negligent staff mandatory• Strict confidentiality of project data to be maintained
Jurisdiction	Laws of India; Arbitration under the **Arbitration and Conciliation Act, 1996**; Courts at Delhi

3.5.2 Review of Substation AMC Agreement

The Annual Maintenance Contract (Non-Comprehensive) for the Substation System at the Banihal Tunnel (NH-44) was executed between Quazigund Expressway Pvt. Ltd. (QEPL) and Sterling & Wilson Pvt. Ltd. The contract ensures the preventive and breakdown maintenance of the complete substation network supporting tunnel operations and ancillary systems.

Exhibit 21: Key Terms of Substation AMC Agreement

Parameter	Details
Date of Agreement / Work Order	04th October 2023
Employer	Quazigund Expressway Pvt. Ltd. (QEPL), Control Room, South Portal, Banihal, Ramban District, J&K
Contractor	Sterling & Wilson Pvt. Ltd.
Service Order Reference	QB/E&M/2023-24/158
Linked Proposal Reference	Honeywell Proposal Ref.: HBS/North/2023/AIPL/New Contract/0039 dated 07 August 2023
Contract Period	As per preventive maintenance cycle (2 quarters) – extendable based on performance and mutual consent
Contract Value	Net Total: ₹17,57,500/- GST @18%: ₹3,16,350/- Total: ₹20,73,850/- (Rupees Twenty Lakh Seventy-Three Thousand Eight Hundred Fifty Only)
Payment Terms	• Payment as per approved AMC schedule (2 quarters). • Payment released after successful completion of each service cycle. • All statutory deductions (TDS, GST, cess) as applicable.
Scope of Work	• Preventive maintenance of complete substation system. • Four preventive maintenance visits per year (as per Annexure I checklist) • Emergency breakdown visits on call. • Performance testing, tightening, cleaning, insulation, and functional checks.

Parameter	Details
	• Compliance with client's specifications and statutory regulations.
Execution Requirements	• Maintenance to be carried out under the supervision of QEPL officials and in line with NHAI guidelines. • All work to conform with relevant Indian Standards and safety norms. • Contractor to deploy qualified and experienced personnel only.
Service Provider Obligations	• Responsible for quality, reliability, and timeliness of services. • Must maintain qualified manpower and tools at all times. • Any deficiencies to be rectified at Contractor's cost.
Performance Documentation	• Preventive Maintenance Reports (PMRs) to be submitted after each visit. • Emergency Breakdown Reports (EBRs) to be filed post-rectification. • Post-implementation support as per agreement framework.
Standards & Compliance	• All works in accordance with client's technical standards, OEM manuals, and statutory safety laws.• Contractor responsible for compliance with all labour, EHS, and regulatory requirements.
Inspection & Verification	Subject to verification by QEPL, Independent Engineer, and/or NHAI. Non-compliance or defects to be rectified by Contractor at own cost.
Termination Clause	• QEPL may terminate the agreement at any stage without compensation if the Contractor fails to meet contractual obligations or timelines. • Contractor must refund any advance payments immediately upon termination. • QEPL may also terminate for breach, EHS violations, or non-performance.
Confidentiality (Clause 13)	All information shared by QEPL to be treated as strictly confidential. Any breach constitutes a material breach, giving QEPL termination rights.

Parameter	Details
Indemnity	Contractor shall indemnify QEPL against all losses, damages, claims, or IPR infringements arising from its acts, negligence, or performance failures.
Assignment / Subletting	Contractor shall not assign, transfer, or subcontract any part of the agreement without prior written consent of QEPL.
Delay & Damages	• Time is of essence. • Delay or non-compliance with specifications allows QEPL to terminate the contract • No explicit LD clause; remedy limited to termination and refund of advances.
Liability & Risk	Contractor responsible for safety of personnel, tools, and equipment; liability capped to contract value except for willful misconduct or statutory violations.
Insurance	Contractor to maintain insurance coverage for workmen, materials, tools, and equipment; non-compliance may lead to withheld payments.
Dispute Resolution / Arbitration	Disputes to be resolved through arbitration under the Arbitration and Conciliation Act, 1996; Sole Arbitrator to be appointed by QEPL COO; Venue: Mumbai; Language: English.
Governing Law & Jurisdiction	Governed by the laws of India; jurisdiction with Courts at Mumbai.

3.5.3 Review of Electrical Substation AMC Agreement

The Annual Maintenance Contract (Non-Comprehensive) for the Electrical Substation System at the Banihal Tunnel (NH-44) was executed between **Navayuga Quazigund Expressways Pvt. Ltd. (NQEL)** and **Sterling & Wilson Pvt. Ltd.** The contract covers routine preventive maintenance as well as emergency corrective support for the complete substation infrastructure supporting tunnel operations and associated electrical systems.

Exhibit 22: Key Terms of Electrical Substation System

Parameter	Details
Date of Agreement / Service Order	11th January 2023
Employer	Navayuga Quazigund Expressways Pvt. Ltd. (NQEL), South Portal, Banihal, Ramban District, J&K
Contractor	Sterling & Wilson Pvt. Ltd.
Service Order Reference	Service Order No. 35
Contract Period / Validity	01-Jan-2023 to 31-Dec-2023 (12 Months)
Contract Value	Base AMC: ₹35,15,000/- GST @18%: ₹6,32,700/- **Total: ₹41,47,700/-** (Rupees Forty-One Lakh Forty-Seven Thousand Seven Hundred Only)
Payment Terms	• 25% advance within 15 days of order issuance (adjustable in final invoice).• Balance through quarterly invoices, payable within 30 days of certification.
Scope of Work	• Non-Comprehensive AMC for complete electrical substation system. • Preventive maintenance: Quarterly, Half-yearly, and Annual detailed inspections including transformers, ACBs, VCB/SF6 panels, UPS, relays, and thermography. • Emergency breakdown support with corrective rectifications. • Thermography before and after rectification.
Execution Requirements	• Services to commence within 45 days of advance payment • Work to be executed under supervision of NQEL and as per statutory electrical safety norms and OEM standards.

Parameter	Details
Maintenance Schedule	• **Quarterly:** Visual inspection, logbook verification, fuse and protection checks. • **Half-Yearly:** Transformer IR/PI testing, breaker servicing, cable terminations. • **Annual:** Dielectric tests, relay calibration, CT testing, complete thermography of substation.
Corrective Maintenance	Emergency visit and repair/rectification in event of faults, failures, or operational disruption.
Documentation & Reporting	• Submission of Preventive Maintenance Reports (PMRs) after each planned visit. • Breakdown Maintenance Reports (BMRs) after each emergency intervention. • Annual Thermography Study Report.
Standards & Compliance	Services to comply with client specifications, statutory regulations, OEM manuals, and electrical safety protocols. Contractor responsible for manpower competency and regulatory compliance.
Performance Monitoring	All maintenance activities to be jointly certified by NQEL authorities. Any deficiencies to be rectified at contractor's cost.
Termination Clause	• NQEL may terminate the contract by giving 30 days' notice.• Compensation limited strictly to proportionate value of work completed. • Failure to meet service standards may lead to recovery of damages from invoices or retention.
Deficiency & Damages Clause	• Any service lapse, negligence, or operational impact shall be treated as "Deficiency in Service." • Client reserves right to assess and recover damages as liquidated claim (not considered penalty).
Confidentiality	All client-shared drawings, operational data, and technical details to be treated as confidential. Breach is considered material and may trigger termination.

Parameter	Details
Indemnity	Contractor indemnifies NQEL against any claims, IPR violations, service failures, or damages caused due to negligence or improper maintenance.
Assignment/ Subletting	Permitted only with prior written approval of NQEL. Contractor remains fully liable for subcontractor performance.
Force Majeure	Applicable in case of strikes, war, natural calamities, civil disruptions, or conditions beyond reasonable control.
Arbitration & Dispute Resolution	Sole Arbitrator appointed by Client COO; Arbitration under Arbitration and Conciliation Act 1996; Venue: Mumbai; Language: English
Governing Law & Jurisdiction	Indian Law applicable; Courts at Mumbai shall have jurisdiction

3.5.4 Review of Toll Management System AMC Agreement

The Annual Maintenance Contract (Non-Comprehensive) for the Toll Management System (TMS) on the Banihal Tunnel Section (NH-44) was executed between **Athaang Infrastructure Pvt. Ltd. / Quazigund Expressways Pvt. Ltd. (QEPL)** and **Techsture Technologies India Pvt. Ltd.** The agreement covers preventive and corrective maintenance of all toll system hardware, software, networking assets, and plaza-level IT infrastructure to ensure uninterrupted toll collection and system uptime.

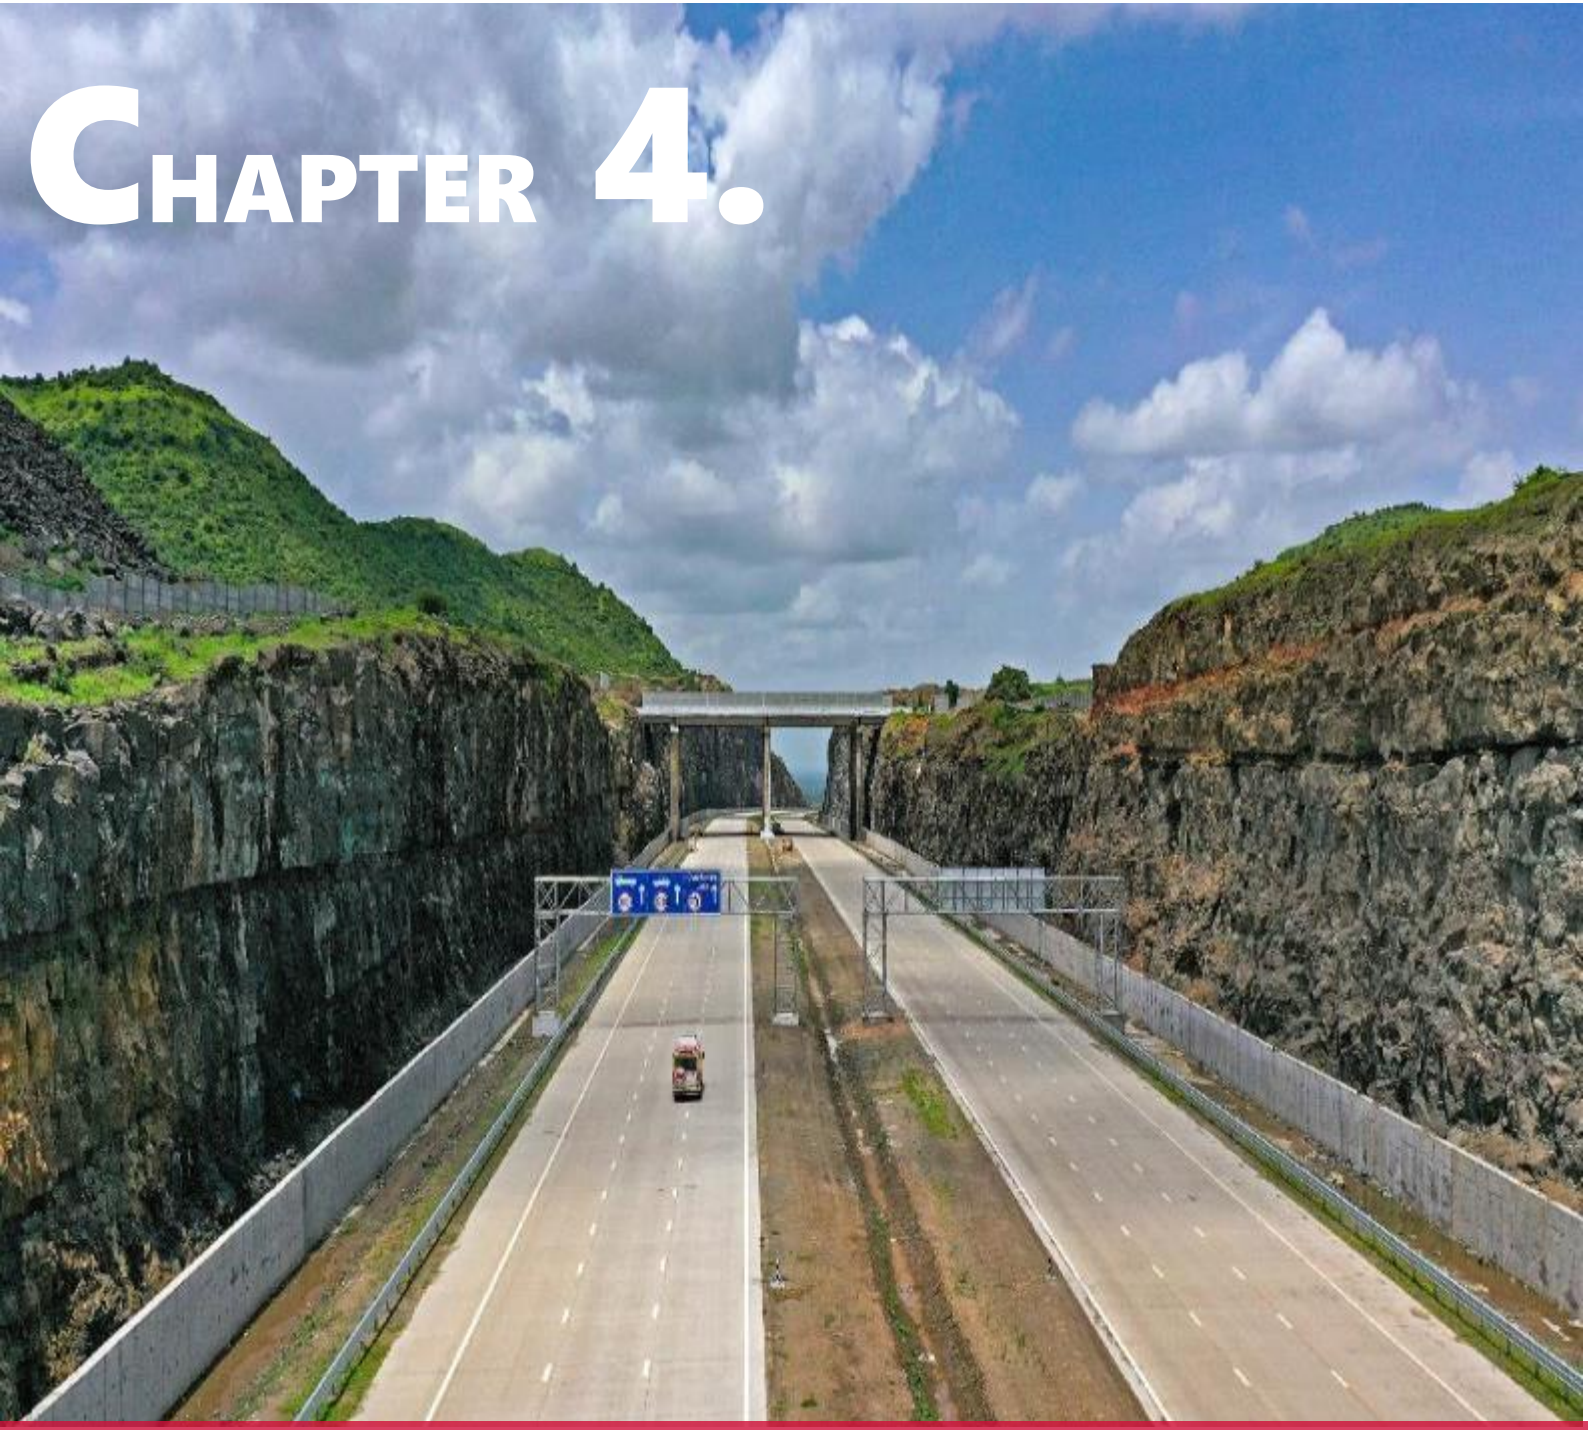
Exhibit 23: Key Terms of Toll Management System AMC Agreement

Parameter	Details
Date of Agreement / Purchase Order	30th June 2023
Employer / Purchaser	Athaang Infrastructure Pvt. Ltd. / Quazigund Expressways Pvt. Ltd. (QEPL)
Contractor / Service Provider	Techsture Technologies India Pvt. Ltd.
Purchase Order Reference	QB/IT/2023-24/86
Contract Period / Validity	01-Jul-2023 to 30-Jun-2024 (12 Months)
Automatic Renewal Clause	Automatically renewed annually unless terminated by either party with 30 days' prior written notice
Contract Value	**Base AMC: ₹14,98,600/-** **GST @18%: ₹2,28,600/-** **Total: ₹17,27,200/- (Rupees Seventeen Lakh Twenty-Seven Thousand Two Hundred Only)**
Payment Terms	• Monthly billing after successful completion of each month. • Payments subject to statutory deductions (TDS, GST, etc.).

Parameter	Details
Scope of Work	• Comprehensive AMC for TMS including hardware, software, ATMS support, lane systems, networking and control systems. • Daily/weekly preventive maintenance of critical components – barriers, printers, power supply, UPS, cabling, controllers. • Free software updates for compliance with IHMCL/NHAI standards. • Corrective maintenance including bug fixing, emergency rectification, and service restoration.
Manpower Deployment	• 1 Resident IT Engineer at each toll plaza (9 AM – 6 PM, emergency on-call support). • 1 Remote Software Engineer (offsite). • 1 Service Manager for escalation and reporting control.
System Uptime Requirement	Minimum **98% uptime** for toll system operations.
Penalty Clause	• If downtime >5% and attributable to contractor → **12% deduction on AMC value**. • Response to faults must be immediate (online support).
Maintenance & Reporting Protocol	• Daily and weekly system checklists to be logged. • Fault register maintained at plaza, signed by QEPL authority. • Weekly reports and MoM documentation for review meetings.
Training Obligations	Techsture to provide preventive and corrective maintenance training to QEPL technical team.
Spares Management	Contractor to provide list of recommended spares; QEPL to maintain onsite stock and manage issuance log.
Termination Clause	• QEPL reserves right to terminate anytime for non-performance or breach. • Supplier must refund any advance in case of early termination. • "Time is essence of contract" – delays qualify for termination action.

Parameter	Details
Confidentiality (Clause 13)	All toll data, system logs, configurations, and operational records are confidential. Breach is considered material → liable for termination.
Indemnity	Contractor indemnifies QEPL against all claims, damages, losses, or IPR-related disputes arising due to performance deficiencies.
Assignment / Subletting	Contractor shall not assign or subcontract any portion of the contract without written consent from QEPL.
Arbitration & Dispute Resolution	Arbitration under the Arbitration & Conciliation Act, 1996; Sole Arbitrator to be appointed by QEPL COO; Venue: Mumbai; Language: English.
Governing Law & Jurisdiction	Governed by the laws of India; Jurisdiction with Courts at Mumbai.

Chapter 4.



Review of Pavement Design

Chapter 4. CONDITION ASSESSMENT OF PROJECT ROAD

4.1 General

This chapter presents a detailed assessment of the existing condition of the Jammu–Udhampur Project Highway in accordance with the provisions of the Concession Agreement and relevant IRC guidelines. The objective of this assessment is to evaluate the current condition and performance of the pavement, structures, tunnels, toll plaza facilities, service roads, drainage systems, safety installations and other highway assets. The observations are based on site inspections, maintenance records, annuity performance, and interaction with the concessionaire's O&M team.

This section presents the findings of the **condition assessment** of the **Quazigund–Banihal Section of NH-44 (Km 189+350 to Km 204+700)** in the Union Territory of Jammu & Kashmir. The assessment has been prepared based on **field observations recorded during the site inspection conducted on 08 October 2025**, the results obtained from the **Falling Weight Deflectometer (FWD) survey carried out in June 2023**, and the **Mobile Bridge Inspection Unit (MBIU) survey conducted in December 2023**.

The integration of these three key datasets — *pavement deflection study (FWD)*, *structural evaluation of bridges (MBIU)*, and *visual field inspection* — provides a **comprehensive and reliable representation** of the current structural and functional condition of the project highway and its associated infrastructure.

The project corridor lies in a **mountainous and geotechnically sensitive zone** of the Himalayas, characterized by **steep gradients, sharp horizontal curves, high rainfall, and frequent exposure to adverse weather conditions**. The alignment commences near **Banihal village at Km 189+350** and terminates near **Quazigund at Km 204+700**, passing through two critical tunnel sections — a **single-tube short tunnel (Km 193+830 to Km 194+540)** and a **double-tube long tunnel (Km 194+700 to Km 204+000)**. The corridor serves as a **vital component of NH-44**, ensuring all-weather connectivity between Jammu and Srinagar.

The purpose of this condition assessment is to determine the **current structural health, performance efficiency, and serviceability** of the project highway and its assets. The study integrates data from both **instrumental evaluations** (FWD and MBIU) and **visual condition surveys**, enabling a holistic review of the **pavement system**, **structures**, **drainage**, and **associated highway facilities**.

Exhibit 24 Existing Vs Schedule B

Sl. No.	Particulars	As per Schedule–B	As Built & Deviations Settled in Supplementary Agreement
1	Project Road Start	Km 189+350 at Banihal	Km 189+350 at Banihal
2	Project Road End	Km 204+700 at Quazigund	Km 205+618 at Quazigund
3	Project Length	15.35 km	16.268 km
4	Tunnel	Short Tunnel – Km 193.792 to Km 194.488 (Length 696 m) Long Tunnel – Km 195.425 to Km 203.865 (Length 8.45 km)	Twin Tube Tunnel Tube 1 – 8457.70 m Tube 2 – 8463.38 m

The primary objectives of this assessment are to:

- Evaluate the **structural adequacy, layer stiffness, and residual life** of the pavement using **FWD test results (June 2023)**.
- Assess the **structural integrity and physical condition of bridges and culverts** based on the **MBIU inspection results (December 2023)**.
- Document the **on-ground physical condition of the pavement, structures, and roadside facilities** based on the **site inspection (08 October 2025)**.
- Identify **stretches requiring overlay, rehabilitation, or other maintenance interventions** to restore performance levels.
- Evaluate the **functionality of drainage, signage, tolling, and traffic management systems**.
- Verify **compliance with Operation and Maintenance (O&M) standards** as prescribed by **IRC codes** and the **Concession Agreement**.

This assessment has been carried out in accordance with the following key references:

- **IRC:115-2014** – *Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements using FWD Technique*
- **IRC:117-2014** – *Guidelines for Structural Evaluation of Rigid Pavements*
- **IRC:37-2018** – *Guidelines for the Design of Flexible Pavements*
- **IRC:SP:35-2015** – *Code of Practice for Inspection and Maintenance of Bridges*
- **IRC:83-2019 (Part I & II)** – *Guidelines for Design and Condition Assessment of Bridge Components*
- **IRC:SP:16 and IRC:SP:83** – *Guidelines for Maintenance of Highways and Toll Facilities*

4.2 Pavement

The proposed pavement design for the **Quazigund–Banihal Section (Km 189.350–Km 204.700)** follows **IRC:37-2012** and **IRC:58-2015** standards for flexible and rigid pavements respectively.

Exhibit 25 Main Carriageway (Flexible Pavement)

S. No.	Layer	Material Description	Thickness (mm)
1	Bituminous Concrete (BC)	Wearing course using VG-30 grade bitumen	40
2	Dense Bituminous Macadam (DBM)	Binder course with VG-30 bitumen	110
3	Wet Mix Macadam (WMM)	Granular base layer	250
4	Granular Sub-base (GSB)	Well-graded granular material	200
	Total Crust Thickness		**600 mm**

Exhibit 26 Service Road Pavement

S. No.	Layer	Material Description	Thickness (mm)
1	Bituminous Concrete (BC)	Surface course using VG-30 bitumen	40
2	Dense Bituminous Macadam (DBM)	Binder course	60
3	Wet Mix Macadam (WMM)	Granular base	250
4	Granular Sub-base (GSB)	Granular sub-base material	200
	Total Crust Thickness		**550 mm**

Exhibit 27 Rigid Pavement (Toll Plaza / Tunnel Section)

S. No.	Layer	Material Description	Thickness (mm)
1	Pavement Quality Concrete (PQC)	M-40 grade concrete	300
2	Dry Lean Concrete (DLC)	M-10 grade concrete	150
3	Granular Sub-base (GSB)	Granular layer	150
	Total Thickness		**600 mm**
	Reinforcement Details		

4.3 Assessment of Highway

Knight Frank carried out a detailed review and assessment of the **project highway assets**, which included **Service Roads (SR), Intersections, TLBs, BLBs, Sign Boards, MBCBs, and other related infrastructure components**. The assessment was undertaken through **comprehensive visual inspections** along the entire project stretch, supplemented by a **review of relevant reports and maintenance records** shared by the Client during site visit.

The objective of this exercise was to evaluate the **existing physical condition, functionality, and maintenance requirements** of each asset category. Based on the observations and data collected, a **maintenance strategy** has been formulated covering **regular repair, preventive, and routine maintenance activities** to ensure the long-term sustainability and serviceability of the highway assets.

Furthermore, the **pavement condition** was assessed through a combination of **visual inspection, and Falling Weight Deflectometer (FWD) testing**, providing a comprehensive understanding of surface condition, structural strength, and performance.

Overall, the review indicates that the **project highway assets are in satisfactory condition**, with all key components performing as intended. Minor deficiencies identified during the inspection can be addressed through routine and preventive maintenance measures as part of the recommended asset management plan.

a) Service Road/Slip:

Total length of service road is 400 m & the width of service road is 4.5 m. Haulage Road length is 3.546 Kms & the width of Haulage Road is 6 m. Service Road / Haulage Roads is constructed along the project as flexible pavements. The overall pavement condition is good. Pavement Markings are also found in service roads but are faded at some places

b) Lighting

Highway lighting has been provided at key locations such as junctions, flyovers, tunnels, and toll plazas to ensure adequate visibility and road safety during night hours. High mast lighting systems are installed specifically at junctions and toll plaza areas for enhanced illumination. Additionally, solar-powered blinker signals have been installed at selected median openings to alert and guide motorists at potential conflict points.

c) Metal Beam Crash Barrier

Metal beam crash barriers and wire-rope barriers are installed at critical locations (carriageway edges, underpasses, approaches and high-embankment zones) to protect against vehicular run-offs.

During inspection, minor looseness in some wire-rope assemblies and local damage to parapets/railings were observed. These are localized issues that can be rectified through routine tightening, replacement of worn components, and targeted repairs to restore full safety performance.

d) Drainage

The **drainage system** along the **Quazigund–Banihal Section of NH-44**, including the **Banihal Tunnels (T1 & T2)**, is a **comprehensive surface and subsurface drainage network** designed to efficiently manage both stormwater runoff and groundwater infiltration. The system comprises **longitudinal side drains**, **cross-drainage connections**, and **inspection manholes** categorized as **Surface (S), Drainage (D), Cable Recess (R), Low Voltage (L), and High Voltage (H)** types, placed at regular intervals along both tubes. These drains are interconnected through **RCC channels and perforated pipes** located behind the waterproofing layer to prevent hydrostatic pressure and ensure proper discharge towards portal-side sumps and outfalls.

Drainage Statistics:

- **Total drainage length (T1 & T2 combined): ~18.3 km (both tubes)**
- **Manholes and access chambers: 520 Nos (S, D, R, L, H types)**
- **Average spacing between manholes: 25–30 m**
- **Discharge outlets / sumps: 4 Nos (2 per tunnel)**

e) Bus Bays /Bus Shelters & Truck Lay Byes:

The project includes **two bus bays with passenger shelters** and **two truck lay-byes**, located near the **tunnel portals and toll plaza approaches**. These facilities are provided on both carriageways for safe stoppage, passenger convenience, and parking of heavy vehicles. All areas are equipped with **paved surfaces, drainage, lighting, and signage**, and were observed to be **functionally operational and well-maintained**, with only **minor repairs and cleaning** required at isolated locations.

f) Median & Median Opening:

The **median width** along the **Quazigund–Banihal Section of NH-44** varies between **1.5 m and 4.0 m**, constructed with **RCC kerbs and reinforced concrete shoulders** as per the **Concession Agreement (CA)** specifications. **Median openings** have been provided at designated locations to facilitate controlled cross-movement in accordance with traffic and safety requirements approved by local authorities. These openings are delineated with **pavement markings and reflective studs** to guide vehicular movement. A total of **46 median openings** are provided along the project stretch.

During inspection, it was noted that **blinker lights and cautionary signboards** were missing at a few openings, which should be reinstated under routine maintenance to ensure continued compliance with **IRC:67 and MoRTH safety standards**.

KF View:

Overall, the project highway is in satisfactory condition, with all major assets performing as intended. Minor deficiencies such as faded markings, missing blinkers, and loose barriers can be addressed through routine maintenance to ensure continued safe and efficient operation.

4.4 Assessment of Structures

A **visual condition survey** of all bridge and culvert structures was carried out jointly by the **Knight Frank (KF) team** and the **Concessionaire**, with the objective of **identifying and quantifying structural deterioration** arising from various factors such as **dead load, live load, wind load**, and **physical or chemical influences** exerted by the environment. In addition to examining **damages caused by unpredictable natural events** or **vehicular collisions**, the inspection also aimed to detect or monitor the impact of any **construction-related imperfections** that may affect long-term performance. Such periodic inspections play an important role in **enhancing the service life and safety** of both existing and newly built bridge structures.

Knight Frank reviewed the **structural condition assessment** of bridges and culverts along the **Banihal village at Km 189+350** and terminates near **Quazigund at Km 204+700**, passing through two critical tunnel sections — a **single-tube short tunnel (Km 193+830 to Km 194+540)** and a **double-tube long tunnel (Km 194+700 to Km 204+000)** during the **Operation & Maintenance phase**, based on **visual inspection** and findings from the **Mobile Bridge Inspection Unit (MBIU) survey** carried out in **December 2023** . The assessment encompassed all **major and minor bridges**, as well as **underpasses** along both the **left-hand and right-hand carriageways** of the corridor.

The observations were made through detailed **visual inspection, functionality checks, and performance verification** of all civil, structural, and electromechanical components, including **bridges, tunnels, culverts, toll plazas, ventilation buildings, drainage systems, and associated road furniture**.

Exhibit 28 Details of Structures

S. No.	Type of Structure	Chainage (Km)	Description / Configuration
1	**Major Bridge No. 1 (LHS)**	189+435	3×36.63 m span, RCC abutments & piers
2	**Major Bridge No. 4**	190+310	RCC deck slab type
3	**Railway Over Bridge (ROB)**	190+400 – 191+100	45 m wide steel girder with RCC slab
4	**Viaduct (South Portal Approach)**	192+600 – 194+200	Multi-span elevated viaduct

S. No.	Type of Structure	Chainage (Km)	Description / Configuration
5	**Truck Parking – South Portal (Lamber)**	192+700 – 193+500 (LHS)	Concrete pavement area with drainage channels
6	**Tunnel T1 (Short Tunnel)**	193+792 – 194+488	Length 0.69 km; 8.50 m wide carriageway with 1.05 m footpath
7	**Tunnel T2 (Main Tunnel)**	195+425 – 203+865	Length 8.45 km; 9.35 m wide carriageway with 1.16 m footpath
8	**Viaduct / Bridge (North Portal Exit)**	204+100 – 204+600	RCC spans with expansion joints
9	**Box Culverts (3 Nos)**	204+814, 205+131, 205+527	RCC Box type structures
10	**Truck Parking – North Portal (Ujroo)**	205+100 (RHS)	Concrete pavement area with facilities
11	**Toll Plaza Building – South (Lamber)**	193+760 (Approx.)	Admin + ETC + Control Rooms
12	**Toll Plaza Building – North (Ujroo)**	203+880 (Approx.)	Admin + ETC + Power rooms
13	**Ventilation Building – South Portal**	193+750	Jet fans, axial fans, and control panels
14	**Ventilation Building – North Portal**	203+880	Louvers, dampers, DG set & exhaust shafts
15	**Drainage Systems (General)**	Throughout alignment	Longitudinal drains, sumps, de-oiling tanks

The inspection revealed that the overall condition of the project assets is **functionally satisfactory**, with **major structures, tunnels, and ancillary facilities in operational condition**, while a few **localized deficiencies** such as damaged gratings, faded signages, non-functional tunnel lights, open hydrant cabinets, and minor surface cracks were observed at specific chainages. Routine **maintenance, cleaning, repainting, and rectification** activities were found to be ongoing under the scope of the concessionaire.

KF View:

Overall, based on the review of the previous MBIU survey reports (conducted by the SPV in December 2023) and a comprehensive visual examination during the site visit, it was observed that most structures are in sound structural condition and maintained in a fair state of serviceability.

4.5 Assessment of Road Furniture & Project Facilities

The inspection of highway and road furniture included **signages, guardrails, pavement markings, hazard markers, drainage gratings, SOS boxes, and lighting systems**. The overall condition was **fair**, but several elements were found needing repainting, replacement, or cleaning.

Road safety devices like **hazard markers, chevrons, and reflective signs** were either faded or damaged at several chainages, and some **road studs and rumble strips** were missing or worn. Tunnel SOS boxes were functional but had **non-working LED indicators** at certain points.

Exhibit 29 Details of Road Furniture's Items

S. No.	Facility / Item	Chainage (Km)	Observation / Condition
1	**Hazard Marker (Damaged)**	189+520 (RHS)	Bent / missing marker
2	**Overhead Gantry Sign Boards**	189+350 & 205+618	Faded / damaged boards
3	**Chevron Signs (Faded)**	192+300 – 192+400 (RHS)	Reflective film worn out
4	**Weighbridge Sign Board (Missing)**	193+935 (LHS)	Missing near Lamber Toll Plaza
5	**Informative Sign – Toll Ahead (Faded)**	193+300 (LHS)	Film faded
6	**Hazard Marker (Rectified)**	192+350 (LHS)	Earlier missing, now fixed
7	**Drainage Gratings – Truck Parking SP**	192+700 – 193+500	Damaged gratings
8	**Pavement Cracks / Settlement Zone**	193+050 – 193+080 (LHS)	Settlement at MCW
9	**Median Plantation – Section 1**	189+350 – 191+000	Plantation with tree guards

S. No.	Facility / Item	Chainage (Km)	Observation / Condition
10	**Road Studs / Cat Eyes (Missing)**	Inside tunnels and viaduct	Missing at several locations
11	**SOS Boxes (LED not working)**	Inside tunnels	Few SOS box lights not functional
12	**Fire Hydrant Cabinets (Open)**	Inside tunnels	Doors unlocked and unprotected
13	**Median Kerb Painting (Trial Patch)**	First 500 m inside Tunnel T1	Trial painting executed
14	**ROW Poles / Boundary Markers**	Throughout corridor	Not installed per NHAI standards
15	**Plantation – North Portal Section**	205+000 – 205+618	Ongoing plantation
16	**Lighting (Tunnel & Toll Plaza)**	Both tunnels and portals	Many non-functional lights
17	**Ventilation Jet Fans (Dusty)**	Inside tunnels	Working intermittently
18	**Bridge Name & ID Boards**	All bridge locations	Damaged / faded
19	**Medical Aid Post (Toll Plaza Complex)**	South & North Toll Plazas	Functional
20	**Rumble Strips**	Tunnel approaches & junctions	Faint markings

4.5.1 Project Facilities

Project facilities include **ventilation buildings, truck lay-bys, drainage systems, and tunnel support structures**. These were found in operational state with periodic maintenance activities.

Exhibit 30 Details of Project Facilities

Facility	Chainage (Km)	Condition / Observation
Ventilation Building – South Portal	193+750	Minor dust accumulation: fan cleaning required
Ventilation Building – North Portal	203+880	GI sheets replaced; louver maintenance pending

Facility	Chainage (Km)	Condition / Observation
Truck Parking – South Portal	192+700 – 193+500	Drainage damaged; repair under process
Truck Parking – North Portal	205+100	ROW cleaning required; gratings damaged
Drainage System	Entire corridor	Desilting in progress

KF View:

Based on the site visit, Knight Frank is of the view that the road furniture and project facilities are functionally adequate but require targeted remedial and maintenance action. Most defects are localized and maintenance-driven; however, a small number of safety-critical items (non-working SOS LED indicators, open fire-hydrant cabinets, missing road studs and non-functional lighting) should be rectified immediately to maintain safety and serviceability

4.6 Assessment of Tunnels

The **Quazigund–Banihal Section of NH-44 (Km 189+350 to Km 205+618)** traverses the **Pir Pranjal range of the Middle Himalaya**, a geologically complex zone characterized by folded sedimentary formations of the **Murree and Siwalik Groups**. The alignment primarily passes through the **Middle Siwalik formation**, comprising **medium- to fine-grained sandstone, siltstone, shale, and claystone**, with interbedded argillaceous and arenaceous strata. The overburden varies significantly across the alignment due to steep topographical gradients and sharp elevation differences between the north (Quazigund) and south (Banihal) portals.

The project features **two major tunnels – Tunnel T1 and Tunnel T2**, forming the critical connectivity link between Banihal and Quazigund, thereby bypassing the earlier snow-prone Jawahar Tunnel stretch. Both tunnels are twin-tube structures designed to carry **unidirectional traffic**, with dedicated **ventilation, lighting, fire safety, and drainage systems** as per **MoRTH and IRC:SP:91-2010 guidelines**.

An overview of the tunnel details for the project is provided below.

Exhibit 31: Details of Tunnel

Tunnel No.	Section	Portal Location	Design Chainage (Km)	Length (m)
T-1 (Short Tunnel)	South Portal (Banihal)	193.792 – 194.488	193+792 to 194+488	**690 m**
T-2 (Main Tunnel)	South to North (Banihal–Quazigund)	195.425 – 203.865	195+425 to 203+865	**8,440 m**

- **Total Tunnel Length:** 9.13 km (comprising two twin-tube tunnels)
- **Tunnel Configuration:** 2 × 2 carriageways (unidirectional, twin-tube)
- **Cross Passages:** At 300 m intervals for emergency evacuation
- **Fire Hydrant System:** Provided along both tubes at 90 m intervals
- **Drainage Sumps and Pumps:** Installed at each portal for dewatering

4.6.1 Tunnel Drainage

During our site visit, two separated drainage systems are Observed in tunnel for carriageway (surface) water and groundwater.

a) SURFACE WATER DRAINAGE SYSTEM:

The surface water is collected at surface water manholes located inside the driving lane side with inlets at intervals of approx. 50-60 m.

b) GROUNDWATER WATER DRAINAGE SYSTEM

The groundwater is collected by the sidewall drainage and the sub-base drainage. The groundwater within the side wall drainage is discharged into the main ground water drainage at the maintenance niches at intervals of approx. 50-60 m.

4.6.2 Manhole

During the inspection, manholes were observed to be strategically positioned at regular intervals to allow for routine inspection of electrical cables and drainage systems. Various types of manholes are present within the tunnel, including:

- Surface Water Manholes
- Cable Recess Manholes
- Low Voltage (LV) Cable Manholes
- High Voltage (HV) Cable Manholes

The details of manholes and their location are

- **Driving Lane: HV cable manholes, Recess manholes, Surface drainage manholes**
- **Emergency Lane: LV cable manholes**

Based on the site visit, Knight Frank (KF) is of the view that the regularly provided surface drain boxes—typically spaced at 25–50 m—provide effective access to the principal drainage conduit running the length of the tunnel. At the time of inspection, the drain boxes showed no visible clogging, which indicates consistent and effective maintenance practices to keep the drainage system operating unobstructed.

4.6.3 Power Supply & Substations in Tunnels:

Each tunnel portal is served by a dedicated **33/11 kV substation**, ensuring reliable power supply for tunnel systems, control rooms and ancillary buildings. The substations are located at the **Banihal (South) and Quazigund (North) portals** and receive primary power from the local utility (JKPDD). Redundant feed arrangements (Circuit A and Circuit B) and a looped HT cable between portal ventilation buildings and the five in-tunnel substations provide continuity of supply along the tunnel. UPS units provide conditioned emergency power for TMS and essential lighting; diesel generators provide backup in the event of utility failure.

- **Substation–1 (South / Banihal):** receives 11 kV from JKPDD and feeds tunnel lighting, ventilation, TMS and fire systems.
- **Substation–2 (North / Quazigund):** independent 11 kV supply feeding ventilation fans, control room and firefighting systems.

Key power assets and configuration observed / provided:

- DG sets: **one 500 kVA (North) and one 600 kVA (South)** (capable of being synchronized to provide improved redundancy for critical loads).
- DG synchronizing panel with **3 × 1600 A ACBs**.
- Ventilation power panels with **3 × 1600 A ACBs** and **6 × 400 A MCCBs**.
- Four (4) distribution sub-panels (each with a **400 A MCCB** and multiple **100 A MCCBs**).
- **16 VFD panels** for jet-fan control.
- MV/LV transformers located inside the ventilation buildings and at five in-tunnel electrical cross-passage substations (ECP-01 to ECP-05), spaced at approximately **1,500 m** intervals.
- 11 kV MV cables routed in conduit beneath the tunnel carriageway; HT cables looped between all substations to enable cross-feeding.

Redundancy is provided by the dual-circuit arrangement: **each tunnel substation can be fed from either portal** (Circuit A via Tube-1 or Circuit B via Tube-2), allowing one portal to supply the combined emergency/UPS load in the event of a failure at the other portal. DGs are sized and configured principally to sustain **UPS and essential systems (TMS & emergency lighting)**; full-load support for all tunnel loads from DGs alone is limited and therefore utility redundancy and cable loop arrangements remain the primary resilience strategy.

All major subsystems and field equipment are integrated to the **Control Room** via server–client/Modbus interfaces. The control room features a widescreen video wall tied to operator workstations and a master–slave server configuration with a database management system for

logging events, alarms and maintenance records; a designated operator monitors and controls day-to-day operations.

4.6.4 Tunnel Ventilation System and Safety Features

The **ventilation system** in both tunnels is of the **longitudinal type**, designed to maintain acceptable air quality and visibility levels within the tubes. Each tunnel tube is fitted with **axial jet fans**, strategically placed to regulate air movement and remove exhaust gases. The system is integrated with **CO (Carbon Monoxide)** and **NO_2 (Nitrogen Dioxide)** sensors for real-time air quality monitoring and is controlled through a **centralized SCADA system** housed at the south portal control building.

- **Tunnel T1:** Equipped with **8 jet fans**, 4 CO sensors, and 4 NO_2 sensors.
- **Tunnel T2:** Equipped with **20 jet fans**, 10 CO sensors, and 10 NO_2 sensors.
- **Cross Passages:** Provided every 300 m for emergency evacuation and fire segregation.
- **Fire Safety:** Fire hydrant network with landing valves every 90 m; emergency fire extinguishers at both portals; CCTV and Public Address System integrated with ATMS.
- **Drainage:** Longitudinal drain with collection sumps and submersible pumps at each portal to remove seepage and stormwater.

Exhibit 32: Summary of Tunnel Systems

Component	Description / Quantity	Status
Number of Tunnels	2 (Twin-Tube Configuration)	Operational
Total Length	9.13 km	Functional
Jet Fans	28 Nos. (T1 – 8, T2 – 20)	Operational
CO & NO_2 Sensors	28 Nos. (distributed along tunnels)	Functional
Cross Passages	300 m interval	Operational
DG Sets	2 Nos. (500 KVA each) per portal	Working
Substations	2 Nos. (Banihal & Quazigund)	Active
Fire Hydrant Points	At 90 m intervals	Functional
Drainage Sumps	2 (one at each portal)	Operational

4.7 Assessment of Tunnel FIREFIGHTING SYSTEM

The firefighting system includes both portable fire extinguishers and a pressurized hydrant network. The tunnel hydrant system is specifically designed to deliver pressurized water through hydrant valves positioned within the tunnel. Two-way hydrants are installed in designated niches at **250-meter intervals**, while **isolation valves** are provided every **1,000 meters** to enable sectional control. The system utilizes **150 NB main header pipes** to distribute water throughout the tunnel. Fire pump houses are located at both the **north and south portals**, each responsible for covering half the tunnel length. The **pumping capacity** of the system is **144 m^3/h**.

Each pump house is equipped with:

- **One electric motor-driven horizontal centrifugal pump**
- **One standby diesel engine-driven horizontal centrifugal pump**, activated during power failure or main pump breakdown
- **One jockey pump** to maintain system pressure during minor leakages

At each portal, **fire water storage tanks** with an effective capacity of **144 cubic meters** are installed. These tanks are divided into compartments and fitted with essential monitoring equipment such as **level indicators** and **temperature transmitters** to ensure reliable operation.

4.7.1 List of Key Major Fire Fighting Equipment observed at site during visit

I. **Hydrant Main Pumps** – 2 units

II. **Hydrant Standby Pumps** – 2 units

III. **Jockey Pumps** – 2 units

IV. **Circulation Pumps** – 2 units

V. **HSD Tank** – 1 unit

Knight Frank review the Maintenance and Inspection Schedule adopted by company for the maintenance of Firefighting system.

The following schedule is followed by site team for the maintenance of firefighting system.

- **Fire Hydrants** – Inspected biannually to check for damages, leaks, and operational readiness
- **Hydrant Functional Tests** – Conducted twice a year or as needed to ensure proper valve function and system response
- **Fire Extinguishers** – Inspected twice a year by an authorized third-party agency
- **Fire Alarm System** – Checked periodically in accordance with the Standard Operating Procedure (SOP)
- **Sprinkler Systems** – Inspected as per the SOP or maintenance manual to ensure leak-free and unobstructed operation
- **Emergency Lighting** – Tested monthly or quarterly to ensure functionality during power outages
- **General Maintenance** – Carried out in line with the project-specific maintenance manual for all components

KF View:

Based on the site visit, Knight Frank is of the view that the firefighting installation (hydrants, pump houses, storage tanks and portable equipment) is fit for purpose and maintained to acceptable standards. KF advises targeted actions such as regular diesel engine exercise under load, documented monthly pump performance logs, and an annual full-system functional test to mitigate operational risk.

4.8 Assessment of TUNNEL VENTILATION SYSTEM

The **ventilation system** in both tunnels is of the **longitudinal type**, designed to maintain acceptable air quality and visibility levels within the tubes. Each tunnel tube is fitted with **axial jet fans**, strategically placed to regulate air movement and remove exhaust gases. The system is integrated with **CO (Carbon Monoxide)** and **NO_2 (Nitrogen Dioxide)** sensors for real-time air quality monitoring and is controlled through a **centralized SCADA system** housed at the south portal control building.

Knight Frank team reviewed the tunnel ventilation system adopted for the project which is as follows

- The ventilation system designed with the heat release rate of 50MW consists of two tubes with unidirectional traffic flow.
- The first tube, known as the Northbound tube, leads traffic in the northern direction towards Srinagar,
- Second tube, called the Southbound tube, leads traffic in the southern direction towards Banihal
- There are two ventilation stations each at one portal end with total of eight fans (four at each end) located at the ends of these ducts. Half of both the tubes are catered by one fan station from North & South bound portals. The ventilation duct of each tube is separated by a remotely operated fire damper.
- The tunnels are also featured by booster jet fan (in group of two) which are strategically placed in the niches on side wall of the tunnel at 100 m spacing.

I. **Northbound Tube**

- Number of Jet Fans: 60
- Number of Fan Groups: 30
- Fan Diameter: 1000 mm
- Power Rating (each): 30 kW

II. Southbound Tube

- Number of Jet Fans: 66
- Number of Fan Groups: 33
- Fan Diameter: 1000 mm

- Power Rating (each): 30 kW

KF View:

Both the Ventilation Stations house a total of eight axial fans, All the axial fans are reversible

In emergency situations, the fans operate based on demand, with their speed and operation directly proportional to the fire's location within the tunnel.

4.8.1 List of Major Equipment for Tunnel Ventilation System:

S. No.	Item Description	Qty (nos.)	Equipment Design Life
1	Axial Fan135 m^3/s @ 3381 Pa (incl. transition piece) **Motor**: 1500 kW, 807 A, 1500 rpm	8	30 Years
2	VFD Panel- VFD Module: 400V, 880A & 500 kW- Main ACB: 690V & 1250A	8	15 Years
3	Jet Fan26.3 m^3/s, 1004 N (incl. 2 silencers & 1 fan bracket) **Motor**: 130 kW, 52.6 A, 1475 rpm	126	20 Years

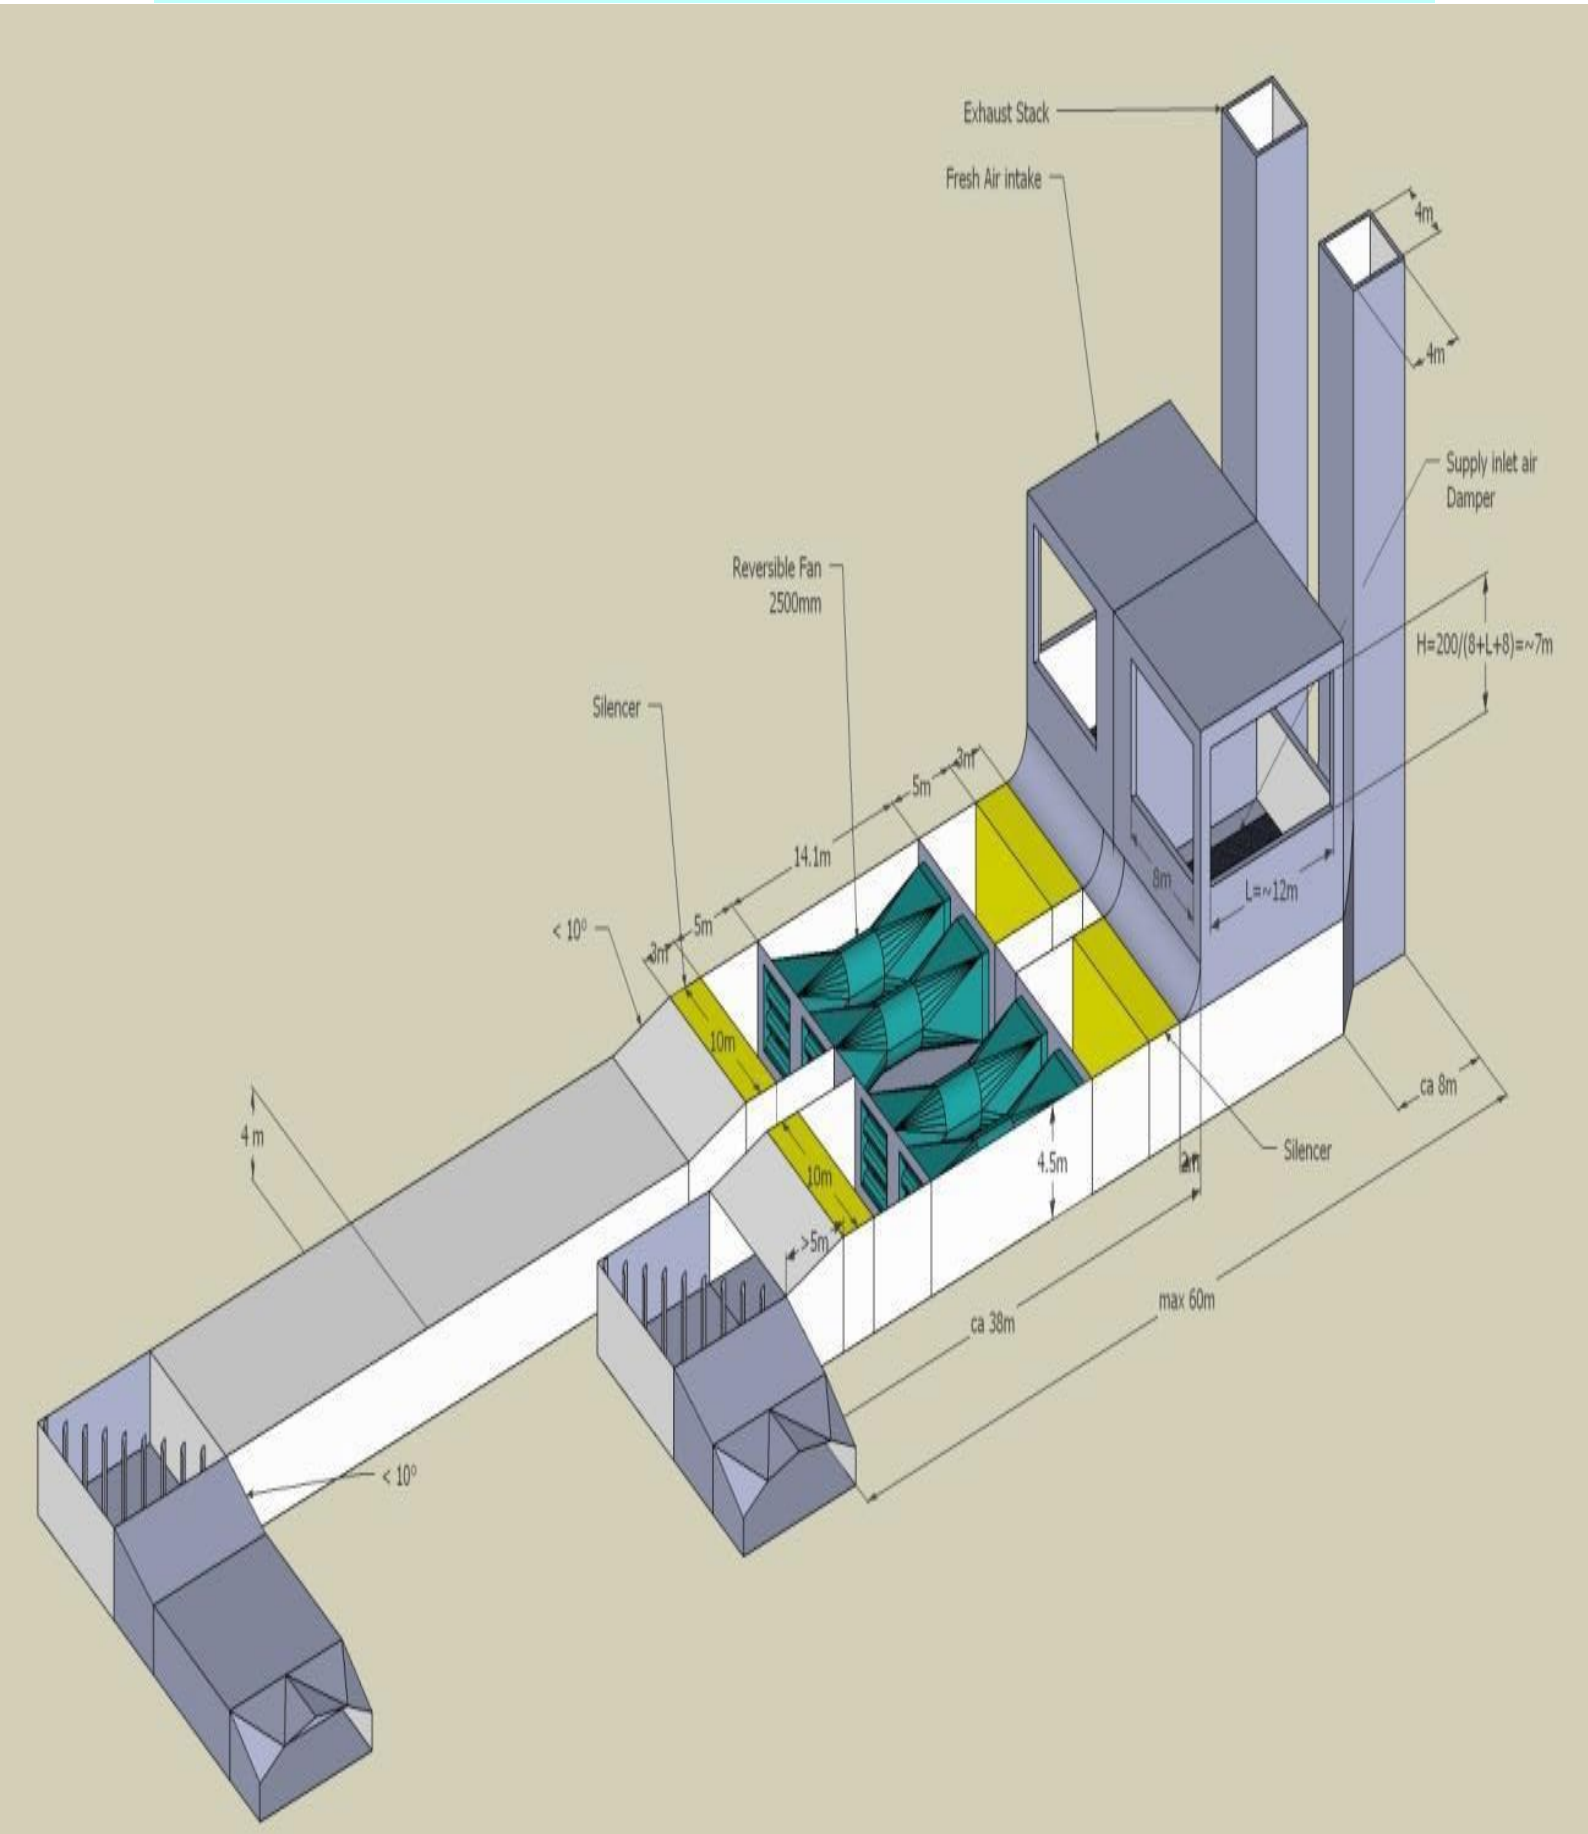
List of Maintenance Check & Frequency

Activity	Brief Description
Inspection	Check fans, dampers, systems for wear, noise, vibration.
Cleaning	Remove dust/debris to maintain airflow and efficiency.
Equipment Testing	Test fans/dampers; full tests post-fire incidents.
Monitoring Systems	Track air quality; adjust ventilation in real time.
Emergency Protocols	Define and train for emergency system use.
Fire Doors	Check closure, seals, and integrity.
Cross Pressure Test	Routine checks to detect air leakages.

KF View:

Based on the site visit, Knight Frank is of the view that the ventilation arrangement (two portal fan stations with 8 axial fans plus 126 jet fans and remotely-operated dampers) is fit for purpose and operates on demand as intended. To mitigate operational risk KF advises targeted actions: scheduled VFD and motor insulation

tests, vibration and bearing monitoring, regular jet-fan anchorage and silencer inspections, calibration of air-quality/smoke sensors, cross-pressure validation and annual full-load/realistic fire drills with control-system verification.



4.9 Assessment of INTEGRATED TUNNEL MANAGEMENT SYSTEM (ITMS)

Knight Frank team reviewed the Integrated Tunnel Management system adopted for the project which is as follows

- The ITMS network is composed of the optical fiber infrastructure installed inside the tunnels and the Ethernet switching equipment that provide the transmission backbone.
- The ITMS network transmission system will interface with the following systems to provide IP and ethernet services.
  - Emergency call station
  - CCTV Surveillance system & AID
  - Linear heat sensing
  - Traffic control system
  - Ventilation system
  - Tunnel lighting system
  - PLC & Power supply
  - Toll collections

KF View:

Knight Frank is in view that implementation of an Integrated Tunnel Management System (ITMS) leveraging fiber optic and Ethernet networks integrates multiple critical systems—CCTV, emergency call stations, ventilation, lighting, and traffic control—ensuring enhanced tunnel surveillance, control, and incident response capabilities.

4.10 Assessment of Toll Plaza

Two toll plaza complexes are located near **Lamber (South)** and **Ujroo (North)**, housing toll booths, administrative offices, control rooms, electrical panels, and washrooms. Both complexes are structurally stable and operational, though minor civil maintenance and electrical works were observed in progress.

Exhibit 33 Details of Toll Plaza

S.no	Toll Plaza Details		
1	Chainage (Km)	193+760	203+880
2	Toll plaza name	Lamber Toll Plaza	Urjoo Toll Plaza
3	No of lanes	6 lanes (3 each direction) – ETC & Manual mix	6 lanes (3 each direction) – ETC & Manual mix
4	Admin Building	Yes	Yes
5	Static Weigh Bridges (SWB)	2	2
6	Toilets	2	2
7	High mast lights	4 No's	4 No's
8	Toll Booths	12 No's	12 Nos.
9	Ambulance	2 Nos.	
10	Crane	2 No's	
11	Highway Patrolling Vehicles	2 No's	
12	Hybrid	10 No's	
13	Medical-Aid Post	Yes	Yes
14	Canteen	Yes	Yes
15	Control & Server Room	Yes	Yes
16	Firefighting System	Yes	Yes
17	Separator width at Toll booths (m)	1.8	1.8
18	Toll lanes width (m)	3.5	3.5
19	Extra Wide Lane width (m)	5.5	5.5

KF View:

Knight Frank reviewed the two toll plazas located at Km 193+760 (Lamber Toll Plaza) and Km 203+880 (Urjoo Toll Plaza) during the site visit, in line with the provisions of the Concession Agreement. Both plazas are equipped with 5 + 1 lanes

in each direction, operating under a Hybrid Electronic Toll Collection (ETC) system comprising both manual and electronic lanes.

Each toll plaza is provided with key facilities such as canopy and high mast lighting, administrative and control buildings, toilet blocks, static weighbridges, tow-away cranes, highway patrolling vehicles, paramedical booths, ambulance services, canteen, and firefighting systems.

Based on the inspection, Knight Frank is of the view that both Lamber and Urjoo Toll Plazas are in good operational condition, with all essential systems functional and routine maintenance being carried out satisfactorily.

4.11 Assessment of Toll Management System (TMS)

Knight Frank conducted a review of the **Toll Management System (TMS)**, including the **Electronic Toll Collection (ETC)**, **Weigh-in-Motion (WIM)** systems, and associated control mechanisms along the **Quazigund–Banihal Section of NH-44 (Km 189+350 to Km 205+618)** during the **site visit.**

The assessment was undertaken through field inspections, system demonstrations, and a review of documents and operational data provided by the Concessionaire. The TMS has been established to ensure **efficient, transparent, and automated toll collection**, integrating ETC, video surveillance, data logging, and centralized monitoring through control rooms at the **Lamber (Km 193+760)** and **Ujroo (Km 203+880)** toll plazas.

The system operates under a **Hybrid ETC framework**, equipped with **automatic vehicle classifiers, smart card readers, loop detectors, WIM sensors, automatic barriers, and CCTV cameras**. All systems are supported by **UPS and DG power backups** to maintain uninterrupted operation. Based on the inspection, the **TMS, ETC, and WIM systems were found to be in good working condition**, with only minor issues related to periodic calibration and sensor cleaning. Overall, the TMS is performing satisfactorily, ensuring smooth toll operations, reduced congestion, and improved transparency across the corridor.

4.11.1 Toll System Maintenance

The **Toll Management System (TMS)** for the **Quazigund–Banihal Section of NH-44** was installed by **M/s Techsture Technologies India Pvt. Ltd., Ahmedabad** and has been in continuous operation since its commissioning in **2017**. The **Concessionaire, M/s Quazigund Expressway Private Limited (QEPL),** has continued to engage the same system integrator under an **Annual Maintenance Contract (AMC)** for the operation and maintenance of all **TMS components**, including the **Hybrid Electronic Toll Collection (ETC) system** installed across all toll lanes at the **Lamber (Km 193+760)** and **Ujroo (Km 203+880)** Toll Plazas. The integrator remains responsible for the **upkeep, calibration, and servicing** of all tolling hardware and software systems to ensure uninterrupted functionality and compliance with NHAI standards.

4.11.2 Advanced Traffic Management System (TMS)

The ATMS installed in the tunnels includes **CCTV cameras, jet fans, ventilation controllers, and SOS panels**. Most systems are working, though several **CCTV cameras, jet fans, and LED indicators** require cleaning and calibration. The control rooms are functional, and operators were present during inspection.

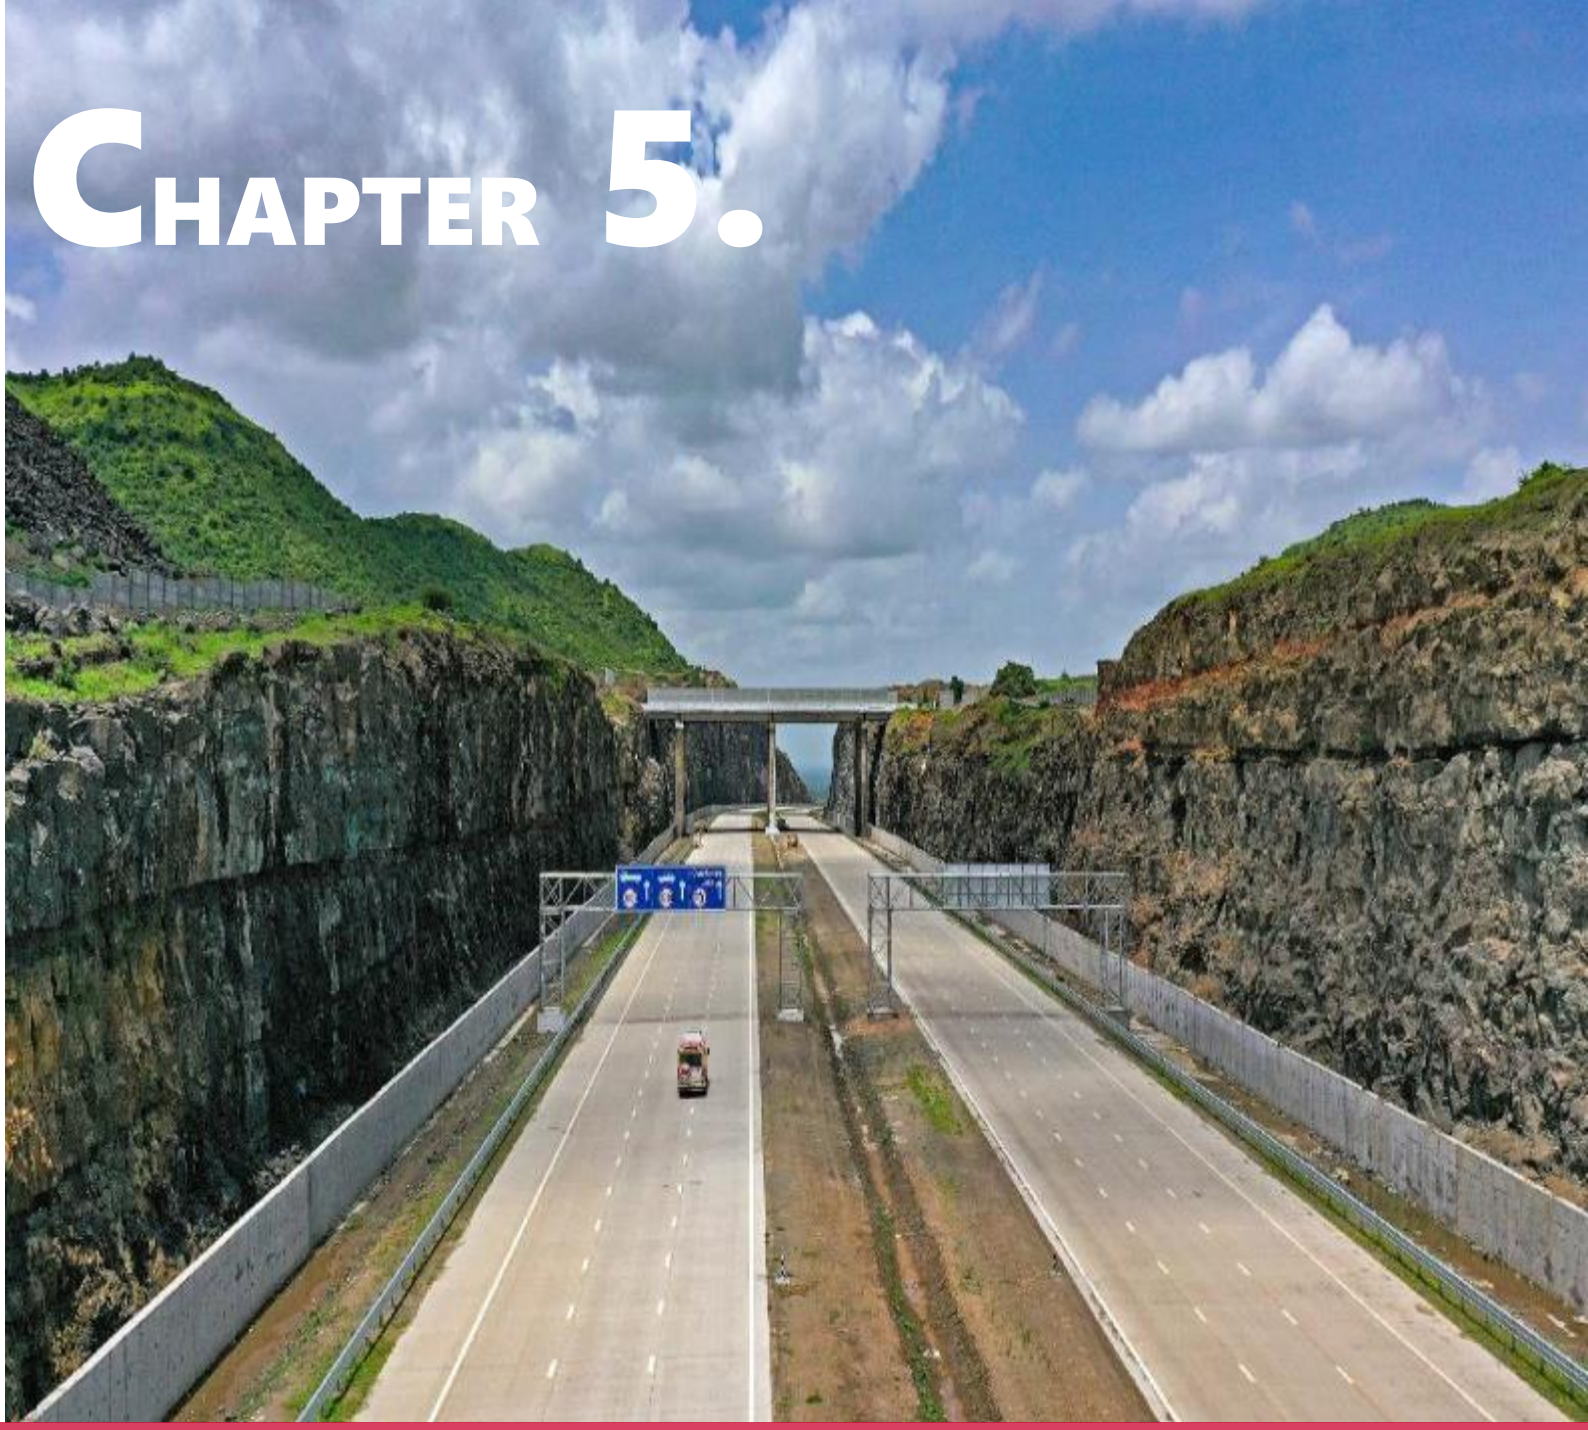
☛ Knight Frank reviewed the **Toll Management System (TMS)** installed along the **Quazigund–Banihal Section of NH-44 (Km 189+350 to Km 205+618)**, including **Electronic Toll Collection (ETC)** and **Weigh-in-Motion (WIM)** systems, through field inspections, system demonstrations, and review of operational records provided by the Concessionaire. The system operates under a **Hybrid ETC framework**, integrating **AVC, WIM, CCTV surveillance, and data logging** for centralized control at **Lamber (Km 193+760)** and **Ujroo (Km 203+880)** Toll Plazas.

The toll operations are being managed through a **third-party agency**, with the TMS presently **functional but operating with certain technical limitations**. The **Automatic Vehicle Classification (AVC)** system is profiler-based with local data storage; however, it does not transmit data independently when the lane controller is taken offline for maintenance. It was also observed that the **Lane Status Display Unit (LSDU)**—a critical component for real-time hardware monitoring and alert generation—has **not been installed**, leading to manual communication of equipment failures by toll operators or IT staff during inspections.

At present, the TMS functions primarily as a **ticketing-based system**, with toll transaction validation dependent on **manual inputs** from toll collectors. While overall tolling operations remain stable with no reported disruptions to revenue realization, **integration between AVC classification and Fastag validation** can be strengthened to improve transaction accuracy, transparency, and system reliability.

Based on the site inspection, Knight Frank is of the view that while the TMS and toll collection process are operational and performing satisfactorily, enhancements in real-time monitoring, system alerting, and data integration are recommended to ensure improved efficiency and long-term reliability.

Chapter 5.



Pavement Investigation & Assessment

Chapter 5. PAVEMENT INVESTIGATION & ASSESSMENT

5.1 General

The life of the Pavement has a co-relation with both its structural as well as Functional Condition. Inspecting and tracking of pavement condition, scheduling maintenance, and treating distress can have serious ramifications impinging on safety of road users and enhancing functional efficiency in end use of the Facility. It is therefore essential to carry out the assessment of the condition of the pavement on a given date taking into cognizance a variety of data to arrive at well-considered decisions and drawing up of the maintenance strategy and taking appropriate course of action to apply funds and resources in optimizing the desired levels of operations on the road assets. Condition data can include factors like roughness, specific distresses, rut depth, friction, and structural health.

Once measurements of road condition are available, they are interpreted in such a way that allows the decision-making process to occur in a logical fashion. This might involve converting multiple physical parameters into a single index, allowing different sections of a road network to be directly compared against one another etc.

Pavement performance under prevailing as well as projected traffic and environmental conditions is crucial as it has a direct bearing on the economic returns from the project developments. While an under-designed pavement will fail prematurely, imposing undesirable Cost Over runs on the Project. It is therefore necessary to ensure the pavement layer thicknesses; configurations and materials are adequately designed and require minimal maintenance under the anticipated traffic loading throughout the life cycle of the project.

To achieve this objective and thereby to predict the performance of any pavement structure, it is necessary to analyze material characteristics, traffic condition, present physical condition of the pavement layers, local environment, and its impacts. In addition, it is also necessary to presume what level of performance and what pavement conditions will be considered satisfactory to estimate the future operation and maintenance cost of the road.

Due to the variety of variables involved, it is essential to determine the exact level of pavement performance through the project life. But, based on the assessment of present condition of pavement, analysis of available survey data, traffic projections and estimations regarding the pavement life, future maintenance requirements can be estimated.

This part of the report deals with the Review of Pavement Design and provides insights on Design Life of the Pavement, Crust thickness, History of Overlays over the Existing Pavement Etc. for sound pavement performance through the project life.

The pavement design for the Quazigund–Banihal Section of NH-44 (Km 189.350 to Km 204.700) has been carried out in accordance with the guidelines laid down in **IRC:37-2012**, **IRC:81-1997**, and **MoRTH Specifications (5th Revision)**. The design accounts for the heavy commercial vehicle traffic, high axle loading, subgrade strength, and environmental conditions prevalent in the mountainous terrain of Jammu & Kashmir.

5.2 Objectives

The project road passes through a high-altitude hilly region of the Pir Panjal range, characterized by steep gradients, low temperatures, and substantial rainfall and snowfall. The alignment includes open road sections, tunnels, viaducts, and approaches requiring both **flexible and rigid pavement designs**.

The objective of the pavement design is to ensure durability, structural strength, and riding comfort for the design life of the pavement, while minimizing maintenance requirements under varying climatic and loading conditions. The design life adopted for flexible pavement is **15 years**, and for rigid pavement (tunnel and toll plaza sections) is **30 years**.

5.3 Review of Pavement Design

A. Design CBR

As per the Pavement design report, the subgrade CBR of **8%** was adopted for all flexible pavement designs. This value was derived from field investigations and laboratory tests and is consistent with IRC 37:2012 requirements. The CBR has been used to compute the resilient modulus of subgrade and thereby establish the required layer thicknesses.

B. Design MSA

Traffic projections were computed using commercial vehicle counts, axle load data, VDF, lane and directional distribution factors. The **Appendix-1 MSA Report** confirmed the following:

- COD 2017 – 2.80 million standard axles (base year traffic).
- 2026 (10 years) – 40 MSA,
- 2031 (15 years) – 70 MSA,
- 2036 (20 years) – 107 MSA

This formed the basis for flexible pavement thickness design and for extrapolating rigid pavement requirements.

C. Pavement Crust of Main Carriageway

The adopted pavement composition for the main carriageway, derived from IRC:37-2012 guidelines and IITPAVE analysis.

The crust thicknesses are as follows:

Exhibit 34 Adopted Composition – Main Carriageway:

Layer	Thickness	Remarks
Bituminous Concrete (BC)	40 mm	Surface Course, VG_30 grade bitumen
Dense Bituminous Macadam (DBM)	110 mm	Binder Course
Wet Mix Macadam (WMM)	250 mm	Base Layer
Granular Sub-Base (GSB)	200 mm	Sub-Base & Drainage Layer
Total Thickness	**600 mm**	**Adequate for 70 MSA (15 year)**

Paved shoulders are to be constructed with the same crust as the main carriageway, as per **IRC SP:84-2014 Clause 5.10**

D. For Service Road/Slip Road

The service road pavement design was carried out as per IRC SP:84-2014 requirements, with a design traffic of 10 MSA and subgrade CBR = 8%.

The crust thicknesses are as follows:

Exhibit 35 Adopted Composition – Service Roads:

Layer	Thickness	Remarks
Bituminous Concrete (BC)	40 mm	Surface Course
Dense Bituminous Macadam (DBM)	60 mm	Binder Course
Wet Mix Macadam (WMM)	250 mm	Base Layer
Granular Sub-Base (GSB)	200 mm	Sub-Base
Total Thickness	**550 mm**	**Adequate for 10 MSA (10 year)**

This configuration is economical, structurally adequate, and suitable for expected traffic demand on service roads.

E. Rigid Pavement – Tunnel and Toll Plaza

Rigid pavements are proposed for the tunnel and toll plaza areas, designed as per **IRC:58-2015** for a **30-year design life**. These sections are expected to carry cumulative loading equivalent to >100 MSA.

The crust thicknesses are as follows:

Exhibit 36 Adopted Composition - Tunnel and Toll Plaza:

Layer	Thickness	Remarks
Pavement Quality Concrete (PQC)	40 mm	Designed with dowel/tie bars, flexural strength governed by IRC:58
Dry Lean Concrete (DLC)	60 mm	Minimum cement content, strength as per IRC SP:49; extended 0.5 m beyond PQC
Granular Sub-Base (GSB – drainage)	250 mm	Designed with permeability ≥ 20 m/day
Total Thickness	**550 mm**	**Adequate for 30 years (>100 MSA cumulative traffic)**

F. Overlay Design

At the stage, **no overlay has been prescribed**, as the project involves the provision of **entirely new pavements**. The need for **future overlays** will be assessed based on **deflection surveys**, **roughness measurements**, and **distress mapping** conducted during the pavement's service life. Based on current projections, it is anticipated that overlays may be required after approximately **10 to 12 years** of service, subject to the **actual performance** of the pavement over time.

5.4 Test Pits & Subgrade Investigations

No information related to test pits or subgrade investigations is provided

5.5 Network Survey Vehicles (NSV) Survey

No information related to test pits or subgrade investigations is provided

5.6 FALLING WEIGHT DEFLECTOMETER (FWD) SURVEY

5.6.1 Pavement Evaluation by Falling Weight Deflectometer (FWD) Technique

a) Introduction:

The project stretch on NH-44 (old NH-1A), from **Km 189+350 to Km 204+700**, in Jammu & Kashmir, was evaluated using the Falling Weight Deflectometer (FWD) technique in June 2023. The study aimed to assess the **structural strength, residual life, and overlay requirements** for both flexible and rigid pavement sections in accordance with **IRC:115-2014** and **IRC:37-2018** guidelines.

b) Project Road

The evaluated corridor lies in Pulwama district, beginning near **Banihal (Km 189+350)** and terminating near **Km 204+700**. The stretch includes a **short single-tube tunnel (Km 193+830 to Km 194+540)** and a **long double-tube tunnel (Km 194+700 to Km 204+000)**. The alignment passes through hilly terrain with heavy traffic loading and experiences harsh climatic conditions including severe winters.

c) Pavement Condition

The pavement evaluation revealed distinct characteristics across flexible and rigid pavement sections. **Flexible pavement sections** comprised **bituminous layers over granular base and sub-base**, with **variable field conditions**. These sections exhibited typical **distresses such as rutting, cracking, and ravelling**. In contrast, **rigid pavement sections** featured **PQC slabs** at selected stretches, particularly near **tunnel approaches**, where **Load Transfer Efficiency (LTE)** and **flexural strength assessments** were conducted to evaluate structural performance. Overall, the **surface condition ranged from fair to good**, although certain stretches with **low residual life** were identified, necessitating **immediate overlay interventions** to maintain serviceability.

d) Falling Weight Deflectometer

In order to evaluate the structural strength of the existing flexible pavement, Falling Weight Deflectometer (FWD) survey has been carried out along the project road as per IRC: 115-2014 guidelines on the Main carriageway. The **equipment and procedure** for the pavement evaluation involved conducting a **Falling Weight Deflectometer (FWD) survey** using impulse loading equivalent to a **40 kN axle load**, simulating an **80 kN standard axle**. Deflections were recorded at

offsets of **0, 200, 300, 450, 600, 900, and 1200 mm**, with tests spaced at **250 to 500 meters** along both the **left-hand side (LHS)** and **right-hand side (RHS)** carriageways. To ensure accuracy, **temperature corrections** (standardized to **35°C**) and **seasonal variation adjustments** for **monsoon conditions** were applied.

For analysis, **KGPBACK** software was used to **back-calculate layer moduli**, while **IITPAVE** facilitated **fatigue and rutting life analysis** as well as **overlay design**.

5.6.1.1 FWD Analysis

i. Flexible Pavement Analysis

- **Back-calculated Moduli (15th Percentile):**
  - **Bituminous Layer:** 1644 – 2807 MPa (LHS), 1474 – 2234 MPa (RHS).
  - **Granular Layer:** 74 – 195 MPa (LHS), 72 – 253 MPa (RHS).
  - **Subgrade:** Stabilized at ~100 MPa (standardized).
- **Remaining Life & Overlay Requirement:**
  - **Design traffic considered:** 22 MSA.
  - **LHS:**
    - Section Km 191+200–193+500: Remaining life only **2.6–3 MSA**, requiring **80 mm overlay (30 mm BC + 50 mm DBM)**.
    - Section Km 204+370–204+700: Remaining life ~**4 MSA**, requiring **70 mm overlay (30 mm BC + 50 mm DBM)**.
    - Other stretches showed adequate life with no immediate overlay required.
  - **RHS:**
    - Section Km 193+800–191+700: Remaining life only **2 MSA**, requiring **80 mm overlay (30 mm BC + 50 mm DBM)**.
    - Section Km 191+700–189+350: Remaining life ~**12 MSA**, requiring **40 mm BC overlay**.
    - Other sections have sufficient rutting and fatigue life without overlay.

ii. Rigid Pavement Analysis

- **Methodology:**
  - Analysis followed **IRC:117-2014** using deflection basin parameters, load transfer efficiency (LTE), modulus of subgrade reaction, and flexural strength of concrete.
  - Fatigue behaviour checked through stress ratio (SR) models.

5.7 Structural Investigations

a. Introduction:

The MBIU survey was carried out in December 2023 to assess the structural and functional condition of bridges and viaducts along the Quazigund–Banihal section of NH-44. The objective was to record inventory details, identify maintenance requirements, and provide a comprehensive health check of the existing structures in service

b. Project Scope:

The inspected stretch covers NH-44 from Km 189+350 to Km 204+700. The inventory includes:

Total structures inspected: 14

Breakdown: 2 Major Bridges, 8 Minor Bridges, 2 RUBs (Road Under Bridges), and 2 Viaducts

Exhibit 37 List of Bridge Inspected

S. No	Chainage	Vent Size	Length of Bridge (m)	Type of Bridge
1	189+435 (Left)	3x36.63m	110.00	Major Bridge
2	189+435 (Right)	3x36.63m	110.00	Major Bridge
3	189+852 (Left)	1x22.654m	22.654	Minor Bridge
4	189+852 (Right)	1x22.654m	22.654	Minor Bridge
5	190+137	1x8.84m	8.84	Minor Bridge
6	190+318 (Left)	1x25m	25.00	Minor Bridge
7	190+318 (Right)	1x25m	25.00	Minor Bridge
8	191+097 (Left)	2x30m + 23.7m	83.70	RUB
9	191+097 (Right)	2x30m + 23.7m	83.70	RUB
10	191+427 (Left)	1x10.82m	10.82	Minor Bridge
11	191+427 (Right)	1x10.82m	10.82	Minor Bridge
12	193+395	1x9.2m	9.20	Minor Bridge
13	194+236 (Left)	38x36.60m	1390.80	Viaduct
14	194+236 (Right)	39x36.60m	1427.40	Viaduct

c. General Condition of Structure:

- Most structures are **serviceable** but exhibit early signs of distress.
- Common issues include:

- **Leakage through expansion joints** (observed at multiple bridges).
- **Clogged drainage spouts** across several structures.
- **Hairline cracks** on abutments, retaining walls, and underside decks (notably at Km 189+852).
- **Honeycombing and exposed reinforcement** near abutments and piers (e.g., A2 at Km 189+852).
- **Rusting in rivets and steel components** on viaduct piers (Km 194+236).
- **Debris accumulation** under and around bridges.

d. General Condition of Structure:

Exhibit 38 Inspection Reports of Bridges NH-44, Section: Banihal to Quazigund

S. No.	Location of Bridge (Ch)	Maintenance Requirements Observed During Inspection
1	189+435 (Left)	1. Leakage of Water through Expansion Joints. Needs to be repaired. 2. Clogging in Drainage Spouts, needs Cleaning.
2	189+435 (Right)	1. Leakage of Water through Expansion Joints Need to be repaired. 2. Clogging in Drainage Spouts, need Cleaning. 3. Slight settlement of 1st pier observed towards Quazigund, needs detailed inspection.
3	189+852 (Left)	1. Clogging in Drainage Spouts, need Cleaning. 2. Hair cracks were observed on the abutment surface & deck surface. 3. Honey combing & exposed reinforcement observed near A2 LHS, need to be repaired.
4	189+852 (Right)	1. Clogging in Drainage Spouts, need Cleaning. 2. Irregular surface of footpath, need proper plastering. 3. Hair cracks were observed on the surface of the deck underside & Abutment. 4. Steel bars were coming out of the retaining wall, need to be cut.
5	190+137	1. Bridge is in Good Condition.
6	190+318 (Left)	1. Clogging in Drainage Spouts, need Cleaning. 2. Debris observed in Expansion joints, need to be cleaned.
7	190+318 (Right)	1. Clogging in Drainage Spouts, need Cleaning.

S. No.	Location of Bridge (Ch)	Maintenance Requirements Observed During Inspection
8	191+097 (Left)	1. Bridge is in Good Condition. 2. Watermarks & leakage of water observed from the joints, need to be repaired. 3. The cover on the drainage in the footpath is damaged at a few locations, need to be replaced.
9	191+097 (Right)	1. Leakage of water from the joints was observed and rubber between the joints had also come out. Needs to be repaired. 2. The cover on the drainage in the footpath is damaged at few locations, need to be replaced.
10	191+427 (Left)	1. Clogging in Drainage Spouts, need Cleaning. 2. Debris under the bridge, require cleaning.
11	191+427 (Right)	1. Clogging in Drainage Spouts, need Cleaning. 2. Stone particles & Debris on footpath, need to be cleaned. 3. Steel reinforcement coming out of the parapet wall, need repairing.
12	193+395	1. Bridge is in Good Condition. 2. Stones & debris observed under the bridge, need cleaning. 3. Vegetation growth & accumulation of debris observed, require cleaning.
13	194+236 (Left)	1. Vertical cracks observed in the pier (4th & 5th). 2. Rusting started in rivets, need painting.
14	194+236 (Right)	1. Debris observed in the expansion joint, need to be cleaned. 2. Clogging in the Drainage spout, need to be cleaned. 3. Vertical cracks observed in pier no. 4th & 5th. 4. Steel beam in the expansion joints is damaged at the 17th expansion joint, needs repairing. 5. The Drainage spout at some location placed above deck level, need to be aligned properly. 6. Near 13th Expansion joints crash barrier is slightly damaged. 7. Horizontal surface cracks observed on 10th pier, require repair. 8. Rusting started in rivets, need painting.

e. Repair and Maintenance Requirements:

- **Expansion joints:** Repair of leakage and damaged sealing material.
- **Drainage spouts:** Cleaning, de-clogging, and realignment.
- **Cracks**: Repair of hairline and vertical cracks in abutments, piers, and decks with epoxy grouting/patching.
- **Concrete defects:** Honeycombing and exposed reinforcement require patch repair and protective coating.
- **Corrosion:** Application of anti-corrosive paint to rusted steel rivets and beams.
- **Structural safety:** Detailed inspection of the settled pier at Km 189+435 (RHS).
- **Debris removal:** Cleaning of accumulated debris beneath structures

The MBIU survey indicates that the bridge and viaduct structures along the Quazigund–Banihal stretch are **generally in a functional condition** but show **localised defects** requiring attention. Timely intervention, particularly on drainage systems, expansion joints, and structural cracks, is essential to prevent further deterioration.

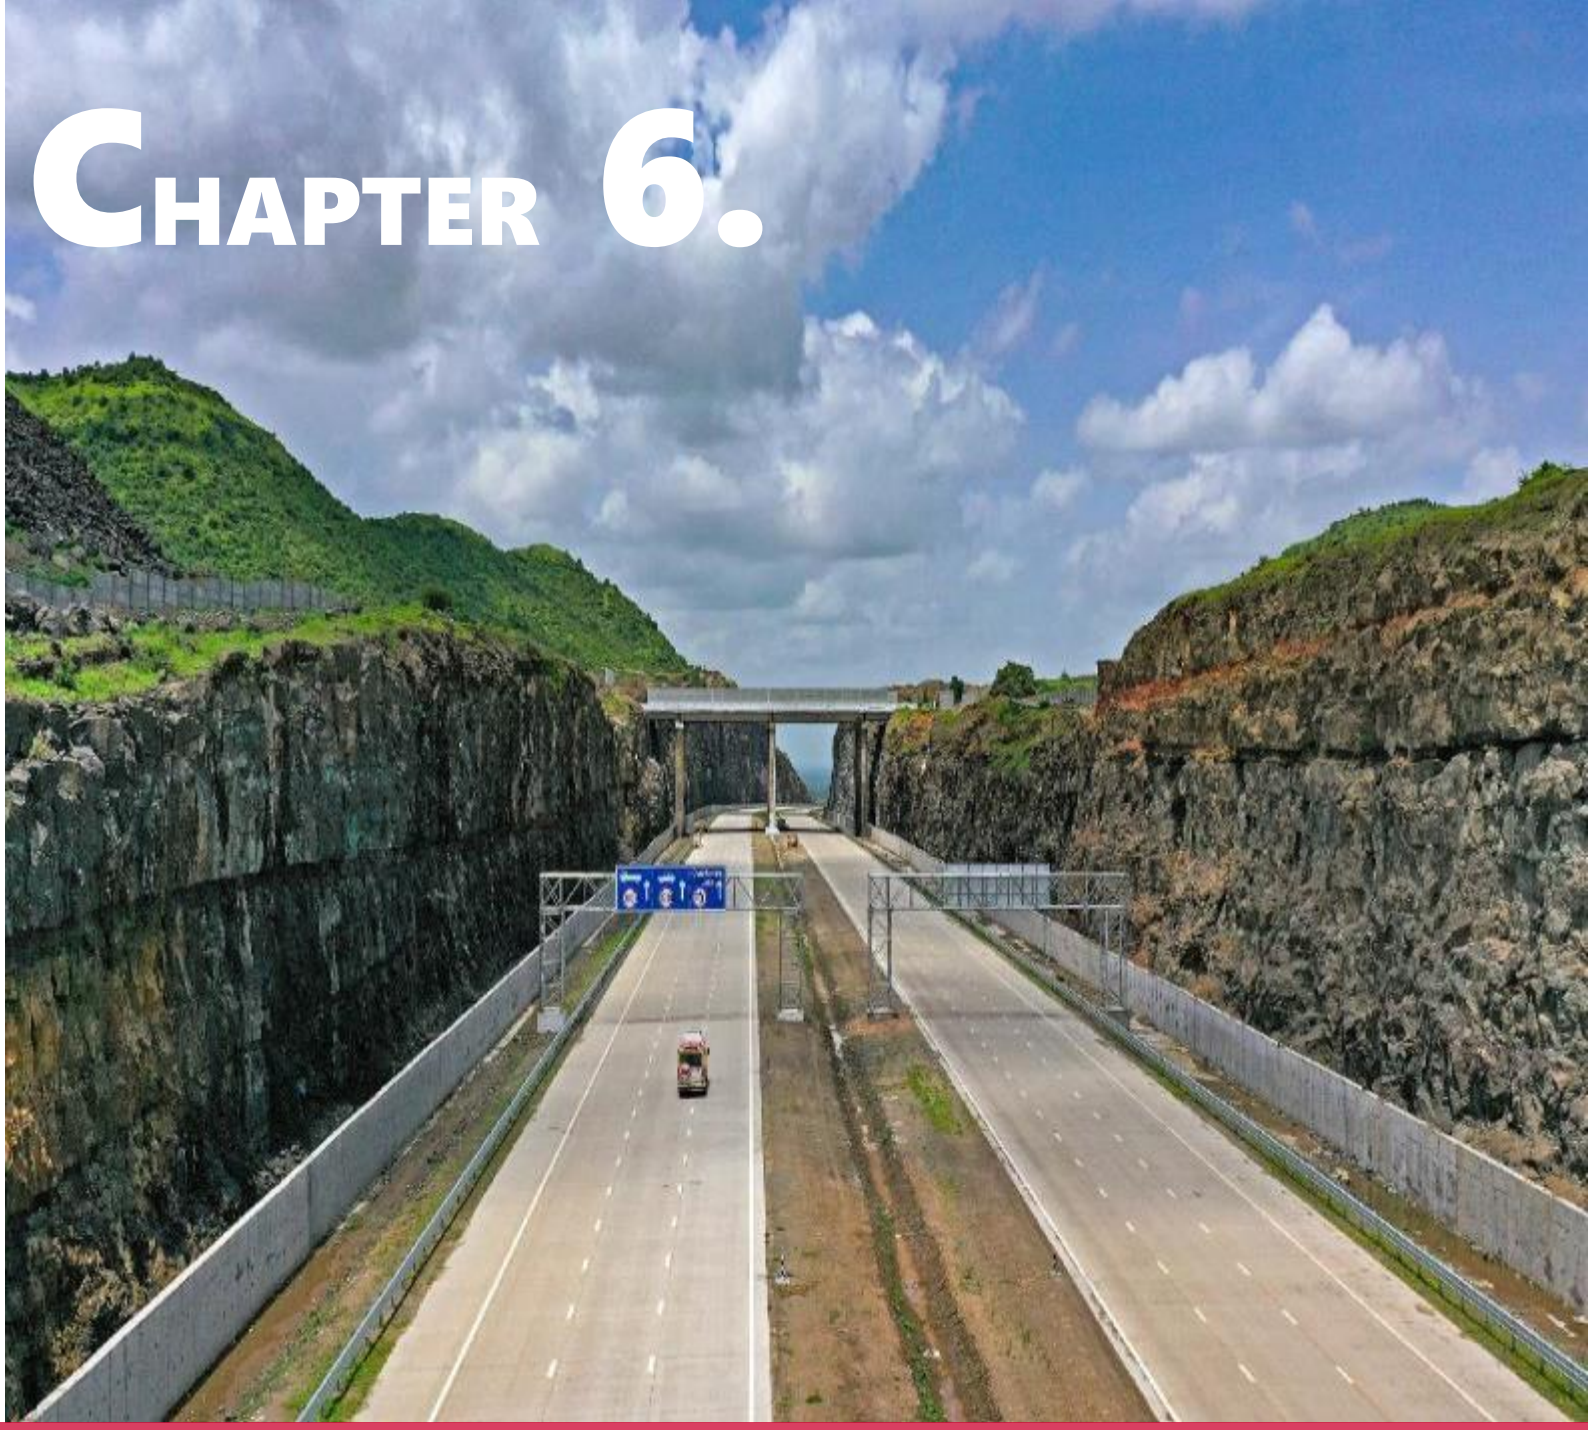
The **viaducts at Km 194+236** and **major bridge at Km 189+435** are critical locations requiring priority repair due to structural cracks, rusting, and settlement. Regular monitoring and preventive maintenance are recommended across the corridor.

5.8 Major Maintenance of Pavement

The periodic maintenance strategy has been developed considering the service life of flexible and rigid pavements, climatic conditions of the project corridor, and expected traffic loading. The project corridor (Km 189.350 – Km 204.700) includes both **flexible pavements** on the main carriageway and service roads, and **rigid pavements** at the toll plaza, tunnel sections, and lay-bys. Maintenance interventions are planned in two distinct **Maintenance Management (MM) Cycles**, ensuring the pavement network continues to perform within the serviceability criteria prescribed

Based on above test results, Concessionaire prepared Strategy, Major Maintenance details discussed at **Chapter 6**

Chapter 6.



Cost Estimate

Chapter 6. COST ESTIMATES

6.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories –

I. Routine O&M Cost
II. Major Maintenance Cost
III. Periodic Replacement of TMS/ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and Escalation.

6.2 Rate Assumption

The cost estimates are based on the following assumptions:

Following assumptions are considered for unit rates of various items while estimating the cost –

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard data book. The input rates for MoRTH standard data book were adopted as below
   a) **Manpower and labor** – As per applicable minimum wages published by Ministry of Labour & Employment, Government of India
   b) **Bitumen** – Bitumen rates are considered to be sourced from IOCL Panipat Refinery. The distance (to- from) from the midpoint of Project Highway is considered as 550 kms. VG-30 and VG-40 grades of bitumen are considered in our cost estimate.

☛ ***Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.***

Therefore, Bitumen prices are considered as per the client's forecast. Current published of bitumen are considered for unit rates calculation for FY24 and FY25. Average 10 years of price of bitumen are considered for unit rates calculation for FY26 and onwards, since bitumen prices have been range bound over the last five-six years. Following rates of bitumen are considered

Exhibit 39 Bitumen Rates (in INR/MT) - Ex-MI supply excluding discount and GST

Refineries	Grade	Rate for FY24 and FY25	Rate for FY26 onwards
IOC Mathura	VG10	45522	33955
IOC Mathura	VG30	46322	34552
IOC Mathura	VG40	48652	36290
IOC Haldia	VG10	45922	33258
IOC Haldia	VG30	46722	33838
IOC Haldia	VG40	49052	35525
IOC Barauni	VG10	46952	34004
IOC Barauni	VG30	47752	34584
IOC Barauni	VG40	50082	36271
CPC Chennai	VG10	44922	33541
CPC Chennai	VG30	45722	34138
CPC Chennai	VG40	48052	35878
IOCL Panipat	**VG10**	**45,830**	**33,915**
IOCL Panipat	**VG30**	**46,630**	**34,506**
IOCL Panipat	**VG40**	**48,960**	**36,230**

c) **Sand and Aggregate** are sourced from the nearest quarry located on project highway.

d) **Cement** is procured from the nearest local market.

e) **Machinery Hire charges** of Plant and Machinery for various items of works have been considered from J&K SOR 2022 and some rates are considered from MORT&H Standard Data Book 2001-2002. Escalation has been considered on MORT&H Plant and Machinery rates to arrive at the present rates of 2024-25.

f) **Material Rates** are obtained from SOR of J&K, PWD 2021-22.

g) Some of the rates are based on Consultant's experience on similar ongoing projects in adjacent locations.

h) **Overheads and profits** have been considered based on MORT&H Standard Data Book. Applicable taxes have been considered in the Rate Analysis.

Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines

Exhibit 40 Adopted Unit Rates for Key items

S.nos	Items Description	Unit	Rates (₹)
1	Dense Bituminous Macadam	Cum	10,936
2	Bituminous Concrete	Cum	12,676
3	Slab replacement cost (PQC)-MCW	Cum	8,933
4	Joint Sealant Replacement/Repairs	Rm	215
5	PQC Taxing	Sqm	208
6	Micro surfacing	Sqm	247
7	Milling	Sqm	125
8	Raising of Road Kerb	m	460
9	Road Marking	sqm	582
10	Kerb and Crash Barrier Painting	sqm	130
11	Tack Coat	Sqm	16
12	Manhole	Nos.	30,000

- *The above unit rates are excluding GST.
- The unit rate of each item includes 10 % overhead for road works, 15 % overhead for structure works and 10 % contractor's profit.
- Details of components considered in rate analysis & quantification are presented in below **Exhibit 41**

Exhibit 41 Major Components Detail for Key items

Sr. No.	Particular	Source	Reference
1	Rate Analysis	MORTH	Standard Data Books published by MORTH
2	**Material**		
A	Aggregate Rates	Nearby Project Corridor	As per Local Market Rates
B	ATMS, TMS cost		As per Vendor offer.
C	Cement	As provided in Local market	As per Local Market Rates
3	Equipment hire cost	Nearby project location	Standard Data Books published by MORTH
4	Labour	As per minimum wages	As per minimum wages

6.3 Routine Operation & Maintenance (O& M) Cost

Operations and Routine Maintenance work required as per the CA. During the concession period, the Concessionaire is fully responsible for Operation & Maintenance of Project Highway. Schedule K elaborates the requirements of various service factor desirable level and acceptable level during O & M period along with time if any parameter level of service beyond acceptable limit.

The CA Stipulates that the Concessionaire shall Operate and Maintain the Project Highway in accordance with Article 17 – Operation & Maintenance & Schedule –K Maintenance Requirements of Concession Agreement. The obligation of Concessionaire as per Article 17 is as follows:

- permitting safe, smooth, and uninterrupted flow of traffic on the Project Highway during normal operating conditions; collecting and appropriating the Fee.
- minimizing disruption to traffic in the event of accidents or other incidents affecting the safety and use of the Project Highway by providing a rapid and effective response and maintaining liaison with the emergency services of the State.
- carrying out periodic preventive maintenance of the Project Highway.
- undertaking routine maintenance including prompt repairs too, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices.
- undertaking major maintenance such as replacement of panels in rigid pavement and associated activities
- preventing, with the assistance of concerned law enforcement agencies, any unauthorized use of the Project Highway
- preventing, with the assistance of the concerned law enforcement agencies, any encroachments on the Project Highway
- protection of the environment and provision of equipment and materials therefore
- operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- maintaining a public relations unit to interface with and attend to suggestions from the Users, government agencies, media, and other agencies; and
- Complying with Safety Requirements in accordance with Article 18.

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have been made from the expenses of similar type of projects to arrive at the operating cost. The estimates are projected based on best industry practices and are compared with the operation cost in the vicinity of the project area. Same has been divided into following major head

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS/HTMS/System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards

6.4 O & M Strategy

Important Operations and maintenance work have been outsourced by the SPV. Details of important works are listed below

Exhibit 42 O & M Strategy

Sn	Activity	Strategy
1	Manpower	In-house
2	Civil work cost	In-house
3	Manpower for Electrical & Mechanical	Outsource
4	Agency for Toll Plaza (TMS)	Outsource
5	AMC for Electrical system	Outsource
6	ITMS AMC	Outsource
7	Rectification work for Electromechanical	Outsource

6.5 Manpower cost

Manpower costs have been estimated based on a combination of market benchmarks and historical contractual data, with appropriate price escalation factored in to reflect anticipated future cost increases. The manpower requirements are categorized into four primary segments:

1. **Project Office and Administration**: Covers expenses related to staff involved in overall project management, administrative duties, and associated benefits and overheads.
2. **Route Operations**: Includes salaries and benefits for frontline operational personnel such as toll operators, traffic controllers, and other essential staff ensuring uninterrupted tunnel functionality.
3. **Ancillary Services**: Encompasses costs for support roles like security staff, emergency response units, and other service teams vital to maintaining safety and operational readiness.
4. **Highway and Tunnel Maintenance and Repair**: Pertains to compensation for technical and maintenance staff responsible for routine upkeep, repairs, and general infrastructure support within the tunnel.

Total Manpower cost estimated by Knight Frank is ₹ 99.41 Crore for the balance concession period of 06 years.

Exhibit 43 Manpower Cost

Manpower Cost			
Year in Nos	**Years**	**Manpower**	**Remarks**
1	FY25	9.8	Each year 10% escalation is considered
2	FY26	10.8	
3	FY27	11.9	
4	FY28	13.0	
5	FY29	14.4	
6	FY30	15.8	
7	FY31	17.4	
Total Cost (₹- Crore)		**93.0**	

Detailed Manpower Costs covers following items cost

- **Project Office and Administration**: Costs are derived from prevailing market rates and past contractual terms, incorporating annual cost escalations.
- **Route Operations**: Calculated based on staffing requirements, specific roles, and associated employee benefits, ensuring adequate coverage for smooth tunnel operations.
- **Ancillary Services**: Includes estimated expenses for security and emergency response personnel, along with costs for necessary equipment and training.
- **Highway and Tunnel Maintenance and Repair Works**: Provides a thorough breakdown of costs for maintenance crews, factoring in labor, tools, and essential equipment required for upkeep and repairs.

6.6 Vehicle Maintenance Cost

Total Vehicle maintenance cost considered is ₹6.3 Crore for balance concession period. It is assumed that all required vehicles will be continuously available for the entire duration of the project. & following items considered for preventive maintenance work:

- **Maintenance Costs:** Assumed at 2.5% of the vehicle cost annually, accounting for regular upkeep and minor repair work.
- **Insurance Costs:** Estimated at 3% of the vehicle cost each year, ensuring coverage for accidents and associated liabilities.
- **Fuel Costs:** Projected based on typical fuel consumption patterns and prevailing fuel rates, with provisions for future price variability.
- **Price Escalation:** Incorporated across maintenance, insurance, and fuel components to reflect anticipated inflation and market shifts over the seven-year duration**.**

Details of Vehicle maintenance cost is tabulated in below **Exhibit 44.**

Exhibit 44 Vehicle Maintenance cost

Vehicle Maintenance Cost (₹-Crore)			
Year in Nos	**Years**	**Vehicles**	**Remarks**
1	FY25	0.7	An annual escalation rate of 10% has been factored in each year.
2	FY26	0.7	
3	FY27	0.8	
4	FY28	0.9	
5	FY29	1.0	
6	FY30	1.1	
7	FY31	1.2	
Total Cost (₹- Crore)		**6.3**	

Above cost is including of GST

Breakdown of Vehicle Maintenance Costs:

- **Routine Maintenance**: Includes yearly expenses for regular servicing, part replacements, and minor repairs.
- **Insurance Premiums**: Calculated annually based on the vehicle's value and the required coverage.
- **Fuel Expenses**: Projected based on average fuel consumption and anticipated price escalation over time.

6.7 Civil work cost

Total Civil work cost considered is ₹13.4 Crore for balance concession period.

The civil cost component encompasses essential maintenance and repair activities for the tunnel and related infrastructure. The key elements include:

- **Painting**: Tunnel walls up to 4 meters high will be painted, with 30% of the total area refreshed annually to maintain appearance and structural integrity.
- **Bitumen and Concreting**: Includes roof concreting and waterproofing for the pump house and portal building, using a 50 mm concrete layer.
- **Grouting**: Applied to 20% of the tunnel length for crack repairs, with 20 nipples per location and 0.5 kg of epoxy per nipple. For water seepage, grouting is done on 2% of the tunnel length under similar specifications.
- **Drain Cleaning**: 25% of surface and main drains will be cleaned each year to ensure effective drainage and prevent clogging.
- **Instrumentation**: Installation of 1,000 crack meters is planned, with a dedicated instrumentation engineer stationed on-site to oversee monitoring and maintenance.
- **Miscellaneous Costs**: 10% of total civil expenses are reserved for unforeseen requirements and minor repair works.

Following items considered for Civil work:

- **Painting**: Includes costs for paint materials, labor, and equipment required for scheduled annual painting works.
- **Bitumen and Concreting**: Detailed cost allocation for concrete materials, waterproofing compounds, and associated labor charges.
- **Grouting**: Covers expenses for epoxy/resin materials, labor, and tools used for crack and water seepage grouting activities.
- **Drain Cleaning**: Encompasses labor, machinery, and waste removal costs for routine cleaning of surface and main drainage systems.
- **Instrumentation**: Costs related to procurement and installation of crack meters, along with the salary of an on-site instrumentation engineer.
- **Miscellaneous**: Budget provision for unforeseen repairs and incidental civil maintenance requirements.

The below **Exhibit 45** presents a detailed breakdown of costs related to manpower, vehicle maintenance, and civil works. It outlines specific estimates for each component across the seven-year period from FY 2025 to FY 2031, providing a comprehensive overview of all expenses associated with the operation and maintenance of the tunnel.

Exhibit 45 Civil Work Cost (₹-Crore)

S.No.	Description	FY25	FY26	FY27	FY28	FY29	FY30	FY31	Total Cost
1	***Painting***				3,54,13,735				**3,54,13,736**
2	***Bitumen + concreting***								
3	***Grouting***	61,67,342	65,99,056	70,60,989	75,55,259	80,84,127	86,50,016	92,55,517	**5,33,72,304**
4	***Cleaning of Drains***	26,92,885	28,81,386	30,83,084	32,98,899	35,29,822	37,76,910	40,41,294	**2,33,04,280**
5	***Instrumentation Engineer***	9,24,000	10,16,400	11,18,040	12,29,844	13,52,828	14,88,111	16,36,922	**87,66,146**
6	***Cracks Meter***	1,33,750	1,43,113	1,53,130	1,63,850	1,75,319	1,87,591	2,00,723	**11,57,475**
Sub Total		**99,17,976**	**1,06,39,954**	**1,14,15,243**	**4,76,61,587**	**1,31,42,096**	**1,41,02,628**	**1,51,34,455**	**12,20,13,941**
10% Miscellaneous		**9,91,798**	**10,63,995**	**11,41,524**	**47,66,159**	**13,14,210**	**14,10,263**	**15,13,446**	**1,22,01,394**
Total Cost		**1,09,09,774**	**1,17,03,950**	**1,25,56,768**	**5,24,27,746**	**1,44,56,306**	**1,55,12,891**	**1,66,47,901**	**13,42,15,335**

Average Civil work Cost estimated is ₹1.91 Crore per year including GST.

6.8 Electrical and Mechanical (E & M) Cost

Total E & M Cost estimated is ₹30.1 crore for balance concession period including GST.

The following considerations have been made during calculation of E & M costs:

- **Component Replacement Costs:** Several parts of the Electrical & Mechanical (E&M) systems—particularly energy storage units—have defined operational lifespans and will require periodic replacement. These costs are essential to include in the Life Cycle Cost (LCC) analysis to accurately reflect future financial requirements.
- **Annual Maintenance for MEP Equipment:** Includes detailed costs for regular maintenance activities such as routine servicing, minor repairs, and replacement of worn-out components.
- **Annual Consumable Costs:** Covers frequently used items like lubricants, filters, lighting fixtures, and other expendables that are consumed during daily operations. These are non-repairable parts that must be replaced regularly.
- **Additional Electromechanical Works:** Accounts for costs related to enhancements necessary for ensuring effective functioning of the tunnel ventilation during fire incidents, protective measures for E&M systems, and fire safety provisions for critical areas like tunnel control rooms.
- **Annual Electricity Costs:** Reflects average yearly electricity expenses factored into the overall cost estimation.

Exhibit 46 Details of Total E & M Cost (₹-Crore)

Electrical & Mechanical Cost			
Year in Nos	**Years**	**Electrical & mechanical (₹-Crore)**	**Remarks**
1	FY25	3.3	
2	FY26	3.6	
3	FY27	3.9	
4	FY28	4.2	
5	FY29	4.6	
6	FY30	5.0	
7	FY31	5.5	
Total E & M Cost (₹- Crore)		**30.1**	

Exhibit 47 Breakup of Yearly E & M Cost (₹-Crore)

S.nos	Items	Monthly Cost (₹-crore)
1	O&M Reports	0.16
2	O&M of Tunnel Ventilation System	0.65
3	O&M of MEP & SCADA	1.31
4	Miscellaneous	0.33
5	Energy Cost	0.82
Total Annual Cost (Annually)		3.27

Price Escalation: ***9% applied to replacement, maintenance, and spare consumable cost to account for inflation and other market changes over the 6-year periods.***

- **Tunnel Ventilation System:**

The tunnel ventilation system includes key components such as **Axial Flow Fans, Jet Fans, Dampers, and Attenuators**. Axial Flow Fans are primarily used for moving large volumes of air efficiently along the tunnel's length. Jet Fans are installed within the tunnel to provide longitudinal ventilation by pushing air in the direction of traffic flow. Dampers help regulate and control airflow by opening or closing specific ventilation pathways. Attenuators are used to reduce noise generated by the ventilation equipment, ensuring quieter and more efficient tunnel operations.

- **O & M of MEE & SCADA**

The tunnel's electrical and mechanical infrastructure comprises a range of essential components, including **Cable Trays**, **HV (High Voltage) Cables**, and **LV (Low Voltage) Cables** for power distribution. **Electrical Panels** and **Transformers** play a crucial role in regulating and managing electrical supply. Backup power is ensured through a **DG Set** and **UPS (Uninterruptible Power Supply)** systems.

For lighting and visibility, a robust **Lighting** setup is installed throughout the tunnel. **Fire Fighting Pipes**, **Pumps**, and **Valves** form the core of the fire suppression system, ensuring safety during emergencies. The HVAC system includes **HVAC Dampers**, **VRF (Variable Refrigerant Flow) units**, and **Extraction Fans** to manage air quality and temperature control. Additionally, **SCADA-PLC**

systems provide automation and centralized monitoring of all tunnel operations, enhancing safety and efficiency.

The average Electrical & Mechanical (E&M) Cost as per calculation is ₹51.6 Crore per year, which seems reasonable as per industrial practice.

6.9 Toll Plaza TMS Cost

The total cost estimated towards Toll Plaza TMS is ₹1.2 Crore per year including GST.

The cost estimation for the **Agency for Toll Plaza TMS** spans from FY25 to FY31, starting at ₹0.14 million in FY25 and increasing annually by approximately 9%, reaching ₹0.20 million by FY31. This escalation accounts for inflation and cost adjustments over time.

☛ ***The cost considered for the Toll Plaza TMS is based on the purchase order issued to Techsture Technologies, the agency appointed by the concessionaire.***

6.10 Major Maintenance Cost

As mentioned in earlier chapter, Currently, the Project Highway is maintained by existing Annuity Concessionaire.

Based on RI & FWD Test results, SPV team made 02 MM cycles for the overlay of projects. Following items were considered during each MM cycle based on the ground requirements.

A. Flexible Pavement

- Overlay of 30-40 mm BC on MCW based on ground conditions and Test results.
- Overlay of 30 mm BC on service road considered.

B. Rigid Pavement

- Dismantling for existing PQC
- Relaying of dismantled panels
- Grouting with cement mortar
- Replacement and relaying of joints
- Diamond grinding with texturing

C. Replacement of Wearing Coat on structures

It is assumed that the pavement will be overlaid before handing over of the project confirming the pavement parameters kept within the limits as per Detailed strategy at **Exhibit 48.** Hence, the major maintenance cycles are proposed between year 2027 and end of concession period.

6.11 Major Maintenance items

Based on detailed highway inventory carried out during site investigation and data provided by the concessionaire following items considered during major maintenance work

- Bituminous concrete for MCW using VG-40
- Dense Bituminous Macadam for MCW using VG-40
- Bituminous concrete for Service Road using VG-40
- Dense Bituminous Macadam for MCW using VG-40
- Micro surfacing
- Repair of Transverse & Longitudinal joints on MCW & Service Road for Rigid pavement area
- Joint Sealant replacement of rigid area
- PQC taxing for rigid pavement area
- Removal & Relaying of Panels
- Crack Sealing

6.12 Major Maintenance items

Major maintenance works to be considered in 02 cycles up to the year 2031. A total Cost of ₹36.97 crore (Without Escalation) considered for major maintenance work Upto end of Concession period. Major maintenance Strategy is shown in **Exhibit 48. Detailed Cost Estimate attached as Annexure A.**

Exhibit 48 Major Maintenance Cycles & Cost

Major Maintenance Strategy & Cost Details for QB Project				
Cycle	**Financial Year**	**Strategy**	**KF Cost (₹-Crore)**	**Remarks**
MM Cycle-01	**(Year 2027)**	**A) Main Carriageway:** 01. 40 mm BC: 50% Length 02. 30 mm BC: 50% Length 03.50mm DBM Rehabilitation: 5% Area 04. Road Marking: 100% Length 05. Kerb Painting: 100% Length 06. Kerb Raising: 100% Length 07. Manhole Repair: 100% **B) Service Road:** 01. 30 mm BC on 100% length 02. Road Marking 100% length **C) Rigid-MCW** 01. 5% Slab Replacement 02. 100% Joint Replacement	26.70

Cycle	**Financial Year**	**Strategy**	**KF Cost (₹-Crore)**	**Remarks**
		03. 100% Retexturing & Grinding 04. 100% Microsurfacing		
MM Cycle-02	**(Year 2031) Handover Period**	**A) Main Carriageway:** 01. 30 mm BC: 25% Length 02. 50mm DBM Rehabilitation: 5% Area 03. Road Marking: 100% Length 04. Kerb Painting: 100% Length 05. Manhole Repair: 25% **B) Service Road:** Nil **C) Rigid-MCW** 01. 5% Slab Replacement 02. 100% Joint Replacement 03. 25% Retexturing & Grinding 04. 25% Microsurfacing	10.27	
Total MMR Cost (₹-Crore)			**36.97**	

Above cost is inclusive of GST & Without Escalation.

6.13 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period as below.

Exhibit 49 Summary of Cost

S.No.	Year of expense	FY25	FY26	FY27	FY28	FY29	FY30	FY31	Total Cost
1	**Routine O&M Cost**								
1.1	Manpower	9.8	10.8	11.9	13	14.4	15.8	17.4	93.1

Chapter 1.

Introduction and Scope of Services

Chapter 1. INTRODUCTION AND SCOPE OF SERVICES

1.1 BACKGROUND

Cube Highways Fund Advisors Pvt Ltd (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an infrastructure investment trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt Ltd has appointed **M/s Knight Frank India (KFI)** (hereinafter referred as "Technical Consultant" or "KFI") to carry out Technical Due Diligence of Rehabilitation, Strengthening and Four Laning of Baharampore-Farakka Section of NH-34 from Km 191.700 to Km 292.294 in the State of West Bengal under NHDP Phase-III on Design, Build, Finance, Operate and Transfer (DBFOT) Toll Basis (hereinafter referred as "Project Road").

1.2 SCOPE OF SERVICES

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below –

Exhibit 1 Scope of TDD Services

S. No	Terms of Reference
1	A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
2	Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, as built drawings, O&M manual, COD/PCOD certificate, Punch list, previous major maintenance etc.
3	Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle Load, material investigations etc.
4	Formulation of future major maintenance Strategy.
5	Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
6	Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period

S. No	Terms of Reference
7	Estimation of Annual Operation expenses along with Systems cost (TMS/HTMS) till the end of concession period.
8	Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Approach

Approach followed for this Due Diligence study is to understand the requirement of the client and terms of reference set forth. Our aim is that the study report should assist the clients in achieving their objectives.

1.4 Methodology

Methodology adopted is broadly outlined as under:

- Objectives of the client were identified from discussions and terms of reference spelt out for the study.
- Available data was collated and analysed by desk study.
- Requirements were identified to augment information/ data as available.
- Detailed List of data required was sent to Concessioner team from time to time
- Personal discussions were carried out with Clients by senior executives from KF to explain data requirements.
- Extensive interaction was made by KF with Clients and data was collected.
- Information to be gathered from Client head office & team were listed
- Relevant documents regarding project highway, including CA Agreement and other documents were collected and the provisions studied in detail.
- All data as collected was duly collated and arranged in the order as required for preparation of the report.

1.5 Study

- Data collected from all sources was duly collated and disseminated to concerned experts in KF.
- Project documents such as CA Agreement, O&M Costing details, O&M Manual etc were studied in detail.
- The data made available was analysed, and comments formulated for inclusion in the report.

1.6 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

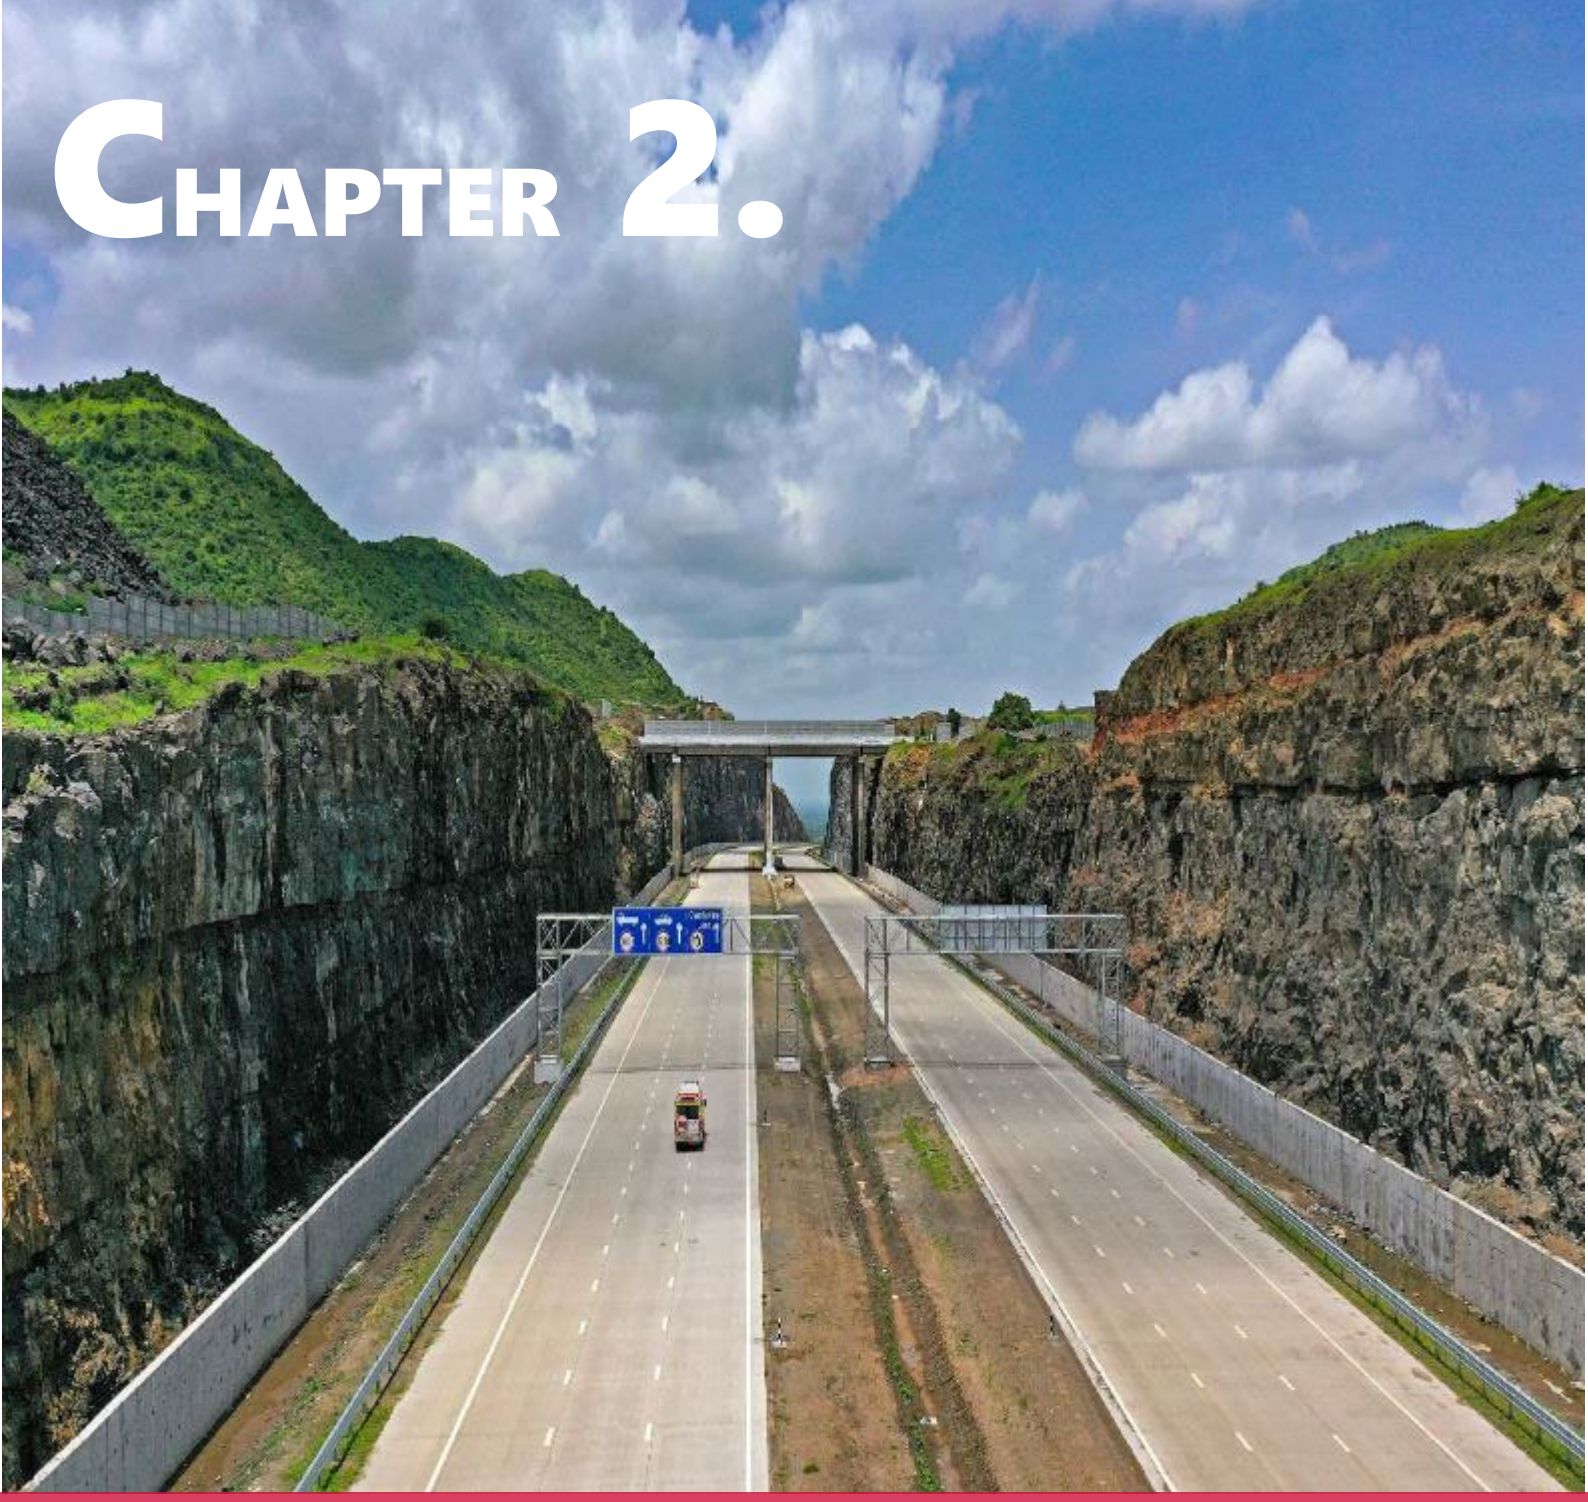
The site visit and inspection were carried out between the periods from 08th October 2025 to 10th October 2025.

The report is organized with the following chapters for easy understanding of various issues –

Exhibit 2 Structure of the Report

S.nos	Chapter	Description
1	**Chapter 1**	**Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**
2	**Chapter 2**	**Project Description:** The chapter describes existing project features, overview of project development.
3	**Chapter 3**	**Review of Agreements:** The chapter describes review of CA, Supplementary, State Support Agreement, Settlement Agreement & Various O & M Agreements.
4	**Chapter 4**	**Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**
5	**Chapter 5**	**Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance
6	**Chapter 6**	**Cost Estimates**: This chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period

Chapter 2.



Project Description

Chapter 2. PROJECT DESCRIPTION

2.1 Project Road

National Highway-34 (NH-34), now renumbered as **National Highway-12 (NH-12)**, is a major arterial highway in the state of **West Bengal**, forming part of the North–South corridor that connects **Kolkata to Siliguri** and serves as a vital trade and passenger link between southern and northern Bengal. The **Baharampore–Farakka Section** lies within the districts of **Murshidabad and Malda**, traversing predominantly plain terrain with a combination of semi-urban and rural landscapes.

This corridor serves as a key movement route for freight traffic from the **Haldia Port and Kolkata Metropolitan Region** towards the northeastern states, while also connecting several important commercial, agricultural and industrial towns. The project highway provides improved regional connectivity between **Baharampore**, **Jangipur**, **Ahiron**, and **Farakka**, and facilitates faster, safer, and more efficient travel along one of eastern India's busiest corridors. The stretch also connects to the **Farakka Barrage**, an important strategic bridge across the river Ganga.

This corridor serves as a key movement route for freight traffic from the **Haldia Port and Kolkata Metropolitan Region** towards the northeastern states, while also connecting several important commercial, agricultural and industrial towns. The project highway provides improved regional connectivity between **Baharampore**, **Jangipur**, **Ahiron**, and **Farakka**, and facilitates faster, safer, and more efficient travel along one of eastern India's busiest corridors. The stretch also connects to the **Farakka Barrage**, an important strategic bridge across the river Ganga.

The **four-laning of the Baharampore–Farakka Section** from **Km 191.700 to Km 292.294** of NH-34 was undertaken by the **National Highways Authority of India (NHAI)** under **NHDP Phase-III** on a **Design, Build, Finance, Operate and Transfer (DBFOT) Toll basis**. To execute the project, NHAI issued the Request for Qualification (RFQ) on **8 February 2010**, and the **Letter of Award (LOA)** was issued to **M/s Larsen & Toubro Limited**. A Special Purpose Vehicle (SPV), **M/s Baharampore–Farakka Highways Limited (BFHL)**, was incorporated for implementation of the project.

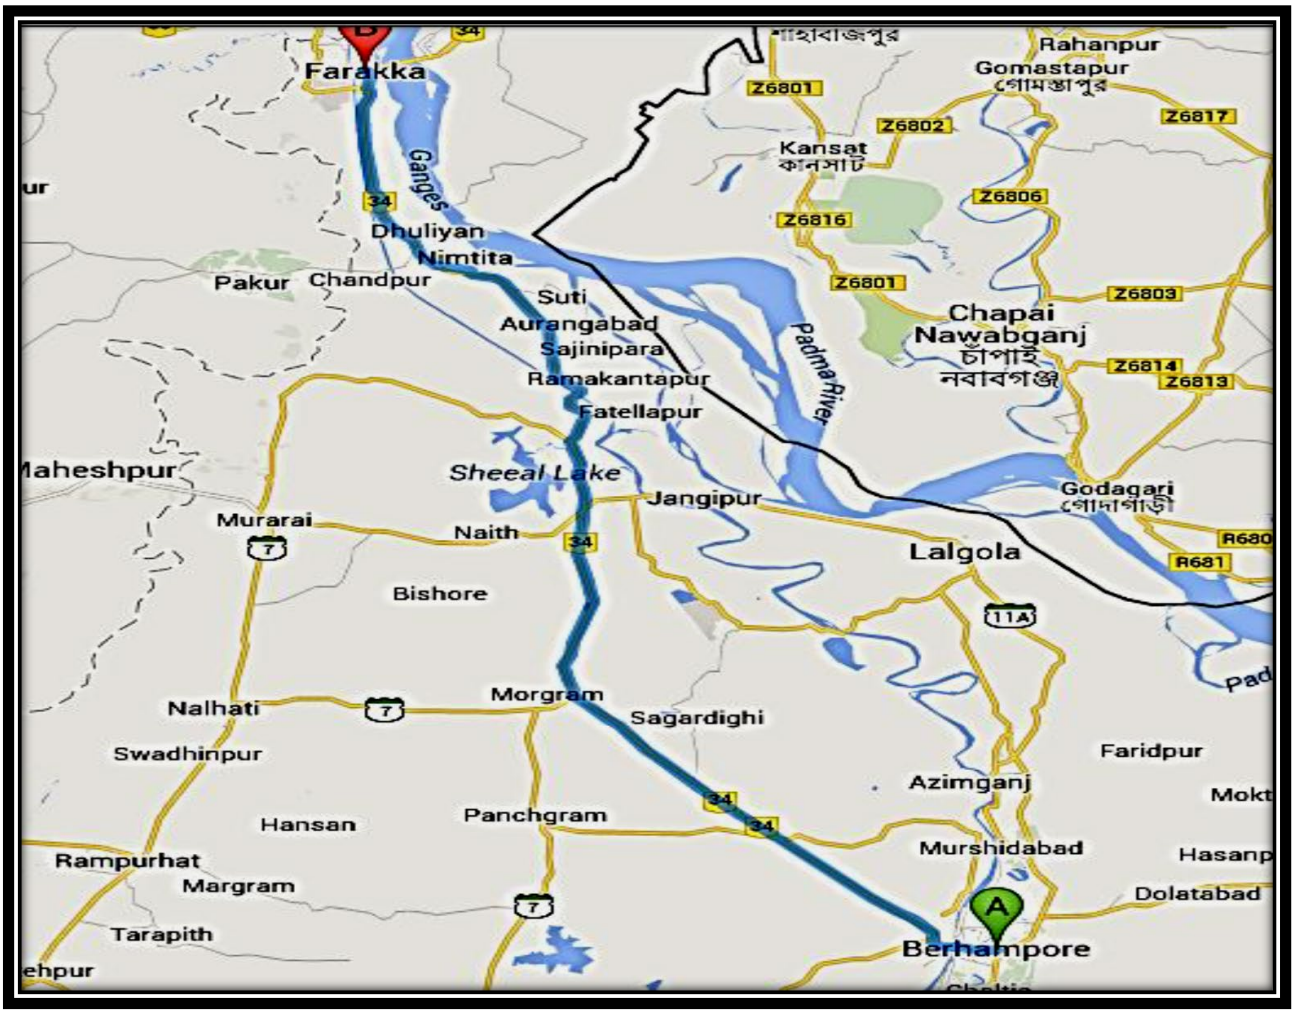
The **Concession Agreement** was signed on **8 February 2010**, and the **Appointed Date** was declared on **3 February 2011**. The project was structured for a **25-year Concession Period**, including a 910-day construction period. The **Total Project Cost** as per the Concession Agreement is **₹ 998.79 crore**. The project comprises approximately **100.6 km of four-lane highway.**

- **PCOD:** Out of the total **100.594 km** project highway stretch, **PCOD-I** was issued for a length of **75.450 km**, which has been under **Operation and Maintenance (O&M)** since **14th May 2014**. An **additional tolling stretch** of **14.350 km** was subsequently issued to the **Concessionaire** on **14th May 2021**. Accordingly, as of date, a **cumulative length of 89.800 km** out of **100.594 km.**
- **Final CoD: Final Completion Certificate was issued vide letter no. URSSWI/PMG/Baharampore–Farakka/2024/1073 dated 22nd June 2024.**

At present, the project is in the **Operation & Maintenance (O&M) phase**, with toll collection operational at two plazas—**Shibpur (TP-206)** and **Chandermore (TP-260)**. Routine and major maintenance works, drain cleaning, road-furniture replacement, horticulture upkeep, and safety improvements are being carried out under Independent Engineer's supervision.

The Project Location Map in wider context and Specific Project Road Context is shown below at **Exhibit 3.**

Exhibit 3 Project Location Map



As per the CA, the corridor has different design chainage systems, which are presented in the table below.

Exhibit 4: Project Chainage Details

Referencing	Section	Design (km)	Length (km)
CA Design Chainage	**Baharampore Bypass**	191.416 – 204.953	13.537
CA Design Chainage	**Main Carriageway (Existing NH-34)**	204.953 – 292.294	87.341
CA Design Chainage	**Farakka Approach / Transition Zone**	292.294 – 294.684	2.390
Total Design Length (as per CA)		**191.416 – 294.684**	**100.6 km (Actual Length)**

2.2 Climate

The project corridor experiences a **tropical monsoon climate**, typical of the **Gangetic plains of West Bengal**, characterized by hot and humid summers, heavy monsoon rainfall, and mild winters. The terrain along the Baharampore–Farakka section is predominantly plain, with low-lying areas adjacent to rivers and water bodies, making it prone to localized flooding and waterlogging during peak rainfall.

During the **summer months (April to June)**, temperatures generally range between **28°C and 40°C**, with high humidity levels. The **monsoon season (June to September)** brings intense and prolonged rainfall, with an **average annual precipitation of about 1,200–1,600 mm**, primarily influenced by the southwest monsoon. The **winter season (November to February)** is comparatively mild, with temperatures ranging from **10°C to 20°C** and low humidity.

Relative humidity typically varies from **60% to 90%**, depending on the season, with the highest levels recorded during monsoon months. The combination of high rainfall, clayey subgrade conditions, and prolonged wet periods often leads to **pavement deterioration, drainage congestion, and edge failures** in the absence of proper maintenance.

Given these climatic characteristics, **adequate surface and subsurface drainage**, **pavement design with moisture-resistant materials**, and **routine desilting of drains and culverts** are essential to ensure the **durability, serviceability, and long-term performance** of the project highway.

2.3 Terrain

The terrain along the **Baharampore–Farakka project alignment** is **predominantly flat to gently undulating**, typical of the **alluvial plains of the Ganga basin** in West Bengal. The corridor traverses through an extensive stretch of fertile floodplain interspersed with small mounds, roadside settlements, and agricultural fields. There are **no significant elevation changes or hilly sections**, and the alignment primarily follows the existing ground profile of the National Highway.

The **topography** is characterized by **low-lying areas**, particularly near river crossings and drainage channels, which are prone to **seasonal waterlogging** during the monsoon period. The corridor passes through multiple **canals, irrigation channels, and local streams**, necessitating a well-planned system of **cross-drainage and longitudinal drainage structures**.

From a **geotechnical perspective**, the area is underlain by **recent alluvial deposits** comprising **silty clay, fine sand, and sandy loam** soils, with a high-water table. These soils are **moderately compressible** and **susceptible to erosion and subgrade weakening** under prolonged wet conditions. Localized black cotton-type soils are also encountered in isolated patches.

2.4 Administrative details of the Project

The Concession stands granted to operate the road from the Appointed date for the concession period with the obligation on concessionaire to maintain the road in the same period. Administrative details of projects are as at Exhibit 2 below.

Exhibit 5: Administrative Details of Project

S. No.	Particulars	Details
1	**Project Corridor**	Four-Laning of Baharampore–Farakka section of NH-34 from **Km 191.700 to Km 292.294** in the state of **West Bengal**, on **Design, Build, Finance, Operate, and Transfer (DBFOT)** Toll basis under **NHDP–III** (Old NH-34, New NH-12).
2	**Employer**	**National Highways Authority of India (NHAI)**, Ministry of Road Transport and Highways.
3	**Concessionaire**	**M/s Baharampore–Farakka Highways Limited**
4	**Independent Engineer (During O&M)**	**M/s URS Scott Wilson India Pvt. Ltd.**
5	**EPC Contractor**	**M/s Hindustan Construction Company Ltd.**
6	**Project Road Length**	**Km 191.700 to Km 292.294 = 100.6 km** (including **10.798 km of Bypass Road**).
7	**Project Cost (as per NHAI)**	**₹ 998.79 Crore**
8	**Date of Letter of Award (LOA)**	**08.02.2010**
9	**Date of Concession Agreement**	**28.06.2010**
10	**Appointed Date**	**03.02.2011**
11	**Construction Period**	**910 days**
12	**Scheduled Date of COD**	**01.08.2013**
13	**Extension of Time (EOT) for Construction**	**31.01.2014**
14	**Provisional COD (PCOD)**	**• PCOD–I (75.450 km): 14.05.2014**

S. No.	Particulars	Details
		• **PCOD–II (14.350 km): 14.05.2021**
15	**Final COD**	**22.06.2024**
16	**Concession Period (Original)**	**25 years** (including 910 days of Construction Period)
17	**Scheduled End of Concession Period**	**Year 2036** (as projected by the Concessionaire)
18	**Revised Concession Period**	The **Independent Engineer (IE)** recommended a **5-year extension/modification**, revising the Concession Period from **25 years to 30 years** in accordance with **Article 29 of the Concession Agreement (CA)**, vide letter no. **URSSWI/B-F/PMG/Baharampore–Farakka/2022/1568** dated **04.10.2022**. **(Approval from the Authority is pending in this regard.)**

2.5 Salient Features of the Project

Salient features of the project are covered at **Exhibit 6** below.

Exhibit 6: Salient Features of Project

S. No.	Description of Item	Length in Km./Nos.
1	Total Length of the Project	100.594 Kms
2	Service Roads (Both Side)	1.06 Kms
3	**Bypass**	**1 Nos. Baharampore Bypass**
a	Length of Bypass	10.798 kms
	Proposed Structures:	
5	Flyover/Grade Separator	03 Nos
6	Major Bridges	04 Nos.
7	Minor Bridges (New Construction)	12 Nos.
8	VUP	01 Nos
9	PUP/CUP	08 Nos
10	No. of ROB	4 Nos.
11	No. of RUB	Nil
12	No. of Box/ Slab Culverts	138 Nos.
13	Major Junctions	24 Nos.
14	Minor Junctions	42 Nos
15	Bus Bays	46 Nos.
16	Toll Plaza	02 nos. 1. Toll Plaza @ Km.206+562 2. Toll Plaza @ Km.260+850
17	Truck Lay Byes	02 Nos.
18	Rest Areas/Way Side Amenities	01 Nos @ 198+187
	Proposed Facilities	
19	Signages	3023
20	Traffic Blinkers and Signals	154
21	Lightings	805
22	Delineators	1562
23	Kilometer Stones	214

S. No.	Description of Item	Length in Km./Nos.
24	MBCB-Semi Rigid Barrier	42675
25	Pedestrian Guardrail (PGR)	4153
26	Medical Aid Post	02 nos.
27	Traffic Aid Post:	02 nos.
28	Advance Traffic Management System (ATMS):	02 nos.
29	Variable Message Sign (VMS):	02 nos.
30	CCTV surveillance:	09 nos.
31	Emergency Call Box (ECB):	GSM based ECBs are installed after every 2 Kms in the entire stretch.

2.6 Pavement Composition

The pavement for the **Baharampore–Farakka Section of NH-34 (NH-12)** has been designed in accordance with **IRC: 37-2001** and the **Manual of Specifications and Standards for Four-Laning of National Highways (IRC: SP: 84-2009)**.

The Concessionaire's design consultant (**LEA Associates South Asia Pvt. Ltd.**) adopted a **design subgrade CBR of 10 percent** and **design traffic loadings of 40 MSA and 50 MSA** for the two traffic-homogeneous sections (Section I: Km 193–232 and Section II: Km 232–295).

Both directions were provided with the same pavement crust thickness to maintain uniformity of performance and ease of maintenance.

As mentioned in Pavement Design Report, design consultants summarized the calculated design traffic for the next 20 years for BT and Base and subbase layer respectively.

Exhibit 7: Design Traffic (MSA) for 20 Years

S. No.	Section	Design Traffic (MSA)- 20 Year
1	Section I (Km 193 – 232)	40 MSA
2	Section II (Km 232 – 295)	50 MSA

Pavement Configuration for Project is given in **Exhibit 18**

Exhibit 8: Pavement Composition-Main Carriageway

S. No	Design MSA	As built drawings
Flexible Pavement		
	Adopted MSA – 40	**Section-I (Km 193 – 232)**
1	BC in mm	40
2	DBM in mm	100
3	WMM in mm	250
4	GSB in mm	230
	Adopted MSA – 50	**Section-II (Km 232 – 295)**
1	BC in mm	40
2	DBM in mm	110
3	WMM in mm	250
4	GSB in mm	230
Rigid Pavement		

S. No	Design MSA	As built drawings
	PQC	DLC
1	300	150
Overlay Works		
The Overlay thickness proposed for design traffic of 40 MSA & 50 MSA for the project corridor. Based on the BBD Test Result Concessionaire Proposed Overlay of 50-75 mm thickness with DMB of 40 mm thickness with BC.		

As per the **Pavement Design Report (PDR)**, the **Concessionaire** has stated that the **existing bituminous layer** along the Baharampore–Farakka corridor generally varies between **140 mm to 160 mm**, with a combined **granular base and sub-base thickness of about 400 mm to 450 mm**, depending on location and pavement age.

In sections proposed for **overlay strengthening**, the existing pavement condition was assessed using **Benkelman Beam Deflection (BBD) tests**, and overlay thicknesses were accordingly designed for **40 MSA to 50 MSA** traffic loading. As per the **approved Pavement Design Report**, the **service road** has been designed for a **design traffic of 5 MSA** and **subgrade CBR of 10 %**.

The Pavement layer adopted for service road as given below:

Exhibit 9: Pavement Composition -Service Road

S. No.	Layer (Adopted = 5 MSA)	Thickness (mm)
1	Semi-Dense Bituminous Concrete (SDBC)	25
2	Dense Bituminous Macadam (DBM)	50
3	Wet Mix Macadam (WMM)	250
4	Granular Sub-Base (GSB)	150
5	Select Sub-grade (CBR 10 %)	500

2.7 Project Completion Certificate and PCOD & FCOD

A. Provisional Completion Certificate (PCOD):

Out of the total **100.594 km** project highway stretch, **PCOD-I** was issued for a length of **75.450 km**, which has been under **Operation and Maintenance (O&M)** since **14th May 2014**. An **additional tolling stretch** of **14.350 km** was subsequently issued to the **Concessionaire** on **14th May 2021**. Accordingly, as of date, a **cumulative length of 89.800 km** out of **100.594 km** is under **O&M.**

Exhibit 10: Provisional COD (PCOD) details

Sl. No.	Chainage (From – To)	Length (Km)
Total PCOD-I Stretch		
1	Km.204+550 to Km.229+300	24.75
2	Km.230+600 to Km.254+800	24.2
3	Km.258+350 to Km.284+850	26.5
Total PCOD-I Stretch (A)		**75.450 Km**
Total PCOD-II Stretch		
1	Km.202+500 to Km.204+550	2.05
2	Km.229+300 to Km.230+600	1.3
3	Km.254+800 to Km.258+350	3.55
4	Km.284+850 to Km.292+300	7.45
Total Additional Tolling Stretch (B)		**14.350 Km**
Total PCOD Length (A+B)		**89.8 Kms**

B. Final Commercial Operation Date (COD):

Upon successful completion of all balance works and compliance with the provisions of the **Concession Agreement**, the **Independent Engineer (M/s URS Scott Wilson India Pvt. Ltd.)** certified completion of the project highway for a **total length of 100.600 km (Km 191.700 to Km 292.300)**. Accordingly, the project was declared **fit for entry into commercial operation**, and the **Final Completion Certificate (Final CoD)** was issued **vide letter no. URSSWI/PMG/Baharampore–Farakka/2024/1073 dated 22nd June 2024**.

Knight Frank reviewed the Final CoD issued by the IE for a total project length of 100.600 km (Km 191.700 to Km 292.300), vide letter no. URSSWI/PMG/Baharampore–Farakka/2024/1073 dated 22nd June 2024.

2.8 Extension of Time

A. For Construction Period

Earlier, the Extension of Time (EOT) was approved for **3,602 days**, up to **12.06.2023**. Subsequently, the **Independent Engineer (IE)** recommended an additional **233 days**, extending the total EOT to **3,835 days**. Accordingly, the IE granted EOT up to **31.01.2024** vide letter no. **URSSWI/PMG/Baharampore–Farakka/NHAI/2024/1469** dated **04.09.2024**, to facilitate completion of the remaining works and necessary rectifications.

B. Extension of Concession Period:

- The Concessionaire submitted a proposal for modification of the Concession Period as per **Clause 29.2** of the Concession Agreement (CA).
- The **Independent Engineer (IE)** reviewed and verified all supporting documents related to the submission.
- Based on the assessment, the IE recommended an extension of **5 (five) years**, equivalent to **20% of the existing 25-year Concession Period**, in favor of the Concessionaire.
    - Recommendation communicated vide letter no. **URSSWI/B-F/PMG/Baharampore–Farakka/2022/1568** dated **04.10.2022**.
- The Authority, vide memo no. 62023/1/2022-23/BFHL/28/740 dated 13.10.2022, sought certain clarifications on the IE's recommendation.
- Subsequently, the **Team Leader**, through letter no. **URSSWI/B-F/TL/O&M/2022-23/0105** dated **19.10.2022**, requested the Concessionaire to provide comments on the observations raised by the Authority.
- The **Concessionaire** submitted the required clarifications and supporting documents vide letter no. **BFHL/NHAI/O&M/10-2022/1427** dated **20.10.2022**.
- **Upon review, the IE provided detailed comments and justifications and reaffirmed its recommendation for a 5-year extension/modification of the Concession Period extending it from 25 years to 30 years in accordance with Article 29 of the CA.**
- The recommendation was found valid and substantiated vide letter no. **URSSWI/B-F/PMG/Baharampore–Farakka/2022/1719** dated **03.11.2022**.

- Further, the **Authority** sought additional clarification vide memo no. **62023/1/2024-25/BFHL/21/341** dated **24.07.2024**
- Subsequently, the **Authority** sought verification of **traffic data (2019–2023)** and related videography, which the IE certified. Upon the Concessionaire's non-submission of certain documents, the **IE** independently finalized and submitted the required statement to the **Authority** in **September 2025**

☛ ***The Independent Engineer (IE) has recommended an extension/modification of the Concession Period from 25 years to 30 years in accordance with Article 29 of the Concession Agreement (CA). However, approval from the Authority is still awaited in this regard.***

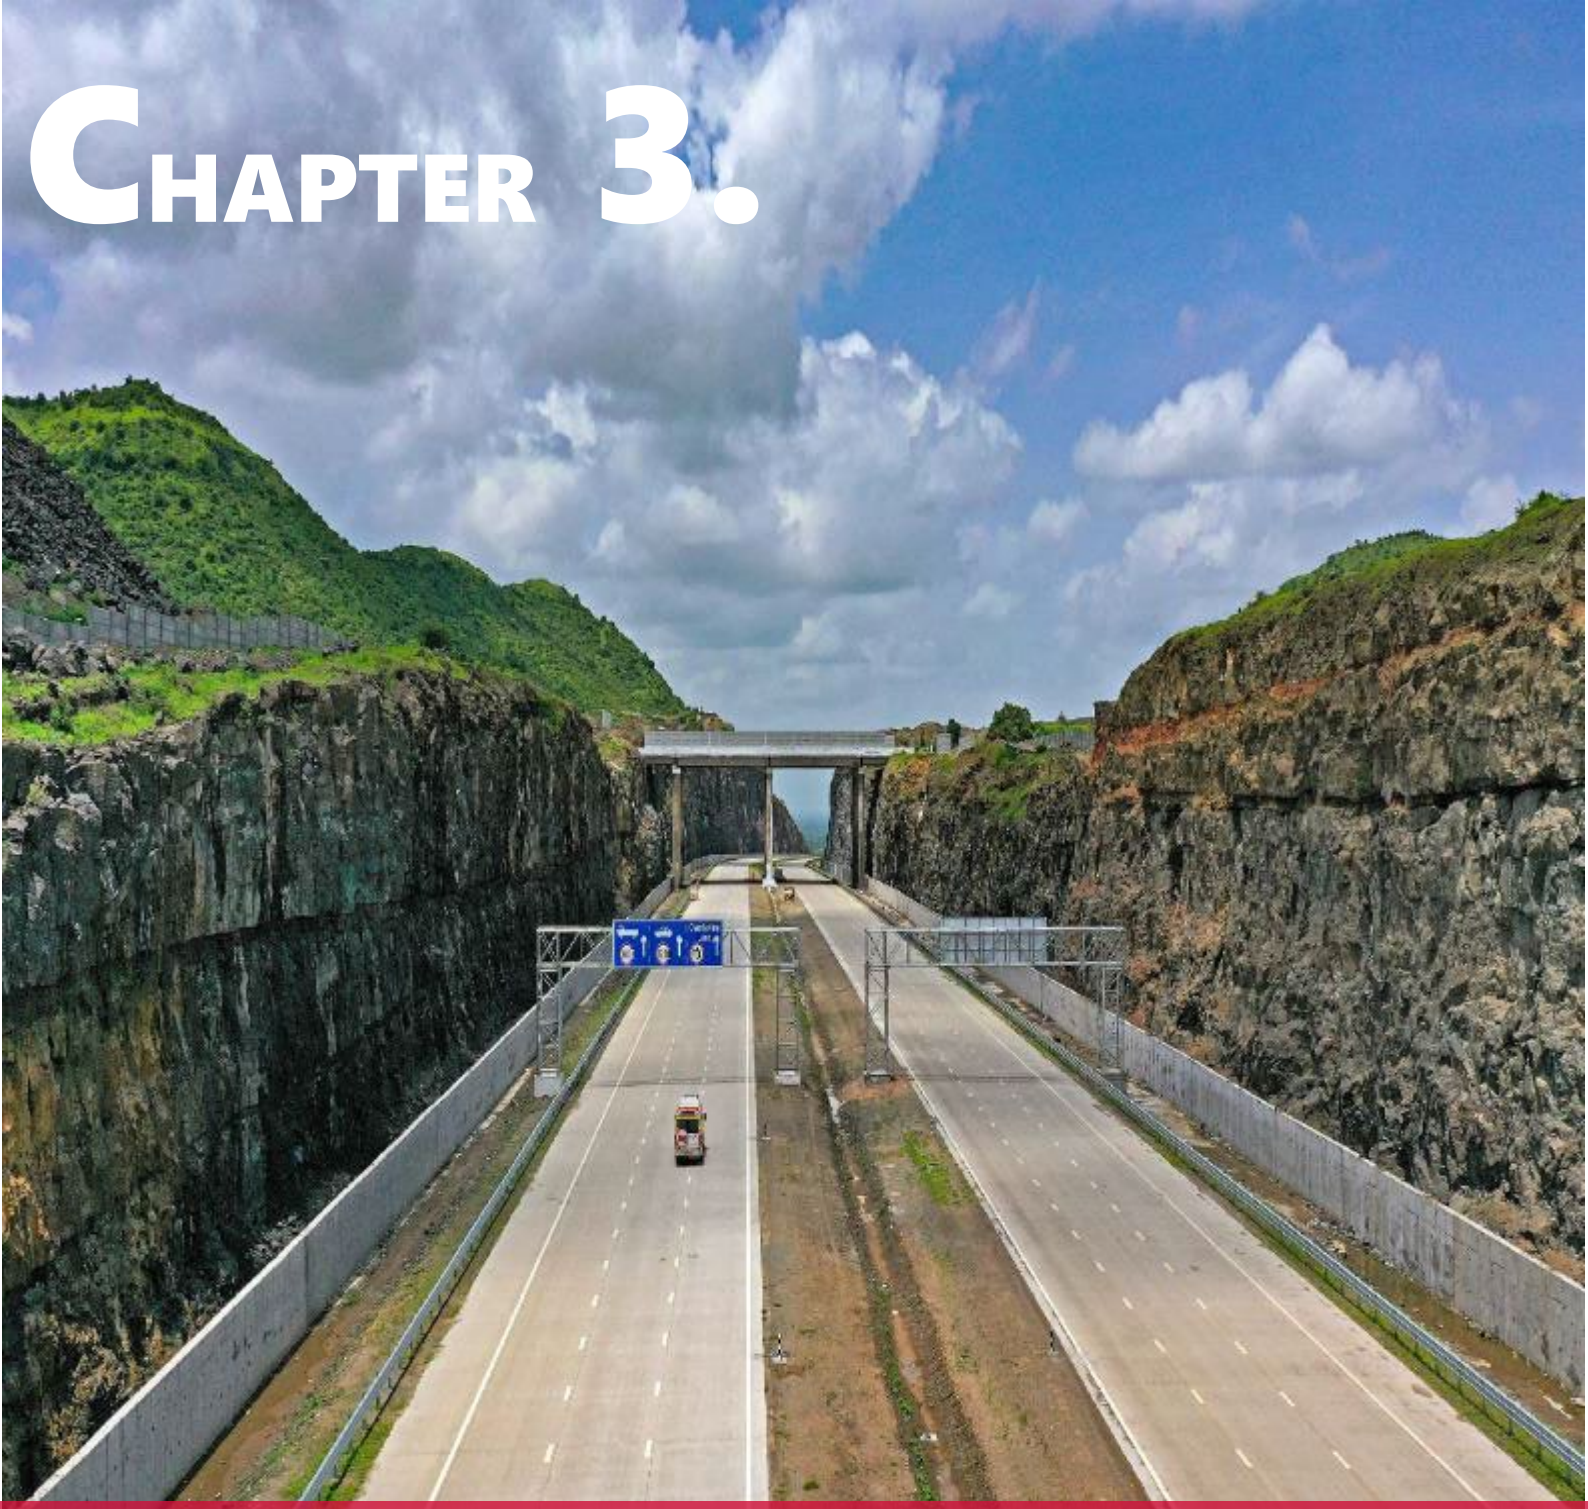
2.9 Penalty

There is no penalty on project as of now.

2.10 Approvals & Permits

Since Project is in O & M stage therefore all necessary approvals required are in place with concessionaire.

Chapter 3.



Review of Project Agreements

Chapter 3. Review of Project Agreements

3.1 Review of Concession Agreement

Concession Agreement was executed on **28th June 2010** between:

National Highways Authority of India (NHAI), (hereinafter referred to as the "Authority"); and **Baharampore–Farakka Highways Limited (BFHL)**, (hereinafter referred to as the "Concessionaire")

The Agreement relates to the **Rehabilitation, Strengthening and Four-Laning** of the **Baharampore–Farakka section of NH-34** from **Km 191.416 to Km 294.684** in the State of **West Bengal**, under **NHDP Phase–III**, on a **Design, Build, Finance, Operate, and Transfer (DBFOT) Toll Basis.**

Exhibit 11: Key Terms of Concession Agreement

Parameter	Details
Date of Agreement	28th June 2010
Appointed Date	Declared after fulfilment of Conditions Precedent (notified separately by NHAI)
Employer / Authority	National Highways Authority of India (NHAI), Ministry of Road Transport & Highways, GoI
Concessionaire	M/s Baharampore–Farakka Highways Limited
Concession Period	25 years from Appointed Date
Length of Project	103.268 km (Km 191.416 to Km 294.684 of NH-34, West Bengal)
Project Type	DBFOT (Toll)
Total Project Cost	₹998.79 crore (as referred in Schedule–F)
Performance Security	₹49.94 crore Bank Guarantee (Schedule–F)
Right of Way (ROW)	To be provided by NHAI, free from encumbrances (Clause 10.3)
Construction / Completion Period	910 days (approx. 2.5 years) from Appointed Date (Schedule–G)
Scheduled Four-Laning Date (COD)	910th day from Appointed Date
Concession Fee / Premium	As per Concession Agreement (Article 26 – Toll based model)
Toll Collection	Concessionaire entitled to collect and appropriate user fee as per Fee Notification (Article 27)
Financial Close	To be achieved within 180 days from Agreement Date

Parameter	Details
Change in Ownership	Restricted without prior approval during construction and first 2 years of O&M
Governing Law & Jurisdiction	Laws of India; Courts at Delhi
Dispute Resolution	Arbitration under the Arbitration & Conciliation Act / ICADR Rules, New Delhi

3.1.1 Obligations of the Authority & Concessionaire

Exhibit 12: Key Obligations of Parties

Authority	Concessionaire
Provide Right of Way (ROW) free from encumbrances (Clause 10.3)	Design, engineer, finance, procure, construct, operate & maintain the Project Highway on DBFOT (Toll) basis
Assist in obtaining statutory approvals, permits, and clearances	Achieve Financial Close within 180 days and furnish Performance Security
Maintain existing highway until Appointed Date	Maintain Project Highway per Specifications, Standards, and O&M Requirements (Schedule–K)
Provide support for utility shifting, land acquisition, and safety enforcement	Ensure safety, traffic regulation, and emergency response
Ensure no competing road constructed within 10 years of Appointed Date (Clause 6.3)	Meet all construction milestones per Schedule–G
Pay cost of utility shifting, tree felling, and environmental clearances	Hand back Project Highway at end of Concession free of encumbrances
Co-operate with Independent Engineer	Bear all project-related risks and liabilities, except those allocated to NHAI

3.1.2 Financial Covenants

The Agreement (Articles 28, 29, 31, 32 and 33; Schedules S and V) sets out **strict financial safeguards** to protect project cash flows and lender interests. All toll revenues flow through a dedicated **Escrow Account** with a defined payment-priority waterfall; equity is locked in to ensure sponsor commitment; and lenders are empowered with **substitution rights** in case of Concessionaire default. Comprehensive provisions on **insurance, change in law, revenue shortfall support, and financial reporting** reinforce overall fiscal discipline and transparency throughout the Concession Period. **The detailed covenants are presented in the exhibit below.**

Exhibit 13: Key Financial covenants detail

Aspect	Details
Escrow Account	All toll receipts, insurance proceeds, termination payments and any other revenues are to be credited into an **Escrow Account** maintained with an Escrow Bank (Schedule S). Withdrawals follow a fixed priority: (i) statutory dues and taxes, (ii) O&M expenses, (iii) debt-service obligations, (iv) maintenance and reserve funds, and (v) equity return or distribution.
Toll Revenues	The Concessionaire is entitled to collect and appropriate tolls as per the Fee Notification under Article 27. All receipts are routed through the Escrow Account before any appropriation.
Revenue Shortfall Loan (Article 28)	In case of lower-than-projected traffic, NHAI may, at its discretion, provide a **Revenue Shortfall Loan**, repayable from future surplus revenues; this ensures cash-flow stability during the early O&M years.
Traffic Variation Adjustment (Article 29)	If traffic volumes vary significantly from projections, the **Concession Period** may be modified to restore financial equilibrium. This mechanism insulates the project from abnormal revenue volatility.
Performance Security	₹ 49.94 crore Bank Guarantee maintained during construction; replenishable if encashed; released after 20 % of total project cost is expended and no default subsists (Article 9 & Schedule F).
Debt Servicing & Lender Protection	Senior lenders enjoy first-charge rights over project cash flows via Escrow Mechanism. The **Substitution Agreement** (Schedule V) empowers lenders to replace the Concessionaire in case of persistent default, ensuring continuity of operations and debt protection.

Aspect	Details
Equity Lock-In & Change in Ownership	No change in shareholding below 51 % by the lead sponsor is permitted during construction and for two years post-COD without prior NHAI approval (Clause 5.3 & 7.1).
Change in Law (Article 41)	Any financial impact arising from legislative or regulatory changes shall be compensated on an **NPV basis**, either through toll-rate adjustment or extension of the Concession Period.
Insurance (Article 32)	Comprehensive insurance coverage (construction, third-party liability, O&M phase, force-majeure risks) must be maintained; proceeds are assignable to lenders and NHAI. Failure to insure enables NHAI to recover costs and arrange cover directly.
Financial Reporting (Article 33)	The Concessionaire shall maintain separate project accounts and furnish audited statements, traffic and revenue reports, and other financial disclosures to NHAI and lenders periodically.
Independent Engineer & Auditors	An Independent Engineer (Schedule Q) oversees physical and financial progress, while statutory auditors certify claims, cost statements, and escrow compliance.
Termination Payments (Article 37)	Clear formulas define payment entitlements to lenders and Concessionaire in case of termination, ensuring recovery of Debt Due and protection of lender interests.

3.1.3 Delay Damages and Penalties under the Concession Agreement

Exhibit 14: Key Terms of Damages/ Penalty

Clause / Article	Situation	Damages / Penalty	Remarks
Clause 4.2	Delay by NHAI in providing ROW beyond 90 days from Appointed Date	0.1% of Performance Security per day	Subject to max 20% of Performance Security
Clause 4.3	Delay by Concessionaire in achieving Financial Close	0.2% of Performance Security per day	Max up to 20% of Performance Security
Article 12.4.2	Delay in achieving Milestones / Scheduled Four-Laning	0.1% of Performance Security per day	Delay beyond 90 days attracts penalty until completion
Article 15.2	Delay in achieving COD	0.1% of Performance Security per day	After 910 days from Appointed Date
Article 17.7.3	Delay in reopening lanes post-repair	0.1% of Average Daily Fee per 250m stretch/day	Requires IE approval
Article 35	Breach by either party	Compensation = direct costs only	No claim for consequential loss

3.1.4 Legal and Operational Framework:

- **Force Majeure (Article 34):**

  Covers Natural, Political, and Indirect Events; must be reported within 7 days; provides time extension and limited cost compensation.

- **Compensation for Breach (Article 35):**

  Based on direct cost to non-defaulting party; both parties obligated to mitigate loss.

- **Termination (Article 37):**

  - Permitted for Concessionaire or Authority default, or Force Majeure.
  - Termination payments defined under Clause 37.3.

- **Divestment of Rights (Article 38):**

  On termination or expiry, Concessionaire to hand over assets free of encumbrances with all O&M records and facilities.

- **Defects Liability after Termination (Article 39):**

  Concessionaire liable for construction defects for one year after termination / transfer

3.2 Review of Supplementary Agreement

The **Concession Agreement dated 28.06.2010** between **NHAI** and **M/s Baharampore–Farakka Highways Limited (BFHL)** was modified through a **Supplementary Agreement dated 23.03.2018**, executed **to facilitate the implementation of a Hybrid Electronic Toll Collection (ETC) System across all toll plazas of the project.** This modification was introduced pursuant to directions from the **Government of India** and **NHAI Circular No. NHAI/13013/2016-17/CO/Hybrid ETC/80 dated 30.11.2017**, which mandated the nationwide adoption of Hybrid ETC systems. The agreement was executed under **Change in Scope**, with costs reimbursable by NHAI and corresponding service obligations defined for the Concessionaire. The Supplementary Agreement formalized the installation, testing, commissioning, operation, and maintenance of **Hybrid ETC infrastructure**, integrating RFID, Weigh-in-Motion (WIM), Static Weigh Bridge (SWB), and associated hardware/software systems at both **Shibpur (Km 206+562)** and **Chandermore (Km 260+850)** toll plazas.

The arrangement ensures uniform compliance with national ETC standards, improved toll-lane efficiency, and enhanced auditability of user-fee transactions through RFID-based automation.

Exhibit 15: Summary of Supplementary Agreements

Date	Parties	Purpose / Context	Key Terms / Amendments
23.03.2018	**National Highways Authority of India (NHAI)** and **M/s Baharampore–Farakka Highways Limited (BFHL)**	Implementation of **Hybrid Electronic Toll Collection (ETC) System** under Government of India directive and NHAI circular	• Concession Agreement dated 28.06.2010 amended to incorporate Hybrid ETC. • Scope expanded to include design, supply, installation, integration, testing, commissioning, operation & maintenance of Hybrid ETC System at all toll plazas. • Hybrid ETC includes RFID transceivers, Medium-Speed Weigh-in-Motion (MS-WIM), Static Weigh

Date	Parties	Purpose / Context	Key Terms / Amendments
			Bridges, and integrated lane management software. • Concessionaire responsible for system uptime of **≥99% per lane per month** for 90% of lanes (SLA provision). • **Damages @0.1% of installation cost per day** for delays in installation/testing/commissioning, capped at **10% of total installation cost**. • **O&M Period:** 5 years per payment cycle, extendable with annual escalation of **5%**, paid quarterly by NHAI. • Hybrid ETC hardware to be handed over in operational condition at end of Concession Period. • No additional monetary benefits or time extensions allowed, except in case of **Authority Default** or **Force Majeure**. • **Maximum monthly damages** capped at ₹25,00,000 (subject to WPI-based revision every 3 years).

3.3 Review of O&M Contract

3.3.1 Review of Routine Cleaning and Horticulture Services Agreement

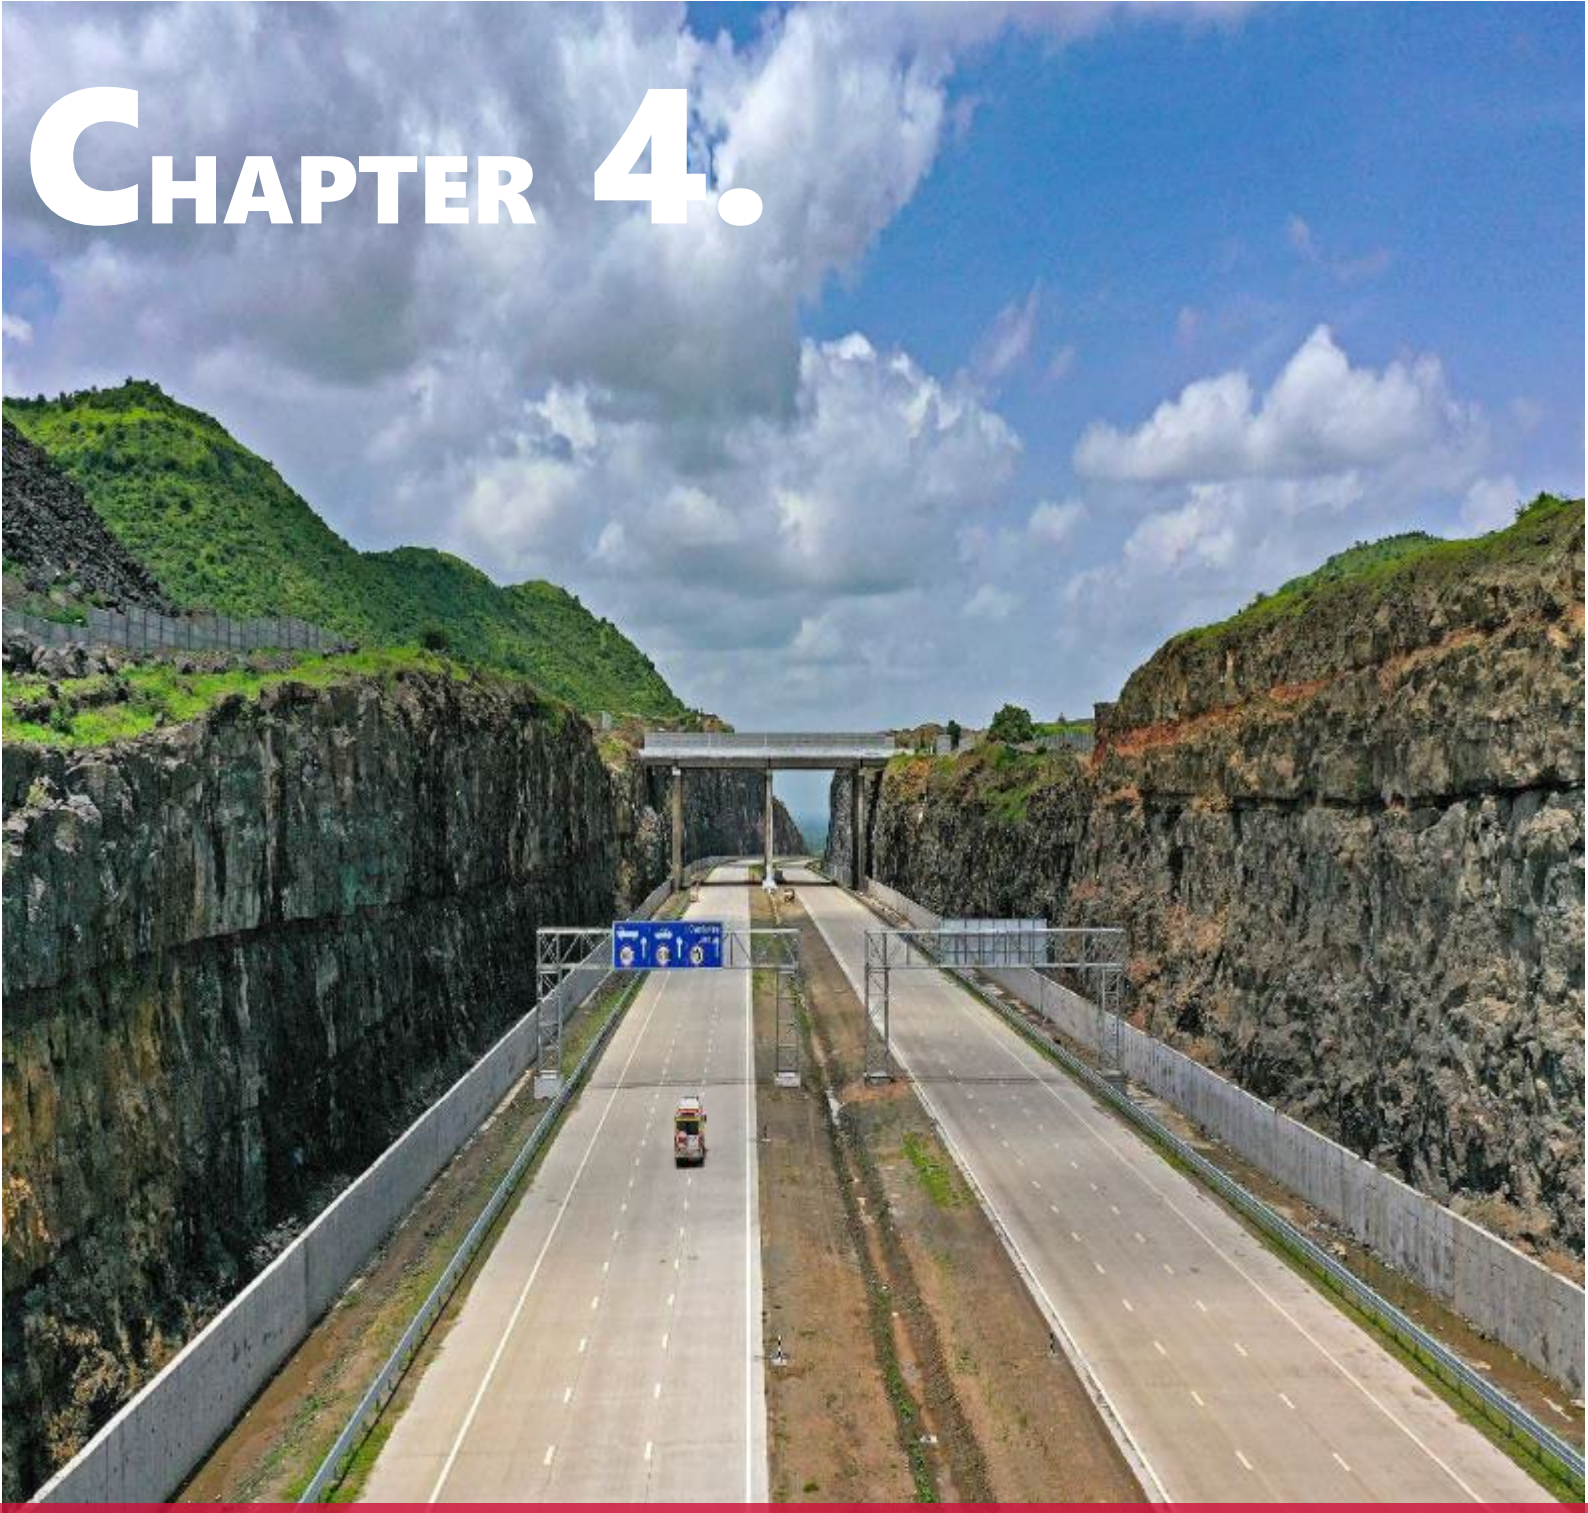
The **Service Agreement** for **Routine Cleaning and Horticulture Works** at the **Baharampore–Farakka Section (NH-34)** Project Highway was executed on **30th March 2025** between **Baharampore–Farakka Highways Limited (BFHL)** and **M/s Humayun Choudhury**. The agreement governs monthly housekeeping, cleaning, drain desilting, and horticultural maintenance of the project highway's Right of Way (ROW), medians, and toll plazas, in line with the obligations under the Concession Agreement and Cube Highways' ESG and IFC performance standards.

Exhibit 16: Key Terms of Routine Cleaning and Horticulture Services Agreement

Parameter	Details
Date of Agreement / Execution	30 March 2025
Parties	Baharampore–Farakka Highways Limited ("Company") and M/s Humayun Choudhury ("Service Provider")
Contract Reference	Service Agreement for Routine Cleaning and Horticulture Works – Project Highway NH-34 (BFHL)
Project / Location	Four-Laning of Baharampore–Farakka Section (NH-34) from Km 191.416 to Km 294.684 in the State of West Bengal
Scope of Work	Routine cleaning, sweeping, and horticulture of ROW, median, toll plaza, and structures including: • Median & avenue plant maintenance • Watering and grass trimming • Cleaning of drains, culverts & road furniture • Sweeping of carriageways & service roads • Safety management at work zones • Vegetation and environmental management as per ESG policy
Contract Value / Service Fee	**₹ 9,05,400 per month (exclusive of GST) — as per Schedule II (Service Fees & Activities Matrix)**
Contract Period	12 months (from 01 April 2025 to 31 March 2026) – extendable by mutual consent
AMC Type / Service Nature	Comprehensive Service Agreement – includes manpower, equipment, safety compliance, and reporting; non-comprehensive for hardware replacement if any

Parameter	Details
Commencement Date	01 April 2025
Performance Security	Not applicable (as per Particular Conditions)
Manpower Deployment	• Dedicated field teams for median, ROW and drain maintenance • Supervisors for each 50 km stretch • Authorized Representative: Mr. Humayun Choudhury
Service Frequency / KPIs	• Sweeping – daily main carriageway • Drain cleaning – monthly/ as required • Median/ avenue trimming – bi-monthly • Watering – alternate days during summer • Reporting – daily DPR through Road Aid App
Payment Terms	• Monthly invoicing within first week of each month • Payment within 30 days of approved invoice • Statutory deductions (TDS, GST) applicable • Retention / adjustments for defects or non-performance
Mobilization Period	Within 15 days from date of award
Cooling / Grace Period	Initial one-month stabilization phase without penalties
Penalty / Damages	As per Schedule V – performance-linked penalties up to 100 % of monthly fee for major non-compliances; activity-wise deductions (10–15 %)
Safety Compliance	Mandatory PPE for all staff; Work Zone Safety SOP (Schedule VIII); Shadow Vehicle with LED Arrow Board & Signage
Reporting & Documentation	• Monthly Invoices with Road Aid DPR • Safety Checklist and Attendance Logs • ESG and POSH Compliance Declarations (Schedule VI & VII)
Insurance Requirements	• Workmen Compensation & Third-Party Liability Insurance (≥ ₹ 5 crore limit) • Copy of policy to be submitted within 14 days of commencement
Indemnity & Liability	Service Provider indemnifies BFHL against any loss, injury, labour dispute, non-compliance, or accident arising out of Services
Termination Clause	• By either party with 30-day notice • Immediate termination for non-performance, safety breach, or statutory non-compliance
Jurisdiction	Laws of India; Courts at New Delhi; Arbitration under the Arbitration and Conciliation Act, 1996

Chapter 4.



Condition Assessment of Project Road

Chapter 4. CONDITION ASSESMENT OF PROJECT ROAD

4.1 General

This chapter presents a detailed assessment of the existing condition of the Baharampore–Farakka Section of NH-34 Project Highway in accordance with the provisions of the Concession Agreement and relevant IRC guidelines. The objective of this assessment is to evaluate the current condition and performance of the pavement, structures, toll plaza facilities, service roads, drainage systems, safety installations and other highway assets. The observations are based on site inspections, maintenance records, annuity performance, and interaction with the concessionaire's O&M team.

This section presents the findings of the **condition assessment** of the **Baharampore–Farakka Section of NH-34 Project Highway** in the **State of West Bengal**. The assessment has been prepared based on **field observations** & Based on Result of **Falling Weight Deflectometer (FWD) survey** carried out in **April 2023**.

The integration of these key datasets — pavement deflection study (FWD), structural evaluation of bridges, and visual field inspection — provides a comprehensive and reliable representation of the current structural and functional condition of the project highway and its associated assets. The **project corridor traverses the alluvial plains of the Ganga basin in the districts of Murshidabad and Malda**, characterized by flat to gently undulating terrain with intermittent low-lying areas and water channels. The alignment commences near **Baharampore (Km 191+700)** and terminates near **Farakka (Km 292+294)**, passing through key settlements such as **Ahiron, Jangipur, and Sujnipara**. The stretch forms a vital component of **NH-34**, serving as a major arterial link between **Kolkata and North Bengal**, facilitating both passenger and freight movement to the **northeastern region** of India.

The assessment integrates **instrumental evaluations** (FWD, Axle load, NSV) and **visual observations** to provide a holistic appraisal of pavement condition, bridge integrity, drainage, and highway appurtenances.

This assessment has been carried out in accordance with the following key references:

- **IRC:115-2014** – Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements using FWD Technique
- **IRC:117-2014** – Guidelines for Structural Evaluation of Rigid Pavements
- **IRC:37-2018** – Guidelines for the Design of Flexible Pavements
- **IRC: SP:35-2015** – Code of Practice for Inspection and Maintenance of Bridges
- **IRC:83-2019 (Part I & II)** – Guidelines for Design and Condition Assessment of Bridge Components
- **IRC: SP:16** and **IRC: SP:83** – Guidelines for Maintenance and Management of Highways and Toll Facilities

4.2 Pavement Composition

The Concessionaire's design consultant (**LEA Associates South Asia Pvt. Ltd.**) adopted a **design subgrade CBR of 10 percent** and **design traffic loadings of 40 MSA and 50 MSA** for the two traffic-homogeneous sections (Section I: Km 193–232 and Section II: Km 232–295).

Both directions were provided with the same pavement crust thickness to maintain uniformity of performance and ease of maintenance.

As mentioned in Pavement Design Report, design consultants summarized the calculated design traffic for the next 20 years for BT and Base and subbase layer respectively.

Exhibit 17: Design traffic in MSA

S. No.	Section	Design Traffic (MSA)- 20 year
1	Section I (Km 193 – 232)	40 MSA
2	Section II (Km 232 – 295)	50 MSA

Pavement Configuration for Project is given in **Exhibit 18**

Exhibit 18: Pavement Composition-Main Carriageway

S. No	Design MSA	Thickness (mm)
Flexible Pavement		
	Adopted MSA – 40	**Section-I (Km 193 – 232)**
1	BC in mm	40
2	DBM in mm	100

S. No	Design MSA	Thickness (mm)
3	WMM in mm	250
4	GSB in mm	230
	Adopted MSA – 50	**Section-II (Km 232 – 295)**
1	BC in mm	40
2	DBM in mm	110
3	WMM in mm	250
4	GSB in mm	230
Rigid Pavement		
	PQC	**DLC**
1	300	150
Overlay Works		
The Overlay thickness proposed for design traffic of 40 MSA & 50 MSA for the project corridor. Based on the BBD Test Result Concessionaire Proposed Overlay of 50-75 mm thickness with DMB of 40 mm thickness with BC.		

As per the **approved Pavement Design Report**, the **service road** has been designed for a **design traffic of 5 MSA** and **subgrade CBR of 10 %**. The Pavement layer adopted for service road as given below:

Exhibit 19: Pavement Composition -Service Road

S. No.	Layer (Adopted = 5 MSA)	Thickness (mm)
1	Semi-Dense Bituminous Concrete (SDBC)	25
2	Dense Bituminous Macadam (DBM)	50
3	Wet Mix Macadam (WMM)	250
4	Granular Sub-Base (GSB)	150
5	Select Sub-grade (CBR 10 %)	500

4.3 Assessment of Highway

Knight Frank carried out a detailed review and assessment of the **project highway assets**, which included **Service Roads (SR), Intersections, TLBs, BLBs, Sign Boards, MBCBs, and other related infrastructure components**. The assessment was undertaken through **comprehensive visual inspections** along the entire project stretch.

The objective of this exercise was to evaluate the **existing physical condition, functionality, and maintenance requirements** of each asset category. Based on the observations and data collected, a **maintenance strategy** has been formulated covering **regular repair, preventive, and routine maintenance activities** to ensure the long-term sustainability and serviceability of the highway assets.

Furthermore, the **pavement condition** was assessed through a combination of **visual inspection, Network Survey Vehicle (NSV) survey, and Falling Weight Deflectometer (FWD) testing**, providing a comprehensive understanding of surface condition, structural strength, and performance.

Overall, the review indicates that the **project highway assets are in satisfactory condition**, with all key components performing as intended. Minor deficiencies identified during the inspection can be addressed through routine and preventive maintenance measures as part of the recommended asset management plan.

a) Highway Lighting:

Lighting facilities have been provided at **junctions, ROBs, toll plazas, and key built-up zones** to improve nighttime visibility. **High-mast lighting** is installed at **toll plazas and major intersections**, while **solar-powered blinkers** are placed at selected median openings and black-spot locations to alert drivers.

b) Drainage:

As per CA, lined between MCW and Service Road to be provided and at outer edge of slip road at approach of grade separated structures.

Drainage arrangements are provided in the project. But these Roadside drainage along the Highway as well as lined drains at median needs appropriate maintenance by cleaning debris and vegetations to make the arrangement working.

c) Metal Beam & Wire Rope Safety Barrier:

As per the **Concession Agreement (Schedule C – Annex I, Section 2(b))**, the project highway includes the provision of **Concrete Crash Barriers**, **Metal Beam Crash Barriers**, and **Separators (MS Railings)** as part of the mandated roadside safety furniture.

The Agreement specifies a **minimum provision of 6.096 km of Concrete Crash Barriers**, **21.8 km of Metal Beam Crash Barriers**, and **3.8 km of MS Rail Separators**, to be installed along the **main carriageway**, **bridge approaches**, and **high embankment locations**, as well as at **median and underpass approaches**, in conformity with **MoRTH Clause 810** and **IRC: 119 – 2015**.

d) Bus Bays /Bus Shelters & Truck Lay Byes:

As per the **Concession Agreement (Schedule-C, Annex-I, Section 2(b))**, a total of **46 bus bays** are to be provided along the project highway at designated locations, in accordance with the approved layout and typical cross-section drawings.

Each bus bay is required to include **paved shoulders, approach tapers, and bus shelters**, designed as per **IRC: 80-1991** standards to ensure safe passenger movement and parking.

Additionally, the Agreement mandates the provision of **2 truck lay-bys**—two on each side of the carriageway—strategically located near **Moregram** and **New Farakka**, to facilitate parking and rest for heavy vehicles.

e) Major/Minor Junctions

Intersections are the places where one or more roads shares the common space. These includes major and minor intersections. The project highway comprises a total of 68 intersections, including 24 major and 42 minor junctions, extending from Km 191.416 to Km 294.684 of NH-34 (now NH-12).

f) Traffic Signs Boards:

The project highway is equipped with various types of road signs, including roadside signs, overhead gantry-mounted signs, kerb-mounted signs, and median signs. The stretch features signboards, overhead gantry signboards, cantilever gantry signboards.

g) Plantation

Landscaping and avenue plantation are present along the project highway; however, they are observed to be sparse and unevenly distributed. Shrubs and flowering plants have been

intermittently planted within the median, though the variety of species is limited. Median plantation is available at certain stretches of the corridor, comprising a mix of shrubs and ornamental plants, but the overall continuity and density of plantation remain inconsistent throughout the project road.

KF View:

Based on the assessment, the project highway exhibits a predominantly satisfactory road condition, with over 99% of both LHS and RHS carriageways in good and serviceable state. The limited portions identified as poor road condition (less than 1%) are minor and localized. Overall, the highway assets are functioning efficiently, with no significant structural or pavement distress observed. The minor issues noted during inspection—such as faded lane markings, vegetation growth inside drains, and localized adjustments required in safety barriers—can be addressed effectively through routine maintenance activities under the existing O&M plan

4.4 Assessment of Structures

A **visual condition survey** of all bridge and culvert structures was carried out jointly by the **Knight Frank (KF) team** and the **Concessionaire**, with the objective of **identifying and quantifying structural deterioration** arising from various factors such as **dead load, live load, wind load**, and **physical or chemical influences** exerted by the environment. In addition to examining **damages caused by unpredictable natural events** or **vehicular collisions**, the inspection also aimed to detect or monitor the impact of any **construction-related imperfections** that may affect long-term performance. Such periodic inspections play an important role in **enhancing the service life and safety** of both existing and newly built bridge structures.

The objective of the inspection was to evaluate the **structural integrity, durability, and functional safety** of bridge assets through a **systematic visual examination**, supplemented by **limited Non-Destructive Testing (NDT)** wherever required. The assessment methodology adhered to the provisions of **IRC: SP:35-2015** (Code of Practice for Inspection and Maintenance of Bridges) and **IRC:83-2019 (Part I & II)** pertaining to bridge design and inspection standards.

The assessment covered all structures listed in the Concession Agreement and verified through the IE's latest asset inventory, comprising:

- **4 Major Bridges – PSC Box Girder / RCC T-Beam type**
- **12 Minor Bridges – RCC Slab and T-Beam type**
- **4 Railway Over/Under Bridges (ROB/RUB)**
- **137 Culverts (Box and Pipe type combined)**
- **9 Pedestrian/Cattle Underpasses/VUP**
- **3 Grade Separators / Flyovers**

KF View:

Overall, the bridge and structure assets are in sound structural condition, with no major distress or deterioration observed in the primary load-bearing components. Minor issues such as localized surface cracks, drainage outlet blockages, and faded markings were noted, which can be addressed through routine maintenance and periodic cleaning under the ongoing O&M plan. The observed condition suggests

that the structures are structurally stable and functionally serviceable, ensuring continued safe operation of the project highway

4.5 Assessment of Toll Plaza

The project highway comprises **two toll plazas**, namely **TP–01 (Shibpur Toll Plaza at Km 206+562)** and **TP–02 (Chandermore Toll Plaza at Km 260+850)**, developed under the **Design, Build, Finance, Operate, and Transfer (DBFOT)** model. Both plazas have been designed and constructed as per **IRC:SP–84** and **MoRTH** specifications to ensure uniformity in layout, functionality, and operational efficiency. Each plaza is equipped with identical facilities, tolling infrastructure, safety systems, and support amenities to maintain seamless toll collection and user service along the corridor

Exhibit 20: Details of Toll plazas

Sl. No.	Particulars	TP-01 – (TP-206) Shibpur Toll Plaza	TP-02 @ Plaza (TP-260) Chandermore Toll	Remarks
1	**Chainage (km)**	206.100 → 207.000 (Centre 206+562)	260.375 → 261.275 (Centre 260+850)	
2	**Existing Chainage (old NH-34)**	208.562 → 209.462	262.743 → 263.643	
3	**Toll Plaza Length (m)**	900	900	
4	**No. of Tolling Lanes**	14 (7 + 7)	14 (7 + 7)	
5	**Lane Width (m)**	3.5 (standard) / 4.5 (extra-wide)	3.5 / 4.5	
6	**Booth Separator Width (m)**	0.9 – 1.0	0.9 – 1.0

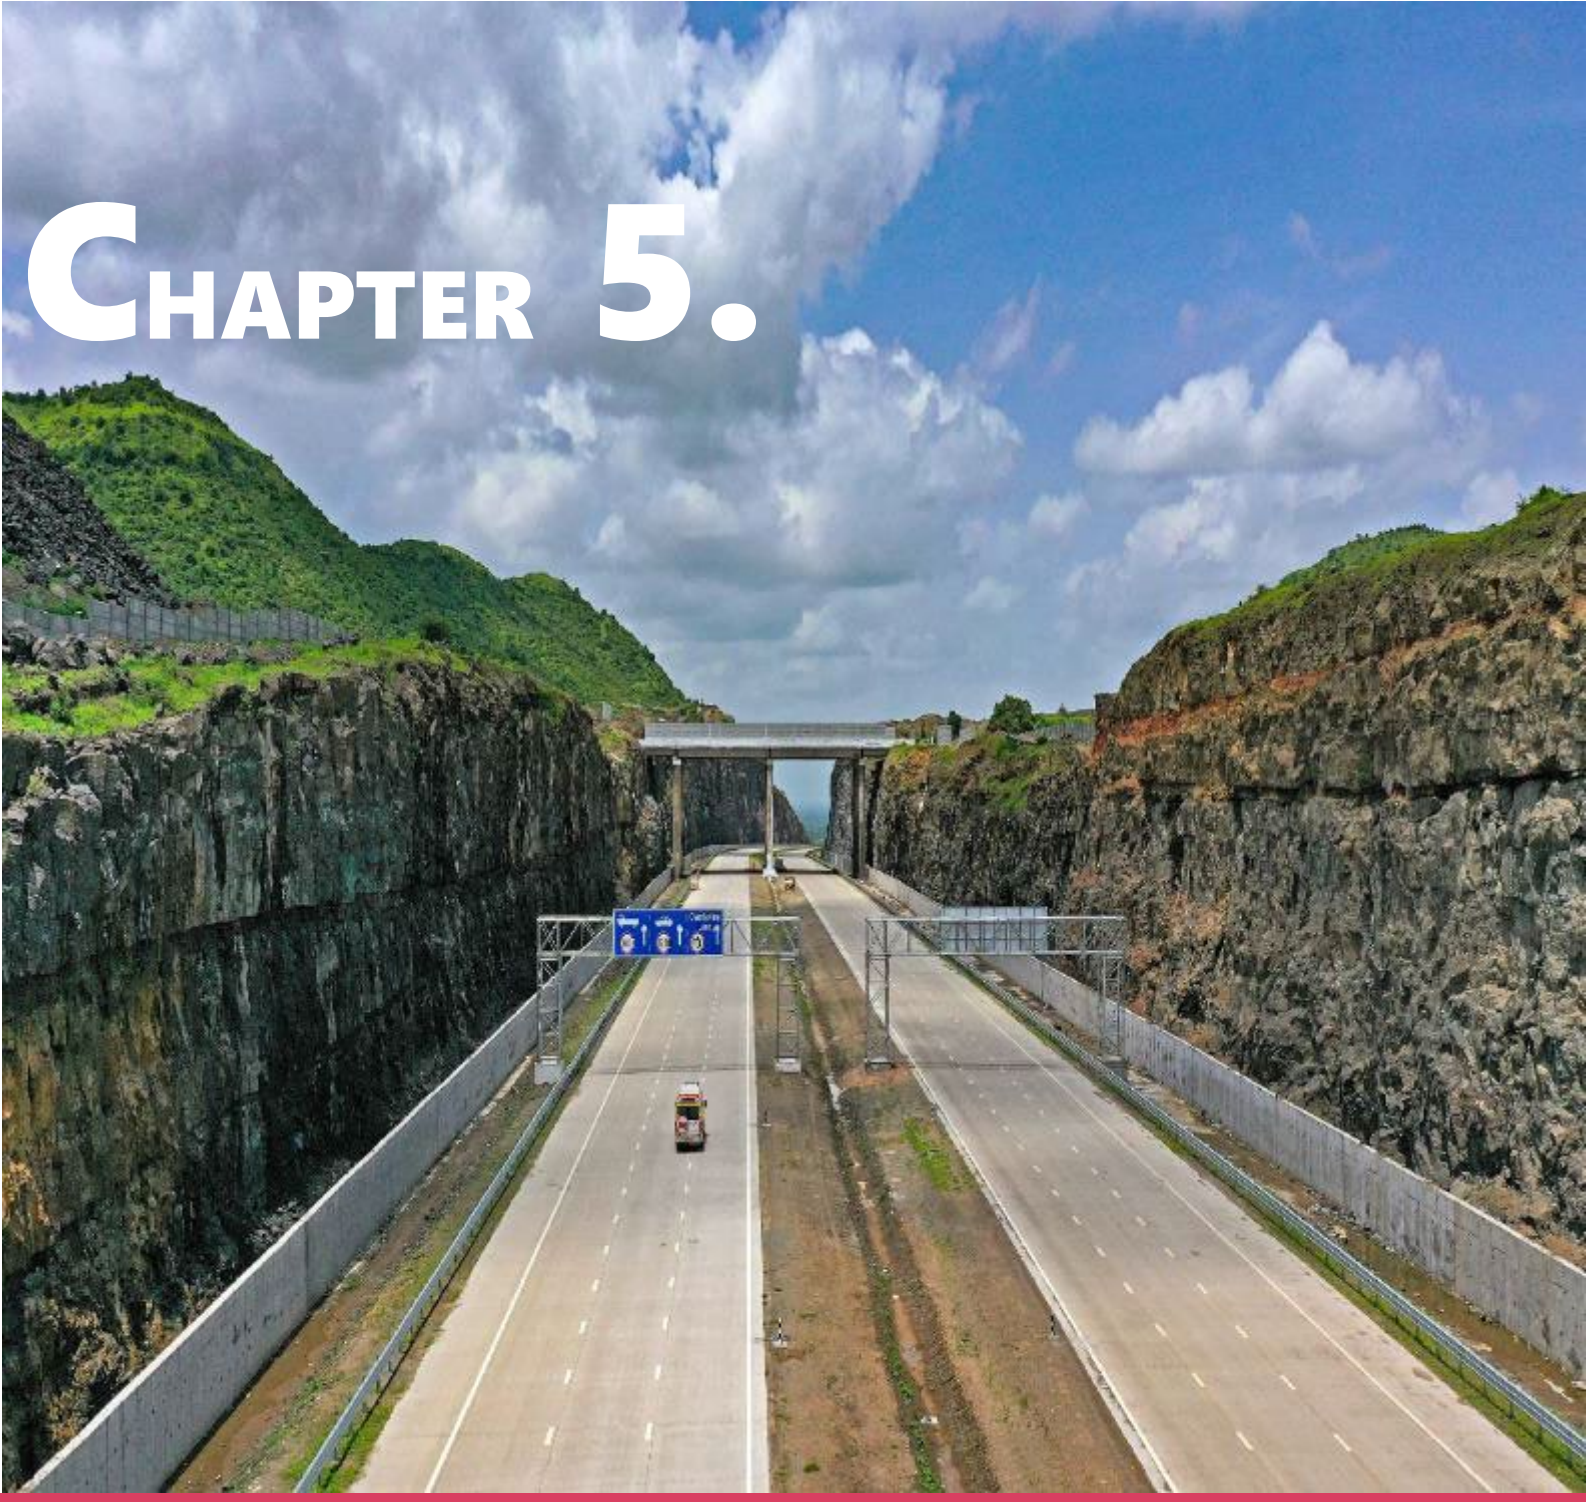
13	**Automatic Vehicle Classifier (AVC)**	14 Nos	14 Nos	

Sl. No.	Particulars	TP-01 – (TP-206) Shibpur Toll Plaza	TP-02 @ Plaza (TP-260) Chandermore Toll	Remarks
14	**CCTV / ANPR Cameras**	28 Nos (dual lens)	28 Nos (dual lens)	
15	**Overhead Transceivers / Antennae**	14 Nos	14 Nos	
16	**Lane Controllers / PLC Panels**	14 Nos	14 Nos	
17	**Hand-held Readers**	3 Nos	3 Nos	
18	**Software Modules**	Lane/Plaza = 14 ; TMS = 5 ; Other = 2	Same	
19	**OEM / Equipment Vendors**	Katherien, Chainway, Metro, Scita, Hikvision, Asbee	Same	
20	**FASTag / ETC Lanes**	14 Hybrid (no dedicated ETC)	14 Hybrid (no dedicated ETC)	
21	**Ambulance (Post)**	1 No. stationed	1 No. stationed	
22	**Highway Patrol Vehicle (RPV)**	1 No. (joint for both)	– (joint with TP-01)	
23	**Crane (35 T)**	1 No.	1 No.	
24	**Hydra**	1 No.	1 No.	
25	**Toilets**	2 Nos (M/F separate)	2 Nos (M/F separate)	
26	**Drinking Water Kiosk / RO Plant**	1 No. integrated	1 No. integrated	
27	**High Mast Lights**	2 Nos (25 m height)	2 Nos (25 m height)	
28	**Power Backup / DG Sets**	2 Nos (125 kVA each)	2 Nos (125 kVA each)	
29	**Fire Safety Equipment**	CO_2 Extinguishers – 6 Nos ; Hydrant system at Admin Building	Same	
30	**Medical Aid Post**	1 No.	1 No.	
31	**Traffic Aid Post**	1 No.	1 No.	
32	**Vehicle Rescue Post**	1 No.	1 No.	
33	**Operation & Maintenance Centre**	Located within plaza premises	Same	
34	**Telecom / ATMS Integration**	Integrated with TMS & Emergency Call Box	Integrated	
35	**Compliance with Specifications**	Yes (IRC:SP-84 / MoRTH)	Yes	

KF View:

Overall, both Shibpur and Chandermore Toll Plazas are fully functional, well-equipped, and in compliance with the prescribed technical standards. All major systems including tolling equipment, surveillance, weighing systems, and power backups are operational and well-maintained. The plazas have adequate O&M, safety, and user facilities, ensuring efficient toll operations and uninterrupted highway service. Minor routine upkeep and periodic calibration of electronic systems are sufficient to sustain long-term performance and compliance.



Chapter 5.

Review of Pavement Condition & Design

Chapter 5. REVIEW OF PAVEMENT CONDITION & DESIGN

5.1 Pavement Condition

The life of the Pavement has a co-relation with both its structural as well as Functional Condition. Inspecting and tracking of pavement condition, scheduling maintenance, and treating distress can have serious ramifications impinging on safety of road users and enhancing functional efficiency in end use of the Facility. It is therefore essential to carry out the assessment of the condition of the pavement on a given date taking into cognizance a variety of data to arrive at well-considered decisions and drawing up of the maintenance strategy and taking appropriate course of action to apply funds and resources in optimizing the desired levels of operations on the road assets. Condition data can include factors like roughness, specific distresses, friction, and overall structural health.

Once measurements of road condition are available, they are interpreted in such a way that allows the decision-making process to occur in a logical fashion. This might involve converting multiple physical parameters into a single index, allowing different sections of a road network to be directly compared against one another etc.

Pavement performance under prevailing environmental conditions is crucial as it has a direct bearing on the economic returns from the project development. While an under-designed pavement will fail prematurely, imposing undesirable Cost Over runs on the Project. It is therefore necessary to ensure the pavement layer thicknesses; configurations and materials are adequately designed and require minimal maintenance under the anticipated traffic loading throughout the life cycle of the project.

To achieve this objective and thereby to predict the performance of any pavement structure, it is necessary to analyze material characteristics, traffic condition, present physical condition of the pavement layers, local environment, and its impacts.

Due to the variety of variables involved, it is essential to determine the exact level of pavement performance through the project life. But, based on the assessment of present condition of pavement, analysis of available survey data, and estimations regarding the pavement life, future maintenance requirements can be estimated.

This part of the report deals with the details of the series of field investigations and analysis carried out to find out the present condition of pavement as well as to determine the future maintenance requirements for sound pavement performance throughout the project life.

5.2 Objectives

- Collect data regarding physical conditions of pavement.
- Prepare a plan for rectification as required for damaged/poor sections in consonance with requirements of the CA.
- Project maintenance requirement in physical and monetary terms over the life cycle of the project road.

5.3 Review of Pavement Design

5.3.1 Design Period

As per the Four-Laning Manual and IRC: SP:84-2009, the sub-base and base layers of the pavement are required to be designed for a minimum of 15 years, while the bituminous surfacing shall be designed for a minimum of 10 years. ***However, in this project, the concession period is 25 years (including 2.5 years of construction and 22.5 years of operation). Hence, the consultant designed the pavement for the full operation period of 22.5 years following IRC 37-2001 and the stipulations of SP:84-2009 Clause 5.4.1(ii).***

5.3.2 Design CBR

As per the pavement design report, concessionaire considered the 10% CBR for pavement design.

5.3.3 Design MSA

As stated in the Pavement Design Report, traffic loading for the 22.5-year operation period was computed using classified volume counts and axle-load data collected at km 231 and km 242+500. Two homogeneous traffic sections were identified as detailed below:

Section	Chainage	Design Traffic (MSA) – 20 years
I	193 to 232 km	133 MSA
II	232 to 295 km	179 MSA

For the **initial bituminous layers**, 10-year traffic loading of **40 MSA (Section I)** and **50 MSA (Section II)** was considered.

Vehicle Damage Factors (VDFs) used in the design were derived from actual surveys, varying between 2.1 and 8.9 for heavy vehicles, aligning with observed over-loading patterns.

5.3.4 Pavement Crust of Main Carriageway

The adopted pavement crust for the Main Carriageway meets the requirements of IRC 37-2001 Concessionaire carried out the pavement design with 10% CBR values. Even though the design traffic in RHS direction is relatively less compared to the LHS direction, but the concessionaire is providing the same thickness for both directions. The crust thicknesses are as follows:

Exhibit 21 Pavement Design Composition of Main Carriageway

S. No	Design MSA	As built drawings
Flexible Pavement		
	Adopted MSA – 40	**Section-I (Km 193 – 232)**
1	BC in mm	40
2	DBM in mm	100
3	WMM in mm	250
4	GSB in mm	230
	Adopted MSA – 50	**Section-II (Km 232 – 295)**
1	BC in mm	40
2	DBM in mm	110
3	WMM in mm	250
4	GSB in mm	230
Rigid Pavement		
	PQC	**DLC**
1	300	150
Overlay Works		
The Overlay thickness proposed for design traffic of 40 MSA & 50 MSA for the project corridor. Based on the BBD Test Result Concessionaire Proposed Overlay of 50-75 mm thickness with DMB of 40 mm thickness with BC.		

5.3.5 For Service Road/Slip Road

As per Approved Pavement Design Report the service road has been designed for 5 MSA & CBR-10%. The Pavement layer adopted for service road as given below:

Exhibit 22: Pavement Composition -Service Road

S. No	Design MSA	
	Adopted MSA – 5 MSA	
1	SDBC in mm	25
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	150

5.3.6 Pavement Overlay design for Existing Carriageway

As per the Pavement Design Report (PDR), The existing pavement comprised **bituminous layers of 90 – 350 mm** and **granular layers of 300 – 700 mm**. BBD tests showed characteristic deflections between 1.2 and 1.5 mm.

Overlay design followed **IRC 81-1997** using the deflection method. The design MSA was 40–50 for 10 years, the concessionaire proposed overlay thicknesses, details of which are provided in the below

Exhibit 23: Pavement Composition -Overlay Works

Chainage	Length	Characteristic Deflection (mm)	Adopted Overlay (mm) (BC)	Adopted Overlay (mm) (BC + DBM)
191 – 208	17 km	1.2	40	50
208 – 232	24 km	1.5	40	70
232 – 239	7 km	1.5	40	75
239 – 249	10 km	1.2	40	50
249 – 295	46 km	1.2	40	50

5.4 Pavement Evaluation by Falling Weight Deflectometer (FWD) Technique

FWD surveys were carried out to determine the present condition of pavement as well as finding out the future maintenance requirements.

5.4.1 Introduction:

The **Falling Weight Deflectometer (FWD) survey** for the **Baharampore–Farakka section of NH-34** was carried out in **April 2023**. The objective was to evaluate the structural condition of the existing pavement, determine the resilient moduli of individual pavement layers, and assess the remaining structural life of the corridor in terms of fatigue and rutting criteria.

This evaluation was carried out as per the provisions of **IRC:115-2014 "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer"**. The survey results form a critical input for deciding the overlay requirements and long-term maintenance strategy of the project highway.

5.4.2 Project Road

The project stretches forms part of the **NH-34 Baharampore-Farakka corridor (Package III, BFHL project)** in the state of **West Bengal**, connecting Murshidabad to Malda district. The section is a vital link of the Kolkata–Siliguri corridor under NHDP Phase III. The road passes through a plain to rolling terrain with clayey subgrade soil and high annual rainfall, making it susceptible to rutting and moisture-related distresses.

The FWD survey was conducted along both **LHS and RHS carriageways** for chainages **Km 193+000 to Km 295+000**, covering inner and outer lanes at 250–500 m intervals.

5.4.3 Falling Weight Deflectometer

The FWD survey was carried out using standard equipment with the following parameters:

- **Applied Load:** Equivalent to 40 kN impulse (≈ 80 kN standard axle).
- **Deflection Measurement:** At seven radial offsets (D0–D7) up to 1200 mm.
- **Spacing:** 250–500 m interval on each lane.
- **Temperature Correction:** All bituminous layer moduli adjusted to 35 °C.

- **Seasonal Correction:** Winter correction factors applied to granular and subgrade layers.
- **Analysis Tools:** *KGPBACK* (Genetic-Algorithm based back-calculation) and *IITPAVE* (for fatigue/rutting analysis)

5.4.4 FWD Analysis

The FWD data collected has been analysed as per IRC:115-2014 guidelines with the suggested ranges for in-service pavements.

Description	Range
Subgrade Modulus	5 CBR to 20 CBR
Granular Layer Modulus	100 MPa to 500 MPa
Bituminous Layers –Thick without distress	750 MPa to 3000 MPa
Bituminous Layers in distressed condition	400 MPa to 1500 MPa

The above suggested ranges are for guidance only and pavement engineer shall use his judgment based on available data while fixing the above ranges. By looking at the age, condition and performance of the pavement following different set of ranges have been used in the analysis:

Layer	Bituminous Layers	Granular Layer Modulus	Subgrade
Modulus Value (MPa)	750-3000	100-500	50-75

Bituminous layer Moduli obtained from back calculations shall be corrected for a standard pavement temperature of 35°C using given equations. Whereas, for back calculated moduli values obtained for granular and subgrade layer shall be corrected for seasonal variations (using winter and summer equations). As FWD tests are performed during winter, accordingly winter correction factor is applied for granular and subgrade layers.

Remaining life in base year and overlay requirement (with VG-40 mix for >20 MSA) has been estimated in accordance with IRC: 115-2014 and IRC: 37-2018. The summary of the results is shown in tables below.

Exhibit 24 Remaining life of the existing pavement,

S.No.	Chainage		Side (LHS/RHS)	Lane	Length (Km)	15th Percentile E Value			Existing Crust Thickness (mm)		Fatigue Strain (mm)	Fatigue Residual Life (MSA)	Rutting Strain (mm)	Rutting Residual Life (MSA)	Remaining Life (MSA) as per 90% Reliability

The **BFHL corridor (NH-34, Baharampore–Farakka)** pavement is structurally sound and capable of catering to design traffic demands over the short to medium term. However, **localized strengthening and periodic overlays** are recommended in lower-modulus sections to maintain uniform performance. Targeted rehabilitation instead of blanket overlay will be the **most cost-effective maintenance approach** for this stretch.

This evaluation reinforces that **targeted strengthening, rather than uniform overlays**, is the most cost-effective maintenance approach for this corridor**.**

5.5 Pavement Evaluation by Network Survey Vehicle

a) Introduction

The Network Survey Vehicle (NSV) survey was carried out in **April 2023** for the **Behrampur -Farakka** section of NH-12 (Chainage CH 202+510 to CH 292+140). The work was performed by IRSM using the Hawkeye 2000 Professional NSV system as part of Independent Engineer / O&M monitoring activities, in accordance with the relevant provisions of the Concession Agreement and the MoRTH / IRC guidance (IRC: SP:16-2019, ASTM E950, AASHTO PP-37).

The primary objectives were to: (i) quantify ride quality (IRI), (ii) measure rut depth and macro-texture, (iii) map visual pavement distresses and patching via high-resolution imagery, and (iv) capture asset inventory and geometry for maintenance prioritisation. The NSV data provides 1-km aggregated roughness tables and lane-wise profiles used for network level decision making.

b) Project Corridor

The surveyed corridor is the **Behrampur → Farakka** stretch (CH 202+510 to CH 292+140), covering **89.68 km** (four lanes; 358.71 lane-km) of NH-12 under BFHL. The corridor traverses largely flat to gently rolling terrain with seasonal high rainfall and predominantly clayey to silty subgrade soils — conditions that influence texture, rutting and localized pavement deterioration. Survey coverage included both inner & outer lanes for both directions at 1-km reporting intervals (1-km aggregated outputs).

c) Instrumentation & Methodology

Instrument: **Hawkeye 2000 Professional NSV** (multi-laser digital profiler + DGPS + panoramic imaging + Gipsi-Trac geometry).

Working parameters and procedures:

- Digital profiler (11 laser configuration) recorded longitudinal profiles, bump integrator, rut profile and sensor-measured texture at highway speeds.
- Video / still imagery captured lane wise defects (images sampled typically every 5–10 m).
- DGPS referenced all data; DMI used for high-accuracy distance.
- Processing: Hawkeye Processing Toolkit; outputs validated and converted into 1-km aggregated tables (IRI, bump integrator, rut depth, speed, co-ordinates).
- Standards: IRC: SP:16-2019, ASTM E950, AASHTO PP-37. Survey limitations (lighting, wet pavements, GPS coverage, fine cracks <3 mm visibility) were recorded and accounted for during QA/QC.

d) NSV Results and Analysis

The NSV data collected for the **Behrampur–Farakka section of NH-12** were processed and analysed using the **Hawkeye Processing Toolkit** in accordance with **IRC: SP:16-2019**, **ASTM E950**, and **AASHTO PP-37** guidelines. The analysis focused on evaluating pavement surface characteristics, particularly **International Roughness Index (IRI)**, **bump integrator values**, and **vehicle speed consistency**, to assess ride quality and surface evenness of both carriageways. The 1-km interval results for each lane were aggregated to determine the overall functional condition of the corridor. This section summarises the key findings of the NSV survey, highlighting lane-wise roughness trends, directional variations, and sections requiring attention for maintenance or rectification.

Roughness Summary – Main Carriageway (MCW)

The International Roughness Index (IRI) was measured at 1 km intervals for each lane and direction. Typical ranges and aggregate statistics derived from the IRSM dataset are summarized below.

Exhibit 25 Roughness Summary Behrampur to Farakka - Inner Lane

Chainage (km)	IRI Average (m/km)	Bump Int (mm/km)	Speed (km/h)	Latitude (deg)	Longitude (deg)

e) Summary Interpretation

- The NSV survey indicates that the **BFHL corridor remains in Fair to Satisfactory functional condition** overall.
- **Main carriageways:** Ride quality is uniform throughout with limited rough spots; no widespread distress detected from roughness data.
- **Maintenance Recommendation:** Localized mill & overlay treatment for chainages with IRI > 4.5 m/km to restore surface evenness.

5.6 Pavement Evaluation by Test-Pit Survey

a) Introduction

Test-pit investigations and laboratory testing were carried out in **May 2023** along the Behrampur–Farakka section (NH-34) to assess the in-situ condition and material properties of the pavement crust, granular layers and subgrade. Sampling and testing included sieve analysis (percent passing), Atterberg limits, Modified Proctor (MDD/OMC), CBR (soaked), specific gravity, water absorption and aggregate impact value (where applicable). Results are used to validate design assumptions (CBR / layer composition) and to identify chainages requiring remedial strengthening.

b) Project Road / Coverage

Investigations covered representative test pits at identified chainages between **205+900** and **290+170** (both LHS & RHS where available). Test pits were selected across the corridor to capture variability in pavement composition and subgrade soils; coordinates are provided where recorded.

c) Methodology

- Test pits/excavations and sampling followed IS practice and project quality procedures.
- Laboratory tests followed IS:2720 series (sieve analysis, Atterberg limits, Modified Proctor, CBR), aggregate tests as per relevant IS codes and MoRTH guidelines.
- Results were correlated with chainage and geo-coordinates and tabulated for each test location. Any non-conformance to MoRTH/IRC gradation limits is recorded in the table.

d) Test-Pit Results and Analysis

The following chainage-wise test-pit results summarise the in-situ and laboratory findings from the May 2023 investigations. Test pits were excavated, samples collected and tested under IS:2720 procedures to characterise pavement crust, granular material and subgrade soils. The tables that follow present measured layer thicknesses, sieve analyses, Atterberg limits, Proctor/CBR results and other material properties that are required to validate structural capacity and determine localized strengthening needs.

5.6.1 Subgrade Layer Test Results

Below exhibit summarises the subgrade soil classification, particle size distribution, Atterberg limits, Proctor characteristics, field density and soaked CBR values measured at the test pits. These parameters determine the supporting stiffness and moisture sensitivity of the foundation. Pay particular attention to locations with high fines and low 4-day soaked CBR — such chainages typically require subgrade improvement (stabilisation or replacement) prior to any structural overlay.

Exhibit 29 Subgrade Layer Test Results Summary

5.6.2

5.6.3 Granular Layer Test Results

Below exhibit presents the laboratory sieve analyses and related properties of granular materials recovered from WMM and GSB layers. Each row reports percent passing at standard IS sieve sizes, Atterberg limits where relevant, specific gravity, water absorption and aggregate impact values. Use this table to verify compliance with MoRTH gradation limits, identify coarse/fine biases and to assess whether existing granular layers will provide the designed support and compaction characteristics for overlays.

Exhibit 30 Granular Layer Test Results Summary

5.6.4 Pavement Composition Layer Test Results

This exhibit lists the measured pavement layer thicknesses observed at each test pit (bituminous surfacing, DBM/BC equivalent, WMM and GSB). These field-measured crust values are intended to be cross-checked against design drawings and to reconcile any discrepancy between as-built crust and the crust assumed in pavement design or FWD back-calculation. The composition table is essential to determine if additional overlay thickness is required and to prioritise full-depth repair versus surface treatments.

Exhibit 31 Pavement Composition Layer Test Results Summary

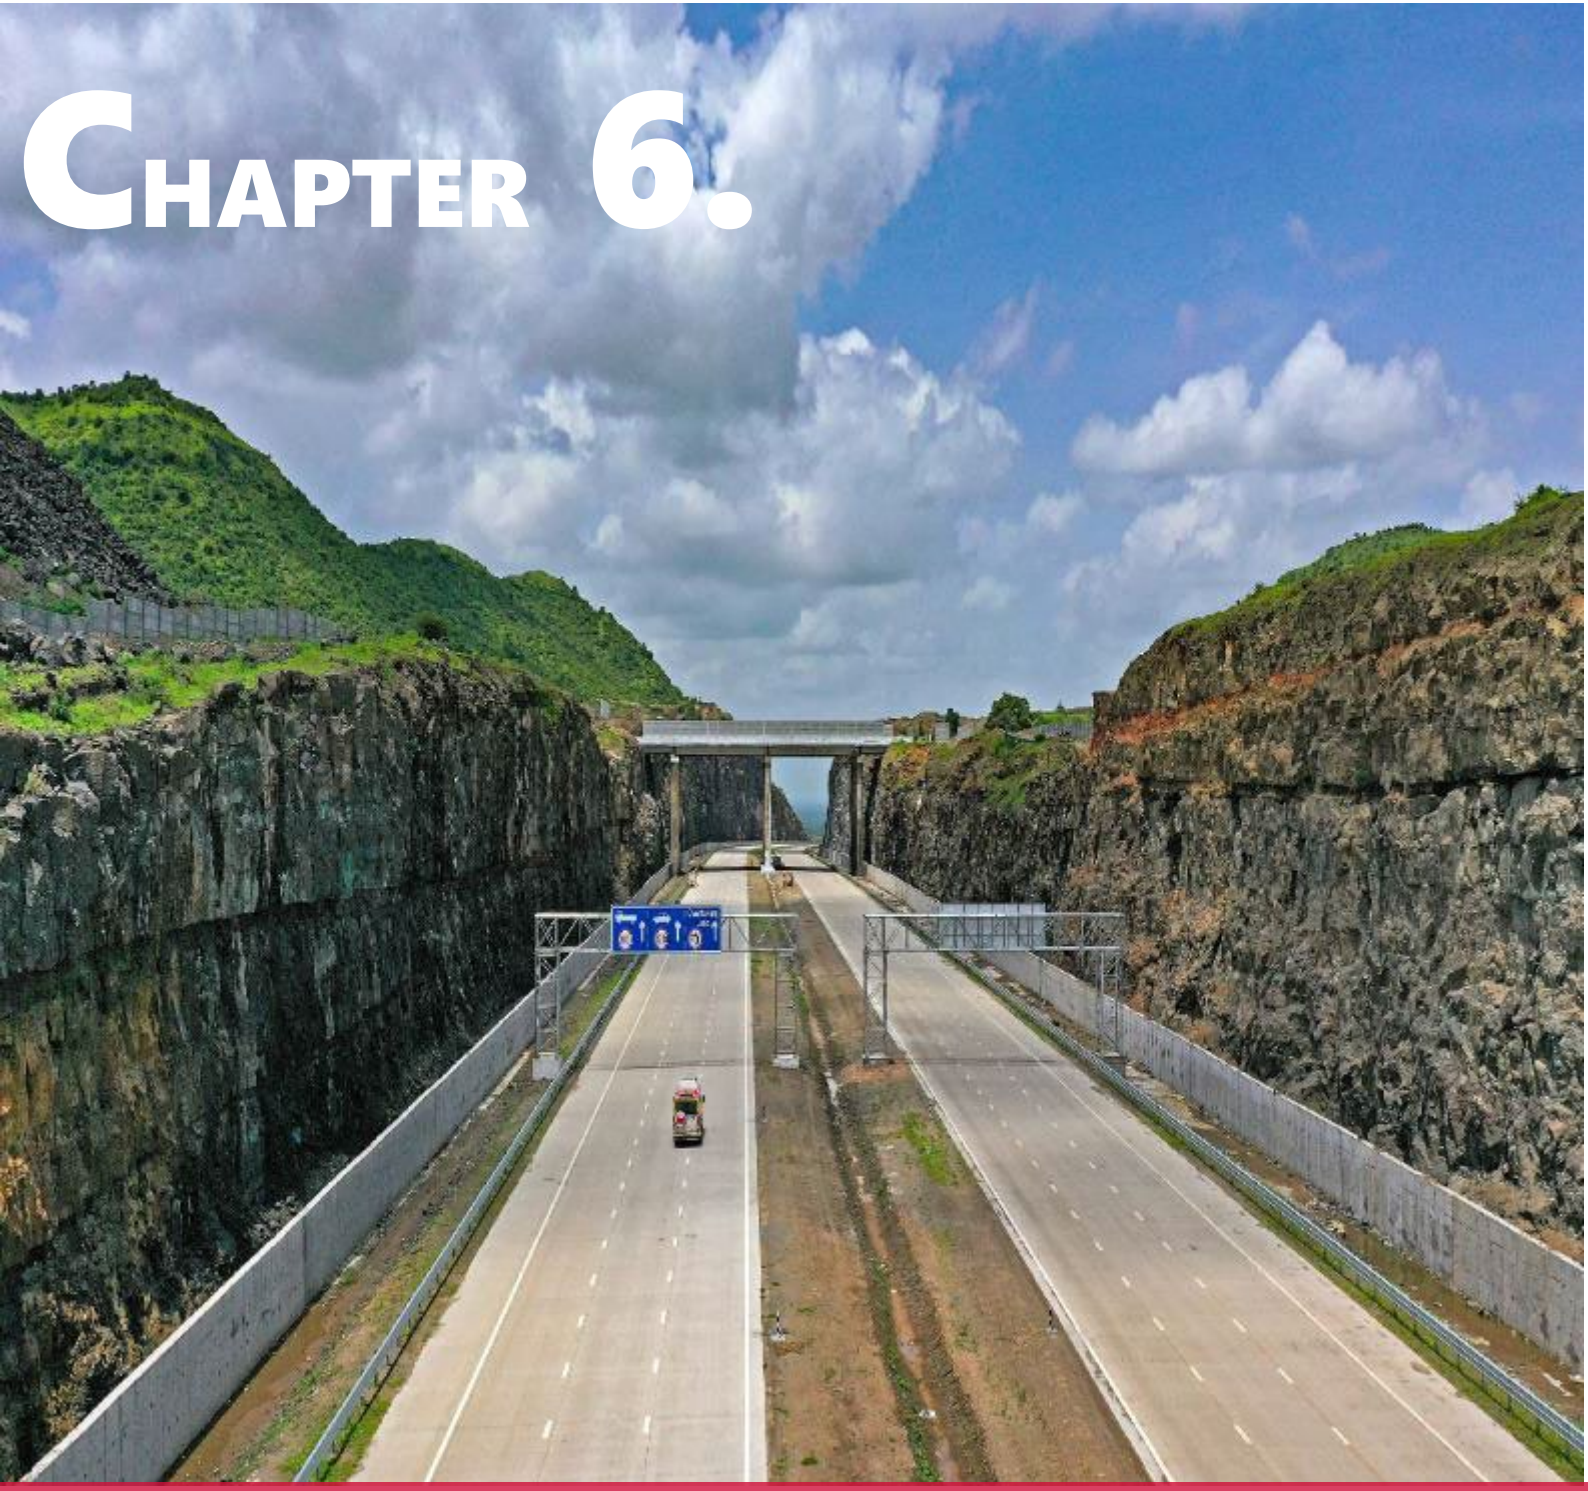
The combined interpretation of granular, pavement-composition and subgrade test data provide the material basis for the FWD and NSV observations; it enables chainage-wise diagnosis of distress mechanisms (e.g., structural weakness, poor gradation, moisture-sensitive subgrade) and supports targeted maintenance strategies rather than blanket treatment.

5.7 Major Maintenance of Pavement

All pavements require maintenance. Stresses from traffic, weather, and moisture change effects on the Surface. Regardless of the reason, without maintenance, pavement deteriorates at a fast pace. An asphalt pavement is an essential asset which must always be maintained. Allowing the pavement to have minor problems will grow into major ones. No road user likes to hit potholes or step into a puddle of water. Sun, rain, and wind age the pavement. Friction from tires rolling wears away the asphalt glues and line stripping. Sunlight oxidizes and draws all the essential oils which results in the pavement breaking away. Water enters the lower layers of the pavement through cracks damaging the foundation which leads to potholes and failure. The summary of required overlay thickness in LHS direction as per FWD (MCW)

Major Maintenance details discussed at **Chapter 6**

Chapter 6.



Cost Estimate

Chapter 6. COST ESTIMATE

Based on the assessment carried out in above chapters, various costs were worked out by Knight Frank. The costs are divided into following categories

- Routine Maintenance
- Major Maintenance Cost

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and Escalation.

6.1 Assumptions

The cost estimates are based on the following assumptions:

Following assumptions are considered for unit rates of various items while estimating the cost –

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard data book. The input rates for MoRTH standard data book were adopted as below
   a) **Manpower and labor** – As per applicable minimum wages published by Ministry of Labour & Employment, Government of India
   b) **Bitumen** – Bitumen rates are considered to be sourced from IOCL Haldia Refinery. The distance (to- from) from the midpoint of Project Highway is considered as 550 kms. VG-30 and VG-40 grades of bitumen are considered in our cost estimate.

☛ ***Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.***

Therefore, Bitumen prices are considered as per the client's forecast. Current published of bitumen are considered for unit rates calculation for FY26 and FY27. Average 10 years of price of bitumen are considered for unit rates calculation for FY28 and onwards, since bitumen prices have been range bound over the last five-six years.

c) **Sand and Aggregate** are sourced from the nearest quarry located on project highway.

d) **Cement** is procured from the nearest local market.

e) **Machinery Hire charges** of Plant and Machinery for various items of works have been considered from J&K SOR 2022 and some rates are considered from MORT&H Standard Data Book 2001-2002. Escalation has been considered on MORT&H Plant and Machinery rates to arrive at the present rates of 2024-25.

f) **Material Rates** are obtained from SOR of J&K, PWD 2021-22.

g) Some of the rates are based on Consultant's experience on similar ongoing projects in adjacent locations.

h) **Overheads and profits** have been considered based on MORT&H Standard Data Book. Applicable taxes have been considered in the Rate Analysis.

i) **Goods and Service Tax (GST)** is considered as 18% as per the latest Government Guidelines.

Exhibit 32: Adopted Unit Rates for Key items

S.nos	Items Description	Unit	Rates (₹)
1	Bituminous Concrete	Cum	10,210
2	DBM	Cum	9,220
3	Milling	Cum	100
4	Tack Coat	Sqm	15
5	Road Marking	Sqm	485
6	Earthen Shoulder	Cum	330
7	Kerb Raising	Rm	350
8	Kerb Painting	Sqm	130
9	Micro Surfacing	Sqm	165

- *The above unit rates are excluding GST.
- The unit rate of each item includes 10 % overhead for road works, 15 % overhead for structure works and 10 % contractor's profit.
- Details of components considered in rate analysis & quantification are presented in below **Exhibit 33.**

Exhibit 33: Major components detail for Key items

Sr. No.	Particular	Source	Reference
1	Rate Analysis	MORTH	Standard Data Books published by MORTH
2	**Material**		
A	Aggregate Rates	Nearby Project Corridor	As per Local Market Rates
B	ATMS, TMS cost		As per Vendor offer.
C	Cement	As provided in Local market	As per Local Market Rates
3	Equipment hire cost	Nearby project location	Standard Data Books published by MORTH
4	Labour	As per minimum wages	As per minimum wages

6.2 Routine Operation & Maintenance (O& M) Cost

Operations and Routine Maintenance work required as per the CA. During the concession period, the Concessionaire is fully responsible for Operation & Maintenance of Project Highway. Schedule K elaborates the requirements of various service factor desirable level and acceptable level during O & M period along with time if any parameter level of service beyond acceptable limit.

The CA Stipulates that the Concessionaire shall Operate and Maintain the Project Highway in accordance with Article 17 – Operation & Maintenance & Schedule –K Maintenance Requirements of Concession Agreement. The obligation of Concessionaire as per Article 17 is as follows:

- permitting safe, smooth, and uninterrupted flow of traffic on the Project Highway during normal operating conditions; collecting and appropriating the Fee.
- minimizing disruption to traffic in the event of accidents or other incidents affecting the safety and use of the Project Highway by providing a rapid and effective response and maintaining liaison with the emergency services of the State.
- carrying out periodic preventive maintenance of the Project Highway.
- undertaking routine maintenance including prompt repairs too, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices.
- undertaking major maintenance such as replacement of panels in rigid pavement and associated activities
- preventing, with the assistance of concerned law enforcement agencies, any unauthorized use of the Project Highway
- preventing, with the assistance of the concerned law enforcement agencies, any encroachments on the Project Highway
- protection of the environment and provision of equipment and materials therefore
- operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- maintaining a public relations unit to interface with and attend to suggestions from the Users, government agencies, media, and other agencies; and
- Complying with Safety Requirements in accordance with Article 18.

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operating cost. The estimates are projected based on best industry practices and are compared with the operation cost in the vicinity of the project area. Same has been divided into following major head

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS/HTMS/System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

6.2.1 O & M Strategy

Important Operations and maintenance work have been outsourced by the SPV. Details of important work orders outsourced are listed below **Exhibit 34**

Exhibit 34: Work outsourcing for Operations and Maintenance work.

Sn	Activity	Strategy
1	Routine Maintenance	In-house
2	Preventive Maintenance	In-house
3	Management and Supervision Staff	In-house
4	Security	Outsource
5	Corridor Management	Outsource

6.2.2 Routine Maintenance

Routine and Preventive maintenance encompasses work that is performed in reaction to an event, season, or overall deterioration of the transportation asset. This work requires regularity and reoccurring in nature. Routine and Preventive Maintenance is essential to maintain the condition of the highway asset or to respond to specific conditions or events that restore the highway system to a functional state of operation.

Total Routine Maintenance cost estimated by Knight Frank is ₹52.53 Crore for the balance concession period of 17 years. The routine and preventive maintenance covers maintenance of the following assets:

- Cleaning of Main Carriageway, service road, bridge deck
- Pruning of median plantation, watering
- Maintenance of Avenue Plantation
- Cleaning of debris from carriageway and shoulder
- Plantation and Landscaping
- ROW Cleaning
- Cleaning of all road asset, Toll Plaza
- Tunnel, MEP & Slope Protection

The average cost for Routine Maintenance is ₹25,450/ km/ month including GST. Based on our previous projects experience & based on the thumb rule method routine maintenance costs are reasonable.

Exhibit 35: Routine Maintenance Cost

Sr. No.	Item Description	As per Knight Frank	Remarks
1)	Routine Maintenance Cost (₹-Crore) (17 Years Concession Period)	52.23	
2)	Routine Maintenance Cost Per Year (₹-Crore)	3.07	
3)	Routine Maintenance Cost Per Km/Year (₹-Lakh)	3.05	

Above cost is including of GST

6.2.3 Preventive Maintenance

Total Preventive maintenance cost considered is ₹32.52 Crore for balance concession period of 17 years & following items considered for preventive maintenance work:

- Repair cost of pavement as and when pavement distress occurred.
- Repair of road Kerb, crash barrier, metal beam crash barrier and guard rail
- Repair of faded road marking
- Fixing of damaged sign boards, KM stones
- Shoulder maintenance
- Repair and maintenance of structure – bearing, expansion joint.
- Repair of crossroad junction
- Maintenance of Truck lay-bys

Average cost considered for Preventive Maintenance is ₹ 15,847/km/ month including GST. Based on our previous projects' experience & based on thumb rule method, preventive maintenance cost is reasonable.

Exhibit 36: Preventive maintenance Cost

Sr. No.	Item Description	As per KF	Remarks
1	Preventive Maintenance Cost (₹-Crore) (17 Years Concession Period)	32.52	
2	Preventive Maintenance Cost Per Year (₹-Crore)	1.91	
3	Preventive Maintenance Cost Per Km/Year (₹-Lakh)	1.90	

Above cost is including of GST

6.3 Highway Lighting

Electricity charge and maintenance cost of highway lighting is calculated as follows:

a) Each lighting post has counted from site and consider having LED light will be operated for 12 hours a day round the year.
b) Lighting post at median / separator are having with two halogen/LED lamp and service road shall be with single lamp only.
c) Tunnel & MEP OPEX

The O & M Cost estimated towards highway lighting is ₹2.07 Crore per year including GST.

6.4 Corridor Management

The following equipment along with operation manpower is required to provide as per Concession agreement.

a) 2 nos. of Crane
b) 4 nos. of route patrol vehicle
c) 2 nos. of Ambulance

O & M Cost estimated towards incident management with operation manpower is ₹1.07 Crore per year including GST.

6.5 Manpower Cost

The requirement of manpower is worked out to function all activity at project road for compliance of CA requirement, toll collection and security of asset. Requirement of manpower is classified into following broad division:

a) Management, Administration/HR and Supervision Staff: in-house manpower (**Cost considered towards SPV Manpower is ₹56 Lakh per year)**
b) Toll Operation Manpower: outsource/In-house for providing 24-hour uninterrupted traffic flow at toll plaza and collection of tolls. Due to Nationwide implementation of Hybrid-ETC System, it is expected drop in toll collection manpower. However, where collection of overloading is expected, manpower for toll collection is not possible at this stage. The company is expecting revenue from overloading in this asset therefore curtailment of toll collectors is not expected. (**Cost considered towards SPV 3rd Party Manpower is ₹5.51 crore per year)**

The cost of manpower is estimated as ₹5.56 crore per year.

6.6 Office Expenses

Cost towards operation of office, insurance premium, professional fees for carrying out traffic, asset condition survey etc., IE fees, AMC for equipment installed at office, communication charge, conveyance cost etc. are considered under Office Expenses. **The cost considered regarding office expenses & operation are ₹5.16 crore per year which is bifurcated as follows.**

- ***₹2.59 crore per year for Independent Engineer (IE)/Authority Engineer (AE) and professional fees covering legal, arbitration, and audit certification during the O&M period***
- ***Actual cost of insurance policy: ₹1.36 crore per year (inclusive of 18% GST)***
- ***Survey and investigation charges: ₹0.23 crore per year (inclusive of 18% GST)***

6.7 Major Maintenance

As mentioned in earlier chapter, Currently, the Project Highway is maintained by existing Annuity Concessionaire.

Based on RI & FWD Test results, SPV team made 03 MM cycles for the overlay of projects. Following items were considered during each MM cycle based on the ground requirements.

A. Flexible Pavement

- Overlay of 30-40 mm BC on MCW based on ground conditions and Test results.
- Overlay of 30 mm BC on service road considered.

6.8 Major Maintenance items

Based on detailed highway inventory carried out during site investigation and data provided by the concessionaire following items considered during major maintenance work

- Bituminous concrete for MCW using VG-40
- Dense Bituminous Macadam for MCW using VG-40
- Bituminous concrete for Service Road using VG-40
- Dense Bituminous Macadam for MCW using VG-40
- Micro surfacing
- Road Marking
- Kerb Raising
- Earthen Shoulder
- Kerb Painting

6.9 Major Maintenance Cycles & Cost

Major maintenance works to be considered in 03 cycles up to FY2041. A total Cost of ₹395.36 crore (Without Escalation) considered for major maintenance work Upto end of Concession period. Major maintenance Strategy is shown in **Exhibit 37. Detailed Cost Estimate attached as Annexure A.**

Exhibit 37: Major Maintenance Cycles & Cost (with GST)

Major Maintenance Strategy & Cost Details for BFHL Project				
Cycle	**Year**	**Strategy**	**KF Cost (₹-Crore)**	**Remarks**
MM Cycle 1	**FY 2031**	**A) Main Carriageway:** 50% 30mm BC Overlay with VG 40 50% 40mm BC Overlay with VG 40 65% 50mm DBM Rehabilitation with VG 40	175.65	
MM Cycle 2	**FY 2037**	**A) Main Carriageway:** 100% 40mm BC Overlay with VG 40 10% 50mm DBM Rehabilitation with VG40 Kerb raising -100%	136.11	
MM Cycle 3	**FY 2041**	**A) Main Carriageway:** 100% 30mm BC Overlay with VG 40 10% 50mm DBM Rehabilitation with VG40	83.60	
Total MMR Cost (₹-Crore) with GST			**395.36**	

*** Above cost is without escalation.**

6.10 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period as below.

Exhibit 38: Summary O & M Cost for Remaining Concession Period

Summary of Cost (₹-Crore)																		
S.nos	**Type/Year of Expenses**	**FY 2025***	**FY 2026**	**FY 2027**	**FY 2028**	**FY 2029**	**FY 2030**	**FY 2031**	**FY 2032**	**FY 2033**	**FY 2034**	**FY 2035**	**FY 2036**	**FY 2037**	**FY 2038**	**FY 2039**	**FY 2040**	**FY 2041**	**Total Cost**

1 INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt. Ltd. (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InVIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an Infrastructure Investment Trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt. Ltd. has appointed **M/s. FP Project Management Consultancy Services Private Limited** (hereinafter referred as "Technical Consultant" or "FPPM") to carry out Technical Due Diligence of 4-Laning of Lebad-Jaora Section of SH-31 from km.0+000 to km.124+150, in the State of Madhya Pradesh. (hereinafter referred as "Project Road"). The project road has been developed on Build, Operate and Transfer (BOT) basis.

M/s. Western MP Infrastructure and Toll Roads Pvt. Ltd. (hereinafter referred as "Concessionaire") is a special purpose vehicle (SPV) for tolling, operation, maintenance, and transfer of Lebad-Jaora Section of SH-31 (from km. 0+000 to km.124+150) on BOT Basis. The project was awarded to Concessionaire on 10th July 2007 with a concession period of 25 years including construction period by Authority (MPRDC). The length of project road is 124.150 km with two toll plazas at km. 41+500 and at km. 79+000.

The Appointed Date of the project was 25th February 2008. The Concession Period of the Project Road is 25 years commencing from the Appointed Date including a construction period. The project has received Final Completion Certificate on 30th October 2010 for Homogeneous Section-I (km. 0+000 to km. 66+250) and on 29th August 2011 for Homogeneous Section-II (km. 66+250 to km. 124+150) by completing all the works as mentioned in the Technical Schedules of Concession Agreement. Due to the demonetization, Covid-19 and variation in traffic growth, the concession period is extended upto 27th April 2038.

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and field investigations. Same is presented in this report.

1.2 Scope of Work

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below:

- A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets
- Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, As-built drawings, O&M manual, COD / PCOD certificate, punch list, previous major maintenance etc.
- Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, axle load, material investigations etc.
- Formulation of future major maintenance strategy
- Estimation of any initial expenses to be incurred due to deficiencies observed in diligence
- Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period

- Estimation of Annual Operation expenses along with Systems cost (TMS / HTMS) till the end of concession period
- Review of balance work cost for project road including estimation of quantities and item rates (if any).

1.3 Our Approach Philosophy

1.3.1 Composition of Team

Our team consists of well-qualified Engineers and other professionals, whose experience covers all the skills and specializations required for undertaking such assignments. All the team personnel proposed are our regular employees and have a long and stable working relationship with our firm.

The Team Leader coordinates the activities between all the key staff who work closely together. The key staff is assisted by various support staff, who report to the respective key staff in their field of expertise. The Team Leader is the point of contact for Client on Technical Study.

The technical study includes review of all the available documents namely:

a) Concession Agreement including Technical Schedules
b) O&M Contract, work order and their provisions
c) Quality of construction based on available data, design, and drawings
d) Documents on historical expenditure on operation and maintenance
e) O&M cost schedule for the concession period
f) Review of Completion / Provisional Completion along with punch list items
g) Review of recent pavement surveys conducted
h) Correspondence regarding scope of works and during O&M
i) Recent O&M Report submitted to Authority
j) Toll operation manual / ATMS related documents

The review of above documents is the first step towards accomplishment of the task. This gives a complete idea of the project and is used as input data for preparation of report after necessary analysis.

1.3.2 Site Visit and Data Collection

A team of experts from various streams has carried out the preliminary site visit to understand the assessment of project assets mainly condition of the pavement and structures.

- The site visit is undertaken for detailed reconnaissance and visual pavement condition assessment.
- The condition assessment of major structures by visual inspection
- The information like material sources and the probable cost is collected for the purpose of cost estimate.

The detailed design / drawings viz. Plan & L-sections, drainage design, structure design, layout drawings for project facilities like toll plaza, bus bay, truck lay-byes, highway lighting facilities etc. are studied. Also, design / drawing and provision pertaining to road furniture are studied.

The information on availability of material in the vicinity is gathered. It has direct impact on cost of maintenance work and balance work.

The basic approach for preparation of cost estimates for operation and maintenance is as per the practice of State PWD / MORT&H in respect of highways and structures.

1.3.3 Data Analysis

Based on the study of the available information and preliminary site visits, the consultants share their preliminary observations with the Client based on the evaluation of the technical data and reports provided by the Client.

1.4 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

The site visit and inspection were carried out between the periods from **7th October 2025 to 10th October 2025**.

The report is organized with the following chapters for easy understandings of various issues.

Chapter 1 **Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies.

Chapter 2 **Project Description:** The chapter describes existing project features, overview of project development.

Chapter 3 **Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit.

Chapter 4 **Pavement Investigation and Assessment:** The chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance.

Chapter 5 **Cost Estimates:** The chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period.

2 PROJECT DESCRIPTION

2.1 Introduction

Madhya Pradesh Road Development Corporation (MPRDC) signed the Concession Agreement with **M/s Western MP Infrastructure and Toll Roads Pvt. Ltd.**, a company promoted by **ESSEL Infra Projects Limited** or a Special Purpose Vehicle (SPV) formed for implementing the project on 30th August 2007. The Appointed date of the Project Road was set as 18th March 2008. Subsequently, the project was acquired by Cube Highways and Infrastructure V Pvt. Ltd. (CH-V) from ESSEL Infra Projects Limited.

The project has been developed through BOT basis with concession period of 25 years from the Appointed date including construction period of 2 years. The Concessionaire received Provisional Completion Certificate for Homogenous section-I (From km.0+000 to km.66+250) on 24th November 2009 and completion certificate on 30th October 2010 and for Homogeneous section-II (From km.66+250 to km.124+150) Concessionaire received provisional Completion certificate on 4th June 2011 and Completion Certificate on 29th August 2011. The Project Road is currently under Operation and Maintenance stage.

2.2 Location

The Lebad Jaora Road (SH-31) starts from junction point with NH-59 near Lebad village (Design Chainage km. 0+000) and after traversing though Western part of Madhya Pradesh terminates at Jaora (Design Chainage km.124+150). The total project length is 124.150 kms.

The Location Map of the Project Road is presented below:

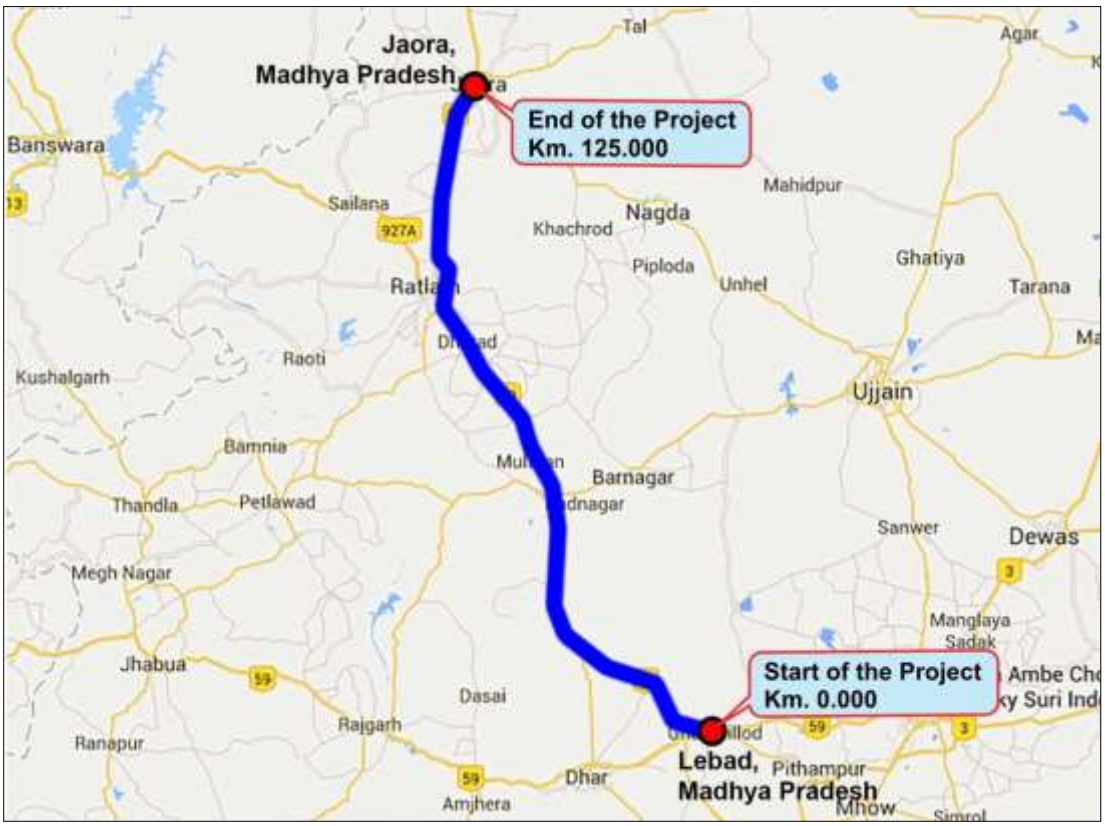

Figure 2-1 Location Map

The photographs taken during the site visit are presented below.

Figure 2-2 Start & End of Project Road

Start of Project at km. 0+000

End of Project at km.124+150

End of Project Road at km.124+150

2.3 Climate

The Project area has a subtropical climate with three main seasons: a warm, dry winter from mid-November to February, a hot, dry summer from March to May with May being the hottest month, and a rainy monsoon season from June to October. May can reach temperatures around 40°C, while winter temperatures range from roughly 10-25°C.

2.4 Terrain

This section of National Highway traverses through plain terrain.

2.5 Abutting Land Use

The project road traverses through a combination of inhabited areas and agricultural lands.

2.6 Right of Way

The width of existing Right of Way (RoW) for the Project Road varies from 32 m to 35 m.

2.7 Existing Utilities

During widening of the Project Road, various affected utility services located along the Project Road were shifted to the PROW. The different types of utilities found along the road include, electrical poles, telephone poles, OFC Cables, etc.

2.8 Development as per Schedule-B

The Project Road from Lebad (km. 00+000) to Jaora (km.124+150) has been developed as a four-lane divided carriageway with median width varying between 1.5 m to 4.5 m, service road and other arrangements. The Project Road passes through rural as well as built-up sections.

As per Article 2 of Concession Agreement, the scope of project defined in Schedule-A and Schedule-B, (the **"Scope of the Project"**) shall mean and include, during the Concession Period:

a) Construction of the project on the Site set forth in Schedule-A and as specified in Schedule-B together with provision of project facilities as specified in Schedule-C and in conformity with the Specification and Standards set forth in Schedule-D.

b) Tolling, operation, management, maintenance, and transfer of the Project Road subject to and in accordance with the provisions of this Agreement.

c) Performance and fulfilment of all other obligations of the Concessionaire in accordance with the provisions of this Agreement and matters incidental thereto or necessary for the performance of any or all of the obligations of the Concessionaire under this Agreement.

Following is the Scope of Work as per Schedule-B of Concession Agreement.

Table 2-1 Details of Scope of Work

Sr. No.	Type of Structure	Unit	Scope	Remark
1	Construction and O&M of Main Carriageway	km.	124.150	
2	Construction of Service Road	km.	14.840	each Side
3	Major Bridge	Nos.	02	
4	Minor Bridge	Nos.	34	
5	Pipe Culvert	Nos.	124	
6	Slab/Box/arch Culvert	Nos.	61	
8	Underpasses	Nos.	06	
9	Rail Over Bridge	Nos	03	

3 CONDITION ASSESSMENT OF PROJECT ROAD

3.1 Pavement

The Project Road is four lane divided carriageway and generally has paved carriageway of 8.75 m with earthen shoulder of 1.0 m on either side. The project road has median width of 4.5 m and 1.5 m throughout its length.
The entire stretch of Project Road including service road is constructed with flexible pavement. The pavement type for the Toll Plaza is rigid pavement.

3.1.1 Pavement Condition Survey

Pavement condition survey was carried out from **7th October 2025 to 10th October 2025**. through visual inspection for the entire project length. From the visual inspection, it is found that the average pavement condition of the Project Road is found to be Good.

Some of the photographs taken during the site visit are presented as below.

Figure 3-1 Photographs of Pavement Condition (MCW)

Pavement Condition at km. 7+000 (RHS)

Pavement Condition at km. 11+000 (LHS)

Pavement Condition at km. 35+000 (LHS)

Pavement Condition at km. 111+000 (LHS)

Pavement Condition at km. 115+000 (LHS)

Pavement Condition at km. 119+000 (RHS)

3.2 Service Road / Slip Road

The service road of width 5.5 m is constructed in built-up area and adjoining underpass locations. The Project Road has total service road length of 14.840 km. The photographs taken during the site visit are presented below.

Figure 3-2 Photographs of Service Road

Service Road at km. 0+000

Service Road at km. 83+100

Service Road at km. 51+750

Service Road at km. 67+200

3.3 Major / Minor Junctions

There are 8 Nos. of Major junctions and 56 Nos. of Minor junctions along Project Road.

The photographs taken during site visit is presented as below:

Figure 3-3 Photographs of Major Junctions

Major Junction at km. 1+000

3.4 Condition Survey of Structure

The inventory of structures including major bridges, minor bridges, ROB's, underpasses and culverts is presented in table as below:

Table 3-1 Details of Summary for Structures

Type of Structure	Total Number of Structures
Major Structures:	
Road Over Bridge (ROB)	03
Grade Separator	00
Major Bridges (MJB)	02
Minor Bridges (MNB)	34
Underpass (UP)	06
Culverts:	
Pipe Culverts	124
Slab/Box Culverts	61
Total	**185**

The detailed condition survey of structures was carried out by visual inspection. The observations and findings are presented in table below:

3.4.1 Major Bridge

Table 3-2 Condition Survey of Major Bridges

Sr. No.	Chainage	Span Arrangement (no. x m)	Total Width (m)	Type of Structures	FPPM Remarks
1	11.000	7x10.40	7.15 + 7.50	RCC Box	The overall structural condition of the bridge is very good. Expansion joints, pavement, footpath is well maintained. Vegetation present on return wall need to be removed.
2	25.900	5x13.60	7.10 + 7.50	RCC Box	Major bridge is in sound condition. Minor scouring is observed in the foundation. Pavement, expansion joints, footpath is in good condition.

3.5 Condition Survey of Culverts

The cross-drainage structure includes hume pipe culverts and slab culverts at various locations. There are 124 Nos. of Hume Pipe culverts, 61 Nos. of Slab/Box culverts along the Project Road. The height of culvert varies from 1.0 m to 3.0 m from bed level. During the condition survey of structure, these culverts were inspected on sample basis.

The project involves strengthening and widening of existing road to four lane divided carriageway. The culverts beneath existing alignment are either widened or reconstructed. The structural condition of culverts is generally found in sound condition. The quality of surface concrete of box culverts is satisfactory. The RCC parapet, crash barrier or RCC railing has been provided at culvert locations, which is maintained properly.

In most of culverts, the waterway is clear. However, near to urban area and some location is found blocked due to debris, drainage water or bushes, tree growth, which will be removed by the Annuity Concessionaire.

3.6 Drainage

RCC drain is constructed in built-up area and locations where service roads are provided. Earthen drain is provided in rural area. The photographs taken during site visit is presented as below.

Figure 3-10 Photographs of Drainage

RCC Drain at km. 0+200 (LHS)

RCC Drain at km. 83+000 (RHS)

3.7 Slope Protection

Slope protection for high embankment is done with stone pitching and turfing. Few of the slope protection and chute drains are damaged which will be rectified by the Concessionaire during maintenance work. The photographs taken during site visit is presented as below.

Figure 3-11 Photographs of Slope Protection and Chute Drain

Slope Protection at km. 3+500

Slope Protection at km. 91+600 (ROB)

3.8 Road Furniture

The Concessionaire has provided road furniture along the Project Road as per the Standards and Specifications mentioned in Schedule-C.

Pavement Marking

Pavement marking for the Project Road is done as per the design standards indicated in section 12 of Schedule-D. Some of the photographs of road marking are presented below.

Figure 3-12 Photographs of Pavement Marking

Road Marking at km. 48+050 (RHS)

Road Marking at km. 60+050 (RHS)

Road Marking at km. 98+050 (RHS)

Road marking, kerb painting at median opening location at km. 91+500

Road Studs

Road studs for the Project Road have been provided as per the design standards indicated in section 12 of Schedule-D. Road studs has been fixed at junction and zebra crossings. At few locations the roads were found missing.

Some of the photographs of road studs are presented below.

Figure 3-13 Photographs of Road Studs

Road Studs at km. 63+380

Road Studs at km. 99+000 (RHS)

Traffic Signage / Median Kerb painting / KM Stone

Traffic signs include roadside signs, overhead signs, kerb mounted signs and median signs along the Project Road. The design for the traffic signs along the Project Road is done as per the design standards indicated in section 11 of Schedule-D.

The height, lateral clearance, location, and installation are as per relevant clauses of Schedule 'D'. Overhead sign has been installed ahead of major intersections, toll plazas, start / end of Project Road and urban areas as per detailed design requirements.

Kilometre stones, vertical post of sign boards, chevron boards are properly placed. Median kerb painting is completed by the Concessionaire.

Some of the photographs of sign boards are presented below.

Figure 3-14 Photographs of Traffic Signages

Cantilever sign board at km. 118+000

Gantry sign board at km. 99+500

Cantilever sign board at km. 86+000

Signage at km. 80+000

Kilometre stone at km. 122+000

Kilometre stone at km. 100+000

Highway Lighting

Highway lighting is provided at underpasses, toll plaza, ROBs and built-up locations. High mast lighting is provided at toll plaza location. Highway lighting is also provided at approaches of underpass. Some of the photographs of highway lighting are presented below.

Figure 3-15 Photographs of Street Light

Street Lighting at km. 40+625

High Mast at km. 80+350 (TP-2)

Crash Barriers

Metal beam crash barriers are provided at bridge approaches, locations of high embankment and sharp curves. All the crash barriers provided by the Concessionaire are maintained at site. Some of the photographs of metal beam crash barriers are presented below.

Figure 3-16 Photographs of MBCB / RCC Crash Barrier

MBCB at km. 80+000

Crash barrier at km. 12+000

Delineators

The traffic delineators are seen in median on curve portion and at median openings along the Project Road. Some of the photographs of delineators are presented below.

Figure 3-17 Photographs of Delineators

Delineators at km. 3+500

Delineators at km. 75+350

Pedestrian Guard Rail

The pedestrian guard rails are provided in between Main Carriageway and Service Road. It is being maintained by the Concessionaire. Some of the photographs of pedestrian guard rails are presented below.

Figure 3-18 Photographs of Pedestrian Guard Rail

Pedestrian Guard Rail at km. 52+500

Pedestrian Guard Rail at km. 00+100 (LHS)

Pedestrian guard rail at km. 60+100 (BHS)

3.10 Toll Plaza

As per Concession Agreement, there are two no. of toll plazas at km. 41+500 (Chokala) and at km. 79+000 (Chikliya) with the following infrastructure.

Table 3-6 Details of Summary for Toll Plaza Items

Sr. No.	Particulars	Details
1	Toll Plaza Chainage	km. 41+500 and km. 79+000
2	Number of Tolling Lanes	8 lanes for toll operation plus 2 lanes for Class-I Vehicles.
3	Weigh in Motion Facility (Number of Lanes)	Yes
4	No. of ETC Lanes	in each direction
5	Number of Toll Booths	8 singles
6	Canopy	Present
7	Administrative Building	Present at TP-1 Porta cabin for TP-2
8	Parking cum Toilet Block	Present
9	Availability of Tunnel or Elevated Walkway	Tunnel/Yes

Sr. No.	Particulars	Details
	for Movement between Toll Lanes and Administrative Building	
10	Availability of Static Weigh Bridge	Yes
11	Availability of Loading/Unloading Facility for Overloaded Vehicles	No
12	Storage facility for Overloaded Material	No
13	High mast Light	Yes
14	Streetlight	Yes
15	Low mast Light	No
16	User Fee Boards	Yes
17	Cantilever/Gantry Boards	Yes
18	Automatic boom barrier	Yes

Figure 3-21 Photographs of Toll Plaza

Toll Plaza-1 at km. 41+500

Toll Plaza-2 at km. 79+000

3.10.1 Lane Equipment

Following are the lane hardware and equipment installed at toll plaza.

1. RFID ETC Transceiver

2. Lane Controller with Industrial PC
3. AVC Sensors
4. Automatic Lane Barrier (ALB)
5. Lane Traffic Light and user fare display
6. Incident Capture Camera
7. Overhead Lane Signals
8. Traffic Lights
9. Toll Booth Equipment

3.10.2 RFID ETC Transceiver

RFID ETC Transceiver reads tags installed on the windshield of vehicles and mounted on a pole at about 6 m height. Handheld RFID readers are provided (1 no. in each direction) in case a tag is not detected by the fixed reader.

3.10.3 Lane Controller with Industrial PC

Toll Lane Controller is located within the Electronic Enclosure placed inside each toll booth which are connected to the common server and are capable of independent storage of data at km. 41+500 and at km. 79+000 is located inside the Tunnel.

Lane Controller in Tunnel at TP

3.10.4 Automatic Vehicle Classification (AVC) Sensors

The AVC equipment comprises of a pair of height sensor poles, axle sensors and inductive loops. The height detector has a high sensing resolution and detects height when object blocks the path. The presence of vehicle is detected by inductive loop. The loop sensors embedded on the pavement trigger the AVC height sensors located on parallel pillars.

3.10.5 Automatic Lane Barrier

Boom barriers installed on all lanes are in working condition and have a working time of 0.6 - 0.9 s. Automatic Lane Barrier is used to allow only authorized vehicles to pass through the lane. The barrier is activated only on generation of user fee receipt or other relevant vehicle processing activity. A torque motor powers the barrier for raising and lowering the boom. The motor can be blocked at any position without causing any damage. In the event of power failure, the boom is automatically raised. The boom weight is exactly balanced by built-in springs.

ALB at TP

3.10.6 Lane Traffic Light (LTL) and User Fare Display (UFD)

Lane Traffic Light (LTL) is used to instruct vehicles to stop or pass through the lane. The LTL is RED when the toll collector is expecting the vehicle at the booth. After the transaction is done; the LTL turns Green to instruct the vehicle to pass through the lane. The User Fare Display is a part of electronic toll collection equipment located at the toll booth. It is a mini variable message sign (VMS) made of Light Emitting Diodes (LED). The user fare display is used to display the toll fare that is due and that must be paid by the motorist and the classification of vehicle selected by the collector.

LTL at TP

3.10.7 Incident Capture Camera (AVC Camera)

The incident capture camera is installed on island of the booth to capture the image of the vehicle from the back side. The AVC triggers the Image capture system.

3.10.8 License Plate Image Capture Camera (LPIC)

License Plate Image capture camera is installed on a 3 m pole facing incoming vehicle to capture the image of the vehicle number plate.

LPIC at TP

3.10.9 Over Head Lane Signal (OHLS)

The **Overhead Lane Signal (OHLS)** for lane “Open” and “Close” sign consists of a pair of “GREEN” (arrow) and “RED” (cross) lights. The OHLS is located at the vehicle approaching side of the canopy to show the drivers whether the lane is open or closed.

Overhead Lane Signal at Toll Plaza

3.10.10 Toll Booth Equipment

Toll Booth Hardware / Equipment provided are:

- Toll Collector Display (Operator Monitor)
- Customized Industrial Keyboard
- Receipt Printer
- Intercom Slave unit
- Bar code reader
- Violation Light and alarm
- Manual Booth Control (MBC)
- Booth Camera

The operator monitor termed as Toll Collector Display (TCD) is located on the toll collector's desk. It is the system's interface to the toll collector, to display the status of transactions and status of the lane peripherals.

The keyboard on the toll terminal is a programmable keyboard for Registration of toll operations and is customized for different vehicle types and type of ticket.

Thermal printers are installed at the toll booths to print tickets. Intercom slave unit facilitates communication with the master unit located in the control room.

Violation system has an alarm switch which is triggered whenever there is a violation such as run-through happening on the lane. When there is an emergency, a foot switch pressed by the booth operator alerts the control room.

Booth Camera is provided on the inside roof corner of the booth to provide surveillance through CCTV screen located in the control room. Manual Booth Controller is used to release exempt vehicles.

3.11 Plaza Equipment

3.11.1 TMS Server

Plaza Server is provided in a hot standby configuration and provided with port non-POE network switch and Port PoE switch. Internet connectivity is available through one lease line (Airtel) and Jio Wi-Fi module. Firewall with Sophos antivirus is provided.

3.11.2 55” LED screen for CCTV monitoring

55” LED screen for CCTV monitoring installed at the toll plaza admin block provides view of all the toll booths, important zones within the plaza where cash transactions take place (server room, control room, cash up).

The toll plaza manager is able to observe the activities at the toll lanes and toll booth. When the toll collector calls up on the intercom, the manager is able to comprehend the situation at the lane by a zoomed view of the particular lane.

3.11.3 Workstations in Control Room, POS room

Workstations are available in control room (lane monitoring, administration, and audit), cash room and PoS.

3.12 Administrative, Operation and Maintenance Base Camp

Traffic Aid Post and Medical Aid Post are in the scope of Concessionaire. Photographs taken during the site visit are presented below.

Truck Lay-Bye at km. 60+250 (RHS)

Truck Lay-Bye at km. 27+500 (LHS)

Truck Lay-Bye at km. 81+600

3.14 Toilet Block

There are Toilet blocks provided at Truck lay-bye and maintenance of the same is in Concessionaire's scope.

Photographs taken during the site visit are presented below.

Figure 3-24 Photographs of Toilet Block

Toilet Block at km. 81+900 (RHS)

Toilet Block at km. 121+000 (LHS)

3.15 Bus Bays and Passenger Shelters

There are 44 Nos. of bus bays / passenger shelters along the Project Road. Some of the photographs of the bus bays are presented below.

Figure 3-25 Photographs of Bus Bays

Passenger Shelter at km. 83+500

Bus Bay & Passenger Shelter at km. 124+600

3.16 Balance Work Status

The project has received Final Completion Certificate on 30th October 2010 for Homogeneous Section-I (km. 0+000 to km. 66+250) and on 29th August 2011 for Homogeneous Section-II (km. 66+250 to km. 124+150) by completing all the works as mentioned in the Technical Schedules of Concession Agreement. There are no balance works to be executed as per Concession Agreement.

3.17 Operation and Maintenance

3.17.1 O&M Contract

As per Clause 18.1 of the Concession Agreement, the Concessionaire shall operate and maintain the Project Road by itself, or through O&M Contractors and if required, modify, repair, or otherwise make improvements to the Project Road to comply with Specifications and Standards, and other requirements set forth in the Agreement, Good Industry Practice, Applicable Laws and Applicable Permits and manufacturer's guidelines and instructions with respect to toll systems, More Specifically.

The Concessionaire has outsourced for carrying out the activities related to operation and maintenance of the Project Road including toll operation services, security services.

3.17.2 Operation

Operation cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, and other miscellaneous expenses. The Concessionaire has provided the expenses occurred towards operation expenses for past years. Necessary assumptions have been made from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area.

The Operation Cost is presented in the subsequent chapter.

3.17.3 Routine Maintenance

The Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey.

Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

Currently, the Project Road is maintained by Concessionaire.

The Routine Maintenance Cost is presented in the subsequent chapter.

4 PAVEMENT INVESTIGATION AND ASSESSMENT

4.1 General

Presently, the pavement of the Project Road is being maintained by the Concessionaire as per Scope of work laid down in concession agreement. The Concessionaire has received Final Completion Certificate for Homogenous Section-I on 30th October 2010 and for Homogeneous Section-II on 29th August 2011.

The Project is currently under the Operation and Maintenance stage. The Concession Period of the project is 25 years from the Appointed Date including Construction Period. For operation and maintenance purposes, the Project Road is divided into two homogenous sections viz **HS-1** (66.250 km, from km. 0+000 to km.66+250) and **HS-2** (57.900 kms, from km.66+250 to km.124+150).

4.2 Axle Load and VDF

The Concessionaire has conducted the axle Load Survey on Project Road at both Toll Plazas in November 2022. The summary of Vehicle Damage Factor (VDF) calculated as provided by the Concessionaire is tabulated below.

Table 4-1 Vehicle Damage Factor (VDF)

Vehicle Category	Vehicle Damage Factor (VDF)			
	TP-1		TP-2	
	LHS	RHS	LHS	RHS
Bus	0.867	1.582	0.892	1.774
LCV	0.845	0.983	0.639	0.872
2-Axle	2.473	2.825	2.413	2.233
3-Axle	3.743	5.137	4.138	3.792
MAV	7.256	12.955	6.832	11.173

4.3 Design Traffic

Traffic in Million Standard Axles (MSA) for the homogeneous section based on the historical traffic data as provided by the Concessionaire, current traffic has been used for future projections and the estimated design MSA is computed and presented in subsequent table.

For the estimation of design MSA, Actual Traffic Growth Rates as provided by the Concessionaire were used.

Table 4-2 MSA Calculation

TP-1					
Year	MSA (LHS)	Cumulative MSA (LHS)	MSA (RHS)	Cumulative MSA (RHS)	Remarks
FY23	2.39	**2.39**	3.81	**3.81**

4.4 Network Survey Vehicles (NSV) Survey

The Concessionaire has provided NSV survey data conducted in November 2022. Currently Major Maintenance Cycle-1 is in progress, in which Concessionaire has already completed BC Overlay in the 100.00 km length out of 124.150 km. Hence, the previously conducted NSV survey data cannot be considered for pavement condition verification.

4.5 Structural Investigations

The Concessionaire has provided FWD test data conducted in November 2022. Currently Major Maintenance Cycle-1 is in progress, in which Concessionaire has already completed BC Overlay in the 100.00 km length out of 124.150 km. Hence, the previously conducted FWD test data cannot be considered for pavement condition verification.

4.6 Ongoing Major Maintenance

The Project Highway includes certain sections that had experienced repetitive failures in the past. During the acquisition of the asset by Cube Highways and Infrastructure V Pvt.

Ltd. (CH-V) from the erstwhile promoter, it was identified that these failures were primarily attributable to weak underlying pavement layers, necessitating rehabilitation. Accordingly, post-acquisition, Cube Highways and Infrastructure V Pvt. Ltd. (CH-V) developed a detailed rectification methodology under the major maintenance program. In several sections, the entire bituminous layer was rehabilitated, while in some section's rehabilitation was carried out starting from the GSB and WMM layers. As a result, the affected stretches have been substantially improved, and the overall pavement condition of the asset has significantly enhanced. This intervention is expected to reduce the likelihood of recurring pavement distress in the future.

Figure 4-1 Photographs of Pavement Condition before rectification

Figure 4-2 Photographs of Pavement Condition after rectification

4.7 Periodic Maintenance Strategy

Unlike the old Concession Agreements where periodicity and threshold limits were clearly described for the major maintenance, the Concession Agreement of this project does not specify the periodicity or the threshold limits for carrying out the full-length major maintenance. Schedule-K of the Concession Agreement specifies the threshold limits and the timelines for carrying out repairs to the distresses during the operation period.

The maintenance thus can be carried out as and when required basis and to the compliance of Schedule-K requirement to maintain the road in serviceable condition. Only improvement to Riding Quality is expected if the roughness value exceeds 3000 mm/km.

Any newly laid pavement is not expected to exhibit any distress for at least 5 to 6 years, provided that proper routine maintenance is carried out. Routine maintenance activities would be sufficient to meet the performance standards specified in Schedule-K. Accordingly, major maintenance is planned every 6^{th} or 7^{th} year for flexible pavement, counted from the date of the last overlay (FY 2026) until the end of the concession period.

The Concessionaire is presently undertaking the first Major Maintenance work of the Project Highway, which involves laying a 40 mm thick BC overlay along the entire project length. As of now, approximately 110.00 km of BC overlay has been completed, and the remaining 14.15 km overlay work is in progress and work will be completed within a one to two month. So that we do not consider the cost of first Major Maintenance in the Costing Part.

The table below shows the major / periodic maintenance cycle throughout the balance concession period for the Project Road.

Table 4-3 Major Maintenance Cycle

Sr. No.	Year	Main Carriageway	Service Road
1	FY 2026	MM Work is in progress	-
2	FY 2027-FY2030	-	-
3	FY 2031-FY 2032	BC (PMB) overlay of 30 mm for 50% length, 40 mm for 30% length & 50 mm for 20% length Milling & DBM of 50 mm for 12.5% length	BC overlay of 30 mm for 100% length
4	FY 2033-FY 2037	-	-
5	FY 2038	BC (VG-40) overlay of 30 mm for 100% length and Milling & DBM of 50 mm for 12.5% length	BC overlay of 30 mm for 100% length

The projected cost for periodic / major maintenance is presented in the subsequent chapter.

5 COST ESTIMATES

5.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories.

I. Balance Works Cost
II. Routine O&M Cost
III. Major Maintenance Cost
IV. Periodic Replacement of TMS / ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and escalation.

5.2 Rate Assumption

Following assumptions are considered for unit rates of various items while estimating the cost:

- Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard Data Book 2019. The input rates for MoRTH standard data book were adopted as below:

- **Manpower and labour:** As per applicable minimum wages published by Ministry of Labour & Employment, Government of India.

- **Bitumen:** Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.

  Therefore, bitumen prices are considered as per the forecast of Client. Current published of bitumen are considered for unit rates calculation for FY 2026. Average 10 years of price of bitumen are considered for unit rates calculation for FY 2028 and onwards, since bitumen prices have been range bound over the last five-six years.

  Polymer cost and modification cost are provided by the client to work out BC rate with PMB.

  Following rates of bitumen are considered.

Table 5-1 Bitumen Rates - Ex- MI Supply excluding discount and GST

Refineries	Grade	Rate for FY 26 - FY 27 (Rs. / MT)	Rate for FY 28 onwards (Rs. / MT)
Mathura	VG10	37822	30988
Mathura	VG30	39122	32069
Mathura	VG40	41022	33648
Haldia	VG10	39322	31244
Haldia	VG30	40122	31890
Haldia	VG40	42022	33425
Koyali	VG10	38722	30760
Koyali	VG30	40022	31810

Refineries	Grade	Rate for FY 26 - FY 27 (Rs. / MT)	Rate for FY 28 onwards (Rs. / MT)
Koyali	VG40	42702	33974
Chennai	VG10	36872	30942
Chennai	VG30	35672	29623
Chennai	VG40	38872	32541

- **Sand and Aggregate:** Market rates are considered from the quarry located nearest to Project Road.
- **Cement:** Market rates are considered from the nearest local market.
- **Steel :** Rate of steel is taken from Tata Tiscon.
- **Machinery Hire charges:** Hire charges for the machinery are considered in accordance with applicable PWD SOR.
- **Actual Rates of items as per work order:** The rates of road marking, road stud, kerb raising, micro surfacing, milling, aggregate rates etc. are considered as per the work order shared by the client.
- Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines.

Summary of Unit Rates worked out using Standard Data Book adopted for major items is given below:

Table 5-2 Summary of Unit Rates

Sr. No.	Item Description	Unit	Rates (Rs.) (FY 2028 onwards)
1	Dense Bituminous Macadam (VG-40)	Cum	7463
2	Bituminous Concrete (PMB)	Cum	10517
3	Bituminous Concrete (VG-40)	Cum	8657
4	Bituminous Concrete (VG-30)	Cum	8382
5	Milling	Sqm	80
6	Micro-surfacing	Sqm	155
7	Kerb Re-laying	Rmt	316
8	Road Marking	Sqm	525
9	Road Studs	Nos.	247

5.3 Balance Works Cost

As discussed in the previous chapter, there are no balance works to be executed as per CA. Hence, balance work cost is **NIL**.

5.4 Routine O&M Cost

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance, and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have made

from the expenses of similar type of projects to arrive at the operation cost. The estimates are projected based on best industry practices and are compared with the operating cost in the vicinity of the project area. Same has been divided into following major heads:

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Toll Security Services
4. Incident Management Services
5. Electricity and Diesel Charges
6. TMS / HTMS / System Expenses
7. Office Operating Expenses
8. Vehicle Running Expenses
9. Professional Fees Expense
10. Community Development
11. Communication Expenses
12. Conveyance Expenses
13. Insurance Expense
14. IE Fees
15. Horticulture & ROW Maintenance
16. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or “wear-and-tear”. Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

The Routine Operation and Maintenance cost (Routine O&M) is presented below. The detailed working of routine maintenance (Sr. No. 15 of below table) is presented in **Annexure-I**.

Table 5-3 Summary of Operation Cost

Sr. No.	Particulars	Amount (FY 2026 to FY 2038)
1	Salary and Welfare Expenses	2,76,00,000
2	Tolling Operations Services	6,08,48,314
3	Toll Security Services	1,02,74,383
4	Incident Management & Emergency Services	3,35,67,812
5	Electricity and Diesel Charges	1,15,85,948
6	TMS/HTMS/System Expenses	52,92,704
7	Office Operating Expenses	62,07,500
8	Vehicle Running Expenses	33,60,000
9	Professional Fees Expense	62,07,500
10	Community Development	18,62,250
11	Communication Expenses	14,89,800
12	Conveyance Expenses	37,24,500
13	Insurance Expense	1,86,22,500

Sr. No.	Particulars	Amount (FY 2026 to FY 2038)
14	IE Fees	86,90,500
15	Routine Maintenance Cost (Project Highway)	4,78,13,981
16	Horticulture & ROW Maintenance	2,68,16,400
17	Miscellaneous including Contingency at 5%	99,66,686
	Total Cost with GST (Rs)	**28,39,30,778**
	Total Cost with GST (Cr)	28.39
	Per km Cost (Lakh)	**22.87**

5.5 Major Maintenance Cost

The summary of Major Maintenance Cost (Base year cost) is provided as below. The detailed working of the same is presented in **Annexure-II**.

Sr. No.	Year	Major Maintenance Cost (Cr.)	Remark
1	FY 2031-32	143.95	-
2	FY 2038	116.71	-
Total Cost (Cr.)		**260.66**	

5.6 Periodic Replacement of TMS / ATMS System

Every 7 years, replacement of cost of major TMS / ATMS system is considered. The same is provided as below.

Sr. No.	Year	ATMS O&M / Replacement Cost (Cr.)	Remarks
1	FY 2026	4.42	
2	FY 2031	4.42	
3	FY 2037	4.42	
Total Cost (Cr.)		**13.26**	

5.7 Escalation Assumption

Following escalation has been considered for the O&M cost as provided by Client.

Table 5-4 Escalation

Year	Growth Rate	Cumulative Factor
Mar-26	5.00%	1.000
Mar-27	5.00%	1.050
Mar-28	5.00%	1.103
Mar-29	5.00%	1.158
Mar-30	5.00%	1.216
Mar-31	5.00%	1.276
Mar-32	5.00%	1.340
Mar-33	5.00%	1.407
Mar-34	5.00%	1.477
Mar-35	5.00%	1.551
Mar-36	5.00%	1.629
Mar-37	5.00%	1.710
Mar-38	5.00%	1.796

5.8 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summarised yearly for remaining concession period along with escalation as mentioned in the above clause.

Escalated O&M Cost (in INR Cr)

Sr. No.	Year of expense	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38
1	Routine O&M Cost													
1.01	Salary and Welfare Expense	2.76	2.90	3.04	3.20	3.35	3.52	3.70	3.88	4.08	4.28	4.50	4.72	4.96
1.02	Tolling Operations Services	6.08	6.39	6.71	7.04	7.40	7.77	8.15	8.56	8.99	9.44	9.91	10.41	10.93

ANNEXURES

ANNEXURE-I ROUTINE MAINTENANCE COST

Routine Maintenance Cost	
Ordinary Repair Cost for Flexible (with GST)	**4,78,13,981**
(Inclusive of GST)	**= 3.85 lakhs per km**

CONVERSION FACTORS										
National Highways / State Highways										
Reference cost taken for Two / four lane (7.0m or 14.0m) with 1.5m wide shoulders										
(Refer Chapter 6.17 of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 45)										
Sr. No.	**Description for Flexible Pavement**		**Factor**	**Normal** More than 4500 CVD **2,19,810**	**Urban** More than 4500 CVD **2,56,956**	**Hilly** More than 4500 CVD **3,32,463**	**Project Length (km)**		**Per Year Project Maintenance Cost**	
							Normal	**Urban**	**Normal**	**Urban**
1	Four-lane with divided carriageway	Without paved shoulder	1.53	336310.00	393142.00	508669.00	-	-	-	-
		Paved shoulder	1.70	373678.00	436825.00	565188.00	116.73	-	4,36,19,432.94	-
2	Four-lane with divided carriageway and service lane on either side	Without paved shoulder	2.00	439621.00	513912.00	664927.00	-	-	-	-
		Paved shoulder	2.20	483583.00	565303.00	731420.00	-	7.42	-	41,94,548.26
						TOTAL		**124.150**		**4,78,13,981**

Ordinary Repairs

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0m or 14.0m) of NH / SH per Year (Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
1	**Maintenance of Carriageway & Paved Shoulders (1.5m wide); B.T. Surface**			
	i) Pot holes repair (50 mm deep)	100 % Pot hole free	As & when required	1.00%
	Volume (cum)			5.00
	Rs/m^3			9145
	Cost in Rupees			45,725
	ii) Patch repair	100 % Patch less	As & when required	1.00%
	Area (sqm)			100
	Rs/m^2			366
	Cost in Rupees			36,580
	iii) Sealing (Crack)			
	a) Wider than 3 mm	100 % Crack Less	As & when required	0.50%
	Area (sqm)			50
	Rs/m^2			45
	Cost in Rupees			2,247
	b) Width less than 3 mm	75 % Crack Less	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			39
	Cost in Rupees			2,946
	iv) Repair of ruts and undulations			
	a) Greater than 20 mm	75%	As & when required	1.00%
	Area (sqm)			75
	Rs/m^2			366
	Cost in Rupees			27,435
	v) Road marking	33%	Once in 7th year & @	4093

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0m or 14.0m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)				
Sr. No.	**Activity**	**Performance Standard Level of Maintenance**	**Frequency**	**Cost Per km. as per Traffic Intensity**
				More than 4500 CVD
				BT Surface
1	**2**	**3**	**4**	**5**
			Repaired location	
	SUB TOTAL			**1,19,026**
2	**Maintenance of earthen Shoulders:**			
	i) Renewal of earthen shoulders	80%	Once in a Year	6809
	ii) Jungle Clearance	100%	Twice in a Year	2234
	iii) Kuccha Drain Maintenance	100%	Twice in a Year	1197
	SUB TOTAL			**10,240**
3	**Maintenance of Cross Drainage works:**			
	i) Cleaning of culvert bed	100%	Once in a Year	3016
	ii) Repair of floors	100%	Once in a Year	5458
	iii) Repair of parapets	100%	As & when required	2275
	SUB TOTAL			**10,749**
4	**Maintenance of Minor & Major Bridges:**			
	i) Cleaning and removal of dirt & vegetation from pier caps, Bearings, Expansion Joints, Superstructure, Substructure and Retaining wall etc.	100%	As & when required	59,846
	ii) Spot painting & protective Coating required on Bearing and greasing of Bearings, railing, structural members, Expansion joints			
	iii) Repair of minor washouts, erosion scour and animal holes			
	iv) Sealing Cracks with Cement/ Epoxy Mortar			
	v) Replacement & Correction of safety barriers, Guard rails and damaged members			
	SUB TOTAL			**59,846**
5	**Miscellaneous Items:**			
	i) Turfing and Arboriculture		Once in a Year	2660
	ii) Maintenance of gang hut store, sheds, animal & debries		Once in a Year	3990

Details of Ordinary Repair in Rs. For one km. of Two lane (7.0m or 14.0m) of NH / SH per Year				
(Refer Annex. XXIV-E of REPORT OF THE COMMITTEE ON NORMS FOR MAINTENANCE OF ROADS IN INDIA, Page 112-113)

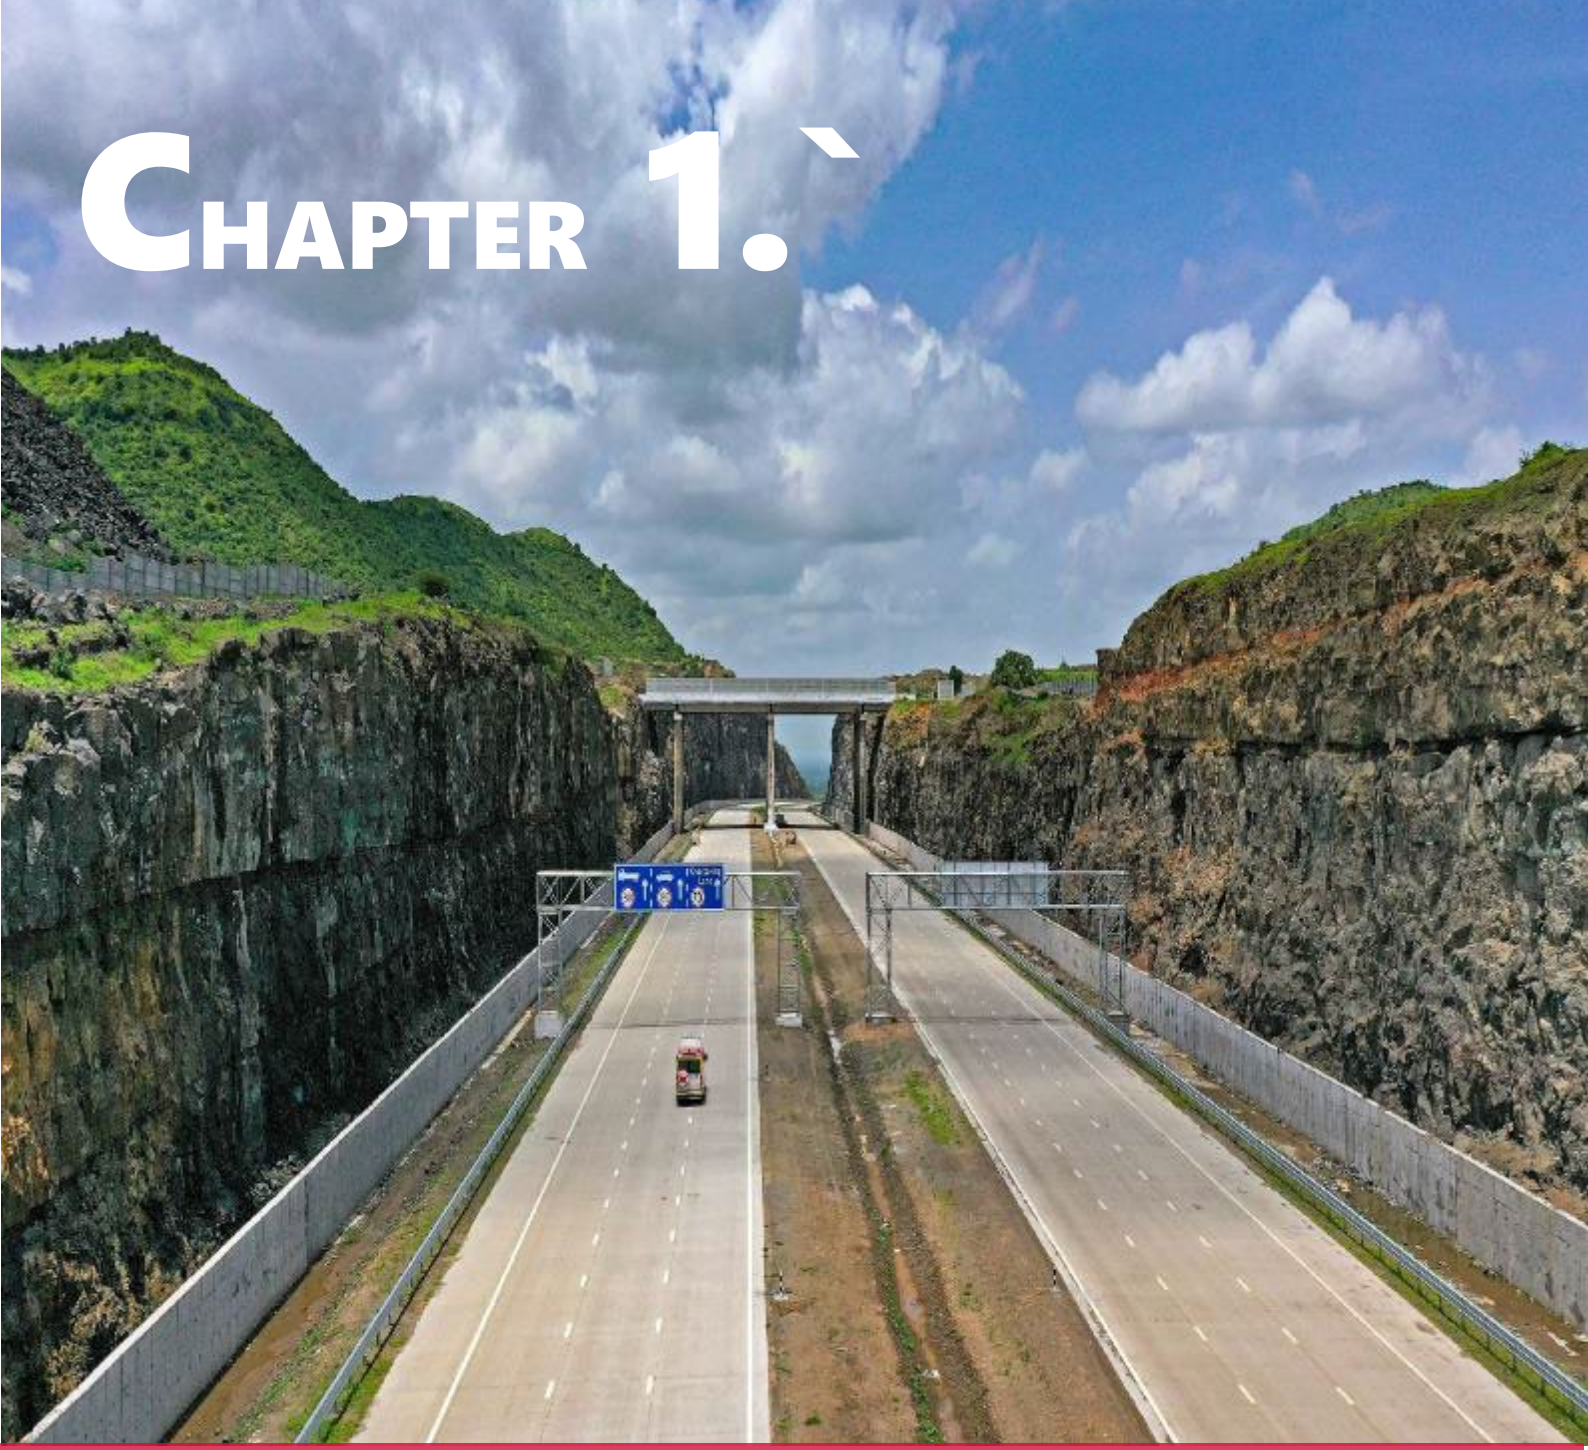
Chapter 1.`



Introduction

Chapter 1. INTRODUCTION

1.1 Background

Cube Highways Fund Advisors Pvt Ltd (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an infrastructure investment trust under the SEBI InVIT Regulations. Cube Highways Fund Advisors Pvt Ltd has appointed M/s Knight Frank India (KFI) (hereinafter referred as "Technical Consultant" or "KFI") to carry out Technical Due Diligence of **Rehabilitation, Strengthening, and Four Lanning of Chenani to Nashri section of NH-1A from Km 89+00 to Km 130+00 (New Alignment) of NH-1A including 9 Km long tunnel (2 Lane) with parallel escape tunnel,** was conceptualized in the Union Territory of Jammu & Kashmir. This project was structured on a DBFOT (Annuity) model.

1.2 Scope of Work

Exhibit 1 Scope of TDD Services

S. No	Terms of Reference
1.	A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
2.	Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, as built drawings, O&M manual, COD/PCOD certificate, Punch list, previous major maintenance etc.
3.	Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle Load, material investigations etc.
4.	Formulation of future major maintenance Strategy.
5.	Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
6.	Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period
7.	Estimation of Annual Operation expenses along with Systems cost (TMS/HTMS) till the end of concession period.

S. No	Terms of Reference
8.	Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Approach

Approach followed for this Due Diligence study is to understand the requirement of the client and terms of reference set forth. Our aim is that the study report should assist the clients in achieving their objectives.

1.4 Methodology

Methodology adopted is broadly outlined as under:

- Objectives of the client were identified from discussions and terms of reference spelt out for the study.
- Available data was collated and analysed by desk study.
- Requirements were identified to augment information/ data as available.
- Detailed List of data required was sent to Mapple team from time to time
- Personal discussions were carried out with Clients by senior executives from KF to explain data requirements.
- Extensive interaction was made by KF with Clients and data was collected.
- Information to be gathered from Client head office & team were listed
- Relevant documents regarding project highway, including CA Agreement and other documents were collected and the provisions studied in detail.
- All data as collected was duly collated and arranged in the order as required for preparation of the report.

1.5 Study

- Data collected from all sources was duly collated and disseminated to concerned experts in KF.
- Project documents such as CA Agreement, O&M Costing details, O&M Manual etc were studied in detail.

- The data made available was analysed, and comments formulated for inclusion in the report.

1.6 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

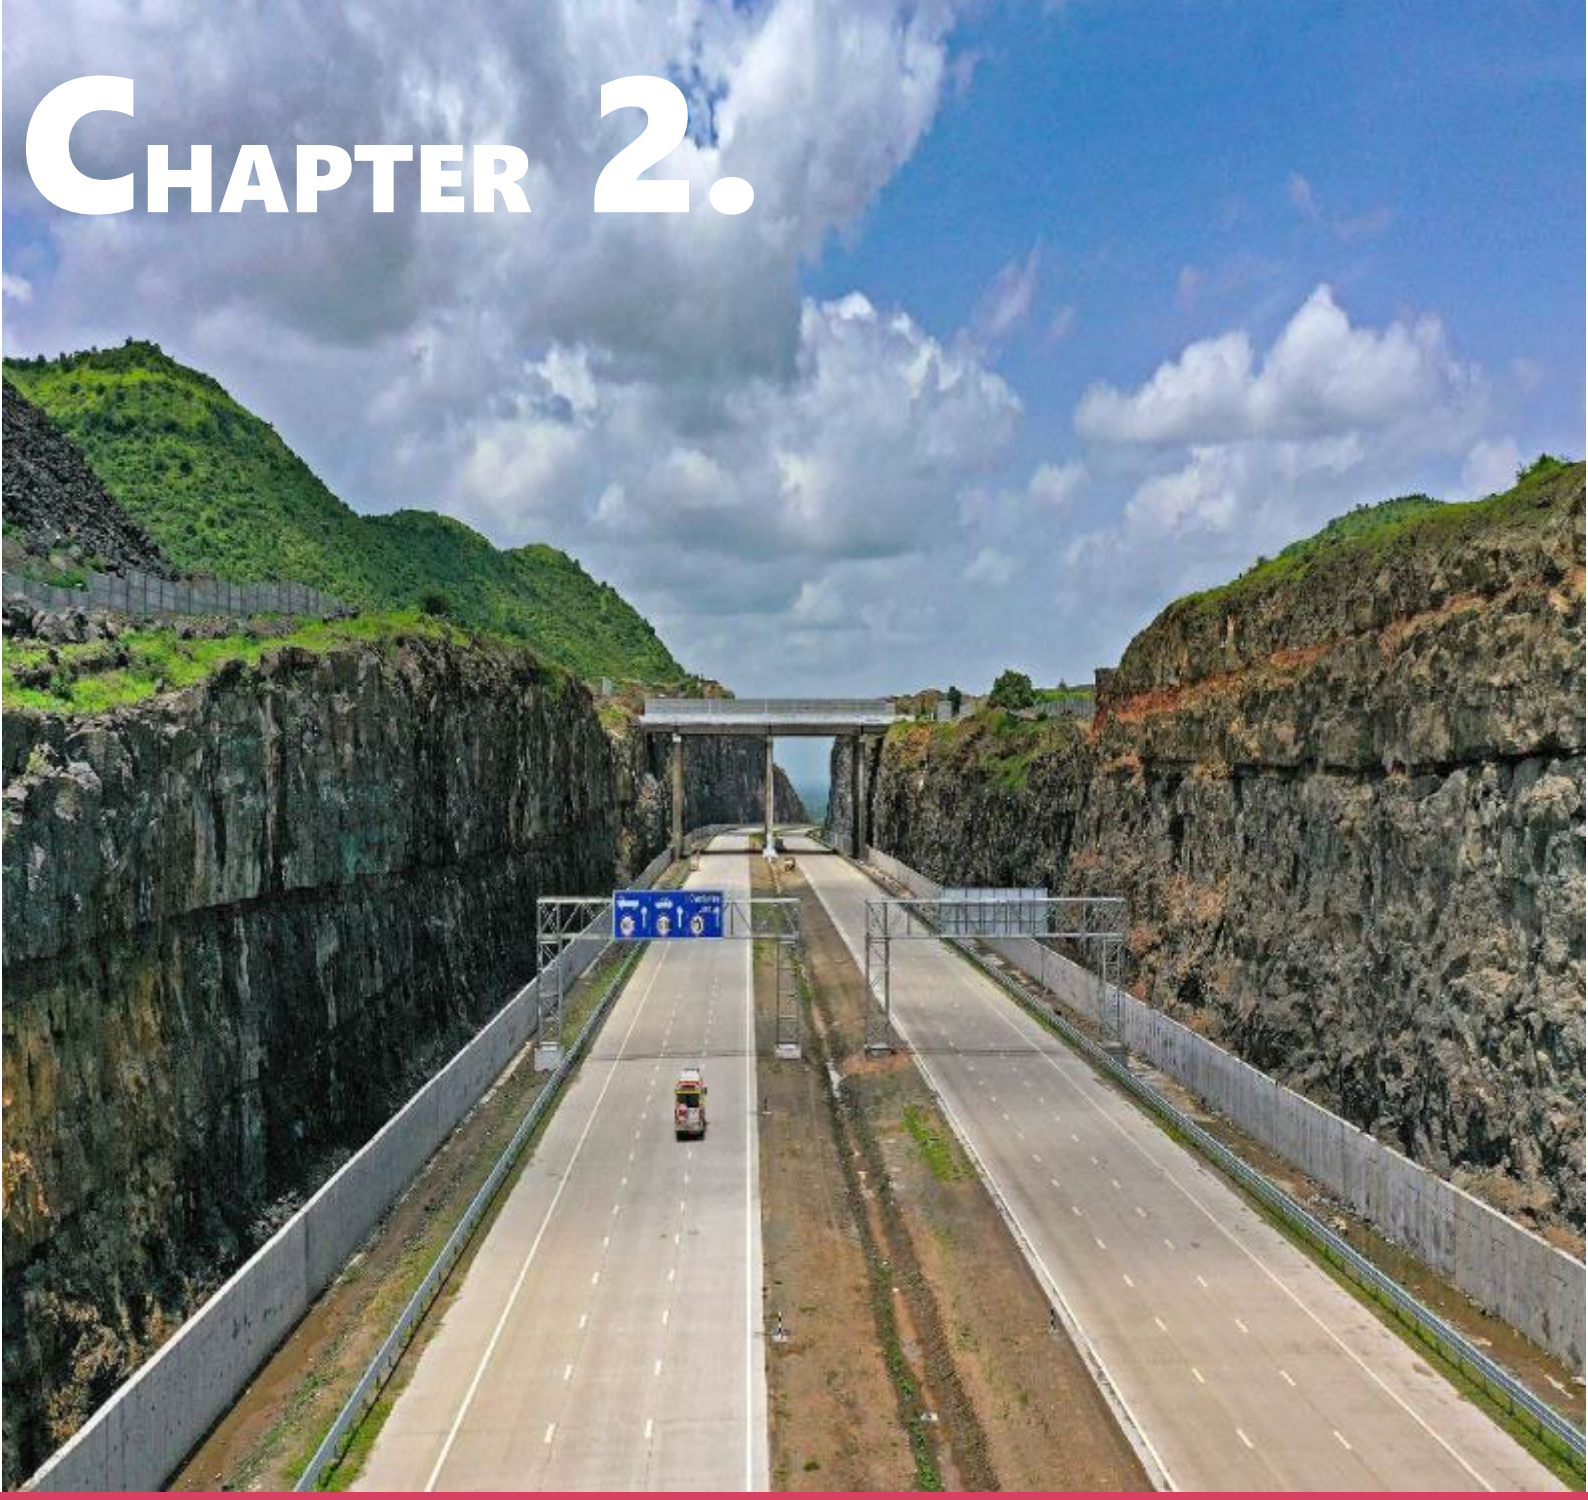
The site visit and inspection were carried out between the periods from 08th October 2025 to 10th October 2025.

The report is organized with the following chapters for easy understanding of various issues –

Exhibit 2 Structure of the Report

S.nos	Chapter	Description
1	**Chapter 1**	**Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**
2	**Chapter 2**	**Project Description:** The chapter describes existing project features, overview of project development.
3	**Chapter 3**	**Review of Agreements:** The chapter describes review of CA, Supplementary, State Support Agreement, Settlement Agreement & Various O & M Agreements.
4	**Chapter 4**	**Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**
5	**Chapter 5**	**Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance
6	**Chapter 6**	**Cost Estimates**: This chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period

Chapter 2.



Project Description

Chapter 2. PROJECT DESCRIPTION

2.1 Project Location and Description

This asset is a **DBFOT (Annuity)** project involving the **construction, operation, and maintenance of the Chenani–Nashri Section** of **National Highway-44 (formerly NH-1A)** in the **Union Territory of Jammu & Kashmir**. The project stretch extends from **Km 89.00 (Chenani)** to **Km 130.00 (Nashri)**, traversing through the **Udhampur and Ramban districts** of the Jammu region.

The project includes the **Dr. Syama Prasad Mookerjee Tunnel (Chenani–Nashri Tunnel)**—India's first and longest **bi-directional road tunnel**—having a **main tunnel of 9.00 km length** and a **parallel escape tunnel**, interconnected by **cross passages every 300 meters** for emergency evacuation. The tunnel passes beneath the **Patnitop hill range** on the lower Himalayas, providing an all-weather, safe, and shorter alternative to the earlier steep and accident-prone mountainous route over **Patnitop, Kud, and Batote**.

This modern infrastructure project has reduced the distance between **Chenani and Nashri by approximately 31 km** and shortened the overall travel time between **Jammu and Srinagar by nearly two hours**, ensuring **uninterrupted connectivity throughout the year**. Situated at an elevation of about **1,200 meters**, the tunnel bypasses areas that were previously prone to **landslides, snow accumulation, and prolonged traffic disruptions** during winter months.

The tunnel is equipped with advanced **Mechanical, Electrical, and Electronic (MEE)** systems, including:

- A **transverse ventilation system** with jet fans and axial fans to maintain air quality,
- **29 cross passages** at regular intervals,
- **CCTV-based surveillance**, **SCADA-controlled operations**, and **fire detection & suppression systems**, and
- Reliable **power supply and backup arrangements** for round-the-clock tunnel operation.

Constructed using the **New Austrian Tunnelling Method (NATM)**, the project represents a major milestone in India's highway engineering, enhancing both transportation efficiency and strategic connectivity across the Himalayan corridor.

Following a competitive bidding process, the contract was awarded by the **National Highways Authority of India (NHAI)** to **M/s IL&FS Transportation Networks Limited (ITNL)**. To implement the project, ITNL incorporated a **Special Purpose Vehicle (SPV)** named **M/s Chenani Nashri Tunnelway Limited (CNTL)**.

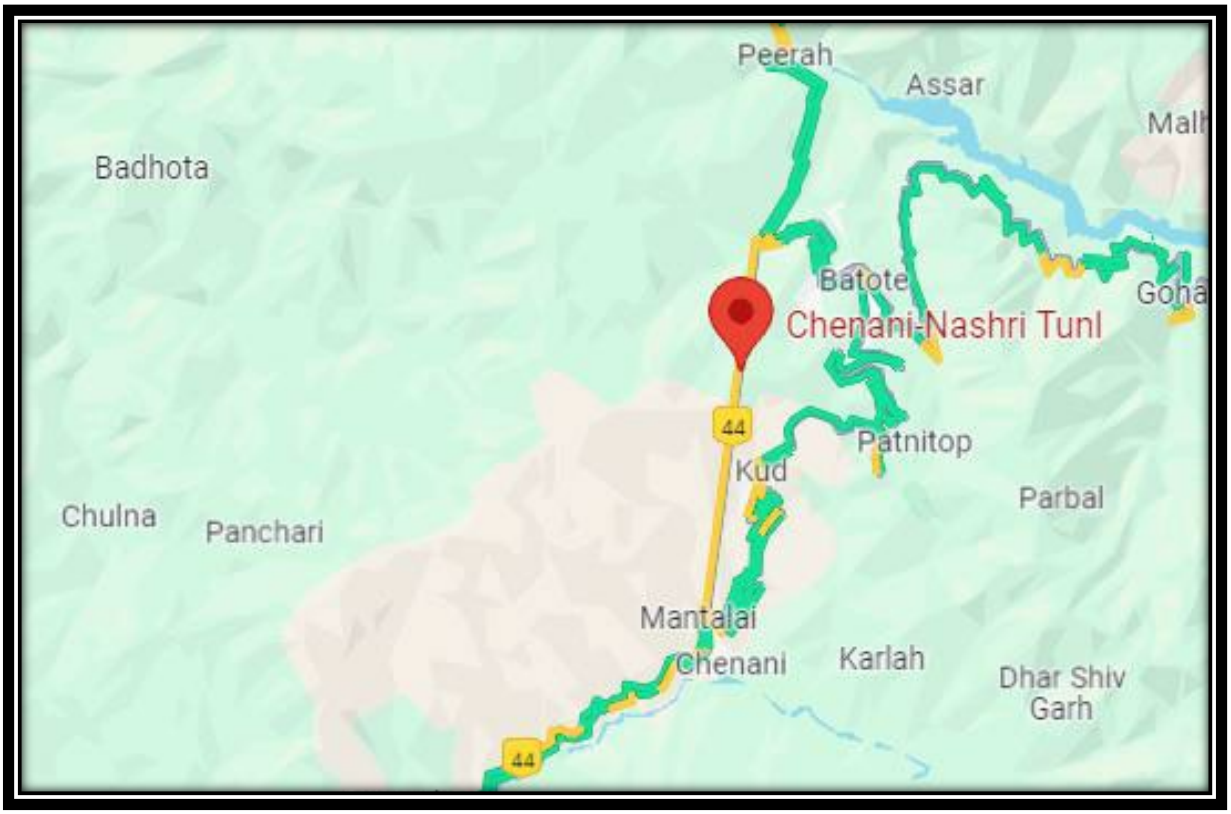
The **Concession Agreement** was signed on **29 May 2010**.

The project achieved **Provisional Completion (PCOD)** on **08 March 2017**, and the **Completion Certificate** was issued on **22 February 2017**. The tunnel was **inaugurated on 2 April 2017** by the **Hon'ble Prime Minister of India**. The project is presently under the **Operation and Maintenance (O&M) phase**.

The **current proposed acquisition** of the project is by ***M/s Cube Highways and Infrastructure V Pte. Ltd.***

Accordingly, Technical Consultant has undertaken the work of assessment of operation and maintenance (O&M) cost based on site inspections and flied investigations. Same is presented in this report.

Exhibit 3 Project Location Map



2.2 Terrain

The **Chenani–Nashri Tunnel** traverses the **lower Himalayan region**, passing beneath the **Patnitop hill range** along the **Pir Panjal foothills** of the Jammu region. The terrain along the project corridor is **mountainous and geologically complex**, characterized by steep slopes, deep gorges, and highly variable geological formations.

Overall, the **terrain and geological setting** of the Chenani–Nashri Tunnel presented challenging conditions for design and construction, necessitating continuous **geotechnical monitoring**, **instrumentation**, and **adaptive tunnelling methods** to ensure stability and safety during excavation and long-term operation

2.3 Climate

The **Chenani–Nashri project corridor**, located in the **lower Himalayan zone of Jammu & Kashmir**, experiences a **temperate to cold mountain climate**, with marked variations between the southern (Chenani) and northern (Nashri) ends of the alignment due to elevation and topographic differences.

Winters, extending from **December to March**, are generally **cold and humid**, with temperatures ranging between **2°C and 10°C** in the lower reaches and occasionally dropping to **near freezing (0°C)** in higher areas near Nashri. Light to moderate **snowfall** occurs on the upper slopes and ridges surrounding the tunnel alignment, while **fog, frost, and low visibility** are frequent during early mornings and late evenings.

Summers, lasting from **May to August**, are **mild and moderately warm**, with daytime temperatures typically ranging from **18°C to 28°C**, and nighttime temperatures remaining around **12°C to 18°C**. These months provide the most favorable conditions for maintenance and inspection works along the corridor.

2.4 Development as per Schedule B

As per **Schedule B (Development of the Project Highway)** of the Concession Agreement for the **Chenani–Nashri Section of NH-1A (Km 89.00 to Km 130.00, new alignment)**, the Concessionaire shall undertake the **design, engineering, construction, development, operation and maintenance** of the project on a **DBFOT (Annuity)** basis in the State of Jammu & Kashmir.

The project involves the **four-laning of the Chenani–Nashri section**, including construction of a **9 km long two-lane tunnel with a parallel escape tunnel**, along with approaches and associated infrastructure. The scope of development includes:

- **Main Carriageway:** Four-lane divided highway with appropriate pavement composition and geometric standards.
- **Tunnels:** Construction of the main tunnel (2-lane) and a parallel escape tunnel, both to be provided with ventilation, lighting, drainage and fire-safety systems as per Schedule D.
- **Approach Roads:** Approach road to the **South Portal (~1.3 km)** and to the **North Portal (~0.6 km)** including slope cuttings, embankments and protection works.
- **Structures:** Two minor bridges (one of 40 m span and one of 50 m span), 11 culverts, pedestrian/vehicular underpasses, and other associated structures.
- **Ancillary Facilities:** Toll plazas at both ends of the tunnel, rest areas, truck lay-bys, bus-bays, roadside furniture, pedestrian facilities, landscaping and tree plantation, and facilities for wayside amenities.
- **Safety and Support Systems:** Highway lighting, traffic aid posts, medical aid posts, vehicle rescue posts, highway traffic management and telecom systems.
- **Right of Way:** As per Schedule B (Clause 4.7), the ROW shall generally be **60 m**, **90 m at toll-plaza locations**, and **45 m in forest areas**.
- **Environmental Works:** Tree plantation, slope protection, and other measures in accordance with the Environmental Management Plan.

All works are to be executed in conformity with the **Manual of Specifications and Standards for Four-Laning of Highways (IRC:SP-84-2009)** and the **technical specifications provided in Schedule-D**.

2.4.1 Roadway and Geometric

Exhibit 4 Roadway and Geometric

Component	Chainage (Km)	Description	Specifications
Four-Lane Main Highway	**Km 89.00 – Km 130.00**	Four-lane section of NH-44 between Chenani and Nashri, including approach roads and interchanges	
Main Tunnel (Dr. Syama Prasad Mookerjee Tunnel)	Within Km 96.00 – Km 105.00 (approx.)	**Bi-directional road tunnel (Main Tunnel)** connecting Chenani and Nashri, bypassing Patnitop	**Length:** 9.00 km (Main Tunnel) **Carriageway:** 2 lanes (7.5 m) **Design Speed:** 50–80 km/h **Vertical Clearance:** 5.5 m
Escape Tunnel	Parallel to main tunnel alignment	**Escape tunnel** for emergency evacuation, connected to main tunnel via cross passages	**Length:** 9.00 km (parallel to main tunnel) **Cross Passages:** 29 Nos. at 300 m intervals
Approach Roads		About 1.3 km of road approaching the South tunnel portal and about 0.6 km of road approaching the North tunnel portal (involves slope cuttings and embankments).	Flexible pavement with granular sub-base, DBM, and BC layers
Bridges / Viaducts			**Total 2 Bridge, 40m single span bridge** approaching the South portal of the tunnel.

Component	Chainage (Km)	Description	Specifications
			50m single span bridge approaching the North portal of the tunnel.
Cross Passages & Egress System	Along tunnel alignment	Cross passages linking main and escape tunnels	29 cross passages spaced at ~300 m intervals

The total project length is approximately **10.9 km**, comprising the **Chenani–Nashri twin-tube tunnel of 9.0 km**, along with about **1.3 km of approach road on the southern side (Chenani portal)** and **0.6 km of approach road on the northern side (Nashri portal)**, involving slope cuttings, embankments, and protective structures.

2.5 Administrative details of the Project

The Concession stands granted to operate the road from the Appointed date for the concession period with the obligation on concessionaire to maintain the road in the same period. Administrative details of projects are as at **Exhibit 5** below.

Exhibit 5 Administrative Details of Project

Feature	Description (as per TDD Report – Chenani–Nashri)
Project Name	Construction, Operation and Maintenance of Chenani–Nashri Section of NH-44 including 9.0 km Bi-directional Tunnel with Parallel Escape Tunnel in the Union Territory of Jammu & Kashmir on DBFOT (Annuity) Basis
Mode of Execution (BOT Toll / BOT Annuity)	BOT (Annuity)
Scheme / Phase	Operation, Maintenance and Transfer
No. of Lanes / Configuration	2-Lane Bi-directional Tunnel with Parallel Escape Tunnel
Length of the Project (in Km)	Approx. 10.9 km (including 9.0 km tunnel and 1.9 km approach roads)
Total Project Cost (in ₹ Crore)	3720 Cr

Feature	Description (as per TDD Report – Chenani–Nashri)
Annuity (Bi-annually)	₹317.52 crore
NH No. (New / Old)	NH-44 (Old NH-1A)
Concessionaire / SPV	M/s Chenani Nashri Tunnelway Limited (CNTL)
Parent Company	M/s IL&FS Transportation Networks Limited (ITNL)
EPC Contractor	Leighton India Pvt. Ltd. (Leighton)
Independent Engineer (O&M Phase)	Segmental Consulting & Infrastructure Advisory Pvt. Ltd in association with Segmental Consulting & Infrastructure Advisory Pvt. Ltd
Date of Award of Work (LOA)	03-05-2010
Date of Signing of Concession Agreement	28-Jun-2010
Appointed Date	23 May 2011
Concession Period	20 Years (including Construction period)
Construction Period	1825 days (05 Years)
Provisional Completion (PCOD) Date	08-Mar-2017
Final Completion / Completion Certificate Date	22-Feb-2018
End Date of Concession Period	Year 2031
No. of Toll Plazas (Number and Location)	02

2.6 Salient Features of Project

Salient features of the project are covered at **Exhibit 6** below.

Exhibit 6 Salient Features of Project

Sl. No.	Particulars	As per Schedule-B	As Built
1	**Project Road Start**	Km 89+000 at Chenani	Km 89+000 at Chenani (South Portal)
2	**Project Road End**	Km 130+000 at Nashri	Km 130+000 at Nashri (North Portal)
3	**Project Length**	10.89 km (New Alignment)	Approx. 10.9 km (9.0 km Tunnel + 1.9 km Approaches)
4	**Rigid Pavement**	Rigid pavement throughout tunnel	Rigid Pavement throughout stretch
	Tunnel		
1	**Tunnel**	Main Tunnel – 9.0 km (bi-directional, 2-lane) Parallel Escape Tunnel – 9.0 km	Same – Main Tunnel (9.0 km bi-directional) and Escape Tunnel (9.0 km service/emergency). Both constructed using NATM under DBFO (Annuity) model.
2	**Length (Excavation) (Portal to Portal)**	9.0 km	9.002 km from Km 89+000 (Chenani Portal) to Km 98+002 (Nashri Portal); excavation carried out by NATM (Drill & Blast – Top Heading, Bench and Invert Sequence).
3	**Tunnel Details**	Bi-directional tunnel with cross passages @ 300 m intervals;	**Main Tunnel –** 9.35 m carriageway + 1.2 m footpath on each side (total

Sl. No.	Particulars	As per Schedule-B	As Built
		vertical clearance 5.0 m (min); constructed using NATM.	≈ 11.75 m width); vertical clearance – 5.0 m. **Escape Tunnel –** 5.0 m width × 2.5 m vertical clearance. Constructed using **New Austrian Tunnelling Method (NATM)** with **lattice girders**, **rock bolts (4–5 m long, 25 mm dia)**, and **shotcrete lining (150–250 mm thick)**, followed by **RCC final lining (300 mm thick, M30 grade concrete)** and **PVC waterproofing membrane** between primary and final linings.
4	**Cross Passages**	29 Nos. @ 300 m spacing	29 Nos. • (22 Pedestrian – 4.5 m × 2.5 m; • 7 Vehicular – 7.5 m × 4.5 m). • Vehicular Cross Passages located approximately every 1.2 km (CP-4, 8, 12, 16, 20, 24, 28).
5	**Functional Cross Section**	○ Main Tunnel – 9.35 m carriageway + 1.2 m footpath each side (total ≈	Same as design – Main Tunnel (9.35 m carriageway + 1.2 m footpath each side), Escape Tunnel (5.0 m × 2.5 m). Cross Passages as

Sl. No.	Particulars	As per Schedule-B	As Built
		11.75 m); vertical clearance 5.0 m ○ Escape Tunnel – 5.0 m width × 2.5 m clearance ○ Cross Passage – 7.5 m width × 4.5 m height (vehicular type)	executed: Pedestrian (≈ 2.5 m × 2.5 m) and Vehicular (≈ 7.5 m × 4.5 m).
6	**Firefighting and SCADA System**	Equipped with SCADA, ventilation, fire detection & suppression, communication and CCTV systems (Appx B-III).	SCADA-based integrated system operational: • 84 Jet Fans + 8 Axial Fans for longitudinal ventilation • Fire Hydrants every 60 m and Fire Niches every 150 m • SOS call boxes and CCTV coverage every 60 m • FM rebroadcast and PA system fully functional.
Structures			
1	**Minor Bridges**	02 Nos. (at South & North Portals)	**2 Nos. (PSC Box Girder Bridges):** • **Bridge B-1 @ Km 89+750 (South Portal)** – 1 × 40 m span PSC Box Girder with RCC Box Abutments on open foundation. • **Bridge B-2 @ Km 99+530 (North Portal)** – 1 × 50 m span PSC Box Girder with RCC Box Abutments on open foundation. Deck width ≈ 9.5

Sl. No.	Particulars	As per Schedule-B	As Built
			m (2-lane carriageway + crash barriers each side).
2	**Underpasses (PUP / CUP)**	02 Nos. (as per Appx B-I)	**2 Nos.:** • **Pedestrian Underpass (PUP) @ Km 89+620 (South Approach)** – RCC box type structure, clear span 4.0 m × 3.0 m. • **Cattle Underpass (CUP) @ Km 99+620 (North Approach)** – RCC box type structure, clear span 6.0 m × 4.0 m.
3	**Culverts**	11 Nos. (10 Box + 1 Pipe Culvert)	**11 Nos.:** • **South Approach (Km 89+100 – Km 89+900)** – 6 Box Culverts (4 m × 3 m RCC sections). • **North Approach (Km 129+000 – Km 129+900)** – 4 Box Culverts + 1 Pipe Culvert (900 mm dia RCC pipe). All with RCC headwalls and wing walls.
Misc.			
1	**Toll Plaza**	2 Nos. (one at each portal)	2 Nos. – South @ Km 89+420 and North @ Km 129+720 (6 + 2 lanes each; for northbound and southbound traffic).

Sl. No.	Particulars	As per Schedule-B	As Built
2	**Drainage Pipe in Main Tunnel**	RCC longitudinal drains on both walls	9.0 km length (4 Nos. – 2 each side of both tubes) of 450 mm dia RCC pipes with collection sumps and automatic pumping at both portals.
3	**Drainage Pipe in Escape Tunnel**	Provided along length for stormwater and seepage drainage	9.0 km length (2 Nos. lines) of 350 mm dia RCC pipes with gravity outlet to portal sumps and cross-link to main tunnel drain system.
4	**Drainage Pipe in Cross Passages**	Inter-connecting main and escape tunnels	29 Nos. RCC links (200–250 mm dia) provided through each cross passage on both ends for seepage and fire-water collection.
5	**Slope Protection Works – Valley Side (South Portal)**	Retaining / gabion walls as per design	Executed ≈ 1,520 m (Gabion crib walls and shotcrete with rock bolts @ 2 m grid).
6	**Slope Protection Works – Hill Side (North Portal)**	Retaining walls and anchored shotcrete as per design	Executed ≈ 1,750 m (RCC retaining walls with anchors and wire-mesh shotcrete facing).
7	**Lay Bays / Truck Lay Byes**	Every ≈ 1.2 km both sides (≈ 14 Nos.)	15 Nos. provided (7 each direction inside tunnel + 1 at South portal); avg length ≈ 40 m each with signage and lighting.
8	**Fire-Fighting Niches**	At 150 m intervals each side	59 Nos. operational (30 south tube + 29 north tube) equipped with hydrant, hose

Sl. No.	Particulars	As per Schedule-B	As Built
			reel and extinguisher; linked to SCADA pressure monitoring.
9	**Vehicular Emergency Exits**	Every ≈ 1.2 km (Appx B-I)	7 Nos. Vehicular Cross Passages (@ CP-4, 8, 12, 16, 20, 24 & 28) clear opening ≈ 7.5 m × 4.5 m.
10	**Pedestrian Emergency Exits / Cross Passages**	At ≈ 300 m intervals (Appx B-I)	22 Nos. Pedestrian Cross Passages (≈ 4.5 m × 2.5 m) between main and escape tunnels.
11	**Ventilation Buildings**	2 Nos. (one at each portal)	2 Nos. – South & North Portals; house axial fans, air shafts and HV panels for jet-fan system.
12	**Tunnel Control Centre (Building)**	2 Nos. (one at each portal)	1 Main Integrated Control Centre (South Portal) with Fire Pump House & Switch Yard; North Portal building houses Ventilation and Power Control equipment.
13	**Toll Plaza Buildings**	At each toll location	Constructed at both portals with Weigh-in-Motion system, Server Room and ITCS facilities.

Exhibit 7 Tunnel Layout

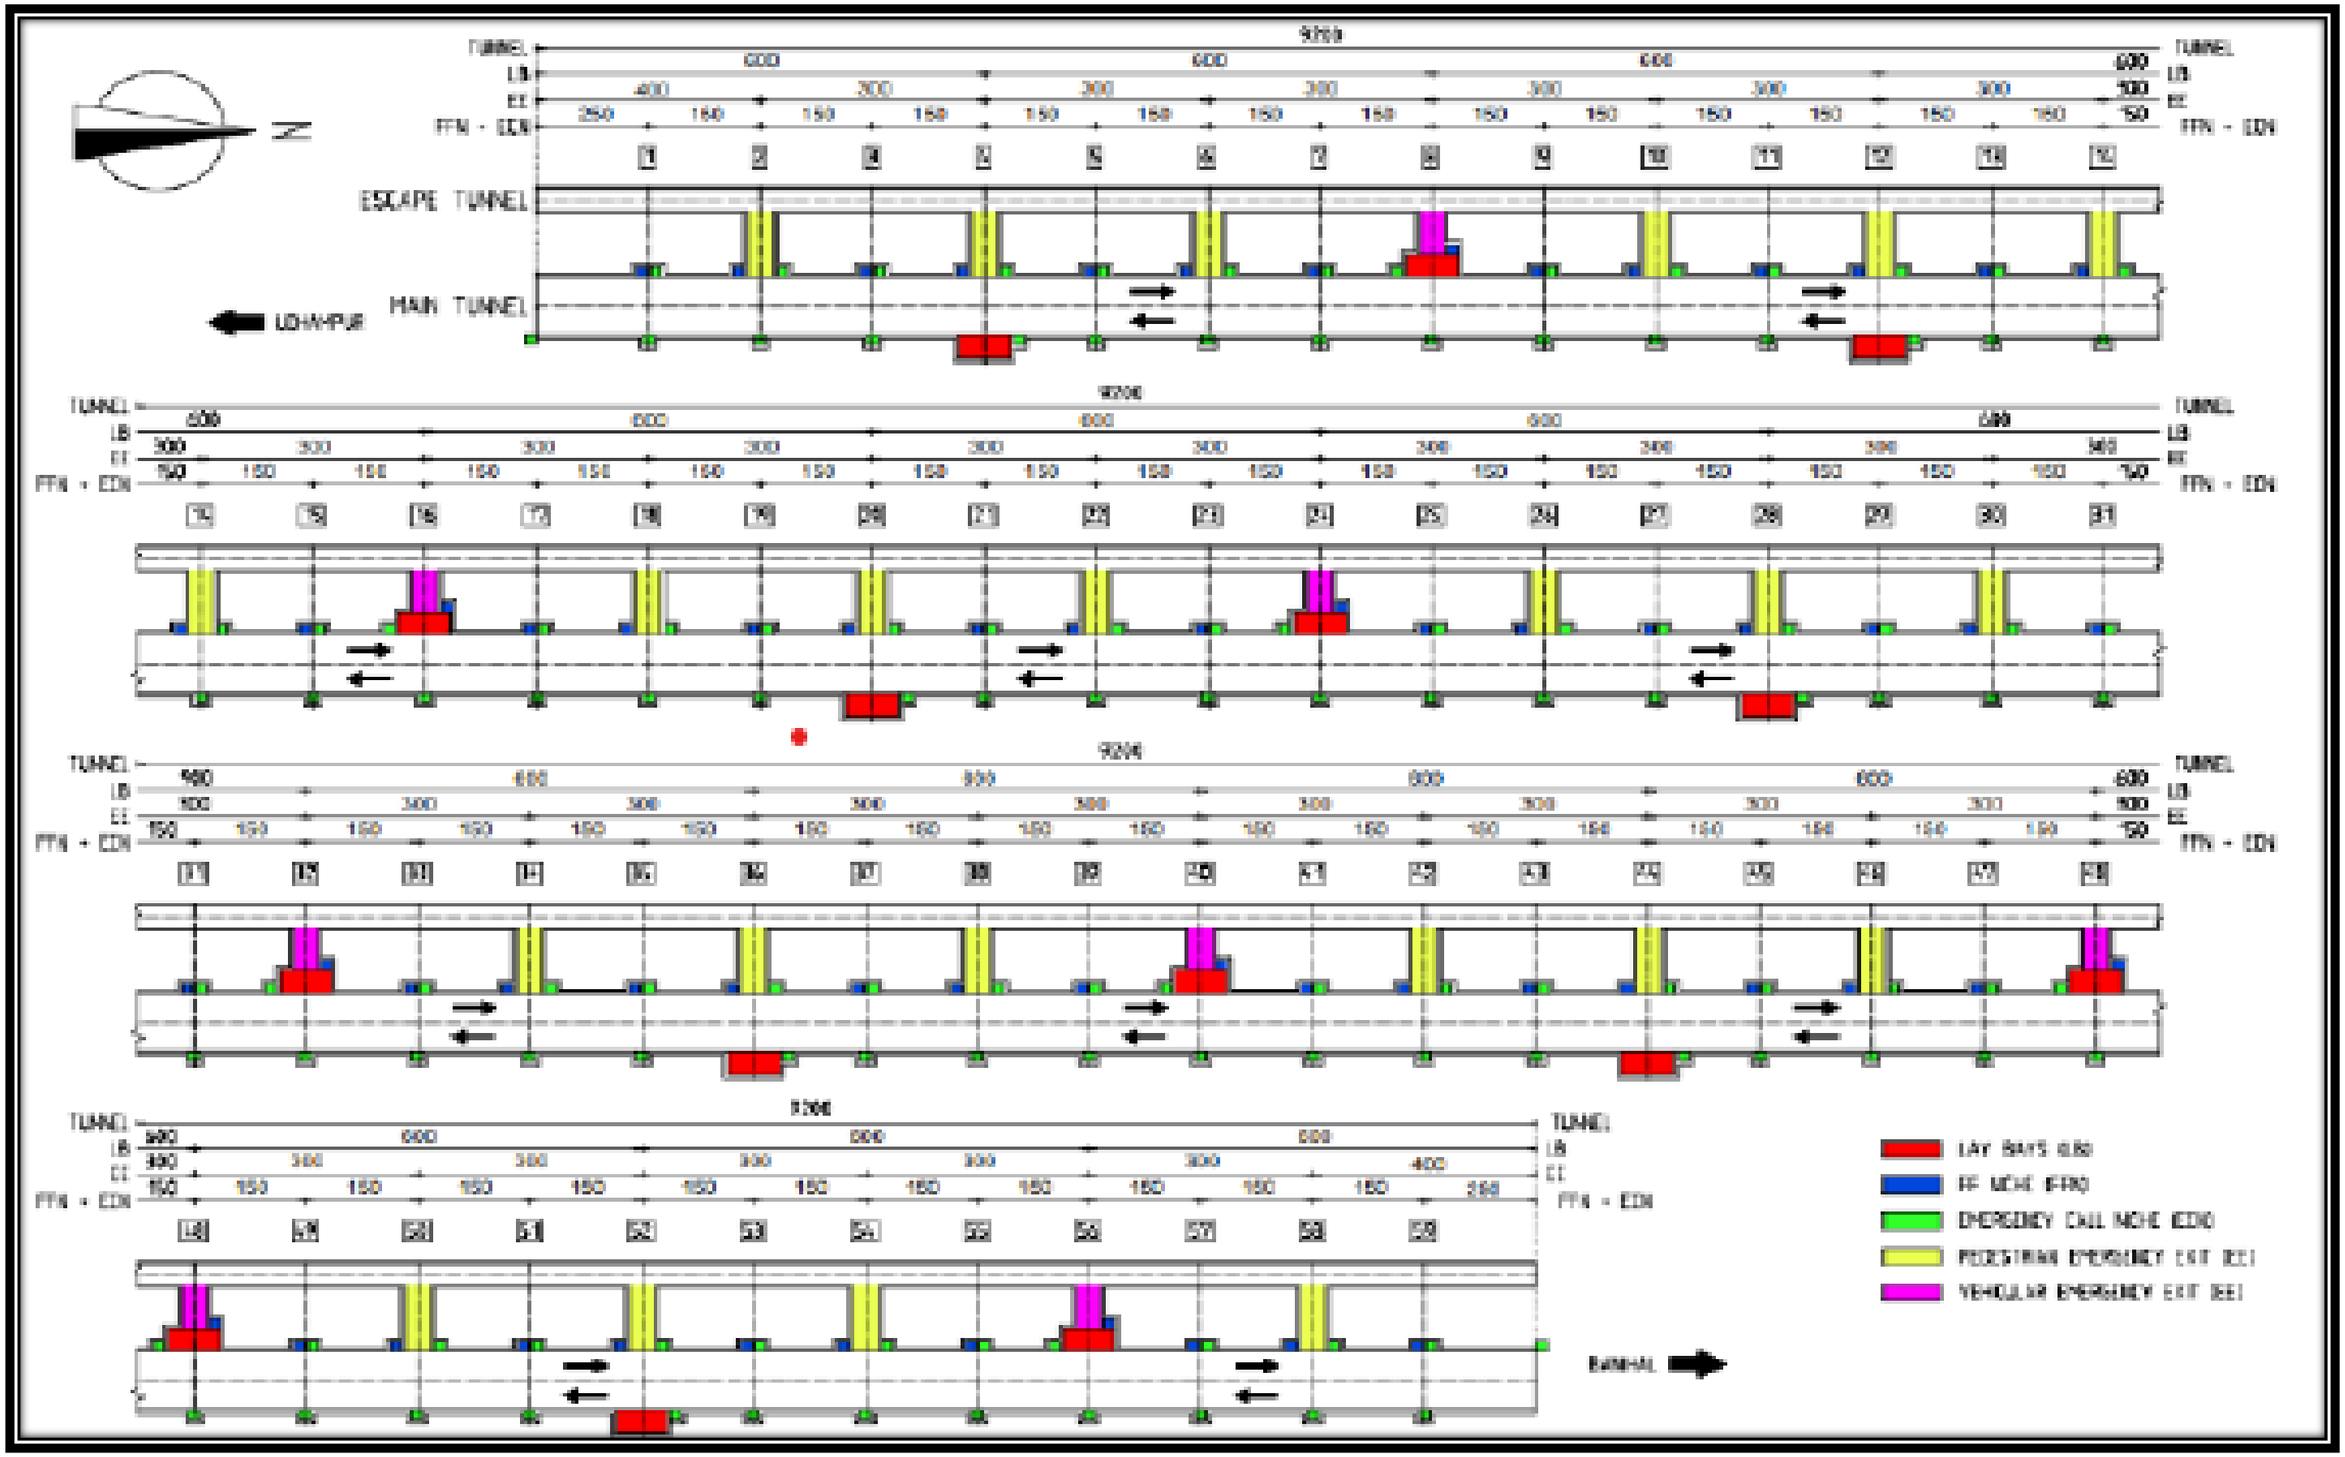


Exhibit 8 Tunnel Typical Cross Section

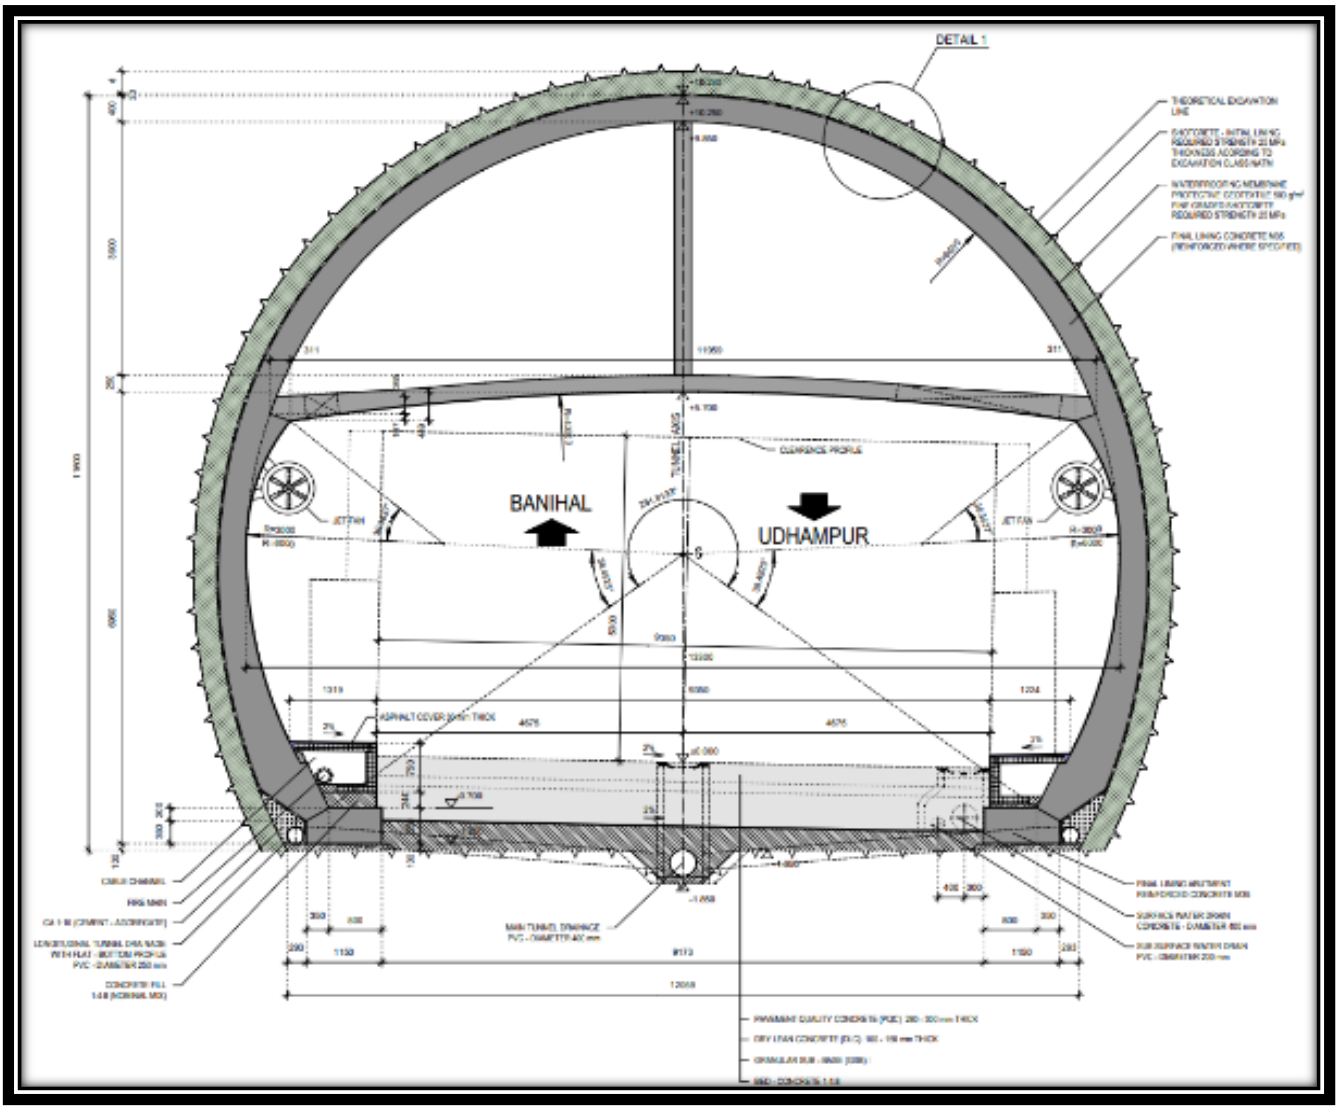

Exhibit 9 Typical Cross Section of Escape Tunnel (during construction and operative stage)

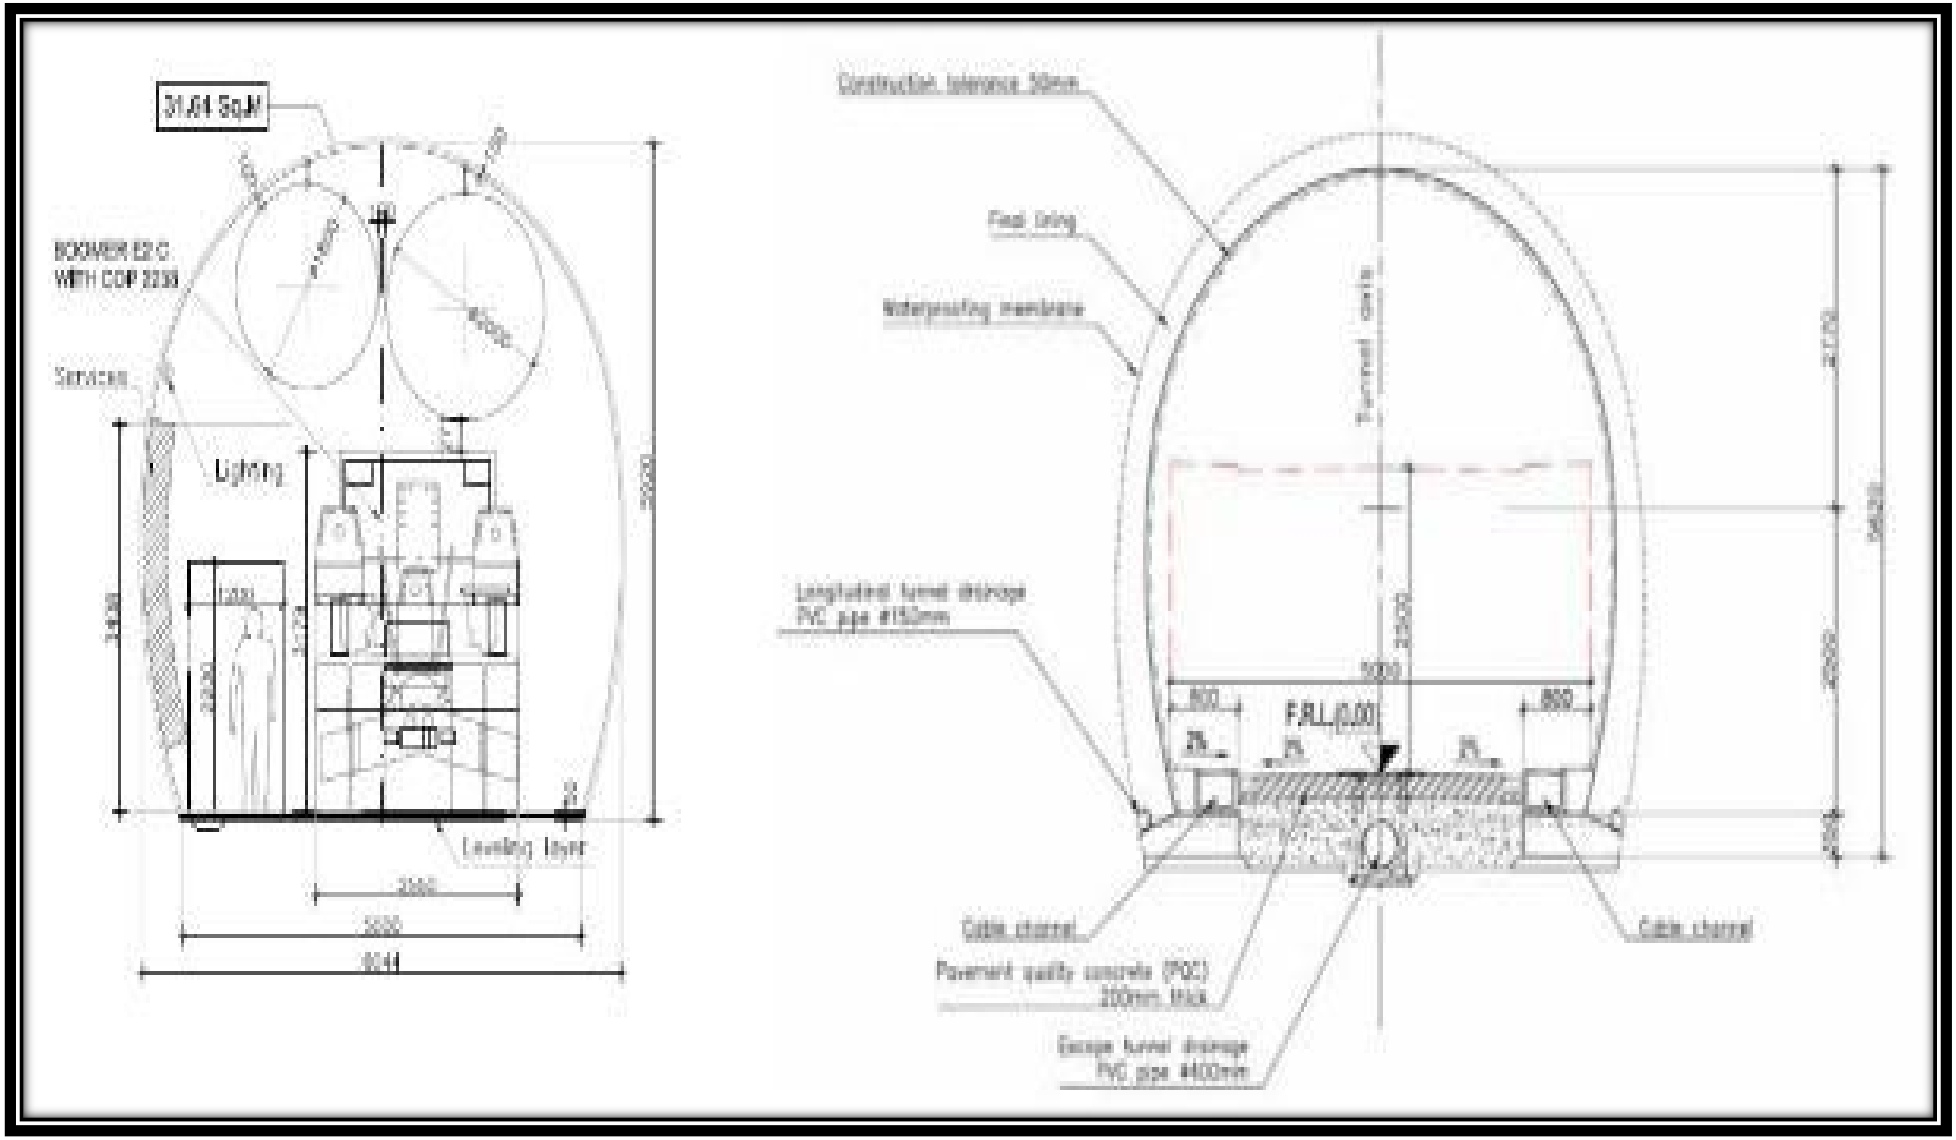

Exhibit 10 Vehicular Cross Passage Longitudinal profile

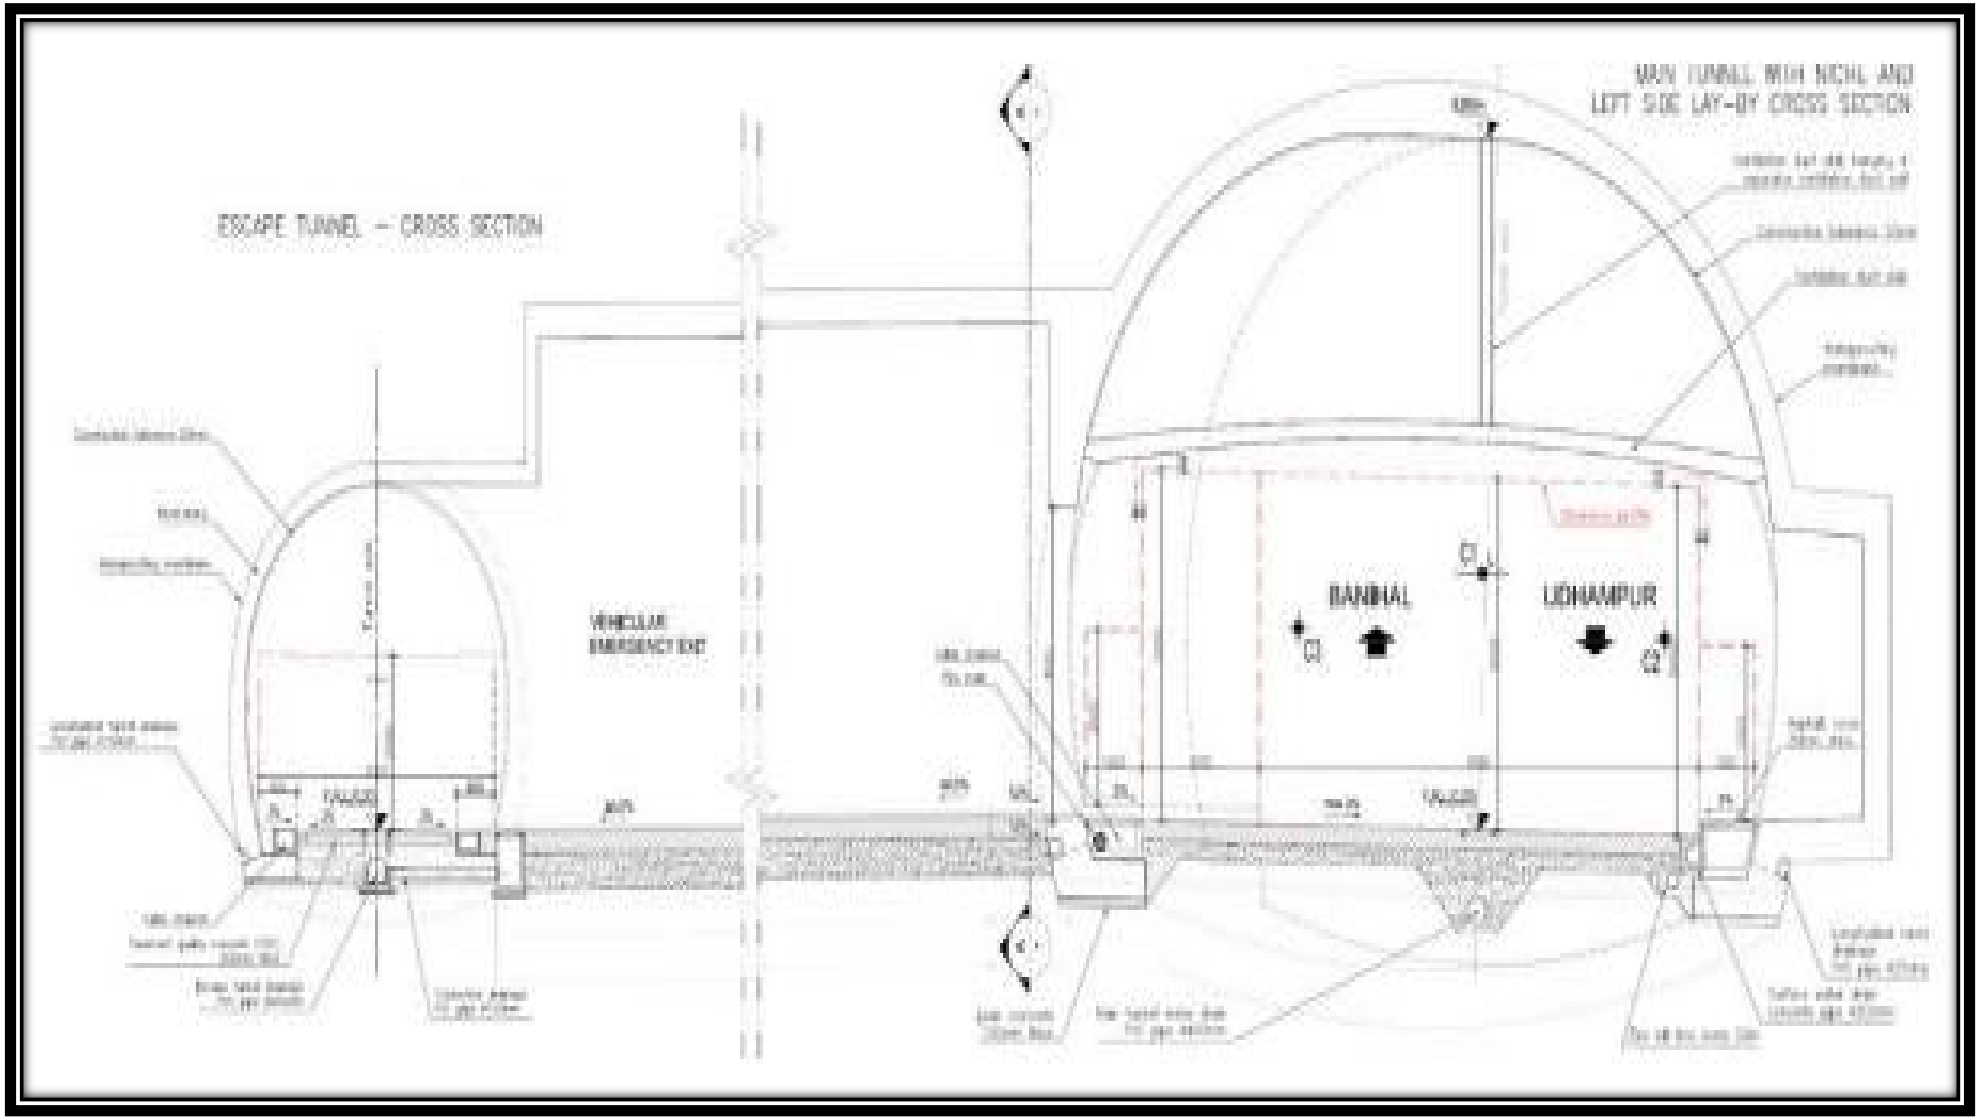


2.7 Project Completion Certificate and PCOD & FCOD

A. Partial Commercial Operation Date (PCOD):

- **PCOD issued: 08 March 2017.**

B. Final Commercial Operation Date (COD):

- **Project received COD (Completion): 22 Feb 2018.**

2.8 Extension of Time

There is no extension of time for the concession period on the project

2.9 Penalty

There is no penalty on project as of now.

2.10 Change of Scope

There is no Change of Scope on project.

2.11 Approvals & Permits

Since Project is in O & M stage therefore all necessary approvals required are in place with concessionaire.

2.12 Power Availability of Project

Exhibit 11 Power Details of Project

Location	DPR Status	33 KV Line	33/11 KV Sub-station	Remarks
North Portal		33 kV incoming power line taken from Udhampur Grid; supply through overhead / pipe-enclosed 11 kV cables from switchyard to portal sub-station	33/11 kV AIS switchyard (10 MVA transformer installed) with 6 × 250 kVAR capacitor banks (1500 kVAR total)	Switchyard and equipment found OK as per design;
South Portal		132/11 kV GIS switchyard near portal (10 MVA transformer); outgoing 11 kV feed to Sub-station-1 and tunnel systems	Sub-station-1 comprises 5 × 1250 kVA + 1 × 750 kVA transformers for ventilation and tunnel loads; 125 kVA auxiliary transformer and 40 kVA DG set provided for stand-by	6 × 250 kVAR capacitor banks (1500 kVAR total) installed; water-logging in 11 kV trench observed — make-up air grill and continuous exhaust fan operation recommended
Present Power Availability				
North Portal		11 kV dedicated line from switchyard feeding tunnel equipment		In use for tunnel operation till permanent system augmentation (if any)
South Portal		11 kV power feed from GIS switchyard to Sub-station-1		In use for tunnel equipment operation; no augmentation noted in TDD Report

☛ Both the North and South Portals are presently operating through their respective permanent power systems. The **North Portal** is fed through a **33/11 kV AIS switchyard (10 MVA)**, and the **South Portal** is supplied from a **132/11 kV GIS switchyard (10 MVA)** with dedicated 11 kV feeders to tunnel substations. The power infrastructure, including transformers and capacitor banks, was found **operational and generally in accordance with design provisions**,.

2.13 Special Features of Project

The Chenani–Nashri Tunnel is part of the four-laning of NH-1A from Km 89+000 to Km 130+000 and provides **uninterrupted all-weather connectivity** between Chenani and Nashri. The tunnel system consists of a **main tunnel (two-lane, 9 km)** and a **parallel escape tunnel (9 km)** interconnected by **29 cross-passages**—22 pedestrian and 7 vehicular—for evacuation and maintenance.

Each tunnel tube ensures safe and continuous traffic movement and is supported by comprehensive civil, mechanical, electrical and safety installations.

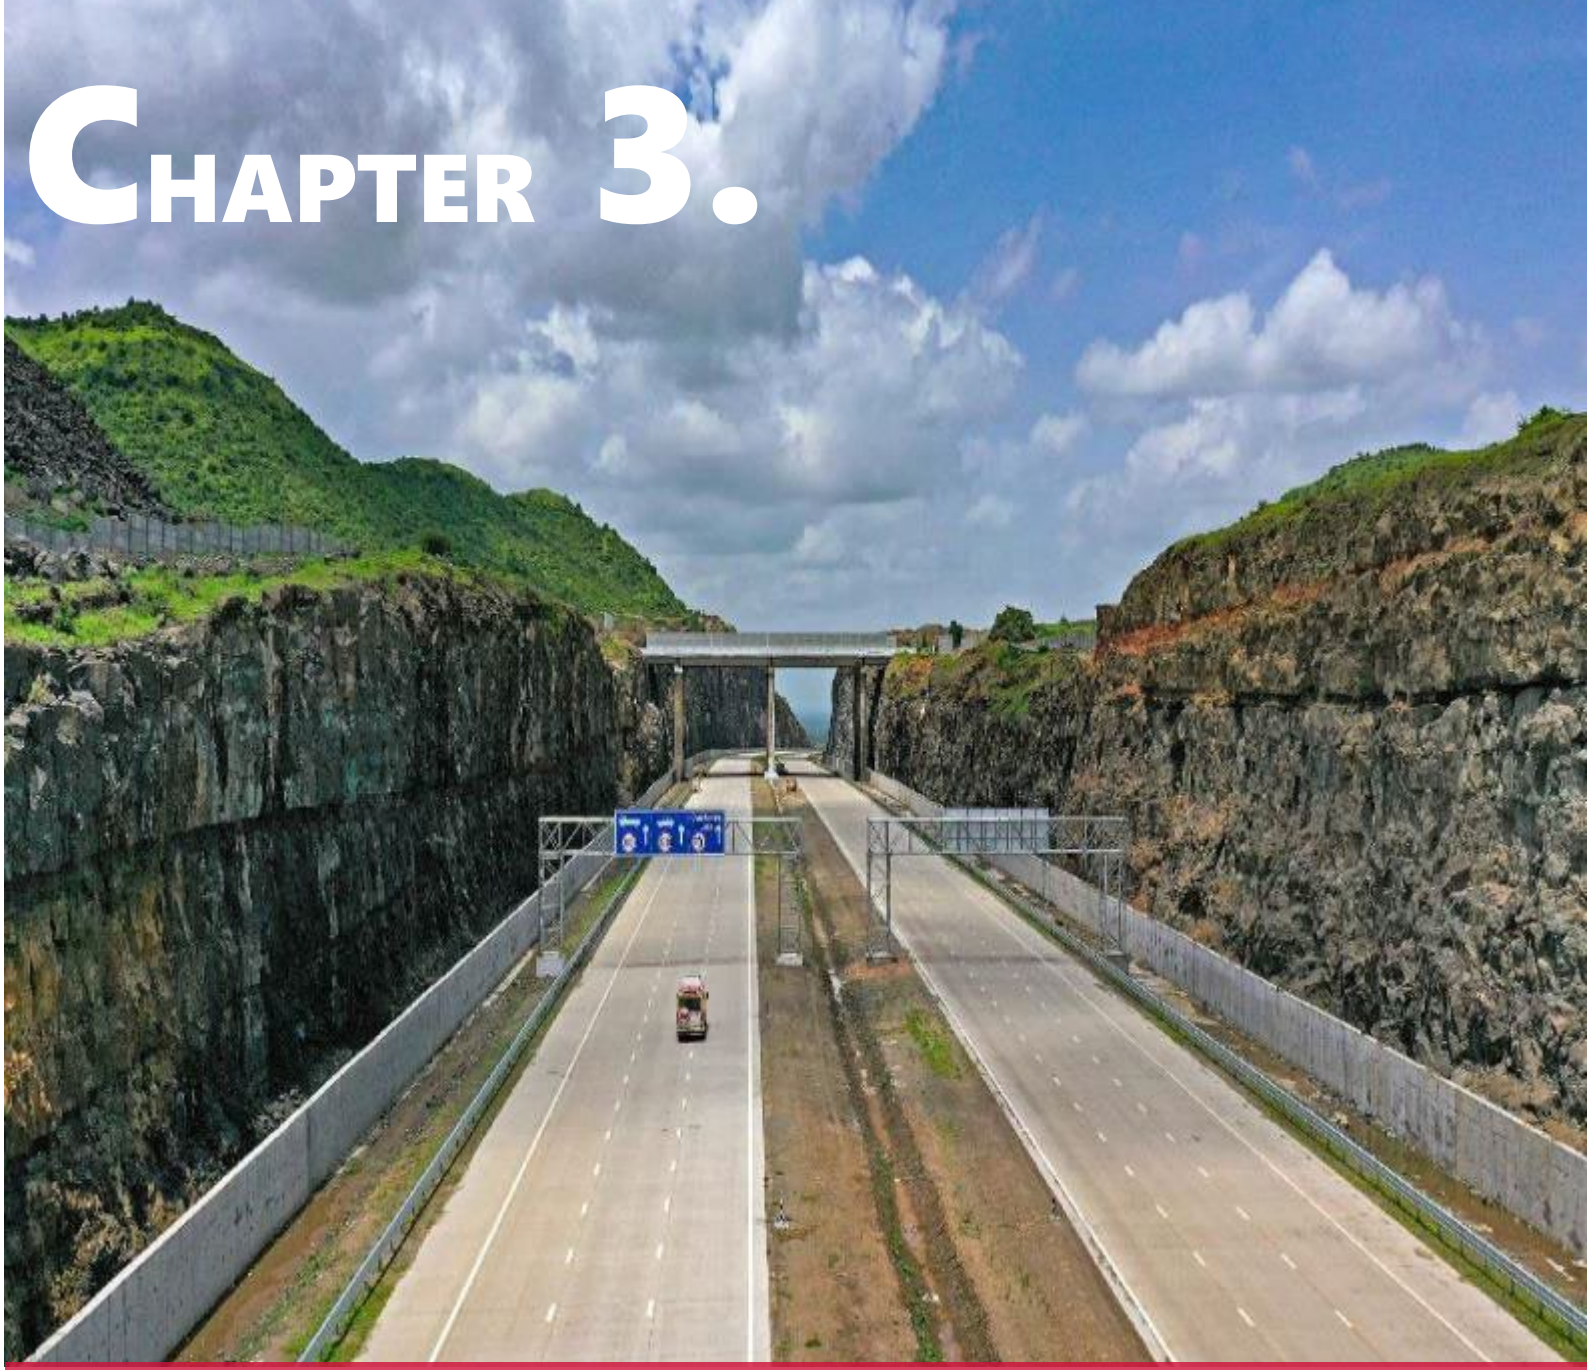
1. **Traffic Management and Control System-** An Integrated Tunnel Control System (ITCS) is installed at both portals for centralized supervision of all tunnel services, including lighting, ventilation, power, communication and safety equipment. The system is functional and monitored from the Control Room (South Portal) and Server Room (North Portal).
2. **Ventilation System Control** – The tunnel is equipped with a longitudinal ventilation system using jet fans to maintain air quality and visibility under normal and emergency conditions. The ventilation fans are controlled through the ITCS.
3. **Power Supply and Distribution Monitoring** – Power is supplied through a 132/11 kV GIS switchyard (10 MVA) at the South Portal and a 33/11 kV AIS switchyard (10 MVA) at the North Portal, feeding multiple sub-stations for tunnel lighting, ventilation and control systems. Both switchyards were found operational and in accordance with design requirements.
4. **Communication and Surveillance System-** The tunnel is provided with a CCTV network covering the main and escape tunnels and both portals. Monitoring is carried out from the Control Room through the ITCS. The system was functional and supported incident monitoring and recording.
5. **Fire Alarm and Fire-Fighting System-** Fire alarm panels and fire pump rooms are installed at both portals. These systems to be operational and recommended improvements in ventilation of panel rooms and periodic maintenance of fire-water connections.
6. **Emergency and Control Facilities-** Each portal houses Control and Server Rooms integrating tunnel operations, with communication links to escape passages and sub-stations. Fire pump rooms and ventilation buildings are also provided at both ends.

7. **Safety Structures and Access Control-** Rigid height restriction barriers are installed at both portals to prevent entry of over-height vehicles. Cross-passages enable safe evacuation and maintenance access throughout the tunnel length.

KF View:

The Chenani–Nashri Tunnel is equipped with a robust and integrated system encompassing traffic management, surveillance, power, ventilation, fire safety, and communication facilities. These systems are seamlessly interconnected through an Intelligent Tunnel Control System (ITCS), ensuring centralized monitoring and swift response to any operational or emergency condition. Designed with built-in redundancy, automation, and real-time data integration, the tunnel's infrastructure ensures safe, reliable, and uninterrupted operations—enhancing user safety, comfort, and overall travel experience.

Chapter 3.



Review of Project Agreements

Chapter 3. REVIEW OF PROJECT AGREEMENTS

3.1 Review of Concession Agreement

The Concession Agreement was executed between the National Highways Authority of India (NHAI) and Chenani Nashri Tunnelway Limited (CNTL) on 28 June 2010 for Four-Laning of the Chenani–Nashri Section of NH-1A from Km 89.000 to Km 130.000 (New Alignment), including a 9 km long two-lane main tunnel with a parallel escape tunnel, in the State of Jammu & Kashmir, on a DBFOT (Annuity) basis under NHDP Phase-II.

Exhibit 12 Key Terms of Concession Agreement

Particulars	Description
Date of Agreement	28 June 2010 (following LOA dated 03 May 2010)
Appointed Date	23 May 2011
Employer / Authority	National Highways Authority of India (NHAI)
Concessionaire	Chenani Nashri Tunnelway Limited (CNTL), promoted by IL&FS Transportation Networks Limited
Concession Period	20 years (including 5 years construction) – *Article 3.1.1*
Project Scope	Four-laning of NH-1A including a **9.0 km main tunnel**, **9.0 km escape tunnel**, **two minor bridges (40m & 50m)**, and **approach roads of 1.3 km (South) and 0.6 km (North)**
Total Project Cost (TPC)	₹3,720 crore
Construction Period	1825 days (5 years) from Appointed Date – *Schedule G*
Scheduled Completion Date	22 May 2016
Annuity Payment	₹317.52 crore per half year (Article 27.1.1; Schedule M)
Annuity Start	6 months post-COD; biannual payments throughout concession period
Performance Security	As per Article 9; Bank Guarantee valid till one year from Appointed Date; replenishable if encashed
Escrow Account	Required prior to Appointed Date; deposits include Financial Package, Annuity inflows, insurance, and receipts (Article 31; Schedule S)

Particulars	Description
Financial Close	Within 180 days of CA signing; extension allowed with damages under Article 10
Termination / Force Majeure	Articles 34–36 define natural, indirect, and political events and related relief/compensation
Dispute Resolution	Conciliation → Arbitration under Arbitration and Conciliation Act, 1996 (Article 44)
Governing Law & Jurisdiction	Governed by Indian Law; Delhi courts have jurisdiction (Article 47)

3.1.1 Obligations of the Authority & Concessionaire

Exhibit 13: Key Obligations of Parties

Authority	Concessionaire
Provide Right of Way (ROW) free from encumbrances (Article 4)	Design, engineer, finance, construct, operate, and maintain the Project Highway (Article 3)
Assist in obtaining clearances and statutory approvals	Achieve Financial Close within 180 days and furnish Performance Security
Pay fixed biannual annuity of ₹317.52 crore after COD	Operate and maintain the highway in accordance with Schedule K (Maintenance Requirements)
Support in shifting of utilities, traffic management, and emergency services	Comply with Safety Requirements (Article 18)
No levy of additional taxes or tolls (traffic risk borne by NHAI)	Ensure uninterrupted traffic and hand over assets to NHAI at end of Concession Period
Coordinate with Independent Engineer for monitoring	Bear all project risks, costs, and liabilities except those allocated to NHAI

3.1.2 Financial Provisions and Settlements:

The Agreement (Articles **27, 29, 31, 32, 33, 41** and **Schedule R**) establishes comprehensive financial safeguards to ensure disciplined cash flow management and protection of lender interests. **The detailed covenants are presented in the exhibit below.**

Exhibit 14: Key Financial covenants detail

Aspect	Details
Escrow Account	All inflows—Financial Package, Annuities, insurance proceeds, etc.—to be deposited; withdrawals prioritized for statutory dues, O&M, debt servicing, reserves, and equity returns.
Annuity Payments	Fixed ₹317.52 crore every six months; begins 6 months after COD; maximum two payments per year. Payments credited directly to the Escrow Account, constituting full discharge of NHAI's obligation.
Revenue Model	No toll rights to Concessionaire; revenue independent of traffic volume.
Change in Law	Compensation on NPV basis if legislation/regulation alters project cost or revenue.
Insurance	Mandatory for construction, third-party, O&M, and Force Majeure events, naming NHAI and lenders as co-insureds.
Substitution Rights	Lenders empowered to substitute Concessionaire in case of persistent default.
Equity Lock-In	Minimum 51% equity holding during construction + 2 years post-COD.

3.1.3 Delay Damages and Penalties under the Concession Agreement

Exhibit 15: Key Terms of Damages/ Penalty

Clause / Article	Situation	Damages / Penalty	Remarks
Article 4.2	Delay by Authority in providing ROW beyond 90 days	₹50 per day per 1,000 sq.m. of delayed land	Payable to Concessionaire
Article 10.3	Delay in achieving Financial Close beyond 180 days	0.1% of Performance Security per day (extendable)	Max 20% of PS
Article 15.2	Delay in achieving COD beyond Scheduled Completion	0.1% of Performance Security per day until COD	Authority may terminate if delay >270 days
Article 17.7.3	Delay in reopening lanes post-maintenance	0.1% of Average Daily Annuity per 250 m/day	As per Schedule K
Article 35	Breach of Agreement	Direct cost compensation only	Excludes consequential losses

3.1.4 Legal and Operational Framework:

- **Force Majeure (Article 34)**: Covers natural, political, and indirect events. Relief through time extension and limited cost compensation (no indirect losses).
- **Compensation for Breach (Article 35)**: Pre-estimated damages applicable to both parties; duty to mitigate losses.
- **Termination (Articles 36–37)**: Triggered by default or Force Majeure; compensation governed by Schedule P.
- **Divestment of Rights (Article 39)**: Concessionaire to hand over assets free of encumbrance, including records, clearances, and designs.
- **Defects Liability (Article 40)**: Concessionaire responsible for defects discovered post-termination for one year from transfer date.

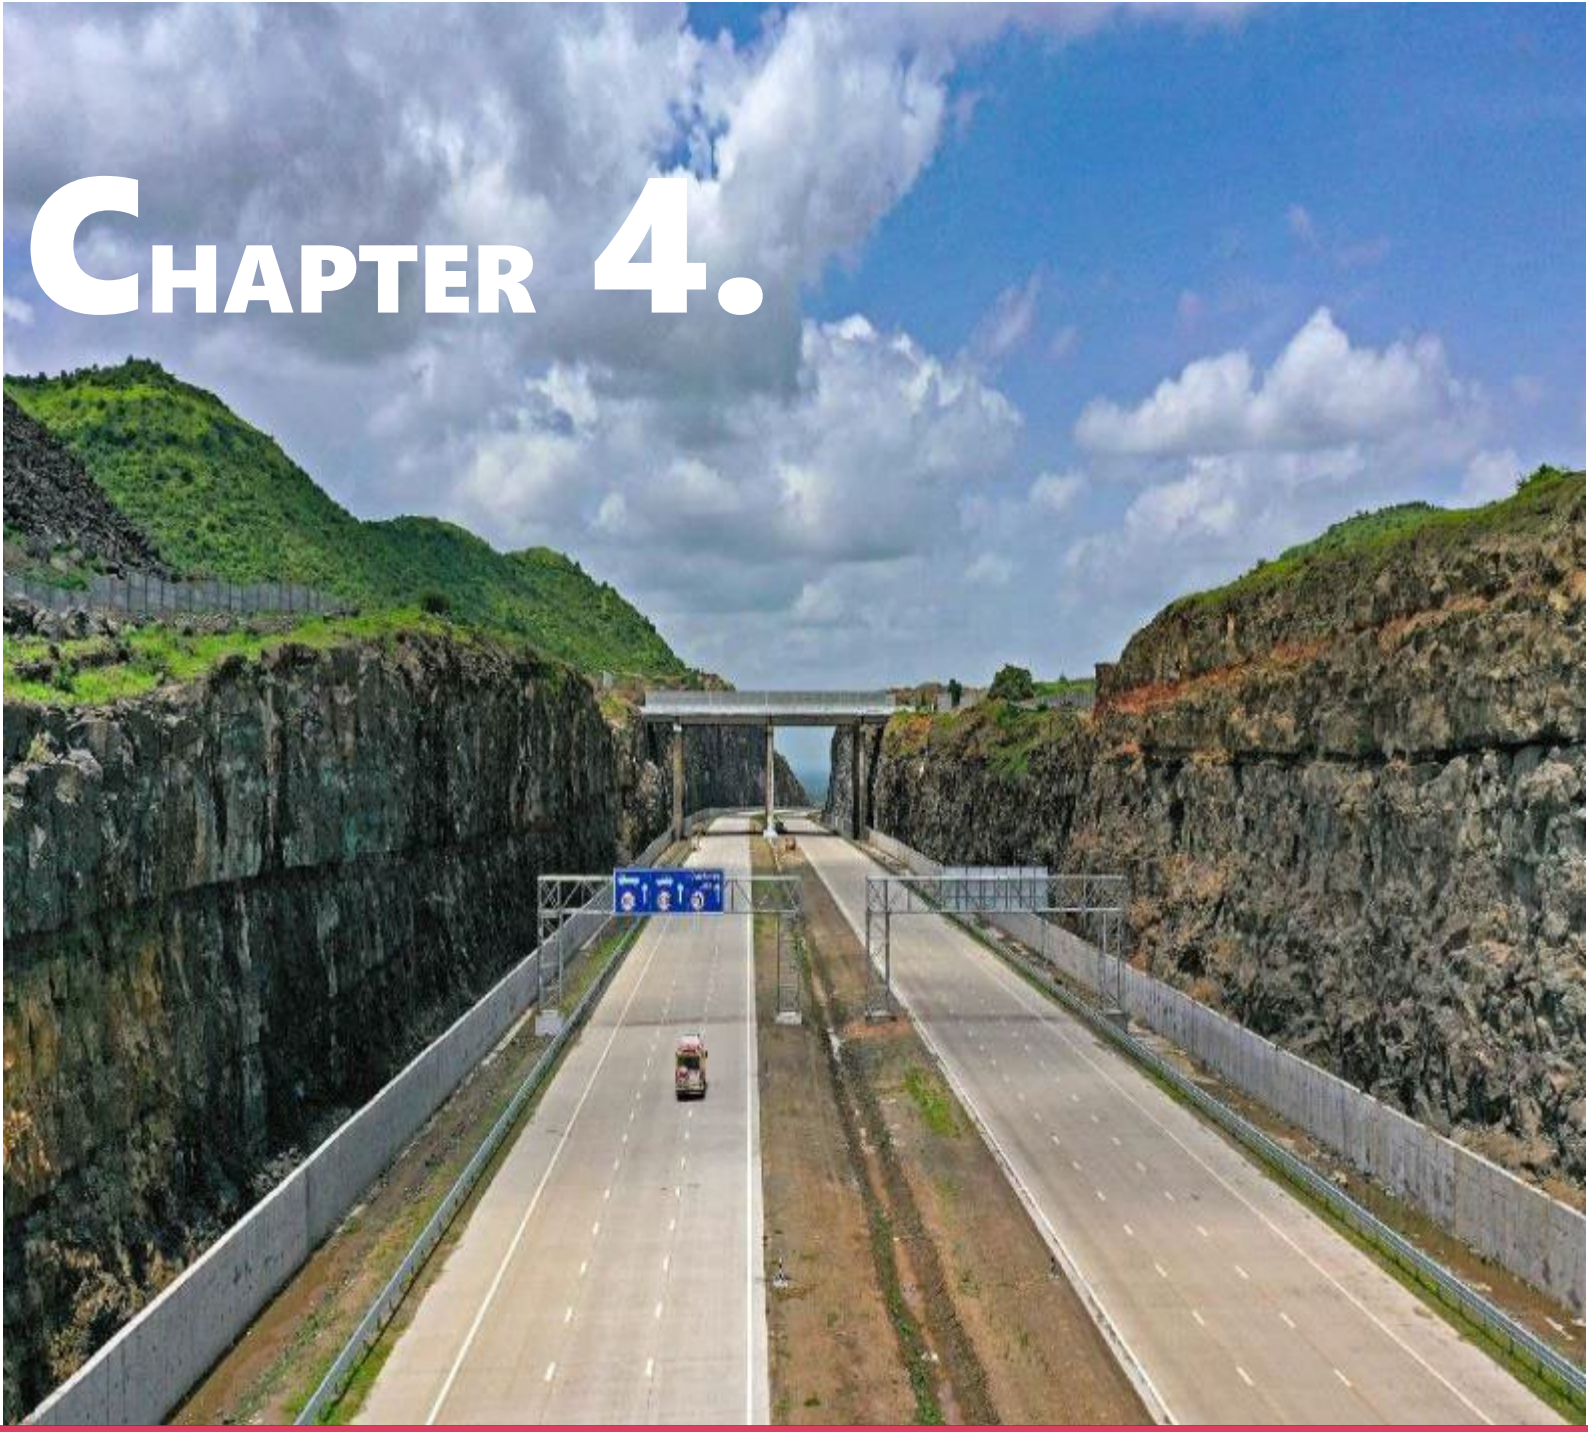
3.2 Review of Supplementary Agreements

The Concession Agreement dated **28 June 2010** between **NHAI** and **Chenani Nashri Tunnelway Limited (CNTL)** was subsequently modified through **four Supplementary Agreements**, addressing changes in financial provisions, annuity schedule, power supply cost sharing, and technological upgrades. These amendments were aimed at strengthening lender assurance, clarifying financial obligations, and enhancing operational systems

Exhibit 16: Summary of Supplementary Agreements

Date	Parties	Purpose / Context	Key Terms / Amendments
19 May 2011	NHAI & Chenani Nashri Tunnelway Ltd.	*First Supplementary Concession Agreement – Termination Provisions (Force Majeure)*	• Amended **Article 34.9** to define clear termination payment formulas during Force Majeure events. • Introduced distinctions for Non-Political, Indirect Political, and Political events. • Non-Political FM: payout = **90% of Debt Due – Insurance Cover**. • Revised **Article 37.3** (Termination Payment) and **Article 47.5** (Delayed Payments). • Inserted new definitions for *G-Sec Yield* and *Spread* under **Article 48**.
28 December 2012	NHAI & Chenani Nashri Tunnelway Ltd.	*Second Supplementary Concession Agreement – Annuity Schedule Revision*	• Substituted **Schedule M – Annuity Payment Schedule**. • Fixed **biannual annuity = ₹317.52 crore**, commencing **June 2016**, continuing till **December 2030**. • Confirmed applicability of Article 27 for schedule adjustments linked to actual COD. • Clarified that all other provisions of CA and first supplementary remain unchanged.
3 January 2017	NHAI & Chenani Nashri Tunnelway Ltd.	*Third Supplementary Agreement – Permanent Power Supply Settlement*	• Resolved dispute on **HV transmission line and permanent power supply** to both portals. • Concessionaire to bear **50% of total cost**, NHAI to bear remaining 50%. • Both parties discharged all future claims on this issue.

Date	Parties	Purpose / Context	Key Terms / Amendments
			• Agreement constituted a **full and final amicable settlement** regarding power infrastructure responsibility.
12 April 2018	NHAI & Chenani Nashri Tunnelway Ltd.	*Fourth Supplementary Agreement – Implementation of Hybrid ETC System*	• Incorporated Government directive for **Hybrid Electronic Toll Collection (ETC)** across all lanes. • Defined scope: installation, integration, testing, commissioning, and 5-year O&M of Hybrid ETC system. • Specified **Service Level Agreements** (uptime ≥ 99%) and penalties for downtime. • Set out payment milestones and O&M obligations (Annexure D). • Confirmed that this modification is a **Change of Scope**, without altering main CA obligations.



Chapter 4.

Condition Assessment of Project Road

Chapter 4. CONDITION ASSESSMENT OF PROJECT ROAD

4.1 General

This chapter presents a detailed assessment of the existing condition of the **Chenani–Nashri Project Highway** in accordance with the provisions of the **Concession Agreement** and relevant **IRC guidelines**. The objective of this assessment is to evaluate the current condition and performance of the **pavement, tunnel structures, viaducts, toll plaza facilities, drainage systems, safety installations, and other highway assets**. The observations are based on **site inspections, maintenance records, and interaction with the Concessionaire's O&M team**.

This section presents the findings of the **condition assessment of the Chenani–Nashri Section of NH-44 (Km 89+000 to Km 130+000)** in the **Union Territory of Jammu & Kashmir**. The assessment has been prepared based on **field observations recorded during site inspections conducted on 09 October 2025**, and the review of available **O&M documentation and maintenance performance data** provided by the Concessionaire.

The analysis integrates the results of the **visual condition survey**, inspection of **tunnel systems, structures, and appurtenances**, and the review of operational performance to provide a comprehensive understanding of the **current structural and functional condition** of the project highway and its associated infrastructure.

The **project corridor lies in a mountainous and geotechnically sensitive zone of the lower Himalayas**, characterized by steep slopes, sharp curves, and exposure to adverse weather conditions. The alignment commences near **Chenani (Km 89+000)** and terminates near **Nashri (Km 130+000)**, passing through the **Dr. Syama Prasad Mookerjee Tunnel (Chenani–Nashri Tunnel)**—a **bi-directional tunnel of 9.0 km length with a parallel escape tunnel**. The project forms a vital part of **NH-44**, ensuring **all-weather connectivity between Jammu and Srinagar**.

The purpose of this condition assessment is to determine the **current structural health, operational performance, and serviceability** of the project assets. The study consolidates information from **field inspections, maintenance records, and operational data**, providing a **holistic appraisal of the pavement system, tunnel structures, drainage, and associated highway facilities**.

Exhibit 17 Existing Vs Schedule B

Sl. No.	Particulars	As per Schedule–B	As Built & Deviations Settled in Supplementary Agreement
1	Project Road Start	Km 89+000 at Chenani	Km 89+000 at Chenani
2	Project Road End	Km 130+000 at Nashri	Km 130+000 at Nashri
3	Project Length	10.9 km	Approx. 10.9 km (including 9.0 km tunnel and 1.9 km approach roads)
4	Tunnel	Bi-directional tunnel with parallel escape tunnel of 9.0 km length	Main Tunnel – 9.0 km Escape Tunnel – 9.0 km (parallel alignment)

The primary objectives of this assessment are to:

- Document the **on-ground physical condition of the pavement, structures, and roadside facilities** based on the **site inspection (09 October 2025)**.
- Identify **stretches requiring overlay, rehabilitation, or other maintenance interventions** to restore performance levels.
- Evaluate the **functionality of drainage, signage, tolling, and traffic management systems**.
- Verify **compliance with Operation and Maintenance (O&M) standards** as prescribed by **IRC codes** and the **Concession Agreement**.

This assessment has been carried out in accordance with the following key references:

- **IRC:115-2014** – *Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements using FWD Technique*
- **IRC:117-2014** – *Guidelines for Structural Evaluation of Rigid Pavements*
- **IRC:37-2018** – *Guidelines for the Design of Flexible Pavements*
- **IRC:SP:35-2015** – *Code of Practice for Inspection and Maintenance of Bridges*
- **IRC:83-2019 (Part I & II)** – *Guidelines for Design and Condition Assessment of Bridge Components*
- **IRC:SP:16 and IRC:SP:83** – *Guidelines for Maintenance of Highways and Toll Facilities*

4.2 Pavement

The proposed pavement design for the **Chenani–Nashri Section (Km 89 to Km 130)** follows **IRC:37-2012** and **IRC:58-2015** standards for flexible and rigid pavements respectively.

Exhibit 18 Rigid Pavement (Toll Plaza / Tunnel Section)

S. No.	Layer	Material Description	Thickness (mm)
1	Pavement Quality Concrete (PQC)	M-40 grade concrete	300
2	Dry Lean Concrete (DLC)	M-10 grade concrete	150
3	Granular Sub-base (GSB)	Granular layer	150
	Total Thickness		**600 mm**
	Reinforcement Details		

Exhibit 19 Service Road Pavement (Approach Road)

S. No.	Layer	Material Description	Thickness (mm)
1	Bituminous Concrete (BC)	Surface course using VG-30 bitumen	40
2	Dense Bituminous Macadam (DBM)	Binder course	75
3	Wet Mix Macadam (WMM)	Granular base	250
4	Granular Sub-base (GSB)	Granular sub-base material	200
	Total Crust Thickness		**550 mm**

4.3 Assessment of Highway

Knight Frank has undertaken an independent technical due diligence and assessment of the **Chenani–Nashri Project Highway**, covering all operational and structural assets developed under the DBFOT (Annuity) framework. The assessment was conducted in accordance with the provisions of the **Concession Agreement**, the **O&M Manual**, and relevant **IRC and MoRTH guidelines**.

The objective of this assessment is to evaluate the **physical condition, functionality, and maintenance adequacy** of all key asset categories — including **pavement, tunnel systems, drainage infrastructure, safety installations, electrical and mechanical systems**, and **ancillary facilities**. The observations are based on **visual field inspections**, review of **maintenance logs and records**, and discussions with the **Concessionaire's O&M personnel**.

The inspection covered the **main bi-directional tunnel (9.0 km)**, **parallel escape tunnel**, and **approach roads** measuring approximately **1.3 km (Chenani side)** and **0.6 km (Nashri side)**. The assessment was performed with the objective of confirming asset condition, operational efficiency, and compliance with the requirements stipulated under the Concession Agreement.

Overall, the **project assets were found to be in satisfactory operational condition**, with the core tunnel systems, pavement, and ancillary installations functioning as intended. Minor deficiencies, such as localized corrosion, worn pavement markings, and occasional lighting outages, were observed and can be addressed through **routine and preventive maintenance interventions**.

a) Approach and Access Roads

The entire project stretch consists of **rigid pavement (PQC)** along both approaches and within the tunnel.

b) Tunnel Lighting and Electrical Systems

The tunnel is equipped with **normal, threshold, and emergency lighting systems**, all integrated through the **SCADA-based control and monitoring system**. Lighting levels were observed to be uniform throughout the main tunnel. Emergency lighting and illuminated signage were functional at the time of inspection.

c) Safety Installations – Crash Barriers and Signage

Metal-beam crash barriers and parapet railings are provided on approach embankments and bridge decks.

Traffic signage, VMS boards, and delineators were in place, though a few reflective studs require replacement.

d) Drainage

A **composite drainage network** exists throughout the **main and escape tunnels**, designed to efficiently manage stormwater runoff and groundwater infiltration. The system comprises **longitudinal side drains**, **perforated pipes** behind the tunnel lining, **cross-drain connections**, and **sump pits with automatic pumping arrangements** provided at both portals to ensure uninterrupted operation.

As per site records and inspection findings, the drainage system includes:

- **Drainage pipes in Main Tunnel:** 9.0 km (4 nos.)
- **Drainage pipes in Escape Tunnel:** 9.0 km (2 nos.)
- **Drainage pipes in Cross Passages:** 29 nos. (at both ends)

e) Lay-bys

The project includes **15 lay-bys** provided at regular intervals within the **main tunnel** to facilitate emergency stoppage, breakdown handling, and inspection activities. These lay-bys are paved and equipped with **reflective signage, lighting, and emergency communication facilities** to ensure user safety during vehicle halts inside the tunnel.

f) Slope protection

Comprehensive **slope protection measures** have been implemented along both the **hill side and valley side** of the Chenani–Nashri project alignment to ensure slope stability and prevent erosion or rockfall near the tunnel approaches. Protection works extend over approximately **1,520 meters on the valley side** and **1,750 meters on the hill side**, covering critical cut slopes and embankment sections near both the **Chenani (South) and Nashri (North) portals**.

KF View:

The Chenani–Nashri Project Highway, including the twin-tube tunnel and approach roads, is observed to be in satisfactory operational and structural condition. All major systems—comprising pavement works, tunnel ventilation, lighting, power supply, drainage, communication, and safety installations were found functional and generally well-maintained. The Intelligent Tunnel Control System (ITCS) effectively supports centralized monitoring and ensures seamless coordination of mechanical, electrical, and safety subsystems.

Minor deficiencies, such as localized corrosion, faded pavement markings, missing blinkers, and a few loose crash barrier sections, were noted during inspection. These are non-critical in nature and can be addressed through routine preventive maintenance. The slope protection, drainage, and emergency facilities are functioning as intended, contributing to the stability and safety of the overall infrastructure.

With regular upkeep, timely inspections, and adherence to the prescribed O&M protocols, the project assets are expected to continue performing efficiently, ensuring safe, reliable, and uninterrupted passage for users through the Chenani–Nashri corridor.

4.4 Assessment of Structures

A **visual condition survey** of all structural components within the **Chenani–Nashri project** was carried out by the **Knight Frank team** in coordination with the **Concessionaire's O&M staff**, with the objective of identifying and documenting any structural deterioration, material distress, or functional deficiency that could affect long-term safety and serviceability.

The **Chenani–Nashri alignment** (Km 89+000 to Km 130+000) primarily consists of a **bi-directional main tunnel (9.0 km)** and a **parallel escape tunnel**, supported by **approach viaducts, underpasses, culverts, and ancillary structures**

Exhibit 20 Details of Structures

Sl. No.	Type of Structure	Quantity (Nos.)	Remarks / Description
1	**Minor Bridges**	02 Nos.	RCC deck slab type bridges; structural condition satisfactory, minor joint cleaning required.
2	**Underpasses**	02 Nos.	RCC box-type structures; no visible structural distress, parapet repair recommended at isolated locations.
3	**Box Culverts**	10 Nos.	RCC box culverts; all functional, minor silt removal and outlet cleaning required.
4	**Pipe Culverts**	01 No.	—

The inspection revealed that the overall condition of the project assets is **functionally satisfactory**, with **major structures, tunnels, and ancillary facilities in operational condition**, while a few **localized deficiencies** such as damaged gratings, faded signages, non-functional tunnel lights, open hydrant cabinets, and minor surface cracks were observed at specific chainages. Routine **maintenance, cleaning, repainting, and rectification** activities were found to be ongoing under the scope of the concessionaire.

KF View:

Based on the visual condition survey, all major structural assets within the Chenani–Nashri Project Highway—including bridges, underpasses, culverts, and tunnel structures are in satisfactory functional and structural condition, with no evidence of significant distress or stability concerns. The minor issues observed,

such as damaged gratings, faded signage, non-functional tunnel lights, open hydrant cabinets, and superficial surface cracks, are localized in nature and do not pose any immediate risk to operational safety or serviceability. These can be effectively addressed through the ongoing routine and preventive maintenance activities undertaken by the Concessionaire.

The overall inspection findings confirm that the structural systems, drainage components, and ancillary installations are performing as intended and remain compliant with the design and safety requirements stipulated under the Concession Agreement. With continued adherence to scheduled maintenance, the project assets are expected to retain their structural integrity, operational reliability, and long-term service performance.

4.5 Assessment of Road Furniture & Project Facilities

The inspection of road furniture and project facilities under the **Chenani–Nashri Project (NH-44, Km 89+000 to Km 130+000)** covered key operational elements such as **signages, pavement markings, drainage gratings, SOS boxes, fire hydrant cabinets, lighting systems, and ventilation installations**. The inspection was undertaken to assess their current functionality, physical condition, and compliance with operational safety standards as defined in the **Concession Agreement** and **IRC:67 / IRC:99** guidelines.

Overall, the **road furniture and tunnel facilities were found to be in satisfactory condition**, with the majority of installations functional. Minor deficiencies were observed in **lighting, reflective elements, and signage visibility**, which can be resolved through routine O&M activities carried out by the **O&M Contractor**

Exhibit 21 Details of Road Furniture's Items

S. No.	Facility / Item	Location / Chainage (Km)
1	**Hazard Markers & Chevron Signs**	Approach sections & portal areas
2	**Sign Boards (Informative / Regulatory / Cautionary)**	Portals, toll plazas & tunnel entry zones
3	**Metal Beam Crash Barriers**	Hillside and valley-side approaches
4	**Road Studs / Cat Eyes**	Inside tunnel and viaduct
5	**Drainage Gratings**	Near tunnel portals
6	**SOS Boxes**	Inside main tunnel
7	**Fire Hydrant Cabinets**	Inside main tunnel
8	**Lighting System**	Tunnels and toll plazas
9	**Ventilation Jet Fans**	Inside main tunnel
10	**Bridge / Structure Name Boards**	Approach structures
11	**Medical Aid Post**	Toll plaza complexes
12	**Rumble Strips / Pavement Markings**	Tunnel approaches

4.5.1 Project Facilities

Project facilities include **ventilation buildings, lay-bys, drainage systems, and tunnel support structures**. These were found in operational state with periodic maintenance activities.

Exhibit 22 Details of Project Facilities

Facility	Chainage (Km)	Condition / Observation
Ventilation Building – South Portal		
Ventilation Building – North Portal		
Total lay bays 14 (South and North Portal)		
Drainage System	Entire corridor	

KF View:

Based on the site inspection, Knight Frank is of the opinion that the road furniture and project facilities under the Chenani–Nashri Tunnel Project are in satisfactory operational condition, with most installations found functional and compliant with relevant IRC:67 and IRC:99 standards. The signages, crash barriers, drainage gratings, lighting systems, and ventilation facilities are generally well-maintained and performing as intended.

Minor deficiencies such as faded pavement markings, reduced signage reflectivity, and isolated lighting outages were noted; however, these are non-critical and can be addressed through routine operation and maintenance activities undertaken by the Concessionaire. The ventilation buildings, lay-bys, and drainage systems were observed to be operational and maintained periodically, supporting the overall safety and serviceability of the project highway.

4.6 Assessment of Tunnels

The **Chenani–Nashri Tunnel Project** (NH-44, Km 89+000 to Km 130+000) passes through the **lower Himalayan range**, characterized by **complex geological and geotechnical conditions** consisting of alternating layers of **sandstone, shale, siltstone, and dolomitic limestone**. The tunnel alignment traverses the **Patnitop hill range** and connects the **Chenani (South Portal)** to the **Nashri (North Portal)**, bypassing the older, snow-prone and landslide-affected section of NH-44.

The project features a **bi-directional main tunnel of 9.0 km length**, accompanied by a **parallel escape tunnel** connected by **29 cross passages** provided at intervals of approximately **300 meters**. The tunnel has been constructed using the **New Austrian Tunnelling Method (NATM)**, adopting appropriate primary and final support systems such as **rock bolts, lattice girders, and shotcrete** depending on the encountered ground class.

The tunnel is equipped with **mechanical, electrical, and electronic (MEE)** systems, including **ventilation, lighting, fire detection and suppression, drainage, and SCADA-based monitoring and control systems** in compliance with **MoRTH** and **IRC:SP:91-2010** standards.

An overview of the tunnel details for the project is provided below.

Exhibit 23: Details of Tunnel

Tunnel No.	Section	Portal Location	Chainage (Km)	Length (m)
Main Tunnel	Chenani – Nashri	South Portal: Km 96+000 North Portal: Km 105+000	Km 96+000 to Km 105+000	9,000
Escape Tunnel	Parallel alignment	South Portal: Km 96+000 North Portal: Km 105+000	Km 96+000 to Km 105+000	9,000

- **Cross Passages:** 29 Nos. at 300 m intervals
- **Fire Hydrant System:** Installed at regular intervals along both tunnels
- **Drainage System:** Longitudinal drains and sump pumps at both portals
- **Ventilation System:** Jet fans and axial fans operational; cleaning required

4.6.1 Tunnel Drainage

During our site visit, A **composite drainage network** exists throughout the **main and escape tunnels**, designed to efficiently manage stormwater runoff and groundwater infiltration. The system comprises **longitudinal side drains**, **perforated pipes** behind the tunnel lining, **cross-drain connections**, and **sump pits with automatic pumping arrangements** provided at both portals to ensure uninterrupted operation.

As per site records and inspection findings, the drainage system includes:

- **Drainage pipes in Main Tunnel:** 9.0 km (4 nos.)
- **Drainage pipes in Escape Tunnel:** 9.0 km (2 nos.)
- **Drainage pipes in Cross Passages:** 29 nos. (at both ends)

4.6.2 Power Supply & Substations in Tunnels:

Each tunnel portal of the **Chenani–Nashri Tunnel Project** is served by a dedicated **33/11 kV electrical substation**, ensuring reliable power supply to the **tunnel systems, control rooms, and ancillary buildings**.

The substations are located at the **Chenani (South Portal)** and **Nashri (North Portal)** and receive primary power supply from the **Jammu & Kashmir Power Development Department (JKPDD)**.

A **redundant power feed arrangement** exists between both portals through a **looped HT cable system**, allowing either end to support the entire tunnel load in case of power failure at one portal.

Uninterrupted Power Supply (UPS) units provide conditioned power to the **Tunnel Management System (TMS)**, emergency lighting, and critical communication equipment, while **diesel generators (DG sets)** supply backup power during utility outages.

Key power assets and configuration observed / provided:

- **Substation – South Portal (Chenani):** Receives 11 kV supply from JKPDD; feeds tunnel lighting, ventilation, TMS, and fire systems.
- **Substation – North Portal (Nashri):** Receives 11 kV independent feeder from JKPDD; supplies ventilation fans, control room, and firefighting systems.
- **DG Sets:** Installed at both portals for backup operation
- **Ventilation Power Panels:** Installed within ventilation buildings for distribution to jet fans and tunnel lighting.

- **Variable Frequency Drives (VFDs):** Provided for jet-fan control.
- **Transformers:** MV/LV transformers located within each portal's ventilation building.
- **Power Distribution Cables:** 11 kV cables routed through conduits below the tunnel carriageway, looped between substations for redundancy.
- **UPS Systems:** Installed for emergency lighting, SCADA, and TMS.

All major **tunnel electrical and mechanical subsystems** are integrated into the **SCADA-based Central Control Room** located at each portal.

The system supports **real-time monitoring, control, and fault diagnostics** of ventilation, lighting, firefighting, and drainage systems.

The control room is equipped with **operator consoles, display monitors, alarm annunciation systems**, and **server–client interfaces** that log operational data, alarms, and maintenance records. Routine operations are continuously monitored by designated control personnel under the O&M contractor's supervision.

System Redundancy and Reliability

- Dual-circuit 11 kV HT cable network ensures redundant power supply between portals.
- Each tunnel substation can be fed from either end, maintaining supply continuity during fault conditions.
- DG systems are designed to support critical and emergency loads only, while utility redundancy and cable looping remain the primary reliability mechanisms.

4.6.3 Tunnel Ventilation System and Safety Features

The **Chenani–Nashri Tunnel** is equipped with a **longitudinal ventilation system**, designed to maintain safe **air quality, temperature, and visibility** throughout both the **main and escape tunnels**.

The system operates through **axial jet fans** installed at regular intervals along the tunnel crown, which induce air movement and control the concentration of vehicular exhaust gases. The system is integrated with **air quality sensors** and is controlled through a **centralized SCADA system** located at the **South Portal control building**.

The ventilation system also incorporates **emergency cross passages** between the main and escape tunnels at approximately **300 m intervals**, allowing for safe evacuation and smoke segregation during emergencies.

Fire safety provisions include a **hydrant network**, **emergency extinguishers**, **CCTV surveillance**, and a **Public Address (PA) system** linked with the **Tunnel Management and SCADA systems**. The drainage system comprises **longitudinal drains** with **collection sumps and submersible pumps** at both portals to manage seepage and stormwater effectively.

Exhibit 24: Summary of Tunnel Systems

Component	Description / Quantity (Verified)	Status / Observation (From TDD & MPR)
Number of Tunnels	2 (Main + Escape parallel configuration)	Operational
Total Tunnel Length	9.0 km each tube / Main Tunnel 9.0 km	Functional
Ventilation Type	Fully transverse system with supply & exhaust fans at both portals	Operational; one supply fan at each portal has bearing heating issue (stand-by available)
Jet Fans	8 Nos. (4 at South portal + 4 at North portal)	Functional; require periodic cleaning and balancing
Cross Passages	29 Nos. at ≈ 300 m intervals	Operational and accessible
Substations	2 portal substations (Chenani & Nashri) + 4 cross-passage substations (CP-08, CP-16, CP-24, CP-29)	Active; supplying tunnel and MEP loads
Fire Hydrant Network	Installed along main and escape tunnels; hydrant posts and hose reels provided	Functional; 2–3 hose reels missing; fire-pump room valves rusted and gauges defective
Drainage Sumps & Pumps	Sumps with submersible pumps at both portals	Operational; routine desilting in progress
SCADA / Control Room	Central SCADA control rooms at South and North portals	Fully operational; monitors ventilation, lighting, fire and drainage systems

KF View:

The Chenani–Nashri Tunnel Project (NH-44, Km 89+000 to Km 130+000) demonstrates a robust design and operational framework, developed to withstand complex Himalayan geological conditions while ensuring safe and reliable connectivity between Chenani and Nashri. The project's civil, mechanical, electrical, and electronic systems have been implemented in accordance with MoRTH and IRC:SP:91-2010 standards, with key functional subsystems ventilation, lighting, drainage, power, and fire safety—integrated through a centralized SCADA-based Intelligent Tunnel Management and Control System.

The visual inspection and system verification confirm that all major tunnel installations, including the ventilation system, drainage network, fire hydrant and suppression systems, power distribution substations, and cross passages, are operational and performing as intended. The twin 33/11 kV substations at the South (Chenani) and North (Nashri) portals, along with looped HT cable redundancy and DG backup arrangements, ensure a high level of power reliability and operational continuity. The longitudinal ventilation system supported by jet fans and axial fans effectively maintains air quality and smoke control under both normal and emergency conditions.

Minor deficiencies such as localized bearing heating in one supply fan, rusted fire valve components, missing hose reels, and the need for periodic cleaning of jet fans and sump desilting were observed. These are maintenance-related in nature and do not affect the overall operational integrity or safety of the tunnel system. Routine maintenance activities were found ongoing under the Concessionaire's O&M scope.

Overall, the tunnel infrastructure, electrical-mechanical systems, and integrated control framework are assessed to be in satisfactory condition, with adequate redundancy, automation, and real-time monitoring capabilities to ensure uninterrupted operation, user safety, and long-term service performance of the Chenani–Nashri Tunnel.

4.7 Assessment of Tunnel MEP System

4.7.1 Main Tunnel

The main tunnel, extending **9 km between the Chenani and Nashri portals**, is a **unidirectional carriageway** connected to a parallel escape tunnel through **29 cross-passages** provided at regular intervals. The tunnel is equipped with **SOS boxes, a public address system, tunnel lighting, fire hydrant posts, jet fans, and supply and exhaust air terminals** installed along its entire length to ensure safe and efficient operation under both normal and emergency conditions.

a) Main Tunnel Lighting System

The **main tunnel lighting system**, comprising **metal halide luminaires**, is installed along the tunnel crown at intervals of approximately **15 meters**, in accordance with the approved design specifications. In addition, **18 W LED lights** are provided along both **side walkways** at 15-meter spacing to facilitate safe access to all **electro-mechanical (E&M) equipment** installed adjacent to the walkway.

Power supply cables are routed through **dedicated trenches beneath the pavement**, ensuring protection and ease of maintenance. **Daylight sensors** are installed near both portals to automatically regulate lighting levels during daytime operation.

Exhibit 25: Main Tunnel Illuminance levels (in candela per square meter, Cd/m^2)

Sr. No.	Location	North Side (Cd/m^2)	South Side (Cd/m^2)
1	Outside Portal	1232	1029
2	Threshold Zone	59.2	138
3	Transition Zone	11	5
4	Exit Zone	2.79	2.22

b) Main Tunnel Security and Surveillance System

The **surveillance system** within the main tunnel comprises **128 fixed CCTV cameras** installed throughout its length, supplemented by **two PTZ (Pan–Tilt–Zoom) cameras** positioned at the entrances of the **South and North portals** for enhanced monitoring coverage. Additionally, **one rotary camera** is installed at the **South Portal near the toll plaza** to oversee traffic movement and portal operations.

SOS boxes are installed at **75-meter intervals** along the main tunnel in a **zig-zag configuration**, alternately placed on the right and left sidewalls, ensuring quick access for motorists during emergencies. The **Public Address (PA) system** is integrated with the surveillance network, enabling

announcements during emergencies or in case of any abnormal conditions detected through the monitoring system. **Speakers** are installed at **75-meter spacing** along both tunnel walls to provide clear and uniform audio coverage.

c) Main Tunnel Communication System

The **VHF communication system** within the main tunnel is facilitated through **leaky feeder cables** installed along its entire length, enabling reliable radio communication between the control room and tunnel personnel. In addition, a total of **five GSM communication antennas**, supported by **signal boosters**, are installed inside the tunnel to ensure uninterrupted mobile network coverage. The **first GSM antenna** is located approximately **1 km from the South Portal entrance**, with subsequent antennas positioned at regular intervals to maintain consistent signal strength throughout the tunnel

d) Main Tunnel Fire Alarm System

In the **main tunnel**, a **Linear Heat Sensing (LHS) cable** runs continuously along the entire length on the **left-hand side (LHS)**. The system is divided into **four detection zones**, each designed to precisely identify and indicate the location of any fire incident within the tunnel. The **LHS fire detection system** is integrated with the **SCADA-based control system**, and its functionality was verified during a **mock drill**, confirming that the system is **operating efficiently and providing accurate zone-based fire alerts**.

e) Main Tunnel Cable Tray, Surface Drainage & Trench

Overhead lighting cable trays are installed along the **main tunnel**, with **tap-offs to the substations** provided at intermediate locations as per design. The **power distribution cables** are routed through **dedicated trenches** beneath the tunnel pavement for protection and ease of maintenance. **Surface drainage channels** are also provided along the tunnel to manage water ingress effectively.

The **main fire hydrant pipeline** runs continuously from the **South Portal to the North Portal** within the same trench. An **isolation valve** is installed between **Cross Passage 14 (CP14)** and **Cross Passage 15 (CP15)**, effectively dividing the hydrant network into two operational sections:

- **Section 1:** CP1 to CP14 – supplied from the **South Portal fire pump room**.
- **Section 2:** CP15 to CP29 – supplied from the **North Portal fire pump room**.

In the event of a **pump failure at either portal**, the **entire hydrant network** can be operated from the **functional fire pump room** by opening the isolation valve, thereby ensuring **system redundancy and uninterrupted firefighting capability** throughout the tunnel.

f) Main Tunnel Ventilation System

The **main tunnel** operates on a **fully transverse ventilation system** designed to maintain optimal air quality, visibility, and temperature conditions throughout its **9 km length**. For effective ventilation control, the tunnel is divided into **two sections of approximately 4.5 km each**.

Fresh air is supplied through **motorized supply dampers** located along the **left sidewall** (when approaching from the South Portal), while **stale air is exhausted** through **motorized exhaust dampers** positioned along the **right sidewall**. A total of **14 sensors**—comprising **Carbon Monoxide (CO)** and **Opacity sensors**—are installed along both tunnel walls (7 on each side) to continuously monitor air quality and visibility parameters.

All **motorized dampers and sensors** are integrated with the **Central Control Centre** through the SCADA-based **Tunnel Management System**. Based on real-time sensor feedback, operators can automatically or manually regulate **damper operations** and adjust the **supply and exhaust fan speeds** to maintain safe ventilation conditions.

Additionally, **four jet fans** are installed at each portal entrance to provide supplementary air circulation and assist in **smoke extraction during fire or emergency scenarios** within the first **600 meters** of the main tunnel. Details are at **Para 4.9**

4.7.2 Escape Tunnel

The **escape tunnel**, running parallel to the **main tunnel** for a length of approximately **9 km**, extends between the **South and North portals**. It is connected to the main tunnel through **29 cross passages** provided at regular intervals to facilitate safe evacuation and maintenance access. The escape tunnel is equipped with **lighting fixtures, ventilation fans**, and **11 kV power cable trays**, ensuring adequate illumination, air circulation, and reliable power distribution along its entire length. **LED lighting** is installed along the **centerline of the escape tunnel ceiling** at intervals of approximately **15 meters**, ensuring uniform illumination throughout the tunnel length.

a) Security And Surveillance System

There is no provision for CCTV inside escape tunnel as per current design.

b) Communication System

VHF communication within the escape tunnel is currently facilitated through a network of antennas installed along its length, ensuring reliable two-way communication during operations and emergencies.

c) Cable Tray

11 kV HT cables run continuously from the South Portal to the North Portal through the escape tunnel, forming a looped power supply network. The three intermediate substations located at Cross Passages 8, 16, and 24 are interconnected within this loop, ensuring redundancy and reliable power distribution along the tunnel alignment.

d) Escape Tunnel Ventilation System

Escape tunnel is equipped with two axial fans at both ends.

4.7.3 Cross Passage

The **main tunnel** and the **escape tunnel** are interconnected through **29 cross passages** provided at regular intervals of approximately **300 meters** along the tunnel length. The cross passages are arranged in a sequence comprising **pedestrian passages every 300 meters** and **vehicular passages every 1,200 meters** from each portal, resulting in **22 pedestrian** and **7 vehicular cross passages** in total.

Each cross passage houses a **Low Voltage (LV) room** equipped with a standardized configuration of electrical and communication systems, including:

- **1 No. Lighting Distribution Panel**
- **1 No. Normal Lighting Control Panel**
- **1 No. Emergency Switchboard**
- **1 No. 20 kVA UPS**
- **1 No. 2 kVA UPS with battery bank**
- **Communication network switches**
- **Fire Alarm Panel**
- **Programmable Logic Controller (PLC)**

The **20 kVA UPS** supports approximately **50% of the tunnel lighting load**, ensuring illumination during power interruptions, while the **2 kVA UPS** provides **uninterrupted backup power to the SCADA system** for continuous monitoring and control.

a) Substation-02 (CP-08)

An electrical substation is located at Cross Passage 8 (CP-08), equipped with two dry-type transformers of 250 kVA capacity each, configured in working and standby mode to ensure uninterrupted power supply. This substation caters to the electrical load requirements of equipment installed between Cross Passages 04 and 11.

b) Substation-04 (CP-24)

Similarly, another **electrical substation** is installed at **Cross Passage 16 (CP-16)**, also equipped with **two 250 kVA dry-type transformers** arranged in **working and standby configuration**. This substation supplies power to the systems and equipment serving the section between **Cross Passages 12 and 19**.

4.8 Assessment of Tunnel FIREFIGHTING SYSTEM

The firefighting system installed in the Chenani–Nashri Tunnel comprises a **hydrant-based fire suppression network** supported by **portal-side fire pump houses**, distributed **hydrant points within the tunnel**, firefighting equipment in **SOS niches / Cross Passages**, and portable extinguishers positioned at strategic locations.

Firefighting pump rooms are located at **both the South Portal and North Portal**, each pump room catering to the fire water demand for its respective tunnel section. The system includes a network of **hydrant posts and hose reel cabinets** located inside the main tunnel at designated firefighting niche points. Additionally, **foam fire cylinders (30 L)** are installed at cross passages for initial response.

Each Fire Pump House is equipped with the following:

- **One (1) Main Hydrant Pump** – Electric motor driven
- **One (1) Standby Diesel Engine Hydrant Pump** – Automatically starts in case of power failure or main pump failure
- **One (1) Jockey Pump** – Maintains system pressure during normal standby mode
- **Fire Water Storage Tanks** – Provided at **both portals** with level monitoring instrumentation
- **Hydrant Line with Pressure Transmitter and Flow Switch**
- **Local Control Panels and Safety Interlocks**

Hydrant posts, hose reels, nozzles, and extinguishers are provided along the tunnel and inside the **Cross Passages (CP-1 to CP-29)** for accessible emergency use. Foam-type extinguishers are available at each CP firefighting box.

Equipment	Quantity / Location
Main Hydrant Pumps (Electric)	**2 Nos.** (1 at each portal)
Standby Diesel Engine Pumps	**2 Nos.** (1 at each portal)
Jockey Pumps	**2 Nos.** (1 at each portal)
Hydrant Posts / Hose Reel Points	Installed along tunnel & portal-side firefighting rooms
Foam Fire Cylinders (30 L)	Available at **each Cross Passage (CP-1 to CP-29)**

Equipment	Quantity / Location
Fire Water Storage Tanks	**Provided at both portals**, with level monitoring arrangement

Knight Frank reviewed the maintenance approach adopted by the Concessionaire for the firefighting system. The site O&M team follows the below preventive maintenance schedule:

- **Hydrant System Inspection** – Conducted periodically to check operating pressure, valve functionality, and leak conditions
- **Functional Testing of Hydrant Pumps** – Performed as per O&M routine schedule and during emergency drills
- **Fire Extinguishers** – Inspected at defined intervals and replaced/refilled as required
- **Fire Alarm & Detection System (Heat/Smoke Sensors, Alarm Panels)** – Tested as per SOP and manufacturer guidelines
- **Emergency Lighting and Exit Signage** – Tested periodically to ensure illumination during power loss
- **General Maintenance & Record Keeping** – Followed in accordance with the approved Maintenance Manual and SOPs

KF View:

Based on the site inspection and review of maintenance practices, Knight Frank is of the opinion that the firefighting installations—including hydrant networks, pump houses, storage tanks, and portable extinguishers—are fit for purpose and are being maintained in accordance with acceptable operational standards. However, Knight Frank recommends certain targeted measures to further strengthen system reliability, such as conducting regular diesel engine pump tests under load conditions, maintaining documented monthly pump performance and inspection logs, and performing an annual comprehensive functional test of the entire firefighting network to ensure sustained readiness and mitigate potential operational risks.

4.9 Assessment of TUNNEL VENTILATION SYSTEM

The Chenani–Nashri Tunnel utilizes a **longitudinal ventilation system** designed to maintain safe air quality, visibility, and smoke management conditions under both normal traffic operation and emergency scenarios. The system is operated through a **centralized SCADA and control room** located at the Tunnel Control Centre.

Ventilation is achieved primarily through:

- **Axial Supply and Extract Fans** installed in **Ventilation Buildings** at both portals, and
- **Jet Fans (Banana Jet Fans)** installed inside the main tunnel to create longitudinal airflow and support smoke control during emergencies.

Air quality is continuously monitored using **CO sensors, Opacity sensors, Weather Stations, Air Velocity Sensors, Vibration and Bearing Temperature Sensors** integrated into the SCADA system. **MSD (Motorized Smoke Dampers)** and **PRD (Pressure Relief Dampers)** located at Cross Passages further support compartmentalization and pressure balance between the **Main Tunnel and Escape Tunnel**.

Exhibit 26: Ventilation System Configuration

Component	South Portal	North Portal
Axial Fans (Supply & Extract)	**AXF-1 to AXF-4 (4 Nos.)**	**AXF-5 to AXF-8 (4 Nos.)**
Jet Fans (Banana Jet Fans)	Jet Fans 1–4 (4 Nos.)	Jet Fans 5–8 (4 Nos.)
Pressurization Fans for Escape Tunnel	1 No.	1 No.
VFD Panels & Fan Starters	Installed	Installed

☛ **KF View:** In operation, **half of the tunnel length is served from each portal**, ensuring directional airflow control based on prevailing traffic load, pollutant concentration, and incident response mode.

Exhibit 27: List of Major Ventilation System Equipment

S. No.	Equipment Description	Qty.	Remarks
1	**Axial Ventilation Fans** (Supply / Extract)	**8 Nos.** (4 South + 4 North)	Each reversible; controlled via VFD
2	**Jet Fans (Banana Type)**	**8 Nos.** (4 South + 4 North)	Forward/Reverse operation through starters
3	**Pressurization Fans for Escape Tunnel**	**2 Nos.** (1 South + 1 North)	Fitted with pressure switches
4	**Motorized Smoke Dampers (MSD)**	**SL-1 to SL-90**	Located along tunnel wall
5	**Pressure Relief Dampers (PRD)**	**CP-1 to CP-29**	Installed at each Cross Passage
6	**Air Quality Sensors (CO + Opacity + Weather + Air Velocity)**	Installed throughout tunnel	Integrated with SCADA
7	**VFD Panels and Electrical Control Panels**	At both portal Ventilation Buildings	Enables speed & direction control

Exhibit 28: Maintenance and Inspection Practices

Activity	Objective / Scope	Frequency
Fan & Motor Inspection	Check noise, vibration, motor temp, bearing & lubrication condition	As per O&M schedule / Monthly
Jet Fan Functional Test	Forward & reverse direction verification	Monthly / During drills
MSD / PRD Operation Check	Confirm opening/closing response through SCADA & manual override	Quarterly
Sensor Calibration (CO, Opacity, Velocity)	Ensure accurate air quality monitoring & alarm response	As per OEM / Semi-annually
Emergency Smoke Mode Simulation	Validate airflow reversal and extract mode under incident condition	As per SOP / Mock drills
Cleaning of Louvers, Air Deflectors, Shafts	Maintain airflow efficiency & reduce pressure loss	As required / Seasonal

KF View:

Based on the site inspection and review of operational records, Knight Frank is of the opinion that the tunnel ventilation system comprising two portal-based fan stations with eight axial fans, eight jet fans, and remotely operated dampers integrated through the SCADA control system is fit for purpose and performs as intended under both normal and emergency operating conditions. The system effectively maintains air quality, visibility, and pressure balance across the tunnel sections and cross passages.

To further enhance operational reliability and minimize risk, Knight Frank recommends implementing the following targeted maintenance measures:

- ***Conduct scheduled testing of VFD panels and motor insulation to ensure electrical integrity.***
- ***Continue vibration and bearing temperature monitoring of axial and jet fan motors.***
- ***Perform regular inspections of jet-fan anchorage, silencers, and mounting assemblies for structural stability.***
- ***Maintain periodic calibration of CO, opacity, and air velocity sensors to ensure accurate air quality feedback.***
- ***Carry out cross-pressure validation tests between the main and escape tunnels to confirm compartmentalization efficiency.***
- ***Conduct an annual full-load ventilation test and realistic fire-drill simulation with integrated SCADA control verification to assess system responsiveness under emergency conditions.***

Overall, the ventilation installation is operational, well-maintained, and performing in accordance with its design intent, providing a robust framework for tunnel safety, air quality management, and emergency smoke control.

4.10 Assessment of Toll Plaza

Two toll plazas are located at the **South Portal (Mada / Chenani side)** and **North Portal (Nashri side)** for user fee collection associated with the tunnel operation. Both toll plazas were **handed over under contract provisions** and are currently in operational condition. The plazas consist of toll booths, control rooms, administrative office/containers, server & network racks, electrical connections, CCTV surveillance, intercom systems, and user fee collection equipment.

From the field review and handover records, both toll plazas are **structurally stable** and **functional**, with routine civil and housekeeping maintenance observed.

Exhibit 29 Details of Toll Plaza

S. No.	Description	South Portal Toll Plaza (Chenani / Mada)	North Portal Toll Plaza (Nashri)
1	Location	South Portal (Mada / Chenani)	North Portal (Nashri)
2	Toll Plaza Name	**Mada Toll Plaza**	**Nashri Toll Plaza**
3	No. of Toll Lanes	**4 Lanes** (ETC + Manual mix)	**4 Lanes** (ETC + Manual mix)
4	Toll Booths	**4 Booths**	**4 Booths**
5	Static Weigh Bridge (SWB)	**1 No.** (Certified & Operational)	**1 No.** (Certified & Operational)
6	Administrative / Office Space	**1 Office Room + 1 Control Room**	**1 Office Room + 1 Control Room**
7	Server & Communication Room	**1 No.** (Rack, NVR, Switches, UPS Installed)	**1 No.** (Rack, NVR, Switches, UPS Installed)
8	Lane Tolling Equipment (TLC + AVC + RFID + Boom Barriers)	**4 Sets (1 per lane)**	**4 Sets (1 per lane)**
9	CCTV Cameras	**6–8 Cameras** (Booth + Lane + Plaza Coverage)	**6–8 Cameras** (Booth + Lane + Plaza Coverage)
10	High Mast / Plaza Lighting	**2 High Mast Poles + Approach Street Lighting**	**2 High Mast Poles + Approach Street Lighting**
11	Toilets / Staff Facilities	**1 Toilet Block**	**1 Toilet Block**

S. No.	Description	South Portal Toll Plaza (Chenani / Mada)	North Portal Toll Plaza (Nashri)
12	Firefighting Equipment	**Portable Fire Extinguishers (3–4 Nos. per plaza)**	**Portable Fire Extinguishers (3–4 Nos. per plaza)**
13	Medical & Breakdown Support	**Provided under Tunnel O&M Fleet (Ambulance + Crane + Patrol Vehicle)**	**Provided under Tunnel O&M Fleet (shared, not plaza-dedicated)**

KF View:

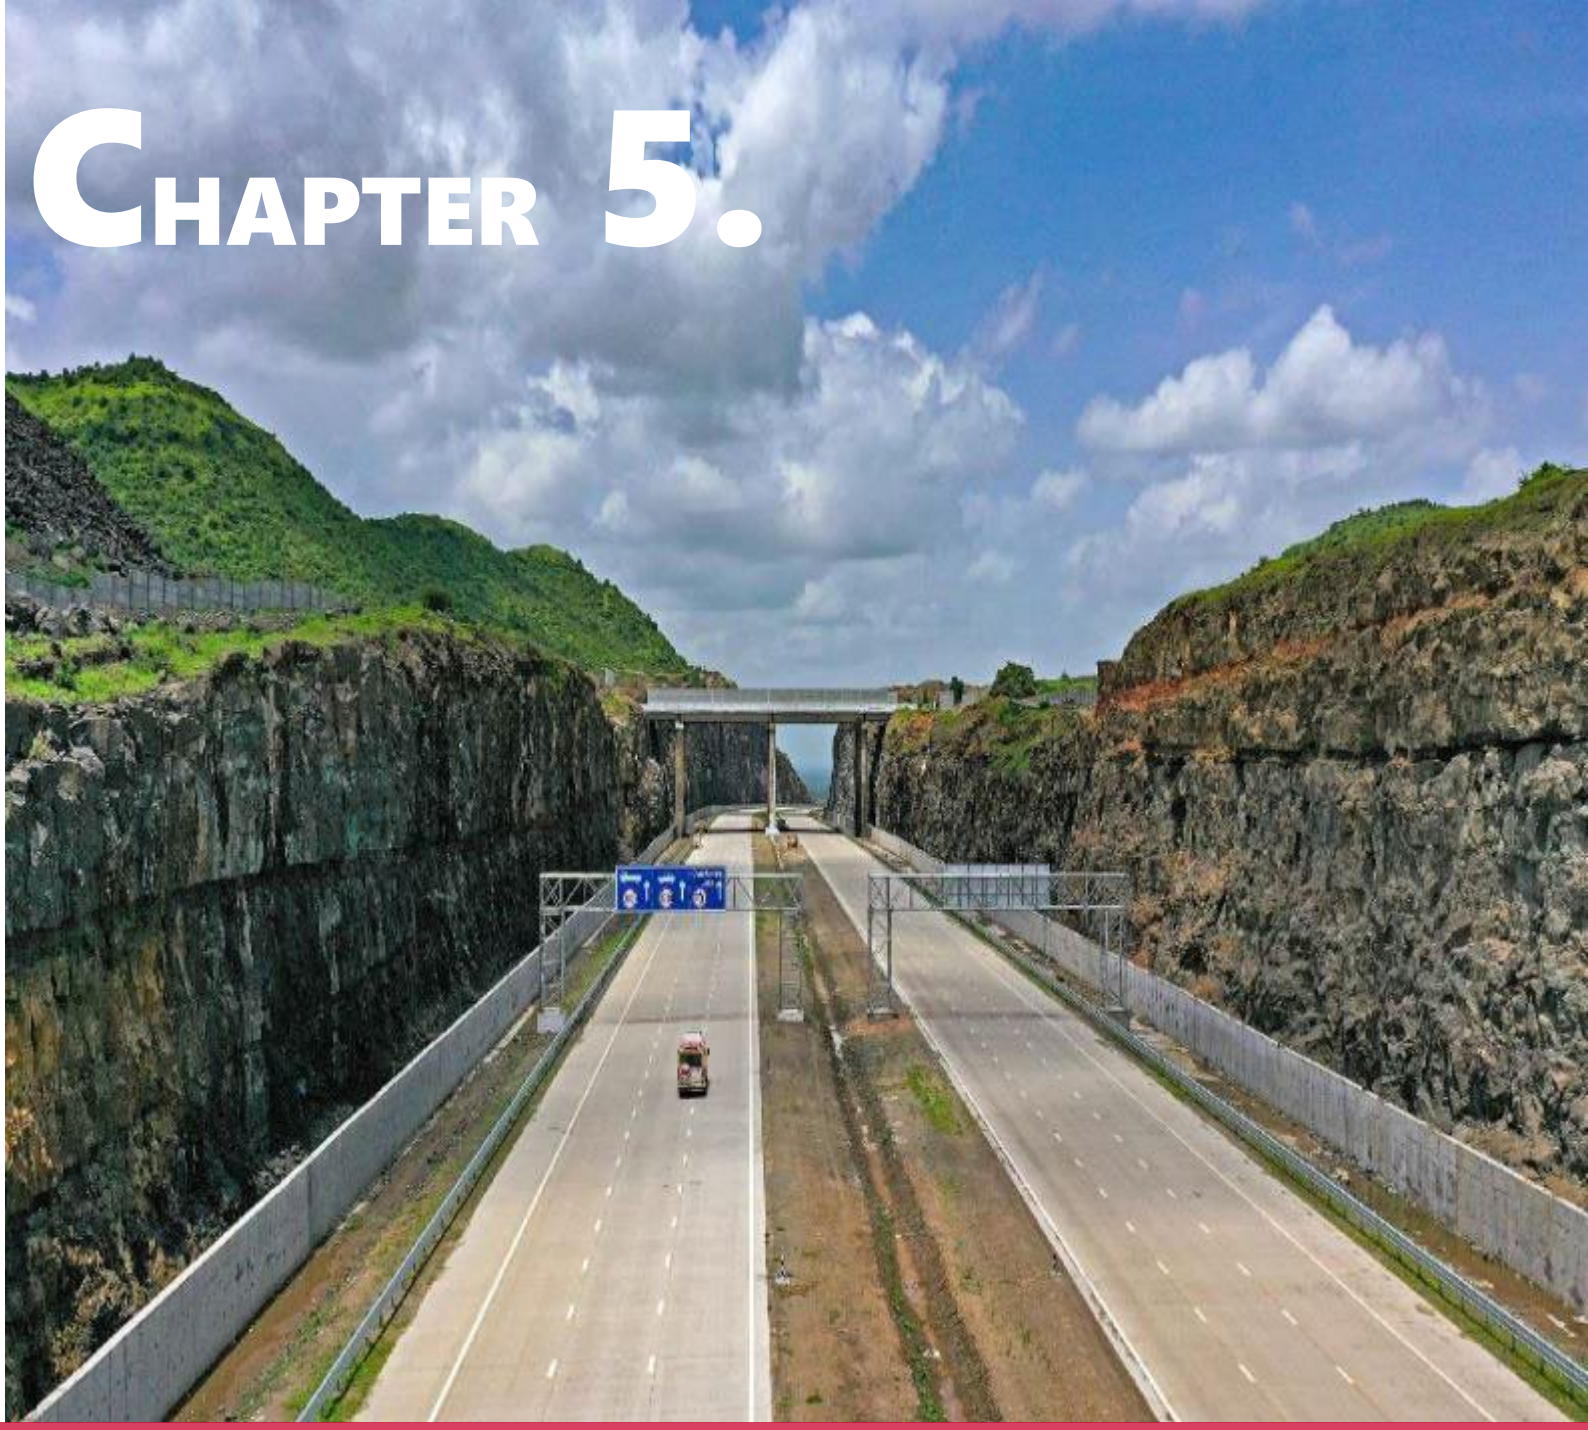
Knight Frank reviewed the two toll plazas located at the South Portal (Mada/Chenani) and North Portal (Nashri) during the site visit, in accordance with the provisions of the Concession Agreement. Both plazas are configured with 4 lanes, operating under a Hybrid Electronic Toll Collection (ETC + Manual) system.

Each plaza is equipped with toll booths, lane tolling equipment (TLC, AVC, RFID readers and boom barriers), CCTV surveillance, a control/server room, administrative office space, static weighbridge, lighting infrastructure, and toilet facilities. Fire extinguishers and basic safety arrangements are also provided.

Ambulance, breakdown crane, patrolling vehicle and emergency response support are part of the centralized Tunnel O&M Fleet and are not plaza-specific assets; however, they remain available to both plazas as required.

Based on the inspection, Knight Frank is of the view that the Mada and Nashri Toll Plazas are operational and in serviceable condition, with essential tolling, monitoring and support functions functioning satisfactorily.

Chapter 5.



Pavement Investigation & Assessment

Chapter 5. PAVEMENT INVESTIGATION & ASSESSMENT

5.1 General

The life of the Pavement has a co-relation with both its structural as well as Functional Condition. Inspecting and tracking of pavement condition, scheduling maintenance, and treating distress can have serious ramifications impinging on safety of road users and enhancing functional efficiency in end use of the Facility. It is therefore essential to carry out the assessment of the condition of the pavement on a given date taking into cognizance a variety of data to arrive at well-considered decisions and drawing up of the maintenance strategy and taking appropriate course of action to apply funds and resources in optimizing the desired levels of operations on the road assets. Condition data can include factors like roughness, specific distresses, rut depth, friction, and structural health.

Once measurements of road condition are available, they are interpreted in such a way that allows the decision-making process to occur in a logical fashion. This might involve converting multiple physical parameters into a single index, allowing different sections of a road network to be directly compared against one another etc.

Pavement performance under prevailing as well as projected traffic and environmental conditions is crucial as it has a direct bearing on the economic returns from the project developments. While an under-designed pavement will fail prematurely, imposing undesirable Cost Over runs on the Project. It is therefore necessary to ensure the pavement layer thicknesses; configurations and materials are adequately designed and require minimal maintenance under the anticipated traffic loading throughout the life cycle of the project.

To achieve this objective and thereby to predict the performance of any pavement structure, it is necessary to analyze material characteristics, traffic condition, present physical condition of the pavement layers, local environment, and its impacts. In addition, it is also necessary to presume what level of performance and what pavement conditions will be considered satisfactory to estimate the future operation and maintenance cost of the road.

Due to the variety of variables involved, it is essential to determine the exact level of pavement performance through the project life. But, based on the assessment of present condition of pavement, analysis of available survey data, traffic projections and estimations regarding the pavement life, future maintenance requirements can be estimated.

This part of the report deals with the Review of Pavement Design and provides insights on Design Life of the Pavement, Crust thickness, History of Overlays over the Existing Pavement Etc. for sound pavement performance through the project life.

The pavement design for the Chenani Nashri Section NH- has been carried out in accordance with the guidelines laid down in **IRC:37-2012**, **IRC:81-1997**, and **MoRTH Specifications (5th Revision)**. The design accounts for the heavy commercial vehicle traffic, high axle loading, subgrade strength, and environmental conditions prevalent in the mountainous terrain of Jammu & Kashmir.

5.2 Objectives

The project road passes through a high-altitude hilly region of the Pir Panjal range, characterized by steep gradients, low temperatures, and substantial rainfall and snowfall. The alignment includes open road sections, tunnels, viaducts, and approaches requiring both **flexible and rigid pavement designs**.

The objective of the pavement design is to ensure durability, structural strength, and riding comfort for the design life of the pavement, while minimizing maintenance requirements under varying climatic and loading conditions. The design life adopted for flexible pavement is **15 years**, and for rigid pavement (tunnel and toll plaza sections) is **30 years**.

5.3 Review of Pavement Design

A. Design CBR

As per the Pavement design report, the subgrade CBR of **10%** was adopted for all flexible and rigid pavement designs. This value was derived from field investigations and laboratory tests and is consistent with IRC 37:2012 requirements. The CBR has been used to compute the resilient modulus of subgrade and thereby establish the required layer thicknesses.

B. Design MSA

Traffic projections were computed using classified volume count and axle load data, incorporating vehicle damage factors (VDF), lane distribution and directional distribution factors as per **IRC:37-2001**.

The design traffic was determined from the base year 2013, and projected cumulative traffic loading for the tunnel section and approaches was calculated as per the traffic report. The Equivalent Million Standard Axles (MSA) are as follows:

- Base Year Traffic 2013 – 17 MSA
- 10 years – 22 MSA

- 15 years – 39 MSA
- 20 years – 59 MSA

Accordingly, the **flexible pavement** has been designed for a **15-year design life (39 MSA)** and the **rigid pavement** has been designed for a **30-year design life (>100 MSA cumulative loading)**.

C. Pavement Crust of Main Carriageway

The adopted pavement composition for the main carriageway, derived from IRC:37-2012 guidelines and IITPAVE analysis.

The crust thicknesses are as follows:

Exhibit 30 Adopted Composition – Main Carriageway:

Layer	Thickness	Remarks
Bituminous Concrete (BC)	40 mm	Surface Course, VG_30 grade bitumen
Dense Bituminous Macadam (DBM)	100 mm	Binder Course
Wet Mix Macadam (WMM)	250 mm	Base Layer
Granular Sub-Base (GSB)	200 mm	Sub-Base & Drainage Layer
Total Thickness	**590 mm**	**Adopted composition for the main carriageway (15 years, 39 MSA).**

Paved shoulders are to be constructed with the same crust as the main carriageway, as per **IRC SP:84-2014 Clause 5.10**

D. Rigid Pavement – Tunnel and Toll Plaza

Rigid pavements are proposed for the tunnel and toll plaza areas, designed as per **IRC:58-2015** for a **30-year design life**. These sections are expected to carry cumulative loading equivalent to >100 MSA.

The crust thicknesses are as follows:

Exhibit 31 Adopted Composition - Tunnel and Toll Plaza

Layer	Thickness	Remarks
Pavement Quality Concrete (PQC)	300 mm	Designed with dowel/tie bars, flexural strength governed by IRC:58
Dry Lean Concrete (DLC)	150 mm	Minimum cement content, strength as per IRC SP:49; extended 0.5 m beyond PQC

Granular Sub-Base (GSB – drainage)	150 mm	Designed with permeability ≥ 20 m/day
Total Thickness	**600 mm**	**Adequate for 30 years (>100 MSA cumulative traffic)**

E. Rigid Pavement – Escape Tunnel and Cross Passage Tunnel

Escape and cross-passage tunnel pavements are designed for emergency/occasional use. Design assumptions and adopted composition reported by the tunnel pavement design are:

- Design life = **30 years**; Equivalent traffic assumed ≈ **0.5 MSA (30 years)**; maximum single axle load = **8 t**; Load Safety Factor = **1.0**; effective k over 100 mm DLC = **38.9 kg/cm²/cm**.

The crust thicknesses are as follows:

Exhibit 32 Adopted Composition - Escape & Cross Passage:

Layer	Thickness	Remarks
Pavement Quality Concrete (PQC)	150 mm	Slab for escape/cross passage (no dowels/tie bars)
Dry Lean Concrete (DLC) / PCC M15	100 mm	Base layer
PCC (M10)	350 mm	Sub-base / bed layer
Total Thickness	**600 mm**	**Adopted composition for escape & cross-passage pavements.**

F. Overlay Design

At the stage, no overlay has been prescribed in the submitted design documents since the pavements are new. The need for future overlays will be determined from performance monitoring (deflection, roughness and distress surveys) during operation. The consultant indicates that overlays may be required in service depending on field performance; timing will be based on actual condition during maintenance.

5.4 BUMP INTEGRATOR (BI) TEST

5.4.1 Pavement Evaluation by Bump Integrator (BI) test

a) Introduction:

A Bump Integrator (BI) test was carried out to evaluate the riding quality and surface evenness of the pavement for the Chenani–Nashri Tunnel Project (CNTL), forming part of NH–44 (Old NH–1A).

The test was conducted to assess the **Unevenness Index (mm/km)** of the pavement surface, which directly reflects the ride comfort, construction quality, and long-term serviceability of the pavement structure.

The survey was conducted as part of the Operation & Maintenance (O&M) monitoring program to determine the condition of the **Pavement Quality Concrete (PQC)** sections and ensure compliance with **IRC: SP:16-2004** requirements.

The BI test results provide a benchmark for assessing pavement smoothness and serve as a reference for future periodic maintenance planning under the O&M regime.

b) Project Road

The evaluated corridor lies within Udhampur and Ramban districts in the Union Territory of Jammu & Kashmir, beginning near Chenani (Km 89+000) and terminating near Nashri (Km 130+000) along NH–44 (Old NH–1A).

The section comprises a **twin-tube tunnel system**—a **Main Tunnel (Km 89+900 to Km 98+900)** and a **parallel Escape Tunnel of equal length**, connected through **29 cross passages** at approximately **300 m intervals**.

The corridor traverses a **mountainous and high-rainfall zone of the Pir Panjal range**, experiencing steep gradients, sharp curves on approaches, and **harsh winter conditions with heavy precipitation and snow**.This stretch carries continuous heavy vehicular traffic, forming part of the strategic **four-laning of the Udhampur–Banihal section of NH–44**, designed for **all-weather operation and high-volume traffic movement** between Jammu and Srinagar.

c) Pavement Condition

The **Chenani–Nashri Tunnel Project (CNTL)** comprises a **rigid pavement system** throughout the main and escape tunnels as well as both approaches. The pavement consists of **Pavement Quality Concrete (PQC)** over **Dry Lean Concrete (DLC)** and **Granular Sub-base (GSB)** layers.

The overall surface condition is **excellent**, with the BI survey indicating an **average unevenness index of about 1,850 mm/km**, well within the "Good" range as per **IRC:SP:16-2004**. Visual inspection showed **no major distresses** such as cracking, scaling, or joint spalling, and **load transfer efficiency** across joints remains satisfactory.

The rigid pavement exhibits **uniform texture, high riding comfort, and adequate structural performance**, requiring only routine cleaning and joint maintenance under the ongoing O&M regime.

d) Bump Integrator (BI) Test

To assess the **surface evenness and riding quality** of the existing **rigid pavement (PQC)** along the **Chenani–Nashri Tunnel Project (CNTL)**, a **Bump Integrator (BI) survey** was carried out in accordance with **IRC: SP:16–2004** guidelines.

The test was conducted along the **main tunnel carriageway and approach roads** to determine the **Unevenness Index (mm/km)**, which reflects pavement smoothness and ride comfort.

The BI equipment, calibrated by **CRRI, New Delhi**, was towed over the pavement surface at a test speed of **32 ± 1 km/h**, with observations recorded at **100 m intervals** along both the left and right lanes.Raw bump counts were converted to **Calibrated Unevenness Index** values using the approved calibration equation.

The analysis revealed that the **average Unevenness Index was 1,850 mm/km**, classifying the pavement condition as **"Good"** per IRC:SP:16–2004 limits (<2200 mm/km). The results confirm that the **PQC pavement exhibits excellent smoothness, uniformity, and riding comfort**, with no corrective measures required other than routine cleaning and joint maintenance during the O&M phase.

5.4.1.1 BI Analysis

The **Bump Integrator (BI) test** was conducted to evaluate the surface evenness and riding quality of the rigid pavement (PQC) along the **Chenani–Nashri Tunnel Project (CNTL)** in accordance with **IRC:SP:16–2004** guidelines.

This analysis helps in determining the current functional condition of the pavement and identifying sections that may require surface improvement or corrective maintenance during the O&M period.

The **maximum permissible values of roughness** for various pavement surface types, as specified in **IRC:SP:16–2004**, are presented in the table below.

For **cement concrete pavements (PQC)**, an Unevenness Index of **less than 2200 mm/km** is classified as *Good*, **2200–3000 mm/km** as *Average*, and **greater than 3000 mm/km** as *Poor*.

Accordingly, the Chenani–Nashri Tunnel PQC pavement, with an **average unevenness index of 1,850 mm/km**, falls within the *Good* category, confirming its excellent surface evenness and riding comfort.

Exhibit 33 Maximum Permissible Values of Roughness (mm/km) for Road Surface

S. No.	Type of Surface	Good	Average	Poor
1	Surface Dressing	< 3500	3500 – 4500	> 4500
2	Open Graded Premix Carpet	< 3000	3000 – 4000	> 4000
3	Mix Seal Surfacing	< 3000	3000 – 4000	> 4000
4	Semi-Dense Bituminous Concrete	< 2500	2500 – 3500	> 3500
5	Bituminous Concrete	< 2000	2000 – 3000	> 3000
6	Cement Concrete (PQC)	< 2200	2200 – 3000	> 3000

The measured **Unevenness Index (mm/km)** across all sections confirmed that the pavement surface falls well within the *"Good"* category (<2200 mm/km), indicating excellent riding comfort and consistent construction quality throughout the tunnel length.

A summary of the chainage-wise results is presented below.

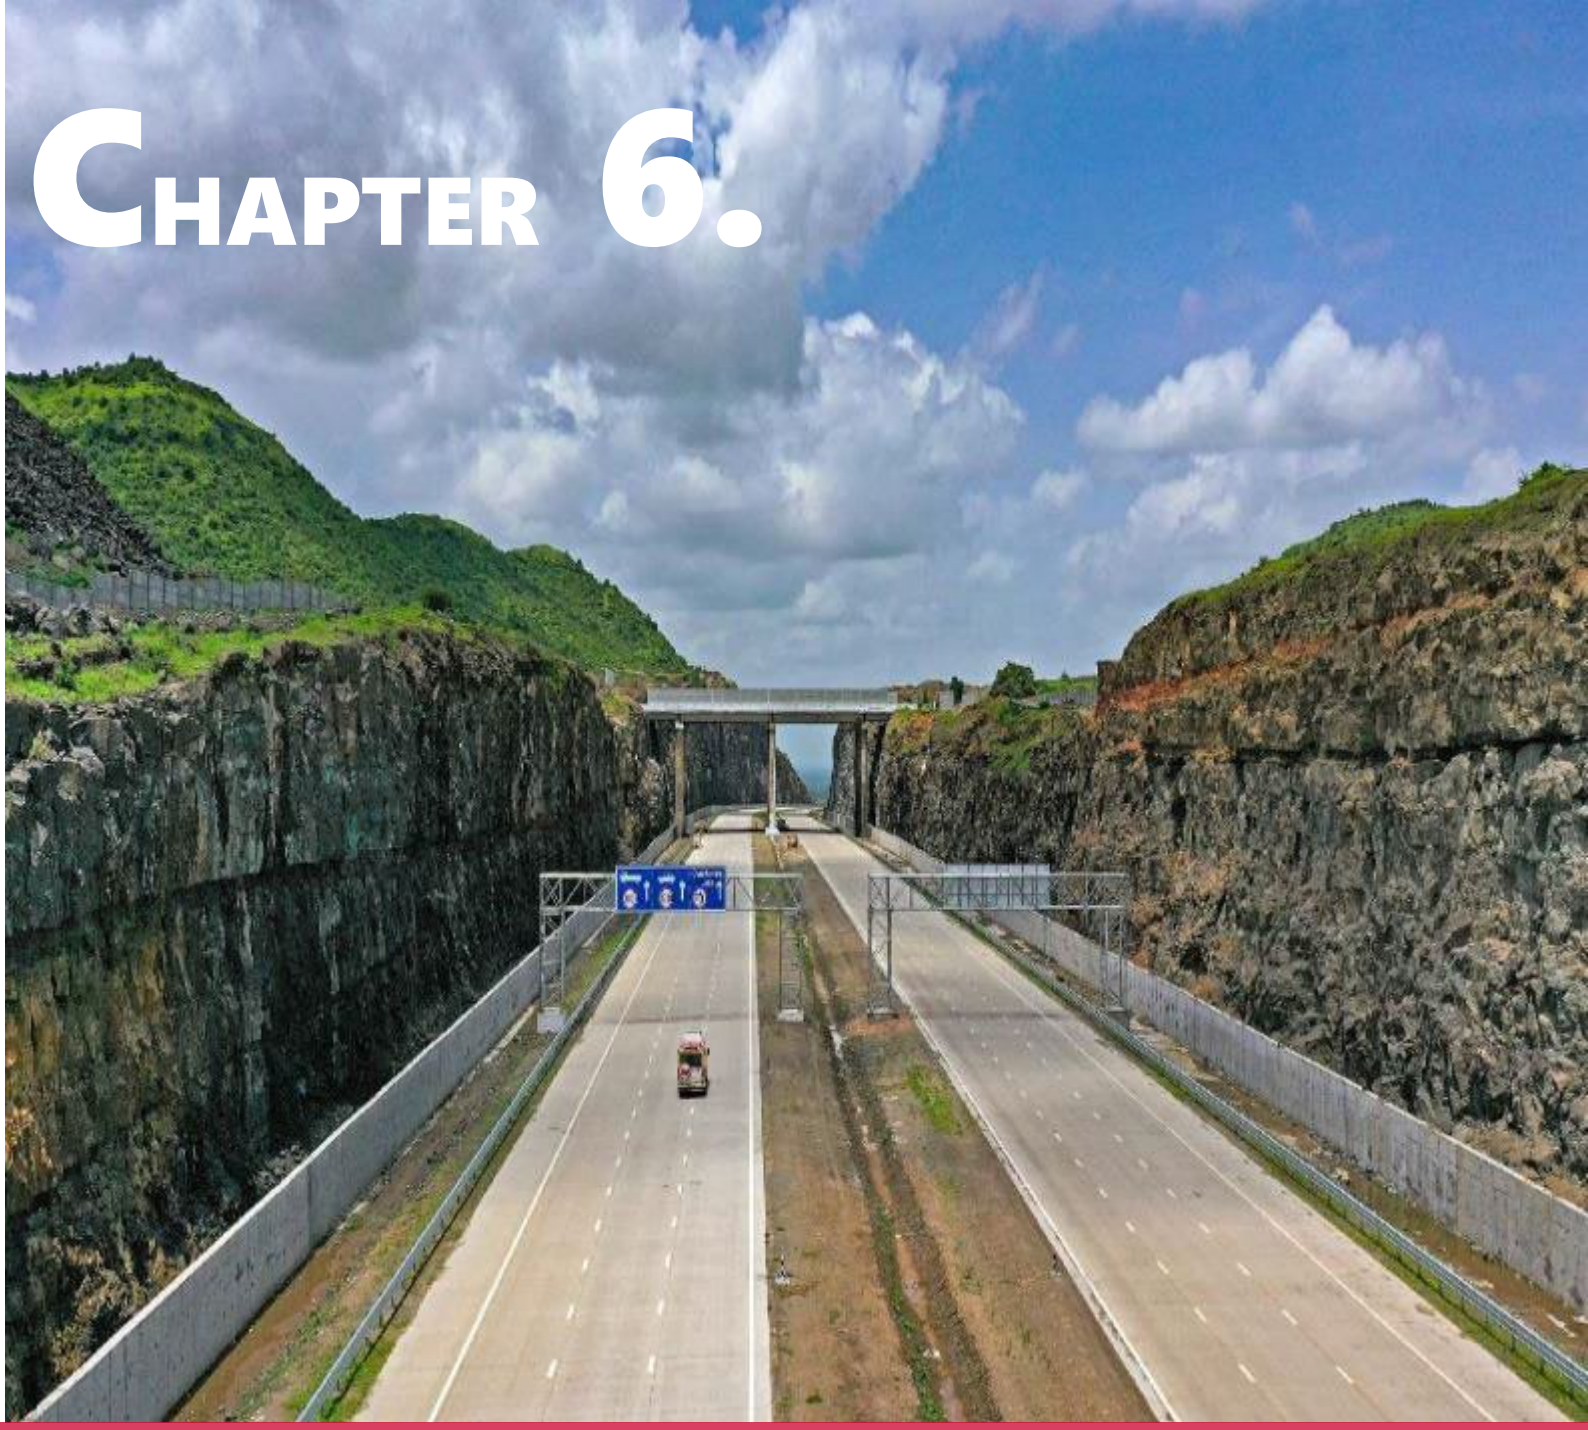
Exhibit 34 Summary of BI Test Results

Chainage (km)	Average Observed Bumps (cm)	Corrected Unevenness Index (mm/km)	Condition	Remarks
0.000 – 1.390	13 – 15	1,985 – 2,251	Good	Uniform PQC finish
1.390 – 3.790	9 – 13	1,452 – 1,985	Good	Smooth and consistent
3.790 – 6.190	9 – 11	1,452 – 1,718	Good	Even surface texture
6.190 – 8.790	9 – 12	1,452 – 1,851	Good	Excellent riding comfort
8.790 – 10.490	9 – 11	1,452 – 1,718	Good	Within permissible limit
10.490 – 10.990	12 – 16	2,118 – 2,451	Good	Slightly higher near toll plaza; acceptable

5.5 Major Maintenance of Pavement

The **periodic maintenance strategy** has been developed considering the **service life of rigid pavements**, **mechanical and electrical systems**, and the **specific climatic and topographical conditions** of the Chenani–Nashri corridor. The project alignment (Km 89+000 to Km 130+000) primarily consists of **rigid pavement** within the tunnel and on the approach sections at both portals. Maintenance interventions are planned through two defined **Maintenance Management (MM) Cycles**, aimed at sustaining pavement performance and structural integrity in accordance with the **serviceability criteria** prescribed under the Concession Agreement and applicable IRC standards. Based on the inspection findings and performance review, the **Concessionaire has formulated a major maintenance strategy**, the details of which are presented in **Chapter 6** of this report.

Chapter 6.



Cost Estimate

Chapter 6. COST ESTIMATES

6.1 General

Based on the assessment carried out in previous chapters, various costs were worked out. The costs are divided into following categories –

I. Routine O&M Cost
II. Major Maintenance Cost
III. Periodic Replacement of TMS/ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and Escalation.

6.2 Rate Assumption

The cost estimates are based on the following assumptions:

Following assumptions are considered for unit rates of various items while estimating the cost –

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard data book. The input rates for MoRTH standard data book were adopted as below
   a) **Manpower and labor** – As per applicable minimum wages published by Ministry of Labour & Employment, Government of India
   b) **Bitumen** – Bitumen rates are considered to be sourced from IOCL Panipat Refinery. The distance (to- from) from the midpoint of Project Highway is considered as 550 kms. VG-30 and VG-40 grades of bitumen are considered in our cost estimate.

☛ ***Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.***

Therefore, Bitumen prices are considered as per the client's forecast. Current published of bitumen are considered for unit rates calculation for FY24 and FY25. Average 10 years of price of bitumen are considered for unit rates calculation for FY26 and onwards, since bitumen prices have been range bound over the last five-six years.

c) **Sand and Aggregate** are sourced from the nearest quarry located on project highway.

d) **Cement** is procured from the nearest local market.

e) **Machinery Hire charges** of Plant and Machinery for various items of works have been considered from J&K SOR 2022 and some rates are considered from MORT&H Standard Data Book 2001-2002. Escalation has been considered on MORT&H Plant and Machinery rates to arrive at the present rates of 2024-25.

f) **Material Rates** are obtained from SOR of J&K, PWD 2021-22.

g) Some of the rates are based on Consultant's experience on similar ongoing projects in adjacent locations.

h) **Overheads and profits** have been considered based on MORT&H Standard Data Book. Applicable taxes have been considered in the Rate Analysis.

Goods and Service Tax (GST) is considered as 18% as per the latest Government Guidelines

Exhibit 35 Adopted Unit Rates for Key items

S.nos	Items Description	Unit	Rates (₹)
1	Slab replacement cost (PQC)-MCW	Cum	10,648
2	Dismantling of slab	Cum	2950
3	Joint Sealant Replacement/Repairs	Rm	234
4	PQC Taxing	Sqm	189
5	Micro surfacing	Sqm	224
6	Road Marking	Sqm	687
7	Road Studs	Nos.	215
8	Route & sealing	Rm	590
9	Cross Stitching	Rm	1770
10	Kerb painting	Sqm	118

- *The above unit rates are including GST.
- The unit rate of each item includes 10 % overhead for road works, 15 % overhead for structure works and 10 % contractor's profit.
- Details of components considered in rate analysis & quantification are presented in below **Exhibit 36**

Exhibit 36 Major Components Detail for Key items

Sr. No.	Particular	Source	Reference
1	Rate Analysis	MORTH	Standard Data Books published by MORTH
2	**Material**		
A	Aggregate Rates	Nearby Project Corridor	As per Local Market Rates
B	ATMS, TMS cost		As per Vendor offer.
C	Cement	As provided in Local market	As per Local Market Rates
3	Equipment hire cost	Nearby project location	Standard Data Books published by MORTH
4	Labour	As per minimum wages	As per minimum wages

6.3 Immediate Repair Cost

As informed during site visit, The following Bill of Quantities (BOQ) outlines the proposed scope of civil and structural works for the project, covering activities such as excavation, anchoring, concreting, gabion protection, drainage arrangements, micro piling, and slope stabilization measures. The rates and quantities have been derived based on current market benchmarks, standard specifications, and site requirements, with the total estimated cost amounting to approximately ₹4.39 Crores.

Exhibit 37 Immediate Repair Cost

Sl No	Description	Unit	Quantity	Rate	Amount (₹)
1	Earth work in bulk excavation by manual means over areas (exceeding 30 cm in depth, 1.5 m in width as well as 10 m2 on plan) including disposal of excavated earth lead upto 50 meters and lift upto 1.5 m, as directed by Engineer-in-Charge.	m^3	1,860.00	1,060.67	19,72,853.47
2	SDA/SDR Bolts: Supply, drilling, installation and grouting of Φ32mm Self-drilling anchor (SDA) bolts of the specified length, 200kN minimum breaking load as per design drawings, technical specifications or as directed by engineer, with contractors men, material, consumables, plants, equipments, machineries, including all lead & lifts loading, unloading etc required for the complete job.	m	4,896.00	2,210.51	1,08,22,669.19
3	Rebars to warranty the stability of Gabion and shotcrete, with 32mm dia.of Fe 500 including drilling, installation and grouting as per approved drawings & specifications or as directed by Engineer.	m	1,460.00	2,210.51	32,27,348.25
4	Shotcreting with designed mix cement concrete of cube strength M30 including all material, labour, equipment etc required.	m^3	35.00	13,169.23	4,60,923.14
5	Providing and laying in position machine batched and machine mixed design mix M-25 grade cement concrete for reinforced cement concrete work for **drainage scheme**, using cement content as per approved design mix, including pumping of concrete to site of laying, including admixtures in recommended proportions as per IS: 9103 to accelerate, retard setting of concrete, improve workability without impairing strength and durability as per direction of Engineer-incharge.	m^3	244.00	10,170.78	24,81,669.71

Sl No	Description	Unit	Quantity	Rate	Amount (₹)
6	Reinforcement quantity in drainage scheme @ 300 by 300 and 12mm dia. of Fe 500 as reinforcement .	T	14.80	69,652.60	10,30,858.51
7	Supply and placement of welded wire mesh 100x100x4 as reinforcement of sprayed concrete for slope works as shown on design drawings, specifications or as directed by Engineer. Steel grade minimum Fe500.	T	1.80	90,098.01	1,62,176.42
8	Supply & placing of Mechanically Woven Double Twisted Hexagonal Shaped Wire Mesh Gabion Boxes of required size	m^3	1,777.00	3,853.79	68,48,187.51
9	Supplying & laying of drainage composite for use behind walls, between two different fills, alongside drains of road, below concrete lining of canals etc.	m^2	1,080.00	884.25	9,54,992.00
10	Providing and laying cement concrete in retaining walls, return walls, walls (any thickness) including attached pilasters, columns, piers, abutments, pillars, posts, struts, buttresses, string or lacing courses, parapets, coping, bed blocks, anchors blocks, plain window sills, fillets etc upto floor V level, including curing but excluding the cost of centring, shuttering and finishing with 1:3:6 (1 cement : 3 coarse sand : 6 graded stone aggregate 20 mm nominal size)	m^3	1,038.50	9,252.26	96,08,471.94
11	Providing and installation of perforated pipes. The pipes are protected by geotextile membrane as shown on design drawings, in technical specifications or as directed by the Engineer.	m	2,274.00	155.61	3,53,846.37
12	Micro piles 200mm dia	MT	3.69	1,21,539.92	4,48,704.34
13	Supplying and Laying of 3D Reinforced Geo composite made of polypropylene polymer made three-dimensional matrix of minimum mass per unit area 500 grams/sqm	m^2	4,845.00	714.53	34,61,897.85
14	Supply and spraying of High Performance-Flexible Growth Medium (HP-FGM) which is 100% biodegradable, composed of 100% recycled, thermally refined.	m^2	4,845.00	416.39	20,17,409.55
15	Filling empty cement bags with sand/ earth; including cost of sewing and strings; including cost of bags and excluding earth / sand	nos.	50.00	16.67	833.49
16	Sand for filling the cement bags	m^3	1.88	810.34	1,519.38
Total Immediate Repair Cost (₹-Crore)					**4.39**

6.4 Routine Operation & Maintenance (O& M) Cost

Operations and Routine Maintenance work required as per the CA. During the concession period, the Concessionaire is fully responsible for Operation & Maintenance of Project Highway. Schedule K elaborates the requirements of various service factor desirable level and acceptable level during O & M period along with time if any parameter level of service beyond acceptable limit.

The CA Stipulates that the Concessionaire shall Operate and Maintain the Project Highway in accordance with Article 17 – Operation & Maintenance & Schedule –K Maintenance Requirements of Concession Agreement. The obligation of Concessionaire as per Article 17 is as follows:

- permitting safe, smooth, and uninterrupted flow of traffic on the Project Highway during normal operating conditions; collecting and appropriating the Fee.
- minimizing disruption to traffic in the event of accidents or other incidents affecting the safety and use of the Project Highway by providing a rapid and effective response and maintaining liaison with the emergency services of the State.
- carrying out periodic preventive maintenance of the Project Highway.
- undertaking routine maintenance including prompt repairs too, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices.
- undertaking major maintenance such as replacement of panels in rigid pavement and associated activities
- preventing, with the assistance of concerned law enforcement agencies, any unauthorized use of the Project Highway
- preventing, with the assistance of the concerned law enforcement agencies, any encroachments on the Project Highway
- protection of the environment and provision of equipment and materials therefore
- operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- maintaining a public relations unit to interface with and attend to suggestions from the Users, government agencies, media, and other agencies; and
- Complying with Safety Requirements in accordance with Article 18.

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have been made from the expenses of similar type of projects to arrive at the operating cost. The estimates are projected based on best industry practices and are compared with the operation cost in the vicinity of the project area. Same has been divided into following major head

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS/HTMS/System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards

6.5 O & M Strategy

Important Operations and maintenance work have been outsourced by the SPV. Details of important works are listed below **Exhibit 38**

Exhibit 38 O & M Strategy

Sn	Activity	Strategy
1	Manpower	In-house
2	Civil work cost	In-house
3	Manpower for Electrical & Mechanical	Outsource
4	Agency for Toll Plaza (TMS)	Outsource
5	AMC for Electrical system	Outsource
6	ITMS AMC	Outsource
7	Rectification work for Electromechanical	Outsource

6.6 Manpower cost

Manpower costs have been estimated based on a combination of market benchmarks and historical contractual data, with appropriate price escalation factored in to reflect anticipated future cost increases. The manpower requirements are categorized into four primary segments:

1. **Project Office and Administration**: Covers expenses related to staff involved in overall project management, administrative duties, and associated benefits and overheads.
2. **Route Operations**: Includes salaries and benefits for frontline operational personnel such as toll operators, traffic controllers, and other essential staff ensuring uninterrupted tunnel functionality.
3. **Ancillary Services**: Encompasses costs for support roles like security staff, emergency response units, and other service teams vital to maintaining safety and operational readiness.
4. **Highway and Tunnel Maintenance and Repair**: Pertains to compensation for technical and maintenance staff responsible for routine upkeep, repairs, and general infrastructure support within the tunnel.

Total Manpower cost estimated by Knight Frank is ₹87 Crore for the balance concession period of 07 years.

Exhibit 39 Manpower Cost

Manpower Cost			
Year in Nos	**Years**	**Manpower**	**Remarks**
1	FY25	12.43	
2	FY26	12.4	
3	FY27	12.4	
4	FY28	12.4	
5	FY29	12.4	
6	FY30	12.4	
7	FY31	12.4	
Total Cost (₹- Crore)		**87**	

Detailed Manpower Costs covers following items cost

- **Project Office and Administration**: Costs are derived from prevailing market rates and past contractual terms, incorporating annual cost escalations.
- **Route Operations**: Calculated based on staffing requirements, specific roles, and associated employee benefits, ensuring adequate coverage for smooth tunnel operations.
- **Ancillary Services**: Includes estimated expenses for security and emergency response personnel, along with costs for necessary equipment and training.
- **Highway and Tunnel Maintenance and Repair Works**: Provides a thorough breakdown of costs for maintenance crews, factoring in labor, tools, and essential equipment required for upkeep and repairs.

6.7 Vehicle Maintenance Cost

Total Vehicle maintenance cost considered is ₹5.0 Crore for balance concession period. It is assumed that all required vehicles will be continuously available for the entire duration of the project. & following items considered for preventive maintenance work:

- **Maintenance Costs:** Assumed at 2.5% of the vehicle cost annually, accounting for regular upkeep and minor repair work.
- **Insurance Costs:** Estimated at 3% of the vehicle cost each year, ensuring coverage for accidents and associated liabilities.
- **Fuel Costs:** Projected based on typical fuel consumption patterns and prevailing fuel rates, with provisions for future price variability.
- **Price Escalation:** Incorporated across maintenance, insurance, and fuel components to reflect anticipated inflation and market shifts over the seven-year duration**.**

Details of Vehicle maintenance cost is tabulated in below **Exhibit 40.**

Exhibit 40 Vehicle Maintenance cost

Vehicle Maintenance Cost (₹-Crore)			
Year in Nos	**Years**	**Vehicles**	**Remarks**
1	FY25	0.71	
2	FY26	0.7	
3	FY27	0.7	
4	FY28	0.7	
5	FY29	0.7	
6	FY30	0.7	
7	FY31	0.7	
Total Cost (₹- Crore)		**5.0**	

Above cost is including of GST

Breakdown of Vehicle Maintenance Costs:

- **Routine Maintenance**: Includes yearly expenses for regular servicing, part replacements, and minor repairs.
- **Insurance Premiums**: Calculated annually based on the vehicle's value and the required coverage.
- **Fuel Expenses**: Projected based on average fuel consumption and anticipated price escalation over time.

6.8 Civil work cost

Total Civil work cost considered is ₹22.7 Crore for balance concession period.

The civil cost component encompasses essential maintenance and repair activities for the tunnel and related infrastructure. The key elements include:

- **Painting**: Tunnel walls up to 4-5 meters high will be painted, with 30% of the total area refreshed annually to maintain appearance and structural integrity.
- **Bitumen and Concreting**: Includes roof concreting and waterproofing for the pump house and portal building, using a 50 mm concrete layer.
- **Grouting**: Applied to 20% of the tunnel length for crack repairs, with 20 nipples per location and 0.5 kg of epoxy per nipple. For water seepage, grouting is done on 2% of the tunnel length under similar specifications.
- **Drain Cleaning**: 25% of surface and main drains will be cleaned each year to ensure effective drainage and prevent clogging.
- **Instrumentation**: Installation of 1,000 crack meters is planned, with a dedicated instrumentation engineer stationed on-site to oversee monitoring and maintenance.
- **Miscellaneous Costs**: 10% of total civil expenses are reserved for unforeseen requirements and minor repair works.

Following items considered for Civil work:

- **Painting**: Includes costs for paint materials, labor, and equipment required for scheduled annual painting works.
- **Bitumen and Concreting**: Detailed cost allocation for concrete materials, waterproofing compounds, and associated labor charges.
- **Grouting**: Covers expenses for epoxy/resin materials, labor, and tools used for crack and water seepage grouting activities.
- **Drain Cleaning**: Encompasses labor, machinery, and waste removal costs for routine cleaning of surface and main drainage systems.
- **Instrumentation**: Costs related to procurement and installation of crack meters, along with the salary of an on-site instrumentation engineer.
- **Miscellaneous**: Budget provision for unforeseen repairs and incidental civil maintenance requirements.

The below **Exhibit 41** presents a detailed breakdown of costs related to manpower, vehicle maintenance, and civil works. It outlines specific estimates for each component across the seven-year period from FY 2025 to FY 2031, providing a comprehensive overview of all expenses associated with the operation and maintenance of the tunnel.

Exhibit 41 Civil Work Cost (₹-Crore)

S.No.	Description	FY26	FY27	FY28	FY29	FY30	FY31	FY32	Total Cost
1	***Painting***	1,83,94,425				2,39,12,752.50			**4,23,07,178**

Average Civil work Cost estimated is ₹3.2 Crore per year including GST.

6.9 Electrical and Mechanical (E & M) Cost

Total E & M Cost estimated is ₹28.7 crore for balance concession period including GST.

The following considerations have been made during calculation of E & M costs:

- **Component Replacement Costs:** Several parts of the Electrical & Mechanical (E&M) systems—particularly energy storage units—have defined operational lifespans and will require periodic replacement. These costs are essential to include in the Life Cycle Cost (LCC) analysis to accurately reflect future financial requirements.
- **Annual Maintenance for MEP Equipment:** Includes detailed costs for regular maintenance activities such as routine servicing, minor repairs, and replacement of worn-out components.
- **Annual Consumable Costs:** Covers frequently used items like lubricants, filters, lighting fixtures, and other expendables that are consumed during daily operations. These are non-repairable parts that must be replaced regularly.
- **Additional Electromechanical Works:** Accounts for costs related to enhancements necessary for ensuring effective functioning of the tunnel ventilation during fire incidents, protective measures for E&M systems, and fire safety provisions for critical areas like tunnel control rooms.
- **Annual Electricity Costs:** Reflects average yearly electricity expenses factored into the overall cost estimation.

Exhibit 42 Details of Total E & M Cost (₹-Crore)

Electrical & Mechanical Cost			
Year in Nos	**Years**	**Electrical & mechanical (₹-Crore)**	**Remarks**
1	FY26	4.1	
2	FY27	4.1	
3	FY28	4.1	
4	FY29	4.1	
5	FY30	4.1	
6	FY31	4.1	
7	FY32	4.1	
Total E & M Cost (₹- Crore)		**28.7**	

Exhibit 43 Breakup of Yearly E & M Cost (₹-Crore)

S.nos	Items	Monthly Cost (₹-crore)
1	O&M Reports	0.21
2	O&M of Tunnel Ventilation System	0.82
3	O&M of MEP & SCADA	1.64
4	Miscellaneous	0.41
5	Energy Cost	1.03
Total Annual Cost (Annually)		4.10

- **Tunnel Ventilation System:**

The tunnel ventilation system includes key components such as **Axial Flow Fans, Jet Fans, Dampers, and Attenuators**. Axial Flow Fans are primarily used for moving large volumes of air efficiently along the tunnel's length. Jet Fans are installed within the tunnel to provide longitudinal ventilation by pushing air in the direction of traffic flow. Dampers help regulate and control airflow by opening or closing specific ventilation pathways. Attenuators are used to reduce noise generated by the ventilation equipment, ensuring quieter and more efficient tunnel operations.

- **O & M of MEE & SCADA**

The tunnel's electrical and mechanical infrastructure comprises a range of essential components, including **Cable Trays**, **HV (High Voltage) Cables**, and **LV (Low Voltage) Cables** for power distribution. **Electrical Panels** and **Transformers** play a crucial role in regulating and managing electrical supply. Backup power is ensured through a **DG Set** and **UPS (Uninterruptible Power Supply)** systems.

For lighting and visibility, a robust **Lighting** setup is installed throughout the tunnel. **Fire Fighting Pipes**, **Pumps**, and **Valves** form the core of the fire suppression system, ensuring safety during emergencies. The HVAC system includes **HVAC Dampers**, **VRF (Variable Refrigerant Flow) units**, and **Extraction Fans** to manage air quality and temperature control. Additionally, **SCADA-PLC** systems provide automation and centralized monitoring of all tunnel operations, enhancing safety and efficiency.

The average Electrical & Mechanical (E&M) Cost as per calculation is ₹5.6 Crore per year, which seems reasonable as per industrial practice.

6.10 Toll Plaza TMS Cost

The total cost estimated towards Toll Plaza TMS is ₹1.1 Crore including GST.

The cost estimation for the **Agency for Toll Plaza TMS** spans from FY25 to FY31.

☛ ***Work Order/ Purchase order details not shared by Concessionaire however Knight frank considered for the Toll Plaza TMS is based on the Previous Tunnel Project experience.***

6.11 Office Expenses

Cost towards operation of office, insurance premium, professional fees for carrying out traffic, asset condition survey etc., IE fees, AMC for equipment installed at office, communication charge, conveyance cost etc. are considered under Office Expenses. **The cost considered regarding office expenses & operation are ₹7.02 crore per year which is bifurcated as follows.**

- ***₹2.28 crore per year for Independent Engineer (IE)/Authority Engineer (AE) and professional fees covering legal, arbitration, and audit certification during the O&M period***
- ***Actual cost of insurance policy: ₹3.72 crore per year (inclusive of 18% GST)***
- ***Survey and investigation charges: ₹0.32 crore per year (inclusive of 18% GST)***

6.12 Major Maintenance Cost

As mentioned in earlier chapter, Currently, the Project Highway is maintained by existing Annuity Concessionaire.

Based on RI test, SPV team made 02 MM cycles for the overlay of projects. Following items were considered during each MM cycle based on the ground requirements.

A. Rigid Pavement

- Dismantling for existing PQC
- Relaying of dismantled panels
- Grouting with cement mortar
- Replacement and relaying of joints
- Diamond grinding with texturing
- Route & Sealing
- Cross stitching
- Road Marking
- Road Studs
- Kerb Painting

6.13 Major Maintenance items

Based on detailed highway inventory carried out during site investigation and data provided by the concessionaire following items considered during major maintenance work

- Slab Replacement
- Slab Dismantling
- Joint Sealant Replacement/Repairs
- PQC Taxing
- Micro surfacing
- Route & Sealing
- Cross stitching
- Road Marking
- Road Studs
- Kerb Painting

6.14 Major Maintenance Cycle & Strategy

Major maintenance works to be considered in 02 cycles up to the year 2031. A total Cost of ₹23.43 crore (Without Escalation) considered for major maintenance work Upto end of Concession period. Major maintenance Strategy is shown in **Exhibit 44.**

Exhibit 44 Major Maintenance Cycles & Cost

Major Maintenance Strategy & Cost Details for CNTL Project				
Cycle	**Financial Year**	**Strategy**	**KF Cost (₹-Crore)**	**Remarks**

Total MMR Cost (₹-Crore) with GST			**23.43**	

Above cost is Without Escalation.

6.15 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period as below.

Exhibit 45 Summary of Cost (₹-Crore)-including GST

S.No.	Year of expense	FY26	FY27	FY28	FY29	FY30	FY31	FY32	Total Cost
1	**Immediate Repair Cost**	4.39							4.39
2	**Routine O&M Cost**								
2.1	Manpower	12.43	12.43	12.43	12.43	12.43	12.43	12.43	87.00

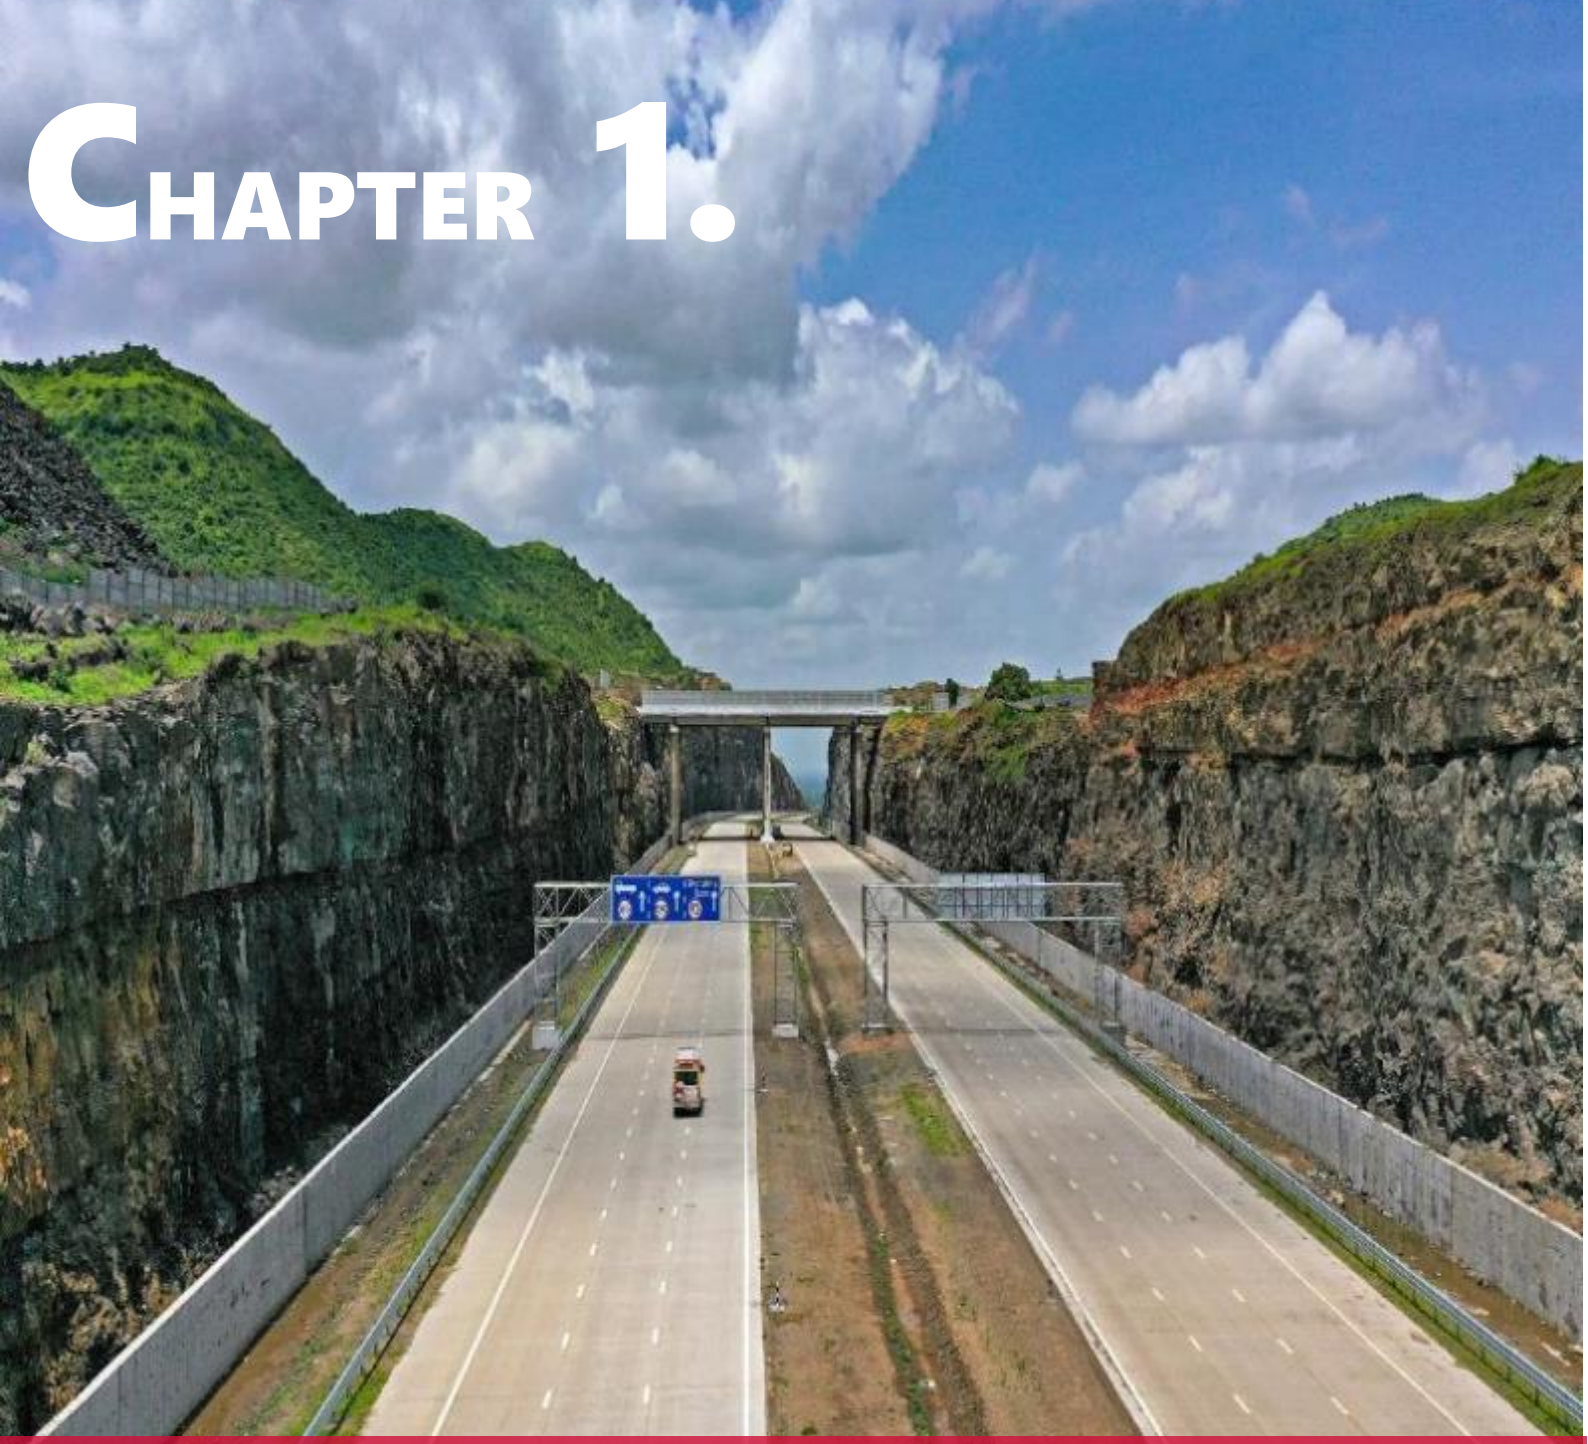
Chapter 1.



Introduction and Scope of Services

Chapter 1. INTRODUCTION AND SCOPE OF SERVICES

1.1 BACKGROUND

Cube Highways Fund Advisors Pvt Ltd (hereinafter referred as "the Client") is the Investment Manager of the Cube Highways Trust ("Trust" or "InvIT"). The Trust is registered with Securities and Exchange Board of India ("SEBI") as an infrastructure investment trust under the SEBI InvIT Regulations. Cube Highways Fund Advisors Pvt Ltd has appointed **M/s Knight Frank India (KFI)** (hereinafter referred as "Technical Consultant" or "KFI") to carry out Technical Due Diligence of **Upgradation, Operation and Maintenance of Hyderabad–Bangalore Section of NH-7 from Km 534.720 to Km 556.840** in the State of Karnataka under **NHDP Phase-VII**, on a **Design, Build, Finance, Operate and Transfer (DBFOT) – Toll** basis.

1.2 SCOPE OF SERVICES

The detailed scope of work for conducting the technical due diligence of Project Road is presented as below –

Exhibit 1 Scope of TDD Services

S. No	Terms of Reference
1	A reconnaissance of the Project Road to understand the current condition of the pavement, structures, road furniture, toll plaza and other highway assets.
2	Review and assessment of important technical documents like CA, pavement design report, O&M report, DPR, as built drawings, O&M manual, COD/PCOD certificate, Punch list, previous major maintenance etc.
3	Review of recent pavement investigations and surveys conducted on Project Road like FWD, NSV, Axle Load, material investigations etc.
4	Formulation of future major maintenance Strategy.
5	Estimation of any initial expenses to be incurred due to deficiencies observed in diligence.
6	Estimation of Routine Maintenance and Major Maintenance forecast for remaining concession period

S. No	Terms of Reference
7	Estimation of Annual Operation expenses along with Systems cost (TMS/HTMS) till the end of concession period.
8	Review of balance work cost for Project Road including estimation of quantities and item rates

1.3 Approach

Approach followed for this Due Diligence study is to understand the requirement of the client and terms of reference set forth. Our aim is that the study report should assist the clients in achieving their objectives.

1.4 Methodology

Methodology adopted is broadly outlined as under:

- Objectives of the client were identified from discussions and terms of reference spelt out for the study.
- Available data was collated and analysed by desk study.
- Requirements were identified to augment information/ data as available.
- Detailed List of data required was sent to Concessioner team from time to time
- Personal discussions were carried out with Clients by senior executives from KF to explain data requirements.
- Extensive interaction was made by KF with Clients and data was collected.
- Information to be gathered from Client head office & team were listed
- Relevant documents regarding project highway, including CA Agreement and other documents were collected and the provisions studied in detail.
- All data as collected was duly collated and arranged in the order as required for preparation of the report.

1.5 Study

- Data collected from all sources was duly collated and disseminated to concerned experts in KF.
- Project documents such as CA Agreement, O&M Costing details, O&M Manual etc were studied in detail.
- The data made available was analysed, and comments formulated for inclusion in the report.

1.6 Structure of the Report

This report has been prepared based on the information, reports and documents made available to us by the Company. We have also referred to publicly available reports, literature etc. and have made our best efforts to check the authenticity of the information available, analyse the same as per the best engineering / industry practices.

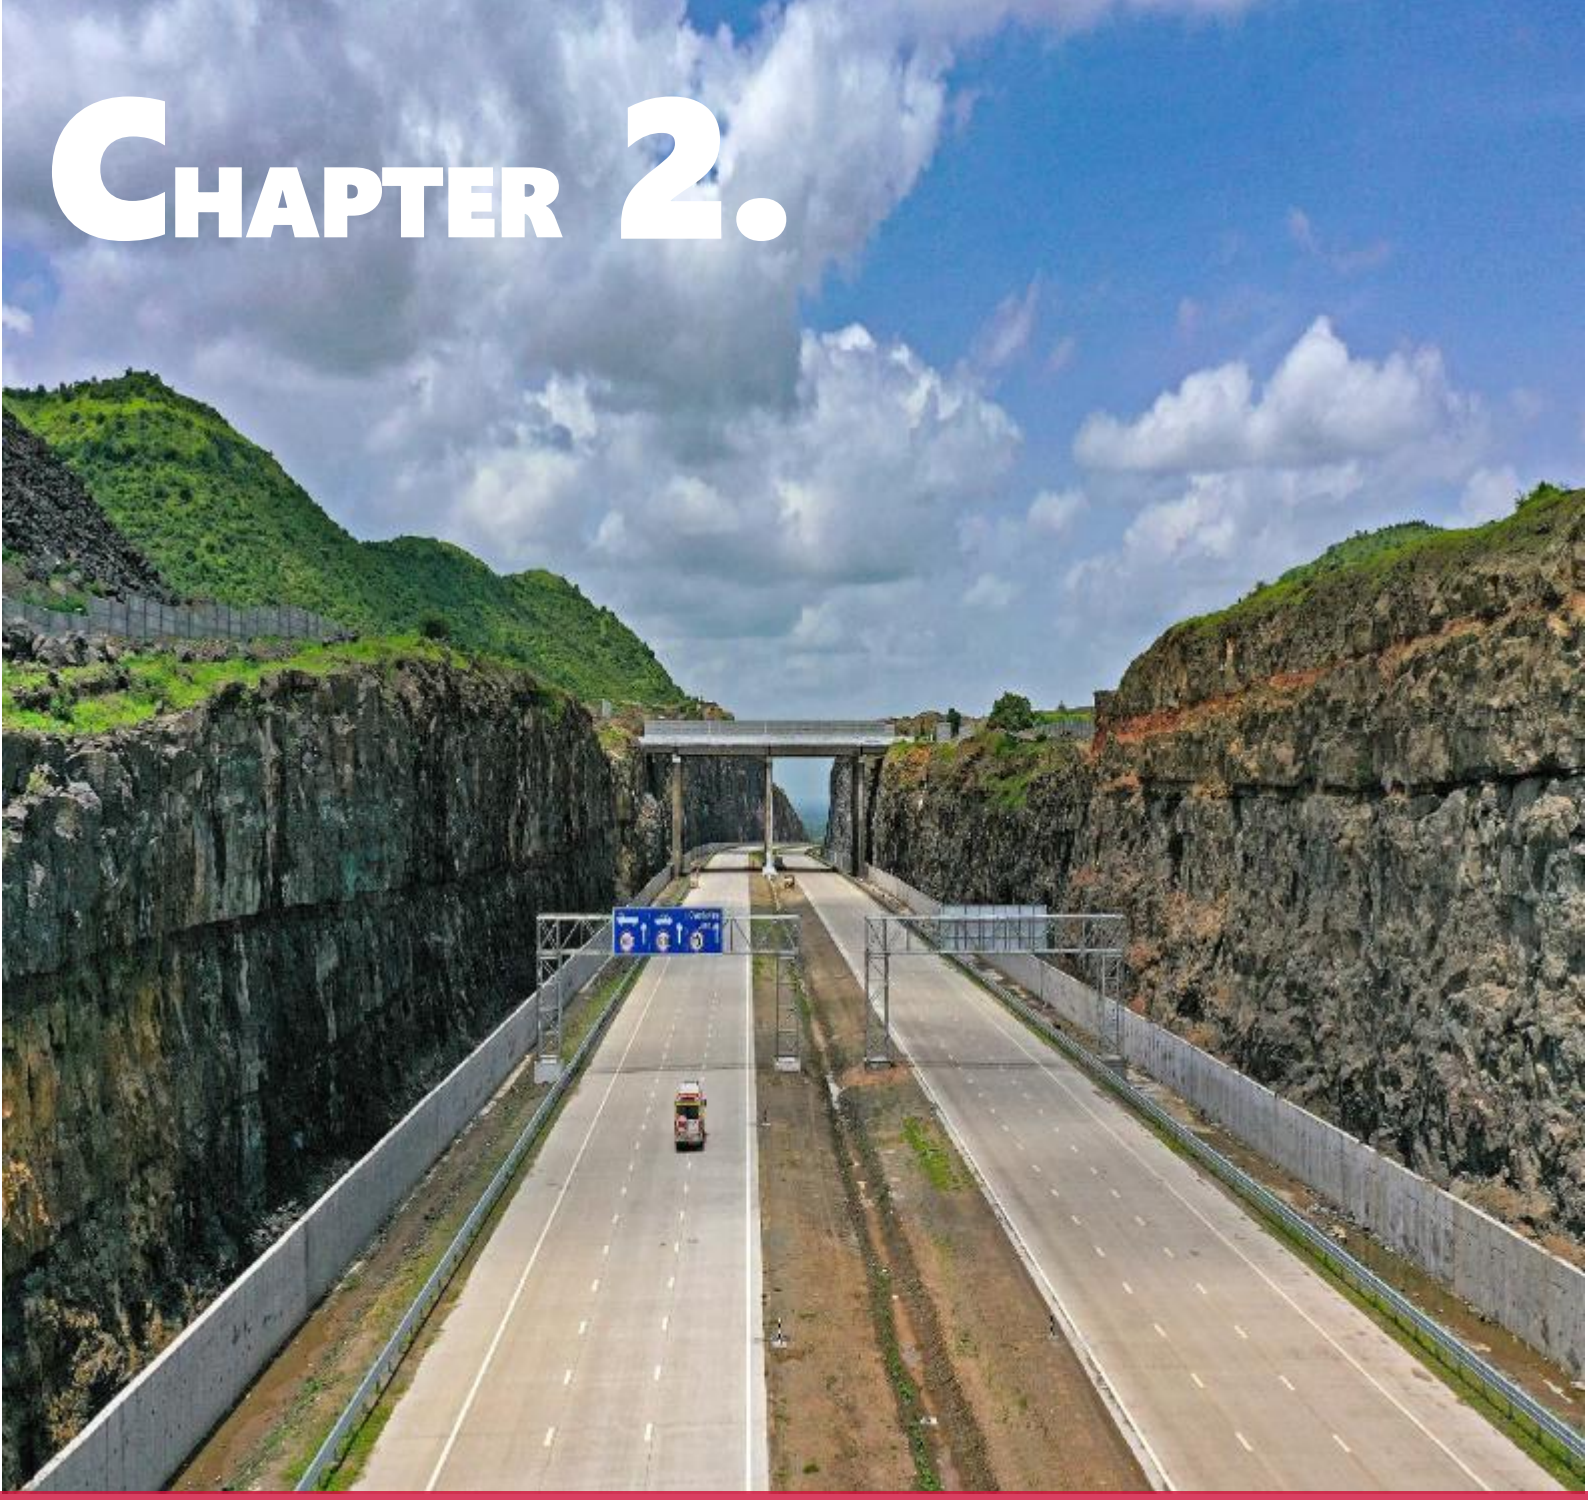
The site visit and inspection were carried out between the periods from 08th October 2025 to 10th October 2025.

The report is organized with the following chapters for easy understanding of various issues –

Exhibit 2 Structure of the Report

S.nos	Chapter	Description
1	**Chapter 1**	**Introduction:** The chapter gives an overview of the project background, detailed scope of work, approach, and methodology for due diligence studies**.**
2	**Chapter 2**	**Project Description:** The chapter describes existing project features, overview of project development.
3	**Chapter 3**	**Review of Agreements:** The chapter describes review of CA, Supplementary, State Support Agreement, Settlement Agreement & Various O & M Agreements.
4	**Chapter 4**	**Condition Assessment of Project Road:** The chapter presents the details and condition of various essential features of the Project Road based on site visit**.**
5	**Chapter 5**	**Pavement Investigation and Assessment:** This chapter describes the summary of pavement surveys and investigations carried out on Project Road along with the requirement of pavement maintenance
6	**Chapter 6**	**Cost Estimates**: This chapter summarizes the forecasting of O&M and major maintenance cost over the remaining concession period

Chapter 2.



Project Description

Chapter 2. PROJECT DESCRIPTION

2.1 Project Road

This asset is a **BOT (Toll)** project developed under **NHDP Phase–VII**, involving the *upgradation, operation and maintenance* of a six-lane urban stretch from **Devanahalli to Hebbal**, covering **Km 534.720 to Km 556.840** of **NH–7 (presently NH–44)** in the **State of Karnataka**. The project corridor is located within the **Bengaluru Urban District**, traversing rapidly developing suburban and urban areas such as **Devanahalli, Vidyanagar, Yelahanka, Kogilu Cross, and Hebbal**, and forms the principal approach road connecting the **Kempegowda International Airport (KIA)** to the city of Bengaluru.

The alignment of the project highway commences at **Km 534.720 near the Devanahalli trumpet interchange**, located approximately 5 km southwest of KIA, and extends southward through **Yelahanka Air Force Station**, **Vidyanagar**, and **Yelahanka Satellite Town**, terminating at **Km 556.840 near Hebbal interchange**, where it connects with the **Outer Ring Road (ORR)** and integrates with the urban arterial network of Bengaluru city. The corridor thus acts as a critical gateway linking **NH–44 (Srinagar–Kanyakumari Corridor)** with the central business district and airport access road, enabling seamless regional mobility for passenger and freight traffic.

The project highway is a **six-lane divided carriageway** with **10.0 m wide paved service roads** on both sides, separated by a raised median. It includes **two major interchanges**—the **Trumpet Interchange at Km 536.500**, providing a direct link to the airport access road, and the **Hebbal Interchange at Km 556.500**, which connects with ORR. The stretch is also equipped with **two Railway Over/Under Bridges (ROB/RUB)** at Km 539.910 and Km 550.770 respectively, **five minor bridges**, and **seventeen culverts**, along with two pedestrian/vehicular underpasses. The total length of service roads on both sides is approximately **22.12 km**, ensuring smooth segregation of local and through traffic. The Right of Way (ROW) varies between **45 m and 60 m**, depending on location and urban constraints.

Situated within the Bengaluru Metropolitan Region, the corridor passes through an area characterized by high vehicular density, major residential townships, and institutional developments. The project alignment lies parallel to the **Yelahanka–Chikkaballapur railway line** and is flanked by major establishments such as **Air Force Station Yelahanka**, **Vidyanagar Township**, and several industrial and commercial clusters. The proximity of the corridor to **Bengaluru International**

Airport, along with its integration into the **Outer Ring Road (ORR)** and **NH–44**, enhances its strategic importance as a high-traffic mobility corridor for both regional and urban transport.

The **Devanahalli–Hebbal (DH) Section of NH-44** achieved **Provisional Completion (PCOD)** on **1st May 2014**, permitting commencement of toll operations across the full project length (Km 534.720 to Km 556.840), and subsequently received the **Final Completion Certificate (COD)** on **22nd October 2014** from the Independent Engineer. The project is presently under the **Operations and Maintenance (O&M) phase**, being managed by **Athaang Devanahalli Tollway Pvt. Ltd.** under the supervision of **NHAI PIU–Bengaluru**.

As part of the project facilities, comprehensive **Intelligent Transportation Systems (ITS)** and **traffic management features** have been implemented, including **Electronic Toll Collection (ETC) systems, CCTV surveillance, Weigh-in-Motion (WIM) devices, Variable Message Signs (VMS), and Emergency Call Boxes (ECBs)**. These systems support efficient toll operations and enhance commuter safety along the corridor. Additionally, the stretch has been provided with adequate **drainage facilities, pedestrian subways, utility ducts, signage, crash barriers, and illumination systems** as per MoRTH standards and the specifications outlined in Schedule–D of the Concession Agreement.

The Project Location Map is shown below in **Exhibit** 3

Exhibit 3 Key Location Map

2.2 Climate

The Devanahalli–Hebbal project corridor lies in the **southern part of the Deccan Plateau**, within the **Bengaluru Urban District** of Karnataka, and experiences a **tropical savanna climate** characterized by moderate temperatures and distinct wet and dry seasons. Owing to its elevation of approximately **900 meters above mean sea level**, the region enjoys relatively mild weather conditions throughout the year. Summers, from **March to May**, are warm but not extreme, with average daytime temperatures ranging between **30°C and 35°C**, and cooler nights averaging around **20°C**. The **south-west monsoon**, extending from **June to October**, brings most of the annual rainfall, which averages between **850 mm and 950 mm**, while occasional showers from the **north-east monsoon** occur during October and November. Winters, from **December to February**, are pleasant, with daytime temperatures averaging **25°C to 28°C** and minimums around **14°C to 17°C**. Humidity remains moderate, typically between **55% and 75%**, and the region experiences gentle winds predominantly from the **south-west during summer** and the **north-east during winter**. Owing to its balanced climate, the corridor remains operational throughout the year, with only minor disruptions during short monsoon spells, primarily due to localised waterlogging in low-lying areas.

2.3 Terrain

The project stretch lies within the **Deccan plateau** region, characterized by **gently undulating terrain** with ground elevations ranging between **850 m and 910 m above MSL**. The corridor alignment passes through **urban and semi-urban areas** with moderately rolling topography and isolated granite outcrops typical of the Bengaluru geological formation.

The subgrade generally comprises **red lateritic soils** and **weathered granite**, underlain by **hard rock** at moderate depth. The geological investigations during design indicated that the sub-strata consist mainly of **gneissic and granitic formations**, suitable for heavy-duty pavement foundations and bridge sub-structures.

No significant geological hazards such as landslides or subsidence are reported. Drainage patterns are governed by minor seasonal nallas and man-made storm-water channels alongside service roads. As the section is urban, the terrain constraints mainly relate to **limited right-of-way (ROW)** and **adjacent developments**, requiring elevated structures and underpasses to ensure safe, grade-separated crossings.

2.4 Development as per Schedule B

As per **Schedule B (Upgradation of the Project Highway)** of the **Concession Agreement** for the **Devanahalli–Hebbal Section of NH-7 (Km 534.720 to Km 556.840)** in the State of Karnataka, the Concessionaire is required to undertake the **design, engineering, construction, and upgradation** of the existing facility into a six-lane divided highway, along with service roads, grade separators, and associated infrastructure works. The development works, to be executed as per MoRTH and IRC standards, include the following major components:

- **Main Carriageway:** Six-lane divided highway (2 × 3 lanes) with paved shoulders and median, conforming to design speed and geometric standards of urban expressways.
- **Service Roads:** Construction of 10 m wide (including paved shoulders) service roads on both sides along the entire stretch for local traffic segregation.
- **Grade Separators and Interchanges:** Two major interchanges—the *Trumpet Interchange* at Km 536.500 providing access to Kempegowda International Airport, and the *Hebbal Interchange* at Km 556.500 connecting to the Outer Ring Road and city network.
- **Railway Over/Under Bridges:** One **ROB** at Km 539.910 (Yelahanka) and one **RUB** at Km 550.770 (Yelahanka Bypass) constructed in RCC box and T-beam configuration.
- **Minor Bridges and Culverts:** Construction and rehabilitation of **five minor bridges** and **seventeen culverts** as per design requirements for adequate cross-drainage.
- **Underpasses and Subways:** Provision of **two vehicular underpasses** at Km 550.170 and Km 550.335 to facilitate local connectivity and safe pedestrian/vehicular movement.
- **Drainage Works:** Longitudinal and cross-drainage systems for efficient storm-water discharge, including side drains, catch-pits, and pipe culverts.
- **Roadside and Safety Works:** Installation of crash barriers, metal beam guardrails, road markings, overhead signage, boundary stones, and delineators in accordance with IRC 67 and IRC 119.
- **Ancillary Facilities:** Toll plazas, traffic aid posts, bus bays, lighting systems, communication and surveillance equipment, and landscaping in the median and ROW.
- **Mechanical & Electrical Systems:** Provision of illumination, high-mast lighting at junctions, toll management and ITS systems including CCTV, VMS, WIM, and emergency call boxes.
- **Environmental Works:** Avenue plantation, horticulture development, and environmental protection structures as per the approved Environmental Management Plan.

All works are to be executed in conformity with the **Manual of Specifications and Standards for Six-Laning of Highways (IRC: SP-87-2019)** and the technical provisions outlined in **Schedule D** of the Concession Agreement.

2.4.1 Roadway and Geometric

The **total project length is 22.12 km**, comprising **six-lane divided carriageway, service roads, interchanges, and structures**, developed to provide high-speed, all-weather connectivity between **Kempegowda International Airport** and **central Bengaluru**, forming an integral link of the **NH-44 North–South Corridor**. The detailed roadway and its geometry shown in below **Exhibit 4.**

Exhibit 4: Roadway and Geometric

Component	Chainage (km)	Description	Specifications
Six-Lane Main Carriageway	534.720 – 556.840	Six-lane divided highway between Devanahalli and Hebbal	2 × 3.5 m lanes + 2 × 1.5 m paved shoulders + 3.0 m median
Service Roads (Both Sides)	534.720 – 556.840	Continuous service roads for local traffic	10 m width (including paved shoulders)
Trumpet Interchange	536.500	Grade-separated interchange for airport connectivity	Loop ramp design with elevated flyover
Railway Over Bridge (ROB)	539.910	Crossing over Yelahanka–Chikkaballapur railway line	1 × 21 m T-beam span
Railway Under Bridge (RUB)	550.770	Yelahanka Bypass underpass	2 × 10 m × 5 m RCC box
Hebbal Interchange	556.500	Terminal interchange connecting NH-7 with ORR & city roads	Multi-ramp grade-separator structure
Minor Bridges (5 Nos.)	Various locations	RCC box and T-beam structures	Span 3 m – 21 m
Culverts (17 Nos.)	Various locations	Pipe & RCC box culverts	1 m – 3 m diam./span

Component	Chainage (km)	Description	Specifications
Vehicular Underpasses (2 Nos.)	550.170 & 550.335	RCC box type underpasses	Span 10 m × 5 m (avg.)

2.5 Administrative details of the Project

The Concession stands granted to operate the road from the Appointed Date for the concession period, with the obligation on the Concessionaire to maintain the project highway during the entire Operation & Maintenance (O&M) phase.

Exhibit 5: Administrative Details of Project

S. No	Feature	Description
1	**Project Name**	Upgradation, Operation, and Maintenance of the Devanahalli to Hebbal Section from Km **534.720 to Km 556.840** of NH-7 (now NH-44) under **NHDP Phase-VII** on **DBFOT (Toll)** basis in Karnataka.
2	**Employer / Authority**	National Highways Authority of India (NHAI)
3	**No. of Lanes / Configuration**	6-lane divided carriageway with **10 m service roads** on both sides, 2 ROB/RUBs, 2 VUPs, 2 PUPs, and elevated section (3.722 km).
4	**Length of the Project**	**22.12 km**
5	**Total Project Cost**	₹ 680 crore
6	**Concessionaire**	**M/s Athaang Devanahalli Tollway Private Limited (ADTPL)**
7	**EPC Contractor**	**Navayuga Engineering Company Limited (NECL)**
8	**Independent Engineer (O&M Phase)**	***M/s L.N. Malviya Infra Projects Pvt. Ltd.,*** *in association with* ***M/s Infratech Civil Solutions Pvt. Ltd.***
9	**Date of Award of Work (LOA)**	08-Feb-10
10	**Date of Signing of Concession Agreement**	30-Apr-10
11	**Appointed Date**	**25 April 2011 (NHAI Letter No. PIU-BLR/NDTPL/2011-12/12).**
12	**Concession Period**	**20 years (**inclusive of construction period

S. No	Feature	Description
13	**Construction Period**	**730 Days**
14	**Approved Extension of Time (EOT)**	**Extended to 31 January 2014 (439 days) with no penalty.** ***(Ref: NHAI EC Minutes & COD Letter, 2014).***
15	**Provisional Completion PCOD**	**01 May 2014** (certified by Independent Engineer vide LBG letter 01.05.2014)
16	**COD Date**	**22-Oct-14**
17	End of Concession Period	• **Scheduled: 24 April 2031** • **Revised Date: 17 January 2032, as per the Settlement Agreement dated 24 March 2025**
18	**Toll Operation Commencement**	From **01 May 2014** (post-PCOD approval)
19	**Project Highway Section**	Km 534.720 (Devanahalli) to Km 556.840 (Hebbal)
20	**No. of Toll Plazas (Number and Location)**	**Two Toll Plaza** · **Toll Plaza 536.500** · **Toll Plaza 538.000**

2.6 Salient Features of the Project

Salient features of the projects are covered at below

Exhibit 6: Salient Features of Project

Sl. No.	Component / Feature	Details/Nos.	Description / Remarks
A. Main Carriageway & General			
1	Project Start Point	Km 534+720	Start near Devanahalli Trumpet Interchange – beginning of six-laning.
2	Project End Point	Km 556+860	Ends at Hebbal Interchange connecting to Outer Ring Road.
3	Total Project Length	22.12 km	
4	Road Configuration	6-lane divided (2×3) + 10 m service roads (both sides)	Flexible pavement with BC (50 mm) + DBM (80 mm) + WMM + GSB layers.
5	Design Speed	100 km/h (rural), 80 km/h (urban)	Conforms to IRC:86 & IRC: SP-87 standards.
6	Right of Way (ROW)	45 – 60 m	As per Schedule-A drawings and land records.
7	Service Roads	Km 534+700 – Km 556+850	Discontinuous only near interchanges and structures.
B. Major Interchanges & Grade Separations			
8	Trumpet Interchange (Airport Access)	Km 536+460 – 537+050	3-level loop interchange linking KIA access road and NH-44.
9	Hebbal Interchange (Terminal)	Km 556+480 – 556+860	Multi-ramp flyover integrating NH-44 with Bengaluru ORR and arterial roads.
10	Elevated Section	Km 548+150 – 551+940	3.72 km long elevated corridor with 127 piers and 1,483 segments.
C. Railway Bridges (ROB / RUB)			
11	ROB – Yelahanka	Km 539+925	1×21 m RCC T-beam bridge over Yelahanka–Chikkaballapur railway line.
12	RUB – Yelahanka Bypass	Km 550+775	2×10 m×5 m RCC box underpass under railway embankment.
D. Minor Bridges (5 Nos.)			
13	MB-1	Km 540+190	1×10 m RCC box.
14	MB-2	Km 540+515	1×9 m RCC box.
15	MB-3	Km 549+470	1×12 m RCC T-beam.
16	MB-4	Km 550+940	1×15 m RCC box.

Sl. No.	Component / Feature	Details/Nos.	Description / Remarks
17	MB-5	Km 555+825	1×9 m RCC T-beam – all verified by IE (May 2025).
E. Vehicular Underpasses (VUPs)			
18	VUP-1	Km 550+165	10 m×5 m RCC box providing local access.
19	VUP-2	Km 550+330	Same dimensions; located near service road intersection.
F. Culverts & Cross-Drainage Works			
20	Culverts	(17 Nos.)	RCC box and Hume pipe culverts (1–3 m span).
21	Longitudinal Drainage	Both carriageways and service roads	Connected to BBMP municipal storm system.
G. Toll Plazas & Facilities			
22	TP-1 – Yelahanka Plaza	Km 539+905	10 lanes (8 manual + 2 ETC); control building, WIM, ECBs, and canopy.
23	***TP-2 – Kogilu Cross Plaza***	***Km 550+775***	***10 lanes constructed; non-operational for tolling per NHAI directive (Dec 2014); used as ITS & SCADA centre.***
H. Project Facilities			
24	Bus Bays / Lay-bys	As per Schedule-B	
25	Delineators (Nos)	22	
26	Raised Pavement Markers (ROW Studs) (Nos)	7706	
27	Variable Message Sign Boards (Nos)	2	
28	Meteorological Data Station (MDS) (Nos)	1	
29	ATCC (Nos)	2	
30	Emergency Call Boxes (ECB) (Nos)	20	
31	Video Cameras (CCTV) (Nos)	11	
32	Pedestrian Guard Rails between MCW & Service	2336	

Sl. No.	Component / Feature	Details/Nos.	Description / Remarks
	Road below Elevated Highway (Nos)		
33	Speed Breakers (Nos)	32	
34	Drain (RCC-Line)	18.2	
35	Drain (RCC-Unlined)	23.06	
36	Median Drain (km)	17.49

47	Footpath	0.12 Kms	
48	Gantry Boards	Cantilever Over Head: 3 Half Width Over Head: 2 Full Width Over Head: 5	

2.7 Project Completion Certificate and PCOD & FCOD

A. <u>Partial Commercial Operation Date (PCOD):</u>

- As per the Concession Agreement, the scheduled completion date for the project was **31 January 2014** after approval of **Extension of Time (EOT)** for 439 days by **NHAI Executive Committee**.
- The **Independent Engineer (Louis Berger Group Inc.)** issued the **Provisional Completion Certificate (PCOD)** on **01 May 2014**, certifying that the project stretch from **Km 534.720 to Km 556.840** was complete in all respects and safe for commercial operation.
- Based on this certification, the **NHAI** permitted commencement of tolling and operation of the entire 22.12 km section from **01 May 2014**.

B. <u>Final Commercial Operation Date (COD):</u>

- After completion of all punch list and ancillary works identified during the PCOD stage, the **Independent Engineer** issued the **Final Completion Certificate (COD)** on **22 October 2014**.
- The **NHAI** approved this as the **Final Commercial Operation Date (FCOD)**, marking the formal completion of the **Devanahalli–Hebbal Section of NH-44 (old NH-7)**.
- The project continues under normal operations and maintenance, with tolling activities managed by **Athaang Devanahalli Tollway Pvt. Ltd.** (formerly NDTPL) under NHAI's supervision.

2.8 Extension of Time

An **Extension of Time (EOT)** of **439 days** was originally approved by **NHAI** to compensate for delays caused by land acquisition, utility shifting, and local access constraints during construction. This extended the *Scheduled Completion Date* from **18 November 2012** to **31 January 2014**, while the **Concession Period** of **20 years (from 25 April 2011 to 24 April 2031)** remained unchanged.

Further, as per the **Settlement Agreement dated 24 March 2025**, **NHAI granted an additional 267-day** extension to the **Concession Period** on account of **COVID-19 Force Majeure events** — *171 days (FY 2020)* and *96 days (FY 2021)* — formally approved by **Regional Office, NHAI Bengaluru**.

Accordingly, the revised **Concession End Date** is extended to approximately **17 January 2032**, without altering the operational obligations or revenue share structure.

2.9 Penalty

As per the *Settlement Agreement (2025)*, there are **no active penalties or liquidated damages** applicable as of date.

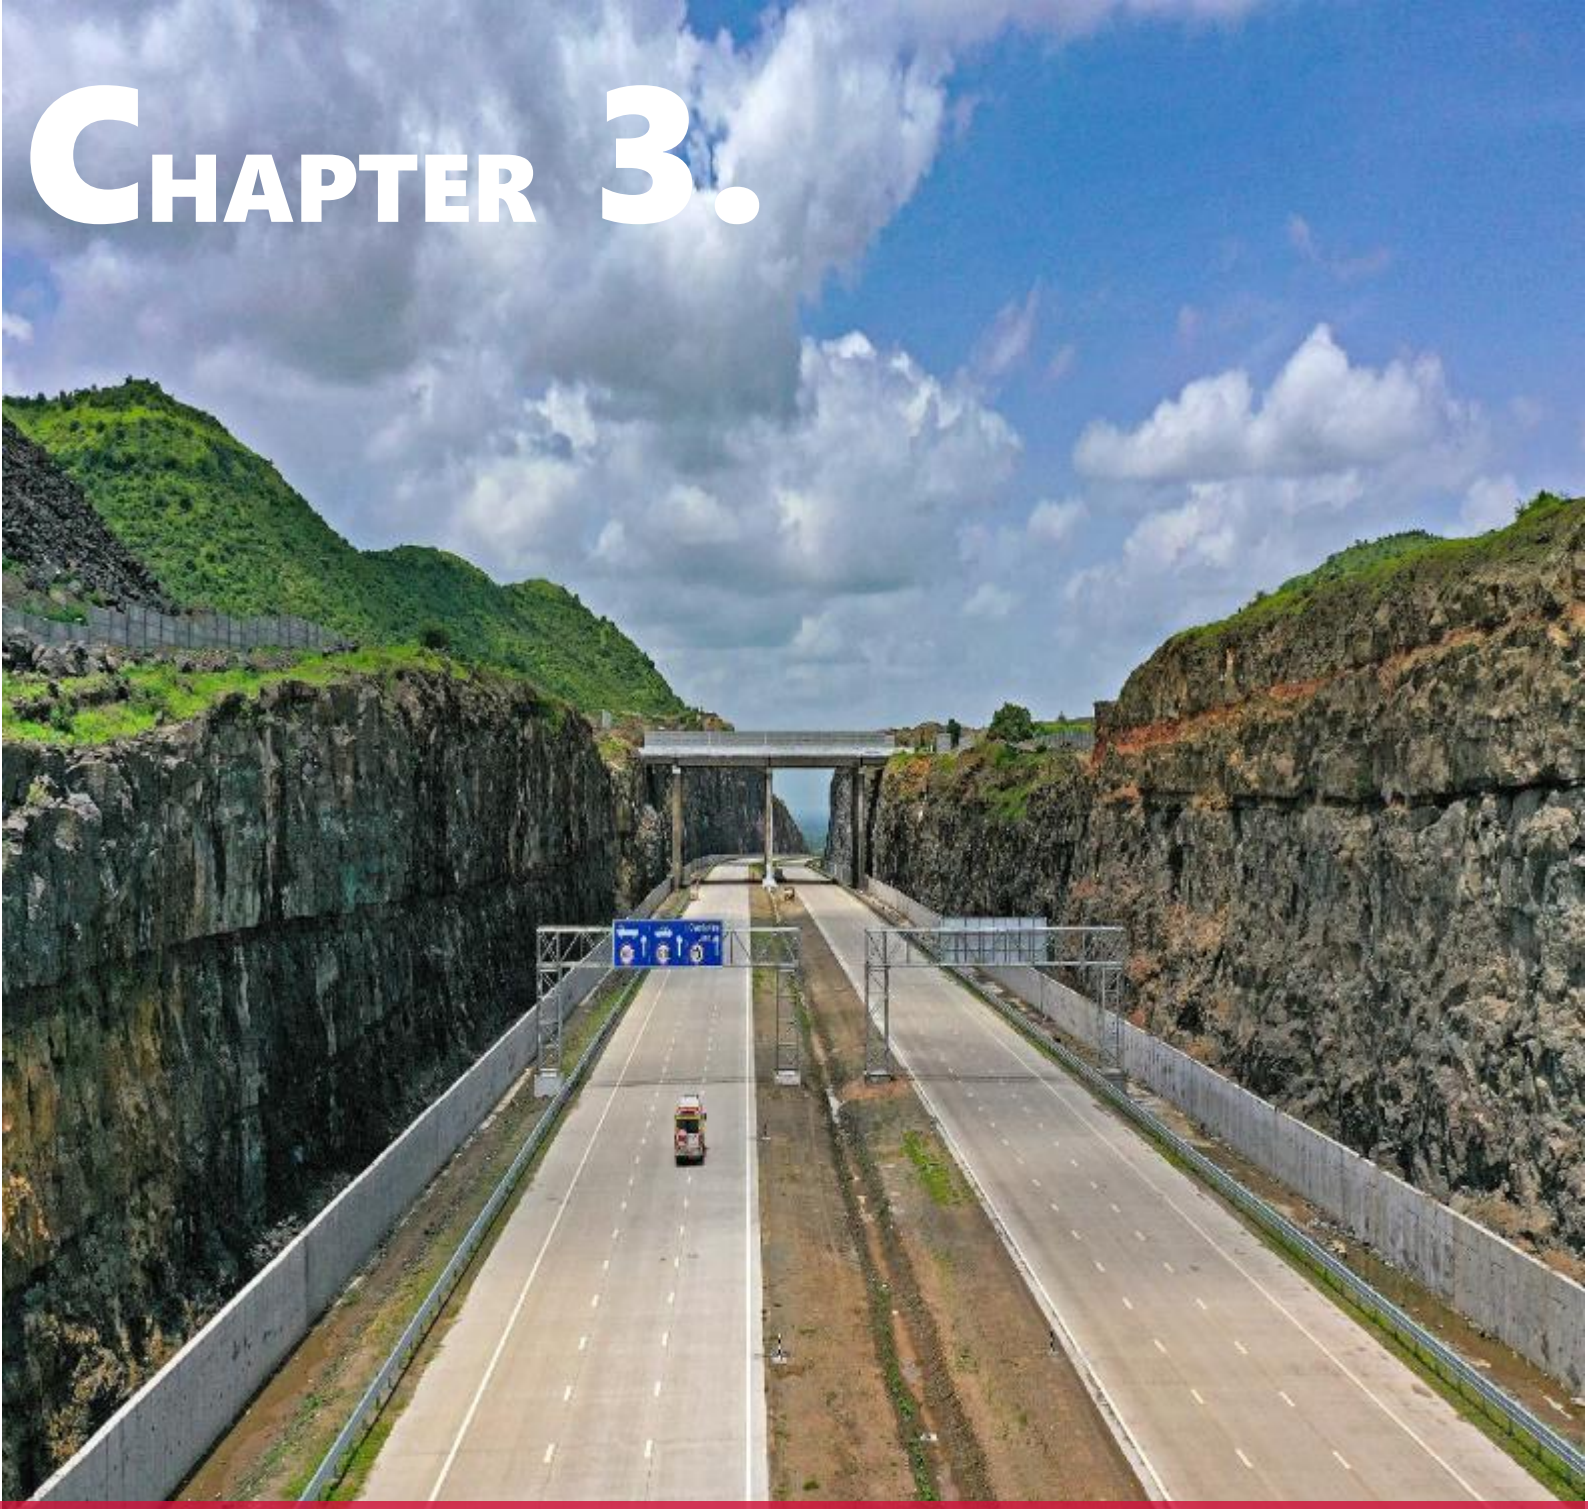
All earlier disputes and counterclaims between **NHAI** and **M/s Athaang Devanahalli Tollway Pvt. Ltd.** (formerly NDTPL) were **settled mutually**, with a **full and final settlement amount of ₹31.52 crore** agreed and paid.

Notably, **maintenance damages (₹1.01 crore for Dec 2023)** were **waived off**, and **no additional penalties** have been imposed under the O&M phase. Thus, the project currently stands in **full contractual compliance**, **with no pending financial penalties or disputes under adjudication.**

2.10 Approvals & Permits

Since Project is in O & M stage therefore all necessary approvals required are in place with concessionaire.

Chapter 3.



Review of Project Agreement

Chapter 3. Review of Project Agreements

3.1 Review of Concession Agreement

Concession Agreement was executed on **30th April 2010** between:

- **National Highways Authority of India (NHAI)**, (hereinafter referred to as the "Authority"); and **Navayuga Devanahalli Tollway Private Limited**, (hereinafter referred to as the "Concessionaire").

The Agreement relates to the **Upgradation, Operation and Maintenance of Hyderabad–Bangalore Section of NH-7 from Km 534.720 to Km 556.840** in the State of Karnataka under **NHDP Phase-VII**, on a **Design, Build, Finance, Operate and Transfer (DBFOT) – Toll** basis.

Exhibit 7: Key Terms of Concession Agreement

Parameter	Details
Date of Agreement	30 April 2010
Appointed Date	Declared by NHAI after fulfilment of Conditions Precedent – 25 April 2011 (as later notified)
Authority / Employer	National Highways Authority of India (NHAI), Ministry of Road Transport & Highways, Government of India
Concessionaire	M/s Navayuga Devanahalli Tollway Private Limited (NDTPL)
Project Scope	Upgradation of NH-7 (22.12 km) including construction of 6-lane elevated highway, flyovers, underpasses, service roads and associated facilities
Length of Project	22.12 km (From Km 534.720 to Km 556.840 of NH-7 in Karnataka)
Concession Period	20 years from Appointed Date
Project Cost	Approx. ₹220 crore (as per bid documents)
Construction Period	730 days (2 years) from commencement of upgradation
Scheduled Completion (COD)	Upon issue of Completion Certificate by Independent Engineer
Performance Security	₹13.60 crore (Bank Guarantee – SBI)
Toll Collection / Revenue Source	User Fee to be collected as per Fee Notification (Schedule R)
Right of Way (ROW)	80 m ROW along the corridor; 134 m at toll plaza location

Parameter	Details
Change in Scope	Permitted under Article 16 with approval of Authority and Independent Engineer
Force Majeure & Relief	Defined under Article 34 (Natural, Indirect Political, and Political Events)
Dispute Resolution	Arbitration under the Arbitration and Conciliation Act 1996 – Venue: New Delhi
Governing Law & Jurisdiction	Laws of India; Courts at New Delhi

3.1.1 Obligations of the Authority & Concessionaire

Exhibit 8: Key Obligations of Parties

Authority	Concessionaire
Provide ROW for the Project Highway free from encumbrances before Appointed Date (Clause 10.3)	Design, engineer, finance, construct, operate and maintain the Project Highway on DBFOT (Toll) basis
Facilitate and assist in obtaining statutory approvals and permits (Clause 6.1)	Achieve Financial Close within 180 days of signing and furnish Performance Security (Article 24)
Permit collection of toll fee in accordance with Schedule R post COD	Maintain the Project Highway as per Specifications and O&M Requirements (Schedule K)
Provide police and administrative assistance for traffic management and security (Article 20)	Comply with Safety Requirements (Article 18 and Schedule L) and Environmental Management Plan
Ensure no Competing or Additional Tollway is developed during the Concession Period (Article 6.3)	Ensure timely completion of Project Milestones (Schedule G) and Scheduled COD within 2 years of Appointed Date
Review and monitor performance through Independent Engineer (Articles 13 & 23)	Hand back the Project Highway free of encumbrances to NHAI at the end of the Concession Period (Article 38)

Authority	Concessionaire
Facilitate land acquisition for toll plaza and project facilities	Bear all project risks, costs and liabilities except those expressly allocated to NHAI under the Agreement

3.1.2 Financial Covenants

The Concession Agreement (Articles 26–33; Schedules R & S) establishes a defined financial structure to ensure transparency and protect lender interests. **The detailed covenants are presented in the exhibit below.**

Exhibit 9: Key Financial covenants detail

Aspect	Details
Escrow Mechanism	All project revenues (toll fee, insurance proceeds, and other receipts) to be credited to an Escrow Account (Article 31 & Schedule S). Withdrawals in priority: (i) statutory dues, (ii) O&M, (iii) debt service, (iv) reserves, (v) equity.
Toll Collection & Fee Notification	User Fee rates governed by Schedule R and MoRTH Fee Rules (2008 & subsequent amendments). Fee to commence from COD.
Financial Close	To be achieved within 180 days of CA signing (extendable with damages under Article 4.3).
Equity Lock-in & Change in Ownership	Lead member (Navayuga Group) to retain ≥ 51% shareholding during construction and two years post COD (Article 5.3).
Insurance	Comprehensive insurance cover for construction and O&M phases, with benefits assigned to lenders and Authority (Article 32).
Substitution Rights	Defined under Schedule V – Lenders empowered to substitute Concessionaire in case of default.
Accounting & Audit	Audited annual accounts and certified traffic reports to be furnished to Authority and Lenders (Article 33).

3.1.3 Delay Damages and Penalties under the Concession Agreement

Exhibit 10: Key Terms of Damages/ Penalty

Clause / Article	Situation	Damages / Penalty	Remarks
Article 4.3	Delay in achieving Financial Close within 180 days of CA signing	0.1% of Performance Security per day (extendable up to 120 days) – further extension at 0.2% per day; max 20% of Performance Security	Weekly advance payment for extension
Article 12.4	Delay in achieving Scheduled Completion Date (730 days from commencement)	0.1% of Performance Security per day until COD is achieved	If delay exceeds 270 days, Authority may terminate
Article 17.7	Delay in re-opening lanes post repair / maintenance	0.1% of Average Daily Toll Revenue per lane per day	Requires Independent Engineer's approval
Article 35	Compensation for Breach of Agreement	Direct costs incurred by non-defaulting party (excluding indirect losses)	Both parties must mitigate loss
Article 36–37	Termination for default	Termination payments as per event type (Concessionaire / Authority / Force Majeure)	Payable in accordance with Article 37.3

3.1.4 Legal and Operational Framework:

- **Force Majeure Events:**

Classified as Natural, Indirect Political, and Political Events (Article 34). Entitlement includes time extension and relief from performance obligations; compensation limited to direct costs.

- **Compensation for Breach of Agreement**

Article 35 specifies mutual compensation principles based on actual loss; damages are pre-estimated, not penalties.

- **Termination and Divestment:**

Articles 37–38 govern termination events and asset hand-back. Concessionaire to transfer project assets, records and facilities to NHAI free of encumbrances upon expiry or termination.

- **Defects Liability after Termination**

Concessionaire liable for any defects detected within one year from termination / transfer date (Article 39).

- **Dispute Resolution and Governing Law:**

Disputes to be resolved through arbitration (Article 44); governed by laws of India with jurisdiction at Delhi.

3.2 Review of Supplementary Agreement

The Concession Agreement dated **30th April 2010** between **National Highways Authority of India (NHAI)** and **Navayuga Devanahalli Tollway Private Limited (NDTPL)** was subsequently amended through **two Supplementary Agreements**. The first, dated **30th April 2014**, regularised project delays and toll suspension events, finalised the Appointed Date, and extended construction timelines without penalty. The second, executed later under the **Hybrid ETC and toll management scope**, introduced technology and system-based enhancements to toll operations through a *Change of Scope* arrangement. Together, these amendments resolved time-related and operational uncertainties, ensured equitable treatment of Force Majeure and State Defaults, and modernised the project's toll collection system.

Exhibit 11: Summary of Supplementary Agreements

Date	Parties	Purpose / Context	Key Terms / Amendments
30.04.2014	NHAI & Navayuga Devanahalli Tollway Pvt. Ltd.	Supplementary to CA dated 30.04.2010 (addressing project delays and toll disruption)	• Fixed **Appointed Date** as 25.04.2011 (binding for all contract purposes). • Confirmed **Commencement of Upgradation** as 19.11.2010 and **Scheduled Completion** as 18.11.2012. • Extended **Construction Period by 439 days** up to 31.01.2014 **without penalty or damages**. • Recognised **Force Majeure Event** of 152 days (court stay) and **State Default** of 311 days (public protest / law & order). • Directed assessment of **revenue loss**: ₹13.69 crore (Force Majeure) and ₹24.71 crore (State Default).

Date	Parties	Purpose / Context	Key Terms / Amendments
			• Declared **no extension of Concession Period** (remains 20 years from Appointed Date). • Concessionaire **waived all claims** for interest or escalation on the delayed period. • Specified that toll revision applies from the date of **Provisional Completion Certificate**. • Stated that all other terms of the CA remain unchanged.
2018 (Hybrid ETC Supplementary)	NHAI & Navayuga Devanahalli Tollway Pvt. Ltd.	Supplementary arrangement introducing **Hybrid Electronic Toll Collection (ETC)** system and integration of automation under Change of Scope	• Introduced **Hybrid ETC System** combining RFID-based automatic and manual lanes, as per NHAI guidelines. • Defined scope for **installation, operation and maintenance** of ETC equipment including lane controllers, RFID readers, and central server integration. • Costs treated as **Change of Scope Works** under Article 16; reimbursable by NHAI upon verification. • **O&M of ETC system for 5 years**, with annual escalation as per CA formula.

Date	Parties	Purpose / Context	Key Terms / Amendments
			• Concessionaire to ensure **interoperability and system uptime** as per MoRTH/NHAI standards. • Upon completion of the Concession Period, all ETC hardware and software assets to be **handed over to NHAI**. • Ensured compliance with **security, data sharing, and audit protocols**. • No change to overall concession period or revenue rights structure.

3.3 Review of State Support Agreement

State Support Agreement (SSA) was executed on **19th April 2010** between:

- **The Governor of Karnataka** (hereinafter referred to as the *"State Government"*); and
- **The President of India**, represented by the **National Highways Authority of India (NHAI)**, Ministry of Road Transport & Highways (hereinafter referred to as the *"Authority"*).

This Agreement provides the framework for support from the **Government of Karnataka** to ensure smooth implementation and operation of the **Hyderabad–Bangalore Section (Km 534.720 to Km 556.840)** of NH-7 under the **DBFOT (Toll)** Concession Agreement executed between NHAI and **Navayuga Devanahalli Tollway Private Limited (NDTPL)**.

Exhibit 12: Key Terms of the State Support Agreement

Parameter	Details
Date of Agreement	30th April 2010
Parties	The Governor of Karnataka (State Government) & The President of India (Authority – represented by NHAI)
Purpose	To define and formalize the role of the State Government in providing administrative, security, and operational support for the implementation and long-term operation of the Devanahalli Tollway Project under NHDP Phase-VII.
Support by State Government	• Provide unhindered **Right of Way (ROW)** and access to the project site. • Facilitate and expedite **land acquisition, resettlement, and rehabilitation** as required for the project. • Assist the Concessionaire and NHAI in obtaining **statutory permits and clearances**. • Support **shifting of utilities** and removal of encroachments in coordination with local bodies. • Ensure no **local barriers, levies, or restrictions** that impede traffic or toll operations. • Provide **police assistance, traffic regulation, and emergency response** support. • Facilitate provision of **medical aid posts** and ensure availability of local administrative assistance.

Parameter	Details
Restriction on Competing Roads	The State Government shall **not construct, permit, or support any competing road** or alternate facility that may divert traffic or reduce toll revenue during the Concession Period, except those notified in advance to NHAI.
Restriction on Additional Tollways	No additional toll facility shall be introduced or operated along or adjacent to the Project Highway except as approved by the Authority under the Concession Agreement.
Restriction on Local Taxes / Tolls	The State Government shall **not levy or collect any local toll, cess, or tax** on vehicles using the Project Highway. All toll collection rights rest solely with the Concessionaire as per the Concession Agreement.
State Obligations in Case of Force Majeure or Default	In the event of any law-and-order disruption, protest, or State-level restriction resulting in suspension of toll collection or delayed works, the State Government shall take corrective measures and cooperate with NHAI to restore normalcy. Revenue losses attributable to State actions or inactions shall be compensated as per Clauses 4 & 5 of this Agreement.
Substitution of Concessionaire	The State acknowledges the rights of **lenders and the Authority** to substitute the Concessionaire in the event of persistent default, in accordance with the Substitution Agreement under Schedule-V of the Concession Agreement.
Obligations of the Authority (NHAI)	• Ensure the Concessionaire complies with all applicable laws, permits, and project standards. • Keep the State informed of major construction activities, safety measures, and toll operations. • Coordinate with the State Police, PWD, and local administration for enforcement of traffic discipline and safety.
State Default	Failure by the State or its agencies to fulfil obligations (such as delay in land transfer, non-assistance, or imposition of taxes) and failure to cure within **60 days of notice** constitutes a **State Default**. Such default is treated as a breach under the Concession Agreement, attracting compensation.

Parameter	Details
Compensation & Termination Payments	For any State Default or attributable delay causing project loss, NHAI and/or the Concessionaire shall be compensated by the State Government. Payment to be made within **60 days** of determination, failing which interest at **Bank Rate + 3%** applies.
Duration	Effective from the date of signing and continues until termination or expiry of the Concession Agreement, including all associated project obligations.
Indemnity	Both the State Government and NHAI mutually indemnify each other against losses or claims arising from their respective breaches or defaults under this Agreement.
Dispute Resolution	Disputes first to be resolved through **conciliation** under the *Arbitration and Conciliation Act, 1996*; failing which arbitration shall be conducted under **ICADR Rules, New Delhi**.
Governing Law & Jurisdiction	Governed by the **laws of India**; jurisdiction vested in **Courts at New Delhi**.
Miscellaneous	• Waiver of sovereign immunity by the State Government for enforcement of contractual obligations. • Agreement binding on successors and assigns. • All notices and communications to be in writing in English. • Agreement forms part of the Concession documentation package between NHAI, the Concessionaire, and the Government of Karnataka.

3.4 Review of Settlement Agreement

Settlement Agreement was executed on **24th March 2025** at **NHAI Headquarters, New Delhi**, between:

- **National Highways Authority of India (NHAI)** (the "Authority"); and **Athaang Devanahalli Tollways Pvt. Ltd.** (the "Concessionaire"), formerly known as **Essel Devanahalli Tollway Pvt. Ltd.** and **Navayuga Devanahalli Tollway Pvt. Ltd.**

This Settlement Agreement was concluded under **Section 73 of the Arbitration and Conciliation Act, 1996**, following conciliation proceedings conducted by the **Conciliation Committee of Independent Experts (CCIE-1)**. It records the full and final settlement of disputes arising under the **Concession Agreement dated 30.04.2010** for the upgradation and operation of the Hyderabad–Bangalore Section of NH-7 (Km 534.720 to Km 556.840) in Karnataka.

Exhibit 13: Key Aspects of Settlement Agreement

Parameter	Details
Date of Agreement	24th March 2025
Parties	National Highways Authority of India (NHAI) & Athaang Devanahalli Tollways Pvt. Ltd. (Concessionaire)
Legal Basis	Settlement under Section 73 of Arbitration and Conciliation Act, 1996 (Conciliation Outcome under CCIE-1)
Project Reference	Concession Agreement dated 30th April 2010 for upgradation of Hyderabad–Bangalore Section of NH-7 (Km 534.720 to Km 556.840)
Trigger for Settlement	Disputes arising from delay in maintenance, COVID-19 Force Majeure period, and financial counterclaims pending before the Sole Arbitrator and Delhi High Court (OMP (Comm) No. 370/2024).
Conciliation Proceedings	Conducted by CCIE-1 (Conciliation Committee of Independent Experts) through four meetings held on **23.12.2024**, **24.12.2024**, **06.01.2025**, and **27.02.2025**.
Concessionaire's Claims	₹393 Cr + 316 days extension of Concession Period (COVID-19 Force Majeure, revenue leakage, damages, etc.)

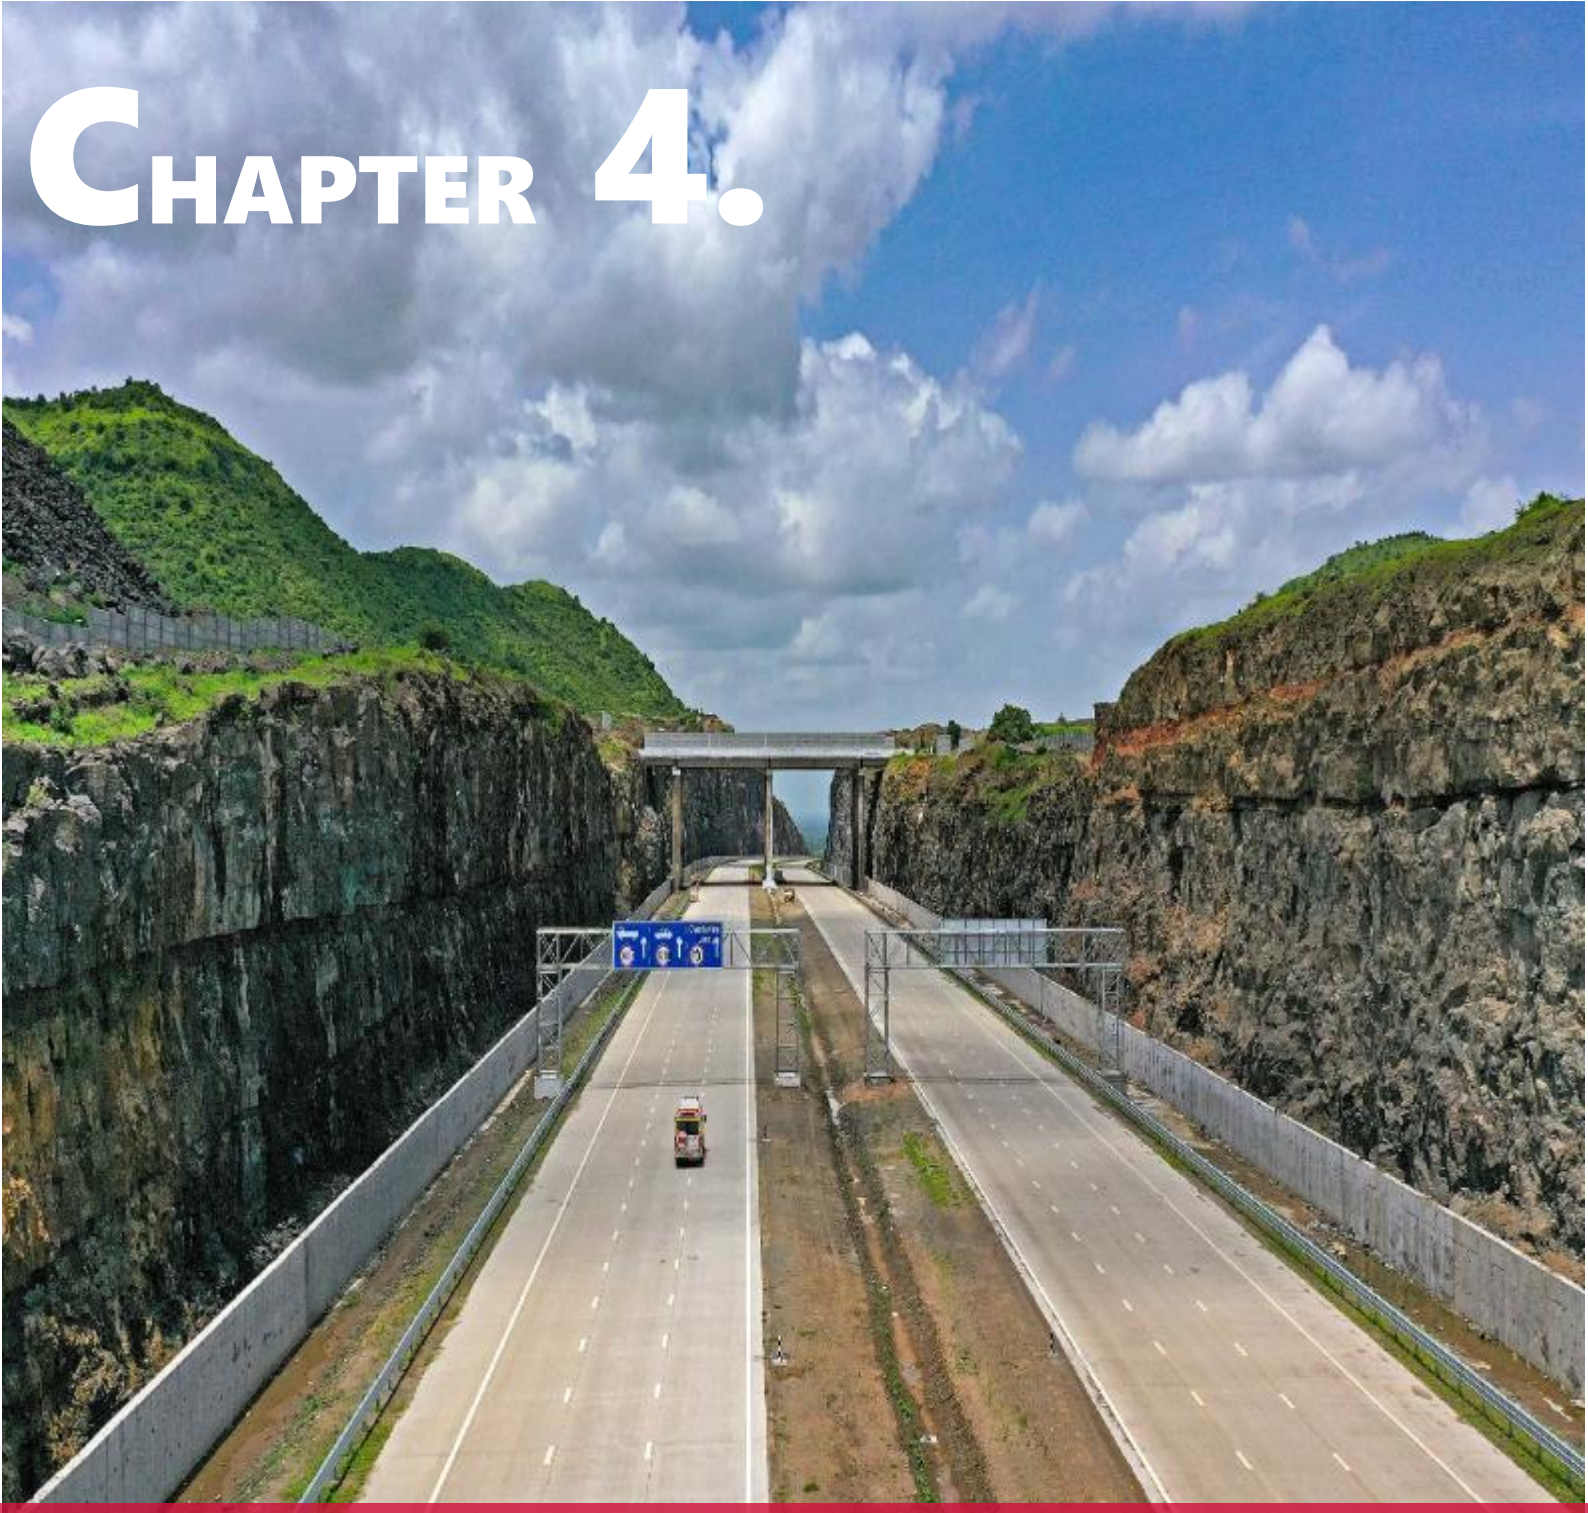
Parameter	Details
Authority's Counterclaims	₹145.14 Cr (damages for maintenance delays, interest, descoping recovery, and fee shortfall)
Final Settlement	Extension of **267 days in Concession Period** and payment of **₹31.52 Cr by Concessionaire to NHAI** as full and final settlement.
Break-Up of Settlement	**Concessionaire's Claims:** • Extension in Concession Period: 267 days granted (vs. 316 days claimed). • Cost Compensation (COVID-19 FM): Nil. • Revenue Leakage: Nil. **NHAI Counterclaims:** • Maintenance Delay Damages: ₹24.7 Cr. • De-scoping of Punch List: ₹75.9 Cr (adjusted). • Interest in FASTag Fee Remittance: ₹1.53 Cr. • Maintenance Damages (Dec 2023): Nil. **Total Agreed Recovery:** ₹31.52 Cr (after ₹25.71 Cr previously recovered per Delhi High Court order).
Extension of Concession Period	267 days (171 days for 2020 + 96 days for 2021) due to COVID-19 Force Majeure Event.
Effective Date	From date of signing of the Settlement Agreement (24 March 2025).
NHAI Obligations	• Grant extension of 267 days in concession period. • Issue confirmation letter within 30 days. • Withdraw related legal and arbitration cases.
Concessionaire Obligations	• Pay ₹31.52 Cr to NHAI within 30 days of signing. • Withdraw all arbitration and court proceedings (including OMP (Comm) No. 370/2024). • Waive all current and future claims.
Finality of Settlement	Full and final settlement of all claims, counterclaims, and disputes under the Concession Agreement. No residual claims, demands, or litigation permitted.
Other Provisions	• No objection to NHAI's independent VOP works near Sadihalli Gate. • No claims or interest permissible post-settlement. • Both parties to bear their own negotiation costs.

Parameter	Details
Authentication	Settlement authenticated by **CCIE-1 Members – Shri Pradeep Kumar** and **Shri Y.S. Malik** on **24.03.2025** as fair, voluntary, and in public interest.
Governing Law & Jurisdiction	Laws of India; Courts at Delhi.

Knight Frank reviewed and noted that Settlement Agreement marks the **amicable closure of all ongoing disputes** between the **National Highways Authority of India (NHAI)** and **Athaang Devanahalli Tollways Pvt. Ltd.**, arising from the original **Concession Agreement (30 April 2010)** and its **Supplementary Contracts**. The settlement provides a **267-day extension in the Concession Period** to account for **COVID-19 Force Majeure impacts**, in line with NHAI's **uniform pandemic relief policy** applicable across national highway projects**.**

Concessionaire's monetary claims amounting to ₹393 crore were fully waived, while the **Authority's counterclaims were rationalised to ₹31.52 crore**, resulting in a **balanced and equitable resolution**. Both parties mutually agreed to **withdraw all pending arbitration and court proceedings**, thereby ensuring **complete discharge of legal liabilities** and removal of long-term contingent exposures.

Chapter 4.



Condition Assessment of Project Road

Chapter 4. CONDITION ASSESMENT OF PROJECT ROAD

4.1 General

This chapter presents a detailed assessment of the existing condition of the **Devanahalli–Hebbal Section of NH-44 (Old NH-7)** in accordance with the provisions of the **Concession Agreement** and relevant **IRC guidelines**. The objective of this assessment is to evaluate the current condition and performance of the pavement, structures, interchanges, toll plazas, service roads, drainage systems, safety installations, and other highway assets.

The observations are based on **site inspections**, **operation and maintenance (O&M) records**, **instrumental surveys**, and **interaction with the Concessionaire's O&M team**. The assessment covers the **Hyderabad–Bangalore Section from Km 534+720 to Km 556+840**, located in the State of **Karnataka**.

The findings are derived from multiple data sources — the **Falling Weight Deflectometer (FWD) survey** conducted by *Indian Road Survey & Management Pvt. Ltd. (IRSM)* in **March 2024**, the **Network Survey Vehicle (NSV) survey** carried out in **May 2024**, the **core sampling and material investigation** undertaken by *Eclat Engineering Consultants* in **March 2024**, and the **visual inspections** completed during **May 2025**.

The integration of these datasets — **pavement deflection (FWD)**, **surface condition and roughness (NSV)**, and **material characterization (laboratory testing)** — provides a comprehensive and reliable representation of the current structural and functional condition of the project highway and its associated facilities.

The **project corridor** traverses a mix of **peri-urban and urban zones** north of Bengaluru, with multiple interchanges, grade-separated structures, and a 3.72 km elevated section near Yelahanka. The alignment begins near **Devanahalli Trumpet Interchange (Km 534+720)** and terminates at **Hebbal Interchange (Km 556+840)**, connecting **Kempegowda International Airport**, **Yelahanka**, and **Bengaluru city limits**. The section serves as a **critical urban approach link** on NH-44, carrying high volumes of passenger and freight traffic.

This assessment has been carried out in accordance with the following key references:

- **IRC:115-2014** – Guidelines for Structural Evaluation and Strengthening of Flexible Pavements using FWD Technique
- **IRC:37-2018** – Guidelines for the Design of Flexible Pavements
- **IRC: SP:16-2019** – Code of Practice for Inspection and Maintenance of Highways
- **IRC: SP:35-2015** – Code of Practice for Inspection and Maintenance of Bridges
- **IRC:83-2019 (Part I & II)** – Guidelines for Design and Condition Assessment of Bridge Components
- **IRC: SP:84-2019** – Guidelines for Operation, Maintenance and Tolling of Highway Projects

4.2 Pavement Composition

The pavement has been designed in accordance with IRC:37-2001. Pavement Design has been carried out adopting 23 years design life (as per clause 4.4.2 Schedule D) including the construction period of 3 years with a structural overlay in 0th Year. CMSA for 20 years is 115 and for service road with 10 CMSA has been adopted.

As mentioned in Pavement Design Report, design consultants summarized the calculated design traffic for the next 23 years for BT and Base and subbase layer respectively.

Pavement Configuration for Project is given in **Exhibit 14**

Exhibit 14: Pavement Composition-Main Carriageway

S. No	Design MSA	Adopted Thickness (mm)
Flexible Pavement		
1	**Adopted MSA – 10**	
2	BC in mm	50
3	DBM in mm	135
4	WMM in mm	250
5	GSB in mm	200
Rigid Pavement		
	PQC	**DLC**
1	340	150
Overlay Works		
Based on the BBD Test Result Concessionaire Proposed Overlay of 50 mm thickness with DBM of 50 mm thickness on Main Carriageway & 50 mm BC thickness for Service Road.		

As per Approved Pavement Design Report the service road has been designed for 10 MSA & CBR-10%. The Pavement layer adopted for service road as given below:

Exhibit 15: Pavement Composition -Service Road

S. No	Design MSA	
	Adopted MSA – 10 years	**25**
1	BC in mm	40
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	200

4.3 Assessment of Highway

Knight Frank carried out a detailed review and assessment of the **Devanahalli–Hebbal Section of NH-44 (Old NH-7)**, covering all key highway assets such as **main carriageway, service roads, interchanges, bridges and underpasses, signages, safety barriers, drainage, lighting systems, and roadside facilities**.

The assessment was undertaken through comprehensive **visual inspections** along the entire 22.12 km project corridor, supplemented by a detailed review of **instrumental survey reports (FWD and NSV), O&M documentation, and maintenance records** shared by the Concessionaire and NHAI.

The objective of this exercise was to evaluate the **existing physical condition, functionality, and maintenance needs** of each asset class. Based on the site observations and survey data, a **maintenance strategy** has been developed focusing on **routine, preventive, and periodic maintenance** to ensure long-term serviceability and performance of the project assets.

Further, the **pavement condition** was assessed through a combination of **visual inspection**, **Network Survey Vehicle (NSV) survey (May 2024)**, and **Falling Weight Deflectometer (FWD) testing (March 2024)**, providing a comprehensive understanding of the surface condition, structural strength, and functional performance of the pavement system.

Overall, the review indicates that the **project highway assets are in good and serviceable condition**, with all major components performing satisfactorily. Minor deficiencies observed during inspection are limited to faded markings, vegetation in drains, and localised safety-barrier adjustments, which can be effectively addressed through routine maintenance actions under the O&M plan.

a) Service Road/Slip:

As per **Schedule-B of the Concession Agreement**, service roads have been provided continuously along both sides of the project highway from **Km 534+720 to Km 556+840**, with minor discontinuities near structures and interchanges.

The **total service road length is 22.12 km** (11.06 km on each side), comprising a **10 m wide flexible pavement section (including paved shoulders)**. The service roads provide uninterrupted local connectivity and access to abutting properties.

b) Highway Lighting:

Lighting has been installed at all **interchanges, toll plazas, and urban sections** in accordance with **Schedule-C (Project Facilities)** of the Concession Agreement.

The system includes **2,986 LED street luminaires** along the corridor and **18 high-mast towers** at interchanges and toll plazas. The lighting network is **SCADA-integrated for remote operation and monitoring**, ensuring uniform illumination levels.

c) Drainage:

In accordance with **Clause 2.2 and Schedule-B**, an integrated **surface and subsurface drainage system** has been constructed along the main carriageway and service roads. The system consists of approximately **30.54 km of median drains**, **9.41 km of covered RCC side drains**, and **56.58 km of longitudinal toe drains**, connected to municipal outlets and natural drains.

d) Metal Beam & Wire Rope Safety Barrier:

Crash barriers have been provided in accordance with **Schedule-D (Specifications & Standards)** and **IRC: 119-2015**.

The corridor includes **21.00 km of W-beam barriers**, **12.29 km of Brifen wire-rope barriers**, and **31.59 km of RCC crash barriers** along embankments, medians, and elevated approaches.

e) Bus Bays /Bus Shelters & Truck Lay Byes:

As provided in **Schedule-B and Schedule-C**, **bus bays and truck lay-bys** have been constructed at regular intervals on both sides of the highway.

A total of **28 bus bays** is available, each with paved approaches and adequate signage. **13 truck lay-bys** are provided along the stretch for heavy-vehicle parking.

f) Major/Minor Junctions

The project comprises **28 intersections**, including **13 major** and **15 minor junctions**, developed as per **Schedule-B layout drawings**.

g) Traffic Signs Boards:

The highway is equipped with **regulatory, warning, and Informatory signages** in compliance with **IRC: 67-2012** and **Schedule-D standards**.

The network includes approximately **1,873 roadside signboards**, **15 overhead gantry signs**, and **19 cantilever signs**.

h) Plantation and Landscaping

As specified under **Environmental Management Plan (EMP)** and **Schedule-B**, median and avenue plantations have been developed throughout the corridor.

Around **1.20 lakh saplings** have been planted, with an estimated **75 % survival rate** as per O&M records (May 2025).

i) Median & Median Opening:

The median width varies between **1.5 m and 4.0 m**, constructed with **CC kerbs, crash barriers, and delineators**, as detailed in **Schedule-B and D**.

A total of **46 median openings** exists along the corridor, provided in accordance with NHAI and local-authority requirements.

Each opening is equipped with **markings, blinkers, and signage**; however, a few require **replacement of missing blinkers and faded markings** to meet current safety norms.

KF View:

Overall, the review indicates that the project highway assets are in good and serviceable condition, with all major components functioning satisfactorily. The minor deficiencies observed during inspection—such as faded road markings, vegetation growth in drains, and localized adjustments to safety barriers can be effectively rectified through routine maintenance under the existing O&M plan.

4.4 Assessment of Structures

A visual condition survey of all bridge and culvert structures was carried out jointly by the Knight Frank (KF) team and the Concessionaire, with the objective of identifying and quantifying structural deterioration arising from various factors such as dead load, live load, wind load, and physical or chemical influences exerted by the environment. In addition to examining damages caused by unpredictable natural events or vehicular collisions, the inspection also aimed to detect or monitor the impact of any construction-related imperfections that may affect long-term performance. Such periodic inspections play an important role in enhancing the service life and safety of both existing and newly built bridge structures.

Knight Frank reviewed the structural condition assessment of bridges and culverts along the **Devanahalli–Hebbal Section of NH-44 (Km 534+720 to Km 556+840)** during the Operation & Maintenance phase, based on visual inspection and findings from the Concessionaire's inspection records verified against Schedule B of the Concession Agreement. The assessment encompassed all major and minor bridges, as well as underpasses along both the left-hand and right-hand carriageways of the corridor.

The objective of the inspection was to evaluate the structural integrity, durability, and functional safety of bridge assets through a systematic visual examination, supplemented by limited Non-Destructive Testing (NDT) wherever required. The assessment methodology adhered to the provisions of **IRC: SP:35-2015 (Code of Practice for Inspection and Maintenance of Bridges)** and **IRC: 83-2019 (Part I & II)** pertaining to bridge design and inspection standards.

A total of **26 structures** were covered under this assessment, comprising:

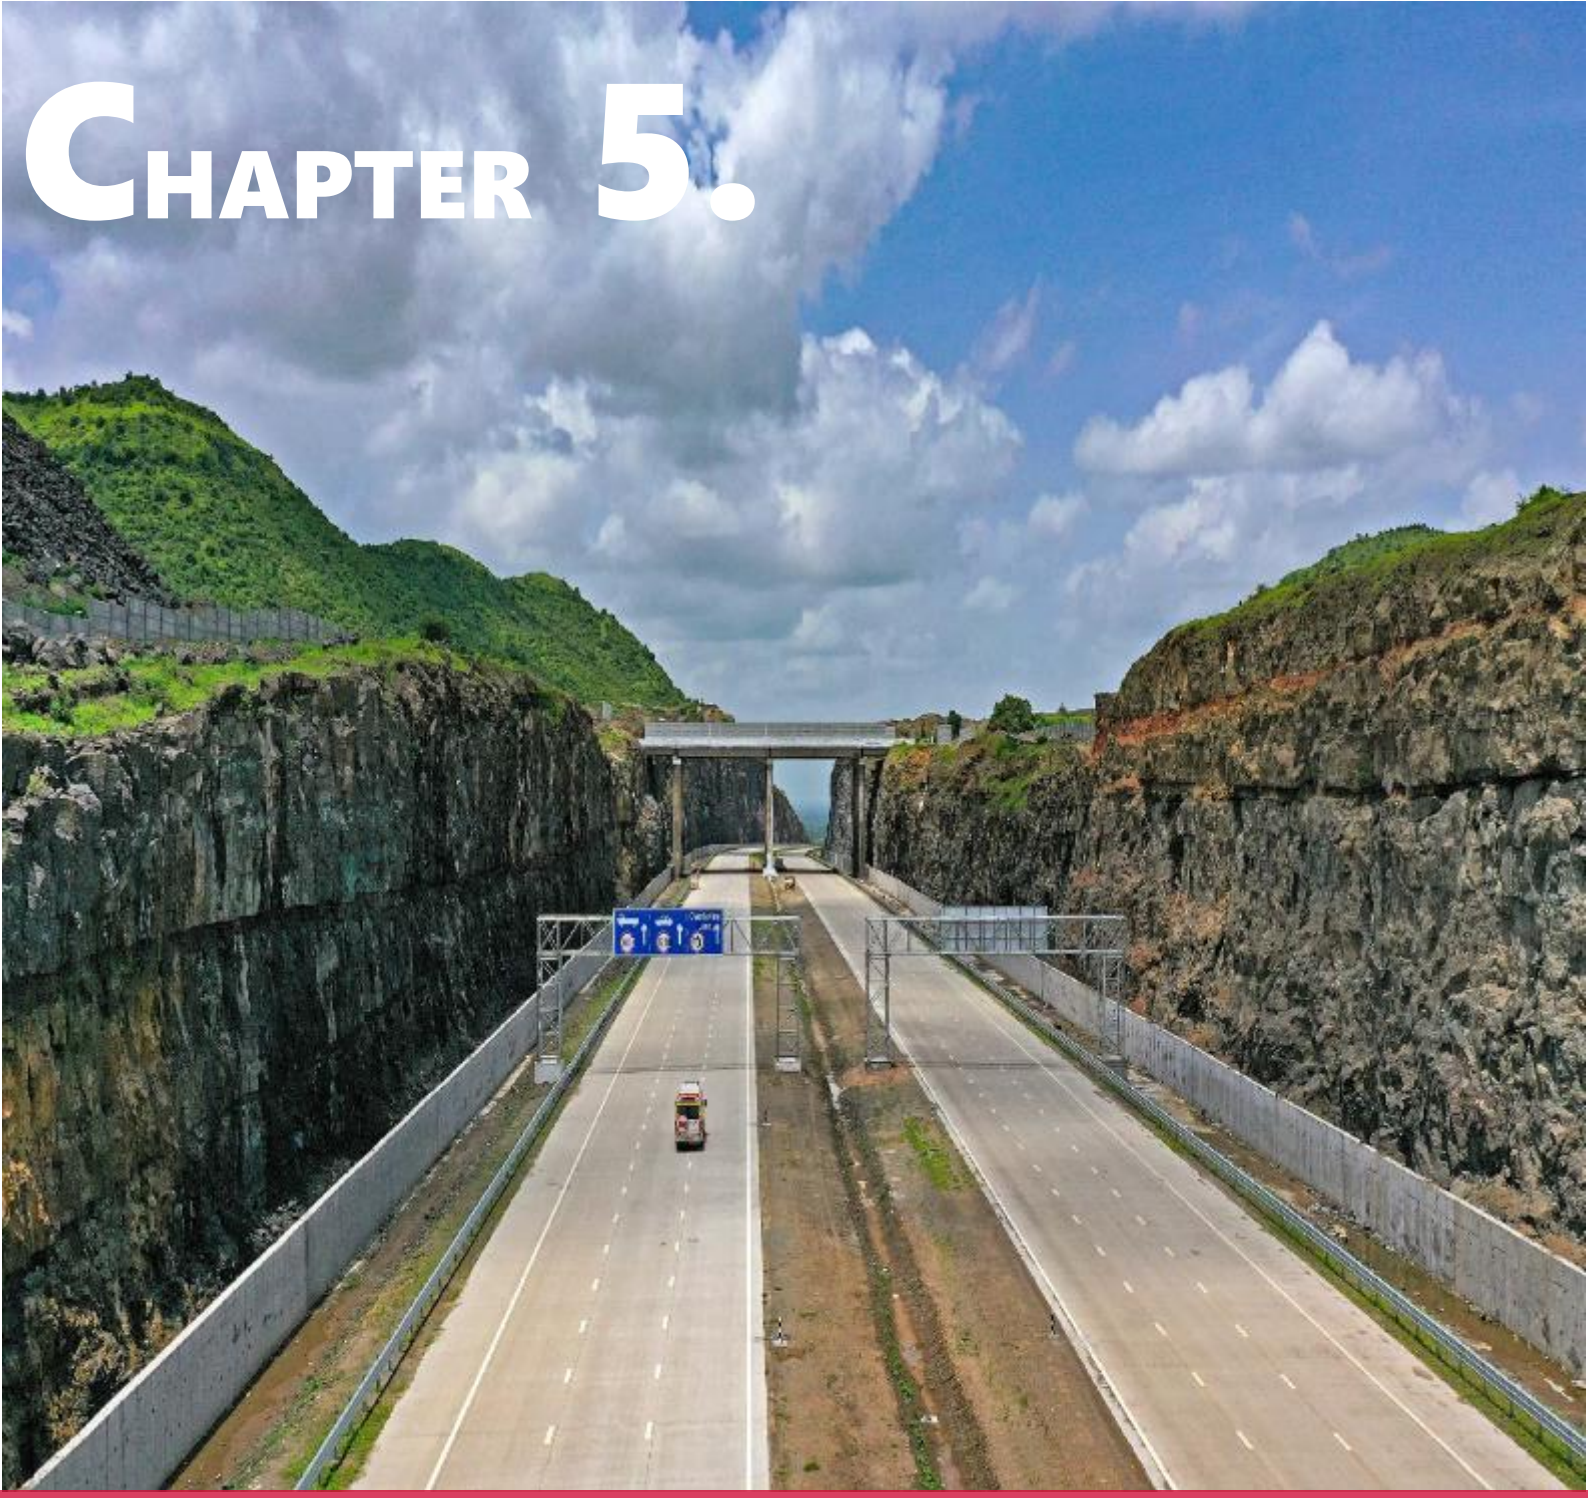
- **0 Major Bridges** – None provided in this section
- **5 Minor Bridges** – RCC Box / RCC T-Beam Type
- **2 Vehicular Underpasses** – RCC Box Type
- **17 Culverts** – RCC Box and RCC Pipe Type (1 m – 3 m span)
- **2 Grade Separators / Interchanges** – Trumpet Interchange (at Km 536+500) and Hebbal Interchange (at Km 556+500)
- **1 Elevated Section (3.72 km)** – PSC Segmental Viaduct with 127 piers and 1,483 segments
- **1 Railway Over Bridge (ROB)** – Yelahanka ROB (1 × 21 m PSC T-Beam Bridge)
- **1 Railway Underpass (RUB)** – Yelahanka Bypass RUB (2 × 10 m × 5 m RCC Box)

Most bridges are of **RCC Box, RCC T-Beam, or PSC Segmental Viaduct** construction, supported by **reinforced concrete abutments and piers with open foundations and stone-pitched protection works**. The **superstructure and substructure elements were generally found to be structurally sound and stable**, with **no significant distress or deformation observed** during inspection.

KF View:

Overall, the inspection findings indicate that the bridge and structure assets are in sound structural condition, with no major distress or deterioration observed in the primary load-bearing components. Minor issues such as localized surface cracks, drainage outlet blockages, and faded markings were noted, which can be addressed through routine maintenance and periodic cleaning under the ongoing O&M plan. The observed condition suggests that the structures are structurally stable and functionally serviceable, ensuring continued safe operation of the project highway.

Chapter 5.



Review of Pavement Condition & Design

Chapter 5. REVIEW OF PAVEMENT CONDITION & DESIGN

5.1 Pavement Condition

The life of the Pavement has a co-relation with both its structural as well as Functional Condition. Inspecting and tracking of pavement condition, scheduling maintenance, and treating distress can have serious ramifications impinging on safety of road users and enhancing functional efficiency in end use of the Facility. It is therefore essential to carry out the assessment of the condition of the pavement on a given date taking into cognizance a variety of data to arrive at well-considered decisions and drawing up of the maintenance strategy and taking appropriate course of action to apply funds and resources in optimizing the desired levels of operations on the road assets. Condition data can include factors like roughness, specific distresses, friction, and overall structural health.

Once measurements of road condition are available, they are interpreted in such a way that allows the decision-making process to occur in a logical fashion. This might involve converting multiple physical parameters into a single index, allowing different sections of a road network to be directly compared against one another etc.

Pavement performance under prevailing environmental conditions is crucial as it has a direct bearing on the economic returns from the project development. While an under-designed pavement will fail prematurely, imposing undesirable Cost Over runs on the Project. It is therefore necessary to ensure the pavement layer thicknesses; configurations and materials are adequately designed and require minimal maintenance under the anticipated traffic loading throughout the life cycle of the project.

To achieve this objective and thereby to predict the performance of any pavement structure, it is necessary to analyze material characteristics, traffic condition, present physical condition of the pavement layers, local environment, and its impacts.

Due to the variety of variables involved, it is essential to determine the exact level of pavement performance through the project life. But, based on the assessment of present condition of pavement, analysis of available survey data, and estimations regarding the pavement life, future maintenance requirements can be estimated.

This part of the report deals with the details of the series of field investigations and analysis carried out to find out the present condition of pavement as well as to determine the future maintenance requirements for sound pavement performance throughout the project life.

5.2 Objectives

- Collect data regarding physical conditions of pavement.
- Prepare a plan for rectification as required for damaged/poor sections in consonance with requirements of the CA.
- Project maintenance requirement in physical and monetary terms over the life cycle of the project road.

5.3 Review of Pavement Design

A. Design Period

As per the **IRC:SP:84-2014** and **IRC:37-2012** guidelines, the **pavement has been designed for 23 years**, including a **construction period of 3 years**, with a **structural overlay at Year 0** (commissioning), the **Concessionaire—M/s Navayuga Devanahalli Tollway Pvt. Ltd. (NDTPL)**—adopted a **20-year design life** for functional performance flexible pavement to ensure durability and minimize overlay frequency. The design provides for full structural strength over the concession period and aligns with the performance standards outlined in **Schedule–K of the Concession Agreement**.

B. Design CBR

As per the **Pavement Design Report prepared by M/s Sheladia Associates Inc. in May 2011**, a **soaked CBR value of 10%** was adopted for the design of the pavement for the **Devanahalli–Hebbal Section of NH-7 (NH-44)**. This value was determined from laboratory tests conducted on borrow area soils available along the project corridor and was used in accordance with **IRC:37-2001** guidelines. The report specifies that any in-situ subgrade with a CBR lower than 10% must be replaced with approved borrow soil compacted to 97% of MDD (Heavy Compaction). The adopted CBR formed the basis for designing a total flexible pavement thickness of **635 mm** (BC 50 mm, DBM 135 mm, WMM 250 mm, and GSB 200 mm) adequate for a design traffic of **115 MSA** over a **23-year design life**.

C. Design MSA

As per the Pavement Design Report prepared by M/s Sheladia Associates Inc. (May 2011), the pavement for the Devanahalli–Hebbal Section of NH-7 (NH-44) was designed for a cumulative traffic loading of 115 (MSA) over a 23-year design life (including 3 years of construction and 20 years of operation). The design traffic was derived using classified traffic counts, axle load data, and Vehicle Damage Factor (VDF) in accordance with IRC:37-2001. For the main carriageway, a design MSA of

115 was adopted, while 10 MSA was considered for the service roads, corresponding to their lower traffic exposure. These MSA values governed the determination of pavement layer thicknesses and material specifications to ensure adequate structural performance throughout the concession period.

Exhibit 16: Details of Traffic MSA

Section	Design Traffic (MSA)	Design Life (Years)
Main Carriageway	115	23 (3 construction + 20 operation)
Service Roads	10	10

D. Pavement Crust of Main Carriageway

The adopted pavement crust for the main six-lane divided carriageway (Km 534.720 – Km 556.840) meets the requirements of IRC:37-2012 and MoRTH 5th Revision.

The crust thicknesses are as follows:

Exhibit 17 Pavement Design Composition of Main Carriageway

S. No	Design MSA	As built drawings
Flexible Pavement		
Adopted MSA - 115 (20-year +3-year Construction Period)		
1	BC in mm	50
2	DBM in mm	135
3	WMM in mm	250
4	GSB in mm	200
Rigid Pavement		
Designed for >100 MSA (30 years)		
	PQC	**DLC**
1	300	150
Overlay Works		

The **same crust thickness** has been provided in both directions (Bengaluru-bound and Airport-bound), ensuring uniformity of performance despite minor variations in directional traffic volume.

E. For Service Road/Slip Road

The service roads along both carriageways have been designed for 10 MSA traffic and 10% subgrade CBR, suitable for local and low-speed access. The Pavement layer adopted for service road as given below:

Exhibit 18: Pavement Composition -Service Road

S. No	Design MSA	
Adopted MSA – 10 years (10- year life)		
Adopted MSA – 10 (10-year life)		
1	BC in mm	40
2	DBM in mm	50
3	WMM in mm	250
4	GSB in mm	200

5.4 Pavement Evaluation by Falling Weight Deflectometer (FWD) Technique

FWD surveys were carried out to determine the present condition of pavement as well as finding out the future maintenance requirements.

a) Introduction:

The Falling Weight Deflectometer (FWD) survey was conducted in 2024 for the **Devanahalli Hebbal section of NH-7**, covering chainage **Km 534+720 to Km 556+840**. The primary objective of this exercise was to evaluate the **structural strength of the in-service pavement**, determine the **moduli of individual pavement layers**, and estimate the **remaining life of the pavement** with respect to **fatigue and rutting criteria**. This evaluation was carried out as per the provisions of **IRC:115-2014** "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer". The survey results form a critical input for deciding the **overlay requirements** and **long-term maintenance strategy** of the project highway.

b) Project Road

The **Devanahalli–Hebbal section of NH-7** forms a crucial part of the north–south corridor connecting Kempegowda International Airport and the city of Bengaluru, serving as a major approach route for regional and urban traffic. The project alignment comprises three distinct segments:

1. **Section I: Devanahalli to Yelahanka (Km 534+720 to Km 543+500) –** Semi-urban stretch carrying significant airport-bound and mixed local traffic.
2. **Section II: Yelahanka to Hebbal (Km 543+500 to Km 556+840)** – Urban corridor with dense traffic flow and multiple interchanges and access points.
3. **Section III: Service Roads and Ramps** – Auxiliary lanes facilitating access to adjoining developments and urban areas.

The section passes through predominantly plain terrain, with localized undulations and high traffic intensity influenced by urban expansion, leading to continuous stress on pavement layers and impacting overall performance.

c) Falling Weight Deflectometer

The FWD survey was carried out using **SWECO PRI 2100 Falling Weight Deflectometer (FWD)** operated by **Indian Road Survey & Management Pvt. Ltd. (IRSM)** with the following parameters: **Load Applied:** Equivalent to **40 kN impulse load (±10%)**, representing a **standard 80 kN axle load**.

- **Deflection Measurement:** Recorded at **nine radial offsets** – 0, 200, 300, 450, 600, 900, 1200, 1500, and 1800 mm – from the load center to capture the complete deflection bowl.
- **Survey Spacing:** Conducted at **regular intervals (approximately 250–500 m)** along both **main carriageways and service roads** between **Km 534+720 and Km 556+840**.
- **Temperature Correction:** All **bituminous layer moduli** corrected to a reference temperature of **35°C** using procedures outlined in **IRC:115-2014**.
- **Seasonal Correction:** Since the survey was conducted in **March 2024 (summer season)**, corresponding **seasonal correction factors** were applied to **granular and subgrade moduli** as per IRC:115-2014.
- **Back-calculation Software: KGPBACK** (Genetic Algorithm-based) used for determining layer moduli; **IITPAVE** used for analyzing **fatigue and rutting performance** and evaluating **remaining pavement life**.

5.4.1.1 FWD Analysis

The FWD data collected for the **Devanahalli–Hebbal section of NH-7** was analyzed in accordance with the procedures outlined in **IRC:115-2014** for *"Structural Evaluation and Strengthening of Flexible*

Road Pavements Using Falling Weight Deflectometer". The analysis considered the indicative modulus ranges for in-service pavements as suggested in the code.

Exhibit 19: Module Range

Description	Range
Subgrade Modulus	5 CBR to 20 CBR
Granular Layer Modulus	100 MPa to 500 MPa
Bituminous Layers –Thick without distress	750 MPa to 3000 MPa
Bituminous Layers in distressed condition	400 MPa to 1500 MPa

The above ranges serve as reference values; however, final modulus ranges were refined based on **pavement age, surface condition, traffic intensity, and performance observations** made during the survey. Considering the field condition of the Devanahalli–Hebbal corridor, the following working ranges were adopted for analysis:

Exhibit 20: Module Range

Layer	Bituminous Layers	Granular Layer Modulus	Subgrade
Modulus Value (MPa)	750-3000	100-500	50-75

Bituminous layer moduli obtained through back-calculation using **KGPBACK** were corrected to a **standard temperature of 35 °C**, while **granular and subgrade moduli** were adjusted for **seasonal effects**, considering that the FWD survey was performed in **March 2024 (summer season)**. Accordingly, **summer correction factors** were applied as per **Equations 7–9 of IRC:115-2014**. Subsequently, the **remaining life** of the pavement and **overlay requirements** (considering **VG-40 mix** for design traffic exceeding 20 MSA) were evaluated in accordance with **IRC:115- 2014** and **IRC:37-2018**. The results, including temperature- and season-corrected modulus values, fatigue, and rutting life estimates, are summarized in the subsequent tables.

The FWD survey results for the **Devanahalli–Hebbal corridor** demonstrate that the pavement is structurally sound and capable of sustaining present and near-term traffic loads. Most sections exhibit **fatigue and rutting lives well above the design MSA**, confirming that the pavement remains in good condition with adequate residual life.

Localized variations in deflection and modulus values, mainly near **service roads and interchange areas**, indicate limited zones of reduced stiffness requiring **targeted overlay or strengthening.**

Overall, the evaluation supports that **selective maintenance and rehabilitation**, rather than full-length overlaying, is the most **cost-effective strategy** for ensuring long-term serviceability of this corridor.

5.5 Pavement Evaluation by Network Survey Vehicle

5.5.1 Introduction:

The **Network Survey Vehicle (NSV) survey** was conducted in **March 2024** for the **Devanahalli–Hebbal section of NH-7**, covering chainage **Km 534+720 to Km 556+840**. This activity was undertaken as part of the **Independent Engineer's Services** during the O&M period, in accordance with the provisions of the **Concession Agreement** and relevant guidelines of **IRC: SP:16–2019** and **MoRTH Circular No. 11041/218/2007-Admn.**

The primary objective of the survey was to assess the **functional condition of the pavement and roadside assets** through automated measurements of **roughness, rutting, texture depth, and visual distress parameters**, along with capturing **road inventory, geometry, and high-resolution digital imagery**. The survey covered both **main carriageways and service roads** of the project stretch.

5.5.2 Project Corridor

The inspected section forms a vital part of the **North–South Corridor**, connecting **Kempegowda International Airport at Devanahalli** with **Hebbal Junction** in Bengaluru city. The **Devanahalli–Hebbal stretch of NH-7**, from **Km 534+720 to Km 556+840**, comprises a **6-lane divided carriageway with paved shoulders** and **service roads** on both sides for partial lengths. The corridor serves as a critical urban and regional link, carrying high volumes of **airport-bound, commuter, and commercial traffic**.

The alignment traverses **predominantly plain terrain** interspersed with **flyovers, vehicular underpasses (VUPs), pedestrian underpasses (PUPs), culverts, and grade-separated junctions**. The route also includes **toll plazas, slip roads, and multiple intersections** catering to mixed urban land use. The section experiences **intense traffic flow**, periodic congestion, and localized surface wear due to frequent braking and lane changes.

Being a **high-speed access-controlled corridor** integrated with urban infrastructure and metro development works, the NSV survey was essential for systematically evaluating **pavement surface condition, functional performance, and asset inventory** under operational conditions.

5.5.3 Instrumentation & Methodology

Instrument: *Hawkeye 2000 Professional Network Survey Vehicle (NSV)*, a fully integrated, vehicle-mounted system equipped with a **multi-laser digital profiler**, **high-resolution imaging cameras**, **Differential GPS (DGPS)**, and a **Gipsi-Trac geometry unit** for capturing pavement and asset data in real time.

Working Range: The system allows **simultaneous collection of longitudinal and transverse profiles**, **texture depth**, **rut depth**, **roughness**, and **pavement imagery** at highway speeds up to **100 km/h**, enabling safe, non-intrusive survey across the entire project corridor.

Supporting Equipment: Onboard **Digital Laser Profiler (11 lasers)**, **distance measuring instrument (DMI)**, **inertial accelerometers**, and **panoramic imaging system** with four synchronized cameras for lane-wise pavement and roadside asset coverage.

Inspection Standard: Data collection and analysis were carried out in accordance with **IRC: SP:16-2019 (Guidelines for Surface Evenness of Highway Pavements)**, **ASTM E950**, and **AASHTO PP-37**, as adopted by **MoRTH** for NSV-based condition monitoring.

Procedure:

- Automated measurement of **roughness (IRI)**, **rutting**, and **macro-texture** along each lane of both carriageways and service roads.
- Video-based **visual condition mapping** of pavement distresses such as cracking, potholes, patching, and raveling.
- Simultaneous **DGPS referencing** spatial accuracy and geo-tagging of all image data.
- Data validation, cross-checking, and **post-processing through Hawkeye Processing Toolkit** to ensure consistency and reliability of recorded parameters.
- All observations and results were compiled for **ride quality evaluation, asset inventory updating, and maintenance prioritization** of the Devanahalli–Hebbal section.

5.5.4 NSV Results and Analysis

The **Network Survey Vehicle (NSV)** survey for the **Devanahalli–Hebbal section of NH-7 (Km 534+720 – Km 556+840)** was conducted using IRSM's *Hawkeye 2000 Professional System*. The survey evaluated the pavement's functional condition by measuring **roughness,**

rutting, surface texture, and visible distresses. Analysis was carried out in accordance with **IRC: SP:16-2019**, **ASTM E950**, and **AASHTO PP-37** guidelines.

5.5.5 Roughness Summary – Main Carriageway (MCW)

The International Roughness Index (IRI) values were analyzed for both directions and all lanes of the main carriageway. The results show that almost the entire section falls within the *good* category (< 2.2 m/km), indicating excellent ride quality with only isolated roughness observed near interchange and ramp areas. For detail refer below Exhibit for Roughness Summary of MCW

Exhibit 22 Roughness Summary of MCW

Sl. No.	Roughness (mm/km)	Length (m) – Devanahalli → Hebbal			Length (m) – Hebbal → Devanahalli			Percentage – Devanahalli → Hebbal			Percentage – Hebbal → Devanahalli		
		Inner Lane	Centre Lane	Outer Lane	Inner Lane	Centre Lane	Outer Lane	Inner Lane	Centre Lane	Outer Lane	Inner Lane	Centre Lane	Outer Lane
1	< 2200	21290	21350	21290	20280	21350	21280	96%	100%	96%	92%	100%	96%
2	2200 – 2400	0	0	0	1000	0	0	0%	0%	0%	4%	0%	0%
3	> 2400	840	0	840	850	0	850	4%	0%	4%	4%	0%	4%

5.5.6 Rutting Summary – Main Carriageway (MCW)

Rutting depth was analyzed to assess deformation under repetitive traffic loading. The entire mainline registered rut depths below 10 mm, confirming a sound structural condition and uniform load distribution with negligible plastic flow. *(Ref.: Table 2 – IRSM Report p. 43)*

Exhibit 23 Rutting Summary of Main Carriageway (MCW)

Sl. No.	Rutting (mm)	Length (m) – Devanahalli → Hebbal			Length (m) – Hebbal → Devanahalli			Percentage – Devanahalli → Hebbal			Percentage – Hebbal → Devanahalli		
		Inner Lane	Centre Lane	Outer Lane	Inner Lane	Centre Lane	Outer Lane	Inner Lane	Centre Lane	Outer Lane	Inner Lane	Centre Lane	Outer Lane

2	> 10	0	60	0	0	0	850	0%	0.3%	0%	0%	0%	4%

5.5.7 Pavement Distress Quantification – Main Carriageway

Visual distress mapping captured through synchronized high-resolution cameras identified localized cracking, ravelling, and patching. The table below quantifies the percentage of area affected by each distress type and severity across lanes of both carriageways. *(Ref.: Tables 3 & 4 – IRSM Report pp. 50–53)*

Exhibit 24 Pavement Distress Quantification (%) – Main Carriageway

Distress and Severity	Unit	Distress Quantity – LHS			Distress Quantity – RHS		
		Inner	Centre	Outer	Inner	Centre	Outer
Longitudinal Cracks							
Low (< 3 mm)	%	0	0	0	0	0	0
Medium (3–6 mm)	%	3.63	3.33	2.75	2.40	4.80	3.00
High (> 6 mm)	%	3.00	0	0	0	0	0

Total	%	15	0	0	0	0	0

5.5.8 Roughness Summary – Service Roads

Service-road surface profiles exhibit higher variability due to braking, turning, and local access traffic. Still, the majority of sections maintain roughness within acceptable limits, with only 10 % of the length exceeding 2.4 m/km. *(Ref.: Table 5 – IRSM Report p. 54)*

Exhibit 25 Roughness Summary of Service Roads

Sl. No.	Roughness (mm/km)	Length (m) – *Devanahalli → Hebbal*		Length (m) – *Hebbal → Devanahalli*		Percentage – Devanahalli → Hebbal		Percentage – Hebbal → Devanahalli	
		Inner Lane	Outer Lane	Inner Lane	Outer Lane	Inner Lane	Outer Lane	Inner Lane	Outer Lane
1	< 2000	4290	4000	14460	11820	24%	21%	74%	60%
2	2000 – 2400	3620	6860	3110	5770	20%	35%	16%	30%
3	> 2400	10020	8490	2000	2000	56%	44%	10%	10%

5.5.9 Rutting Summary – Service Roads

Rutting on service roads was within safe limits, with the majority of test points recording rut depths below 10 mm. Slight deformation in isolated stretches near intersections is attributed to frequent acceleration and braking. *(Ref.: Table 6 – IRSM Report p. 59)*

Exhibit 26 Rutting Summary of Service Roads

Sl. No.	Rutting (mm)	Length (m) – *Devanahalli → Hebbal*		Length (m) – *Hebbal → Devanahalli*		Percentage – Devanahalli → Hebbal		Percentage – Hebbal → Devanahalli

2	> 10	1700	0	0	0	9%	0%	0%	0%

5.5.10 Pavement Distress Quantification – Service Roads

Distress mapping on the service roads showed moderate levels of cracking and patching, with some sections affected by ravelling and potholes, particularly near entry/exit ramps. Overall, the surface remains serviceable with routine maintenance. *(Ref.: Table 7 – IRSM Report pp. 64–65)*

Summary Interpretation

- ***NSV data indicate that the Devanahalli–Hebbal corridor remains in Good to Satisfactory functional condition.***
- ***Main carriageway sections exhibit excellent ride quality, with negligible rutting and only minor localized surface cracking.***
- ***Service roads show slightly higher roughness and minor distress, which is typical for urban access lanes. Overall, the pavement is structurally sound and serviceable, requiring only localized surface maintenance to ensure continued optimal performance and durability.***

5.6 Material Investigation

5.6.1 Introduction

The **Material Investigation Survey** was carried out in **March 2024** for the **Devanahalli–Hebbal section of NH-7**, covering chainage **Km 534+720 to Km 556+840** in the **state of Karnataka**. This investigation was undertaken as part of the **Independent Engineer's routine O&M monitoring**, in accordance with the provisions of the **Concession Agreement** and relevant **MoRTH and IRC specifications** for pavement evaluation.

The primary objective of the study was to determine the **engineering characteristics of existing pavement layers**, including **bituminous, granular, and subgrade materials**, through a combination of field sampling and laboratory testing. The investigation aimed to establish the current material quality, gradation conformity, compaction status, and strength parameters (CBR and MDD) to assess the adequacy of the existing crust and subgrade for future performance and overlay planning.

The work was executed by ECLAT Engineering Consultants, Hyderabad, under the direction of Cube Highways and Transport Assets Advisors Private Limited. Field investigations were carried out between 22 March 2024 and 23 March 2024, involving subgrade test pits, granular layer sampling, and bituminous core extraction at selected locations along both carriageways. Testing and analysis were performed in accordance with IS 2720 series, IS 2386, and MoRTH (5th Revision) guidelines.

5.6.2 Project Corridor

The investigated section forms a vital part of the **North–South Corridor**, connecting **Kempegowda International Airport at Devanahalli** with **Hebbal Junction** in **Bengaluru city**. The **Devanahalli–Hebbal stretch of NH-7 (Km 534+720 to Km 556+840)** comprises a **six-lane divided carriageway with paved shoulders** and **service roads** at major access locations.

The alignment passes through **plain terrain** with **flyovers, underpasses, culverts, and junctions**, catering to heavy **airport-bound and commuter traffic**. The pavement is **flexible**, consisting of **bituminous surfacing over granular and subgrade layers**. Material investigations were undertaken to evaluate **layer composition, gradation, and strength characteristics** for assessing the existing pavement condition and maintenance planning.

5.6.3 Field Investigation and Testing Methodology

The **field investigation** was carried out by **ECLAT Engineering Consultants** between **22 and 23 March 2024** to assess the condition and quality of the **existing pavement layers**. The study involved **subgrade test pits**, **granular layer sampling**, and **bituminous core extraction** at selected representative locations (**Km 537+300 RHS** and **Km 550+700 LHS**).

All sampling and testing were conducted as per **MoRTH (5th Revision)** and **relevant IS standards**, including **IS 2720**, **IS 2386**, and **ASTM D2172**. Tests included determination of **in-situ density**, **moisture content**, **CBR**, **gradation**, **Atterberg limits**, **specific gravity**, **water absorption**, and **aggregate impact value**. Bituminous cores were tested for **binder content**, **gradation**, and **bulk specific gravity**.

The results obtained from field and laboratory testing were used to evaluate the **strength, compaction, and structural adequacy** of the existing pavement materials for the **Devanahalli–Hebbal corridor**.

5.6.4 Material Investigation – Tests and Results

The material investigation program for the Devanahalli–Hebbal section of NH-7 (Km 534+720 to Km 556+840) was undertaken to evaluate the engineering properties of the existing pavement layers, including subgrade soil, granular base/sub-base, and bituminous surfacing materials. The field and laboratory investigations were carried out by ECLAT Engineering Consultants during March 2024 in accordance with MoRTH (5th Revision) and relevant IS codes.

Representative samples were collected through test pits and core cutting at selected locations along both carriageways. The testing program covered classification, strength, compaction, gradation, and binder properties, providing essential input for assessing the structural adequacy and performance of the existing pavement. The detailed test results for each layer are presented in Exhibits below.

A. Subgrade Test Results

Subgrade investigations were carried out to determine the **strength and classification** of in-situ soils along the Devanahalli–Hebbal section of NH-7. Test pits were excavated at **Km 537+300 (RHS)** and **Km 550+700 (LHS)**, and samples were tested for **moisture content, density, CBR, and plasticity characteristics** in accordance with **IS 2720 (Part 2, 4, 5, 8, 16, 29, 40)** and **IS 1498**.

The results confirm that the subgrade soils are **predominantly sandy–clayey** with moderate plasticity and satisfactory strength parameters, suitable for flexible pavement support.

Exhibit 28 Test Results of Subgrade

S. No.	Existing Chainage (Km.)	Side (LHS/RHS)	Soil Classification (as per IS:1498)	Gravel Content (%)	Sand Content (%)	Clay & Silt Content (%)	Atterberg Limits [IS:2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		Field Density	4-Day Soaked CBR at MDD (%)	Free Swell Index (%)	Degree of Compaction (%)
							LL (%)	PL (%)	PI	MDD (g/cc)	OMC (%)	FDD (g/cc)	FMC (%)		
1	537+300	RHS	SC	1.6	49.2	49.2	37	22	15	1.91	12.6	1.71	7.5	9.7	30.0
2	550+700	LHS	SM-SC	6.1	49.2	44.7	26	19	7	1.96	11.1	1.94	6.5	11.9	11.1

B. Granular Test Results

Granular materials were sampled from the **WMM and GSB layers** at test pits corresponding to **Km 537+300 (RHS)** and **Km 550+700 (LHS)**. Samples were tested for **gradation, Atterberg limits, specific gravity, water absorption, and aggregate impact value (AIV)** as per **IS 2386 (Part 3 & 4)**, **IS 2720**, and **MoRTH Table 400-1 / 400-13**.

The results confirm that the existing materials generally **conform to MoRTH graduation requirements**, with all samples showing **acceptable plasticity, impact value, and absorption characteristics**.

Exhibit 29 Test Results of Granular Layers

S. No.	Chainage (Km)	Side (LHS/RHS)	Type of Sample	Gradation Conformation (as per MoRTH 5th Rev.)	Atterberg Limits			Specific Gravity	Water Absorption (%)	Aggregate Impact Value (%)
					LL (%)	PL (%)	PI			
1	537+300	RHS	WMM	4.75 mm IS sieve material coarser side in WMM gradation	22	NP	NP	2.634	0.18	25.0
2	537+300	RHS	GSB	0.425 mm IS sieve material coarser side in GSB Grade-I	25	NP	NP	2.612	0.57	25.1
3	550+700	LHS	WMM	Confirming to WMM gradation	21	NP	NP	2.623	0.26	27.3
4	550+700	LHS	GSB	0.425 mm IS sieve material coarser side in GSB Grade-I & 4.75 mm IS sieve material finer side in GSB Grade-III & IV	23	NP	NP	2.625	0.38	28.9

C. Bituminous Test Results

Bituminous cores were extracted at **Km 536+300 (LHS)**, **Km 539+400 (RHS)**, **Km 545+500 (LHS)**, and **Km 548+100 (RHS)** using a **10 cm core cutter**. Tests were conducted on both **BC and DBM layers** for **bitumen content, specific gravity, and gradation conformance** as per **MoRTH Tables 500-10 & 500-17** and **ASTM D2172**.

The results indicate that all mixes fall within acceptable MoRTH gradation bands, with **binder content ranging from 4.25–5.36%** and **bulk specific gravity between 2.29–2.41**.

Exhibit 30 Test Results of Bituminous Layers

S. No.	Location (Km)	Side (LHS/RHS)	Lane	Type of Material Tested	Source of Sample	Bitumen Content (%)	Bulk Specific Gravity	Gradation Conforming to MoRTH (5th Rev.)

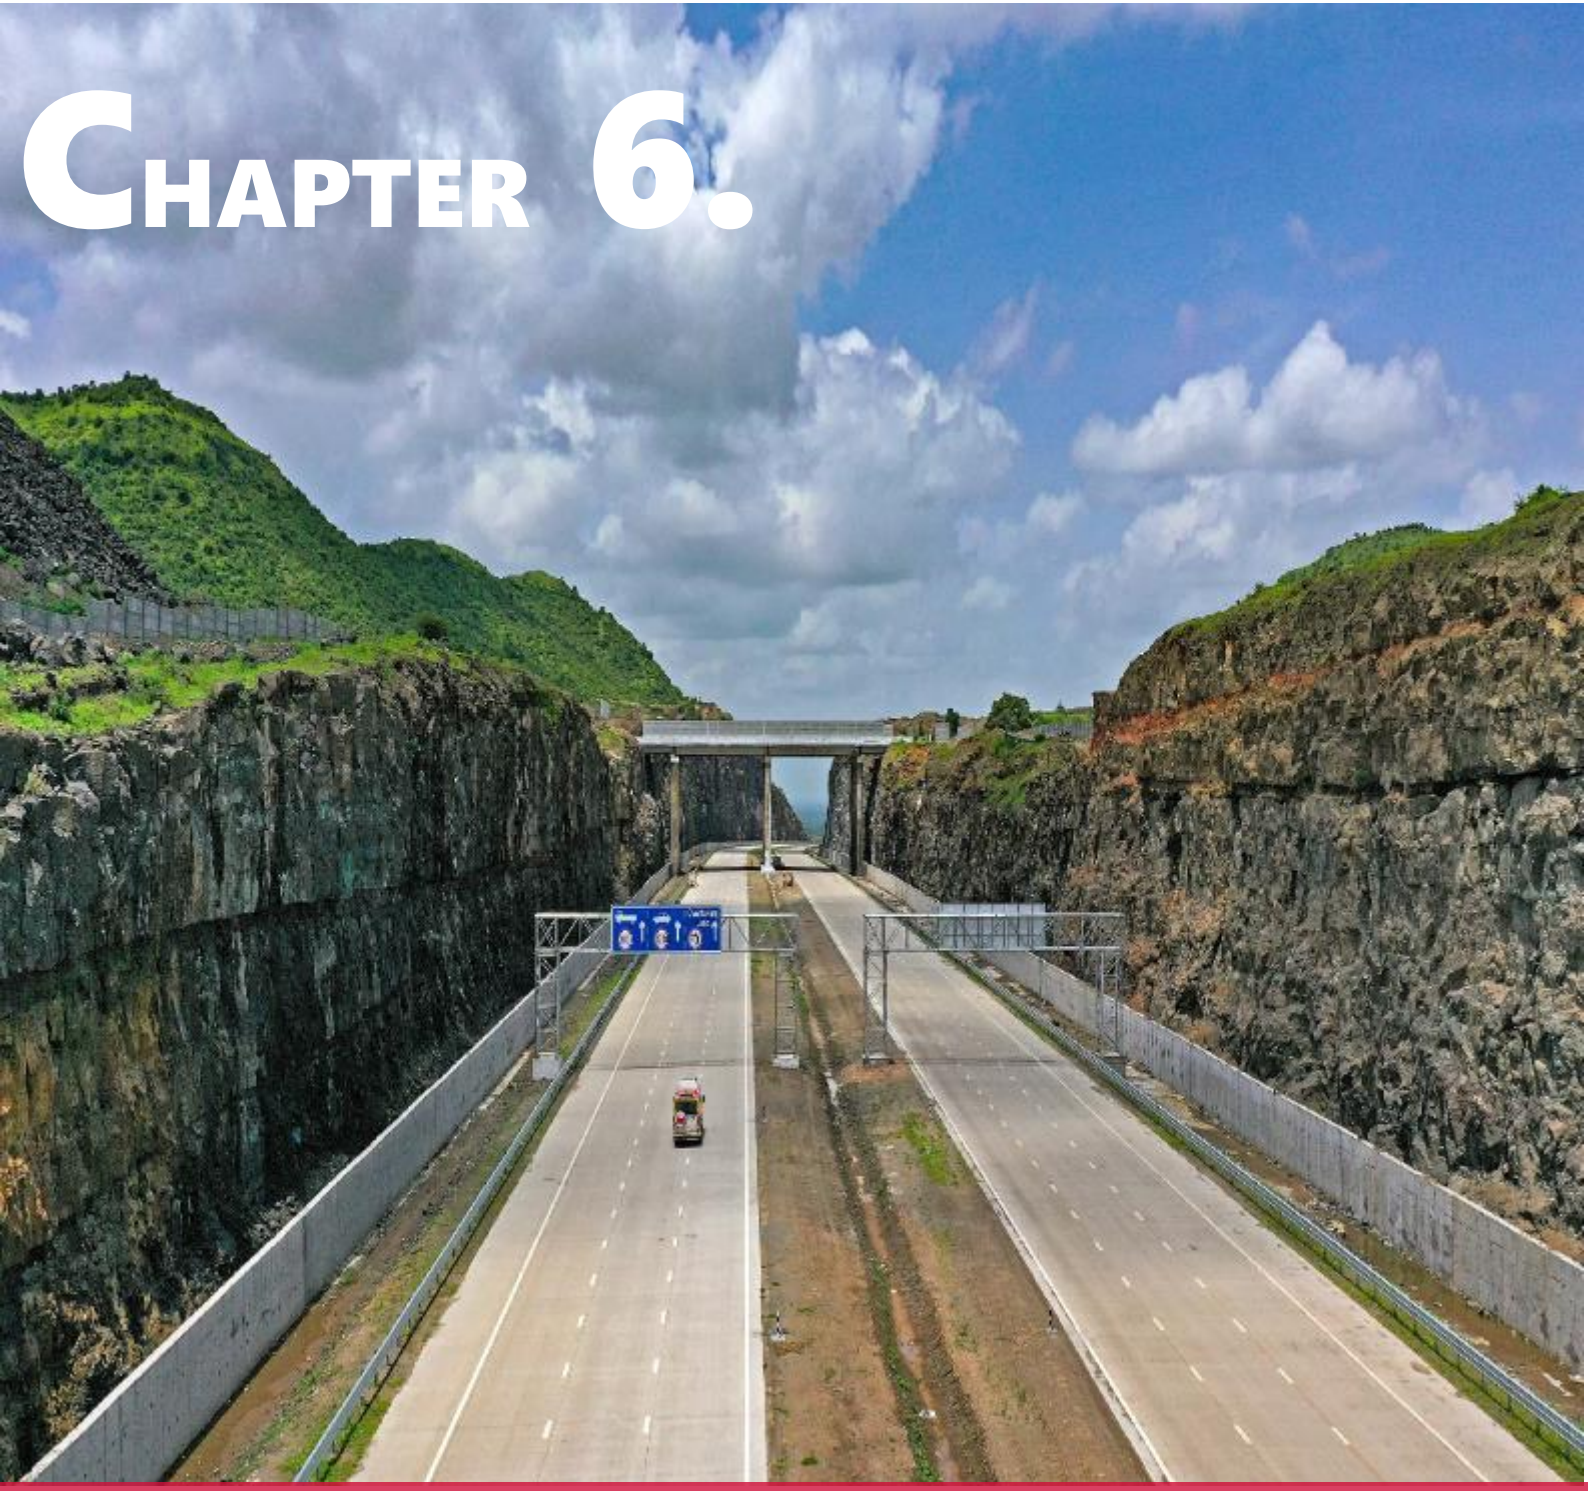
7	548+100	RHS	Inner	BC	Core	5.36	2.33	0.300 mm IS sieve material coarser side in BC Grade-II
8	548+100	RHS	Inner	DBM	Core	4.25	2.35	4.75 mm, 2.36 mm IS sieves material coarser side in DBM Grade-II

5.7 Major Maintenance of Pavement

All pavements require maintenance. Stresses from traffic, weather, and moisture change effects on the Surface. Regardless of the reason, without maintenance, pavement deteriorates at a fast pace. An asphalt pavement is an essential asset which must always be maintained. Allowing the pavement to have minor problems will grow into major ones. No road user likes to hit potholes or step into a puddle of water. Sun, rain, and wind age the pavement. Friction from tires rolling wears away the asphalt glues and line stripping. Sunlight oxidizes and draws all the essential oils which results in the pavement breaking away. Water enters the lower layers of the pavement through cracks damaging the foundation which leads to potholes and failure.

Major Maintenance details discussed at **Chapter 6**

Chapter 6.



Cost Estimate

Chapter 6. COST ESTIMATE

Based on the assessment carried out in above chapters, various costs were worked out by Knight Frank. The costs are divided into following categories.

- Routine Maintenance
- Major Maintenance Cost
- Periodic Replacement of TMS/ATMS system

Costs for different category are detailed out in subsequent sections along with the assumptions considered for rate and Escalation.

6.1 Assumptions

The cost estimates are based on the following assumptions:

Following assumptions are considered for unit rates of various items while estimating the cost –

1. Unit rates of different items (BC, DBM, Concrete, Road markings etc.) are calculated as per the MoRTH Standard data book. The input rates for MoRTH standard data book were adopted as below.
   a) **Manpower and labour** – As per applicable minimum wages published by Ministry of Labour & Employment, Government of India
   b) **Bitumen** – Bitumen rates are sourced from CPCL Chennai Refinery. The distance (to- from) from the midpoint of Project Highway is considered as 350 kms. VG-30 and VG-40 grades of bitumen are considered in our cost estimate.

☛ ***Concessionaire has long term contract with IOCL for the procurement of bitumen and related products. Same discounts are considered on bitumen procurement for this analysis. Furthermore, we also understand that bitumen prices are primarily dependent on crude oil price and market demand and hence are likely to be very volatile and difficult to predict at this stage.***

Therefore, Bitumen prices are considered as per the client's forecast. Current published of bitumen are considered for unit rates calculation for FY26 and FY27. Average 10 years of price of bitumen are considered for unit rates calculation for FY28 and onwards, since bitumen prices have been range bound over the last five-six years.

c) **Sand and Aggregate** are sourced from the nearest quarry located on project highway.

d) **Cement** is procured from the nearest local market.

e) **Machinery Hire charges** of Plant and Machinery for various items of works have been considered from Karnataka SOR 2022 and some rates are considered from MORT&H Standard Data Book 2001-2002. Escalation has been considered on MORT&H Plant and Machinery rates to arrive at the present rates of 2024-25.

f) **Material Rates** are obtained from SOR of Karnataka, KPWD 2022.

g) Some of the rates are based on Consultant's experience on similar ongoing projects in adjacent locations.

h) **Overheads and profits** have been considered based on MORT&H Standard Data Book. Applicable taxes have been considered in the Rate Analysis.

i) **Goods and Service Tax (GST)** is considered as 18% as per the latest Government Guidelines.

Exhibit 31: Adopted Unit Rates for Key items

S.nos	Items Description	Unit	Rates (₹)
1	Bituminous Concrete	Cum	13,350
	DBM	Cum	9,550
2	Milling	Cum	100
3	Tack Coat	Sqm	15
4	Road Marking	Sqm	550
5	Earthen Shoulder	Cum	330
6	Kerb Raising	Rm	300
7	Kerb Painting	Sqm	130

- *The above unit rates are excluding GST.
- The unit rate of each item includes 10 % overhead for road works, 15 % overhead for structure works and 10 % contractor's profit.
- Details of components considered in rate analysis & quantification are presented in below **Exhibit 32.**

Exhibit 32: Major components detail for Key items.

Sr. No.	Particular	Source	Reference
1	Rate Analysis	MORTH	Standard Data Books published by MORTH
2	**Material**		
A	Aggregate Rates	Nearby Project Corridor	As per Local Market Rates
B	ATMS, TMS cost		As per Vendor offer.
C	Cement	As provided in Local market	As per Local Market Rates
3	Equipment hire cost	Nearby project location	Standard Data Books published by MORTH
4	Labour	As per minimum wages	As per minimum wages

6.2 Immediate Repair cost

As informed during site visit, The following schedule outlines the proposed scope of immediate civil and structural works to be undertaken across bridge structures, including expansion joint replacement, drainage spout installation, bearing replacement, and essential structural repair activities. All works shall be executed as per approved drawings, relevant IRC/MORTH specifications, and manufacturer's guidelines to ensure compliance with quality and safety standards.

Exhibit 33: Immediate Repair Cost

S.nos	Items	Amount (₹)	Amount (₹-Crore)
A	**Expansion Joints @ structures**	4040122.5	0.40
B	**Drainage Spouts @ Structures**	11041866	1.10
C	**Bearings @ structures**	52937238	5.29
D	**Structural Repairs**	168253719	16.83
Total Immediate Repair Cost		**236272946**	**23.63**

6.3 Routine Operation & Maintenance (O& M) Cost

Operations and Routine Maintenance work required as per the CA. During the concession period, the Concessionaire is fully responsible for Operation & Maintenance of Project Highway. Schedule K elaborates the requirements of various service factor desirable level and acceptable level during O & M period along with time if any parameter level of service beyond acceptable limit.

The CA Stipulates that the Concessionaire shall Operate and Maintain the Project Highway in accordance with Article 17 – Operation & Maintenance & Schedule –K Maintenance Requirements of Concession Agreement. The obligation of Concessionaire as per Article 17 is as follows:

- permitting safe, smooth, and uninterrupted flow of traffic on the Project Highway during normal operating conditions; collecting and appropriating the Fee.
- minimizing disruption to traffic in the event of accidents or other incidents affecting the safety and use of the Project Highway by providing a rapid and effective response and maintaining liaison with the emergency services of the State.
- carrying out periodic preventive maintenance of the Project Highway.
- undertaking routine maintenance including prompt repairs too, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices.
- undertaking major maintenance such as replacement of panels in rigid pavement and associated activities
- preventing, with the assistance of concerned law enforcement agencies, any unauthorized use of the Project Highway
- preventing, with the assistance of the concerned law enforcement agencies, any encroachments on the Project Highway
- protection of the environment and provision of equipment and materials therefore
- operation and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project Highway
- maintaining a public relations unit to interface with and attend to suggestions from the Users, government agencies, media, and other agencies; and
- Complying with Safety Requirements in accordance with Article 18.

Routine O&M cost is comprised of manpower cost, toll operation cost, power and electricity cost, office operating expenses, vehicle running expenses, administrative expenses, horticulture and ROW maintenance, routine maintenance and other miscellaneous expenses. The Concessionaire has provided the major agreements towards operation and maintenance for past years. Necessary assumptions have been made from the expenses of similar types of projects to arrive at the operating cost. The estimates are projected based on best industry practices and are compared with the operation cost in the vicinity of the project area. Same has been divided into following major head.

1. Salary and Welfare Expenses
2. Tolling Operations Services
3. Incident Management Services
4. Electricity and Diesel Charges
5. TMS/HTMS/System Expenses
6. Office Operating Expenses
7. Vehicle Running Expenses
8. Professional Fees Expense
9. Insurance Expense
10. IE Fees
11. Horticulture & ROW Maintenance
12. Routine Maintenance Cost

In above, the Routine Maintenance cost is derived based on the Ministry of Road Transport and Highways - Report of the Committee on Norms for Maintenance of Roads in India (published by Indian Road Congress New Delhi 2001) along with actual pavement condition assessed during condition survey. Maintenance cost constitutes the routine, day-to-day maintenance activities for project assets, including road pavement, shoulders, embankment, drainage, structures, plantations, roadside furniture, traffic signs, traffic safety devices etc. Past data has been used to assess maintenance costs due to normal usage or "wear-and-tear". Likely costs of maintenance of structures are assessed based on their present condition and vintage, in combination with well-established guidelines and thumb rules given in Indian codes and standards.

6.3.1 O & M Strategy

Important Operations and maintenance work have been outsourced by the SPV. Details of important work orders outsourced are listed below **Exhibit 34**

Exhibit 34: Work outsourcing for Operations and Maintenance work.

Sn	Activity	Strategy
1	Routine Maintenance	In-house
2	Preventive Maintenance	In-house
3	Management and Supervision Staff	In-house
4	Security	Outsource
5	Corridor Management	Outsource

6.3.2 Routine Maintenance

Routine and Preventive maintenance encompasses work that is performed in reaction to an event, season, or overall deterioration of the transportation asset. This work requires regularity and reoccurring in nature. Routine and Preventive Maintenance is essential to maintain the condition of the highway asset or to respond to specific conditions or events that restore the highway system to a functional state of operation.

Total Routine Maintenance cost estimated by Knight Frank is ₹10.66 Crore for the balance concession period of 07 years. The routine and preventive maintenance covers maintenance of the following assets:

- Cleaning of Main Carriageway, service road, bridge deck
- Pruning of median plantation, watering
- Maintenance of Avenue Plantation
- Cleaning of debris from carriageway and shoulder
- Plantation and Landscaping
- ROW Cleaning
- Cleaning of all road asset, Toll Plaza
- Tunnel, MEP & Slope Protection

The average cost for Routine Maintenance is ₹57,362/ km/ month including GST. Based on our previous projects experience & based on the thumb rule method routine maintenance costs are reasonable.

Exhibit 35: Routine Maintenance Cost

Sr. No.	Item Description	As per Knight Frank	Remarks
1)	Routine Maintenance Cost (₹-Crore) (07 Years Concession Period)	8.61	
2)	Routine Maintenance Cost Per Year (₹-Crore)	1.78	
3)	Routine Maintenance Cost Per Km/Year (₹-Lakh)	8.03	

Above cost is including of GST

6.3.3 Preventive Maintenance

Total Preventive maintenance cost considered is ₹7.60 Crore for balance concession period of 07 years & following items considered for preventive maintenance work:

- Repair cost of pavement as and when pavement distress occurred.
- Repair of road Kerb, crash barrier, metal beam crash barrier and guard rail
- Repair of faded road marking
- Fixing of damaged sign boards, KM stones
- Shoulder maintenance
- Repair and maintenance of structure – bearing, expansion joint.
- Repair of crossroad junction
- Maintenance of Truck lay-bys

Average cost considered for Preventive Maintenance is ₹40,897/km/ month including GST. Based on our previous projects' experience & based on thumb rule method, preventive maintenance cost is reasonable.

Exhibit 36: Preventive maintenance Cost

Sr. No.	Item Description	As per KF	Remarks
1	Preventive Maintenance Cost (₹-Crore) (07 Years Concession Period)	7.60	
2	Preventive Maintenance Cost Per Year (₹-Crore)	1.27	
3	Preventive Maintenance Cost Per Km/Year (₹-Lakh)	5.73	

Above cost is including of GST

6.4 Highway Lighting

Electricity charge and maintenance cost of highway lighting is calculated as follows:

a) Each lighting post has counted from site and consider having LED light will be operated for 12 hours a day round the year.
b) Lighting post at median / separator are having with two halogen/LED lamp and service road shall be with single lamp only.
c) Tunnel & MEP OPEX

The O & M Cost estimated towards highway lighting is ₹2.19 Crore per year including GST.

6.5 Corridor Management

The following equipment along with operation manpower is required to provide as per Concession agreement.

a) 1 no. of Crane
b) 2 nos. of route patrol vehicle
c) 1 no. of Ambulance

O & M Cost estimated towards incident management with operation manpower is ₹57.60 Lakh per year including GST.

6.6 Manpower Cost

The requirement of manpower is worked out to function all activity at project road for compliance of CA requirement, toll collection and security of asset. Requirement of manpower is classified into following broad division:

a) Management, Administration/HR and Supervision Staff: in-house manpower (**Cost considered towards SPV Manpower is ₹56.85 Lakh per year)**
b) Toll Operation Manpower: outsource/In-house for providing 24-hour uninterrupted traffic flow at toll plaza and collection of tolls. Due to Nationwide implementation of Hybrid-ETC System, it is expected drop in toll collection manpower. However, where collection of overloading is expected, manpower for toll collection is not possible at this stage. The company is expecting revenue from overloading in this asset therefore curtailment of toll collectors is not expected. (**Cost considered towards SPV 3rd Party Manpower is ₹4.78 crore per year)**

The cost of manpower is estimated as ₹6.08 crore per year.

6.7 Office Expenses

Cost towards operation of office, insurance premium, professional fees for carrying out traffic, asset condition survey etc., IE fees, AMC for equipment installed at office, communication charge, conveyance cost etc. are considered under Office Expenses. **The cost considered regarding office expenses & operation are ₹3.91 crore per year which is bifurcated as follows.**

- ***₹1.71 crore per year for Independent Engineer (IE)/Authority Engineer (AE) and professional fees covering legal, arbitration, and audit certification during the O&M period***
- ***Actual cost of insurance policy: ₹1.36 crore per year (inclusive of 18% GST)***
- ***Survey and investigation charges: ₹0.145 crore per year (inclusive of 18% GST)***

6.8 Major Maintenance

As mentioned in earlier chapter, Currently, the Project Highway is maintained by existing Annuity Concessionaire.

Based on RI & FWD Test results, SPV team made 01 MM cycles for the overlay of projects. Following items were considered during each MM cycle based on the ground requirements.

A. Flexible Pavement

- Overlay of PMB & 40 mm BC on MCW based on ground conditions and Test results.
- Overlay of 30 mm BC on service road considered.

B. Replacement of Wearing Coat on structures

6.9 Major Maintenance items

Based on detailed highway inventory carried out during site investigation and data provided by the concessionaire following items considered during major maintenance work

- Bituminous concrete for MCW using PMB/VG-40
- Dense Bituminous Macadam for MCW using VG-40
- Bituminous concrete for Service Road using VG-40
- Dense Bituminous Macadam for MCW using VG-40
- Micro surfacing

6.10 Major Maintenance Cycles & Cost

Major maintenance works to be considered in 01 cycles up to the FY2029. A total Cost of ₹65.70 crore (Without Escalation) considered for major maintenance work Upto end of Concession period. Major maintenance Strategy is shown in **Exhibit 37. Detailed Cost Estimate attached as Annexure A.**

Exhibit 37: Major Maintenance Cycles & Cost

Major Maintenance Strategy & Cost Details for DH Project				
Cycle	**Year**	**Strategy**	**KF Cost (₹-Crore)**	**Remarks**
MM Cycle-01	**FY 2029**	**A) Main Carriageway:** 01. 40 mm BC overlay with PMB: 100% Length 02. 30 mm BC inlay with PMB: at Structures 03.50mm DBM Rehabilitation VG40: 5% Area **B) Service Road:** 01. 30 mm BC Overlay with VG40: 50% length 02. Microsurfacing: 50% length	65.70	
Total MMR Cost (₹-Crore) with GST			**65.70**	

*** Above cost is without escalation.**

6.11 Summary of Cost

Different O&M cost have been worked out based on the investigations and assessment on Project Road. Cost for each of the category has already discussed in previous sections. Since the forecasting has been carried out for remaining concession period, the cost is summaries yearly for remaining concession period as below.

Exhibit 38: Summary O & M Cost for Remaining Concession Period

Summary of Cost (₹-Crore)									
S.nos	**Type/Year of Expenses**	**FY 2026***	**FY 2027**	**FY 2028**	**FY 2029**	**FY 2030**	**FY 2031**	**FY 2032****	**Total Cost**

Disclaimer

This report has been produced for the sole benefit of Cube Highways Pvt. Ltd ("the Client"). The report may only be relied upon by Approved Addressees in accordance with the terms of our engagement letter. This Report (the "Report") is confidential and disclosed only for information purposes, and it may not be relied upon by any party other than the Client or a Party to a Reliance Letter, and Steer: a) makes no warranty, expressed or implied, with respect to the use of any information or methods disclosed in this Report; and b) assumes no liability with respect to the use of any information or methods disclosed in this document. Any such party by its acceptance or use of this Report releases Steer from any liability for direct, indirect, consequential, or special loss or damage whether arising in contract, warranty, express or implied, tort or otherwise.

The Report is based on standard professional efforts, and information available to us at the time the review took place and is subject to time and budget constraints of the Report's scope of work. This Report, information and statements contained herein, are all based on third party data provided to us, or sourced by us, and Steer has not sought to establish the reliability of the data, except as specifically stated in the Report. Steer bears no responsibility for the results of any actions taken on the basis of third-party data. Certain forward-looking statements in the Report are estimates based on interpretations or assessments of information available at the time of writing. The Report is thus to be viewed as an assessment that is time-relevant, specifically referring to conditions at the time of the review. Steer undertakes no obligation to update the Report for any reason. While the estimates contained in the Report are not precise forecasts, they do represent, in our view a reasonable expectation of the future, based on information we have been provided with or sourced. However, the estimates necessarily rely on numerous assumptions and judgements, and circumstances may occur over the timeframe of the project that go counter to these assumptions and judgements and that affect the project's realized revenues. Actual events may differ from those assumed, and events are subject to change. Therefore, Steer makes or provides no warranty, whether implied or otherwise, as to the accuracy of forward-looking information presented. Further, it is important to note that forecasts presented represent long term growth profiles; the results for individual time periods may vary from forecasted values.

Traffic Consultant developed the relationships in the models used to produce the forecasts for the projects based on data available through September 2025. This report does not consider variations in traffic performance due to changing macro and force majeure events such (but not limited to) as global wars, economic uncertainty (high inflation, global recession), and changes in the regulatory environment. The situation remains dynamic and is subject to significant change in the short and medium term. In this challenging context, Traffic Consultant has produced base forecasts with a view on a possible scenario for the traffic forecasts. However, it is important to note that this is only one view, and there continues to remain uncertainty as to the short-term, intermediate or prolonged effects of and responses to such macro-economic/force majeure events. As a result, no assurance can be provided by Traffic Consultant that the scenarios and assumptions Traffic Consultant has identified will prove to be accurate. Given the uncertainty inherent in this scenario, Traffic Consultant advises that all readers of the Report consider the Report in the context of their own assessment of the impact of such events.

TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, THE LIABILITY OF THE TRAFFIC CONSULTANT FOR ANY LOSS, DAMAGE, COST OR EXPENSE SUFFERED OR INCURRED BY ALL PERSONS OR ENTITIES AND FOR ALL CLAIMS RESPECTING ITS WORK PERFORMED IN CONNECTION WITH THE ISSUE OR THE REPORTS IS HEREBY LIMITED IN THE AGGREGATE TO THE AMOUNT OF FEES ACTUALLY PAID BY THE CLIENT TO THE TRAFFIC CONSULTANT IN RESPECT OF THE REPORTS AND CONNECTED SERVICES.

1 Introduction

The assignment

1.1 The Cube Highways Fund Advisors Private Limited (the "Client") has commissioned Steer Davies Gleave India Private Limited ("Steer") for a traffic due diligence to be carried out on the Kotwa - Muzaffarpur Tollway Road (hereafter called "Asset"). This report forms part of the annual fair market valuation (FMV) undertaken as part of the "Transit 10 project". This report presents an update of the traffic and revenue forecasts based on actual traffic data available up to September 2025 and latest macro-economic assumptions.

1.2 The Asset Kotwa-Muzaffarpur consists of a single toll road section. For this report, we hereafter call the toll plaza on the Asset as TP1.

- Kotwa-Muzaffarpur Tollway Limited: KMTL: TP1 – Parsoni Khem

Our scope of work for the traffic and revenue forecasting process includes:

Table 1.1: Scope of work and sources of data

Scope of work	Data source
• Review of historical Traffic Management System (TMS) data, Vendor reports and documents	• Provided by client for the period between Oct'20 and Sept'25
• Historical analysis and forecasts for baseline growth, including; — Background growth, and — Seasonality trends	• Historical data provided by the Client and benchmarking using plazas in the vicinity or of similar nature of the Asset has been done wherever sufficient data was unavailable.
• Validation of revenue reported in FY26YTD	• TMS data provided by Client • Revenue reconciliation using toll plaza traffic and ticket type data to calculate revenue and reconciling it with toll plaza reported revenue
• Origin Destination (OD) analysis to understand growth drivers: — Zonal influence and Top OD pairs — Commodity distribution — Trip length distribution	• Origin Destination (OD) surveys undertaken by a survey agency appointed by Steer. The latest surveys were undertaken in 2025 at the TP.
• Analysis of upcoming network improvements and other developments, that may have future impacts on traffic	• Secondary research and our in-house experience of working in the vicinity of the Asset. Impact analysis conducted by Steer based on Generalised Journey Cost spreadsheet-based analysis

Scope of work	Data source
• Historical revenue analysis and forecasts for revenue estimation, including — Toll segmentation and trip factors, — Overloading shares	• Calculated from historical data provided by Client
• Final traffic growth forecasts including baseline growth rates and potential future impacts	• Elasticity based base growth and potential impacts from secondary research and Steer's in-house experience of working in the vicinity of the Asset
• Toll revenue estimation for the entire concession, including toll evolution	• Toll evolution based on toll notification published by National Highway Authority of India (NHAI); and latest Wholesale Price Index (WPI) trends as shared by the client

Our approach

1.3 Our approach follows well-established practices for forecasting ongoing traffic growth on an existing/brownfield Asset. The analysis focused on two sets of issues, namely:

- understanding the traffic that is currently using the Asset; and
- identifying how and why that traffic is likely to change in the future.

1.4 To understand the current traffic on the Asset, we have analysed traffic data from multiple independent sources:

- Client-provided secondary data, including:
  - TMS data starting October 2020 to September 2025
  - Concession agreement and toll notifications for FY25 and FY26
  - Previous studies related to traffic and revenue
  - Steer-commissioned OD surveys on 23rd Jan 2025 on the Asset and an additional survey on the 24 Jan 2025 on the SH74 (alternate route) to validate any change in growth drivers and travel patterns.
  - Steer-commissioned three-day TVC survey between 23rd January and 25th Jan 2025 as a part of study.
- We undertook revenue reconciliation for FY26YTD, by building up revenue from the traffic reported by the toll plaza and subsequently matched it to the reported revenue for FY26YTD using the prevalent toll rates and reported segmentation/toll-frequencies for FY26YTD, this is a key part of our analysis to validate the segmentation/toll-frequency assumptions and the Annual Average Daily Traffic (AADT) reported for each of the toll plaza.

1.5 The estimation of future traffic demand on the Asset was undertaken through:

- Estimating FY26 base year position. The FY25 AADT was calculated using the monthly traffic data for FY25. The annual FY25 AADT was then grown with elasticity linked GDP/GSDP growth to arrive at the FY26 expected traffic. To determine the adopted FY26, the expected FY26 traffic was validated against the six months of actual traffic (Apr-Sept) and necessary adjustments were made where required.
- Secondary research to understand plans for new developments and progress of ongoing developments on the Asset.

- Steer independent primary surveys and site visits to validate our network and contextual understanding.
- Developing a bespoke growth model for each Asset/plaza/toll class to forecast year-on-year traffic growth from FY26 to the end of concession period.
- Investigating the elasticity of historical traffic growth compared to state (GSDP) and national (GDP) growth. Where historical data is limited, we have benchmarked the Asset against our Steer knowledge base (e.g., similar Asset types in the same state or on the same corridor), to derive appropriate elasticities.
- Applying our elasticities to independent GDP forecasts as provided by client.
- Identifying and analysing the potential impacts of any relevant changes to the competitive position of each Asset – these include impacts of changes to road network including expressways and opening of competitive modes of travel.
- Identifying and analysing any other potential impacts to traffic and revenue on each Asset – these include axle load norms, axle shift for heavy goods, FASTag implementation.
- Considering changes in trends of segmentation over time and making suggestions for changes in exemptions in the future.
- Preparing traffic and revenue forecast for the Asset for the complete length of concession. The analysis here includes the specific impacts of network, or other exogenous factors specific to the Asset. We have developed a set of forecasting assumptions for three scenarios: a base case and upside and downside scenarios.

Contents of this report

1.6 The report has been divided into the following chapters, including Chapter 1 providing an introduction:

- Chapter 1 introduces the methodology and approach to undertake the traffic and revenue due diligence;
- Chapter 2 describes the key characteristics of the Asset and its surrounding road network, primarily based on site visits;
- Chapter 3 summarises the current and historical traffic trends on the Asset, including results from the TMS, TVC and OD analysis;
- Chapter 4 presents the socio-economic context of India, the corridor and region/state containing the Asset, along with our approach and results on estimating background along with our key forecasting assumptions,
- Chapter 5 presents our baseline year forecast and summarises our results on estimating background traffic demand growth
- Chapter 6 summarises our assessment of network impacts and presents concession traffic and revenue forecasts for the Asset along with the assumptions for upside and downside cases

2 The Asset

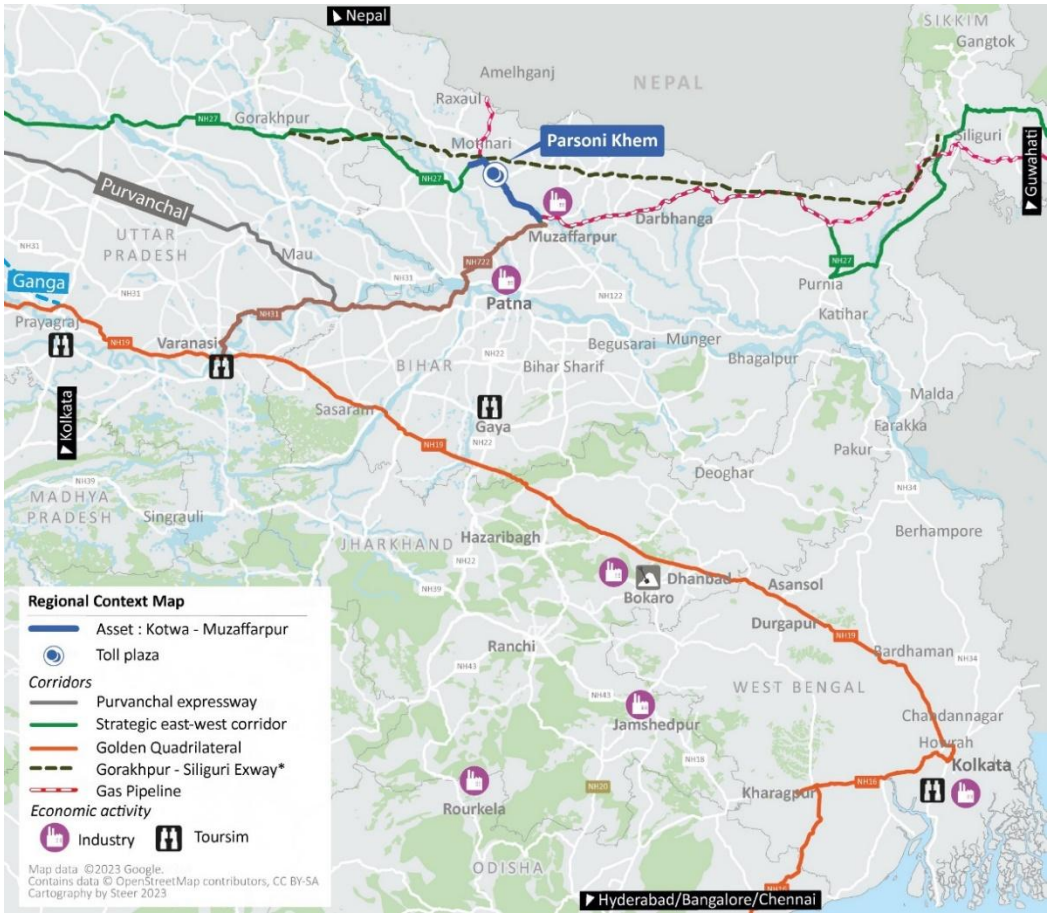
Introduction

2.1 This chapter provides a description of the Asset, based on both primary data (from site visits), and our understanding of the region and network surrounding the Asset. We cover the strategic network context, followed by key economic activities and network developments around the Asset.

Strategic network

2.2 The Asset is situated in the state of Bihar, connecting the cities of Muzaffarpur and Kotwa in the north-west part of Bihar. Figure 2.2 below shows the regional road network in which the Asset is located.

Figure 2.1: Asset location in the regional network context



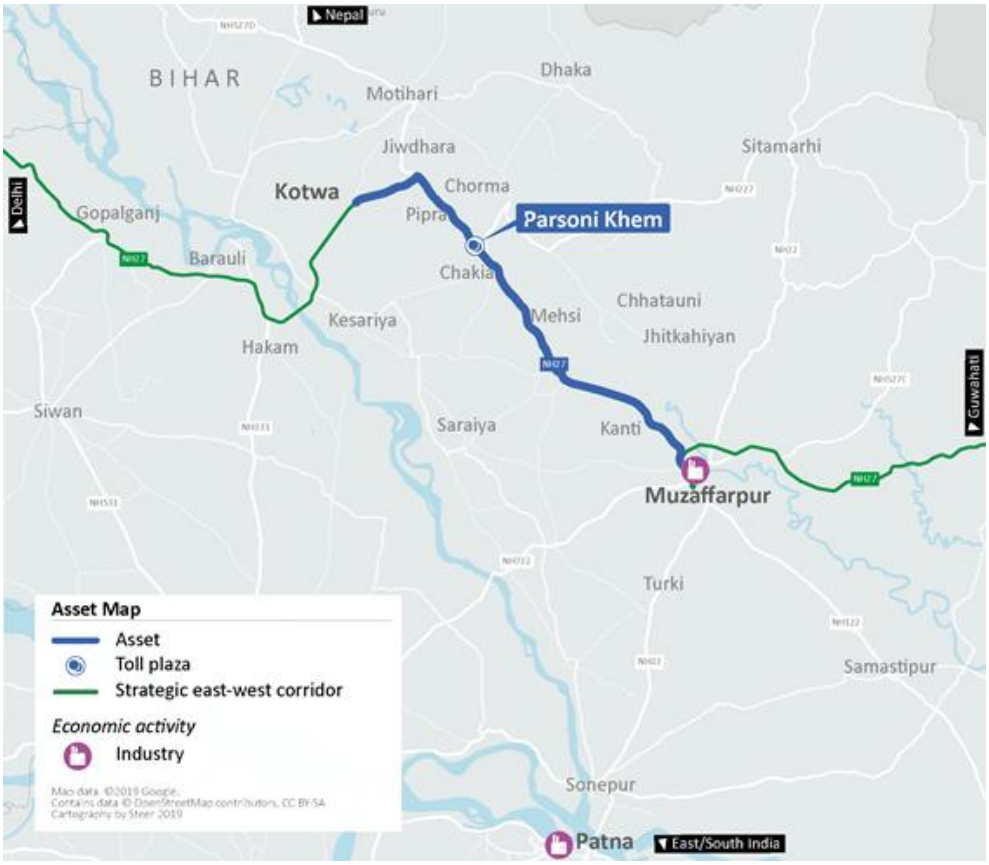
Source: Steer cartography using OpenStreetMap data

2.3 This Asset primarily caters to three different types of strategic movements:

- **Short distance** trips made by cars for local movement between places such as Muzaffarpur, Motihari, Chakia, Motipur and other local destinations mostly for work related purpose.
- **Medium-distance** trips made by light and heavy goods vehicles covering places such as Patna in the southern part of the state and Raxaul near the India-Nepal border thereby catering to the heavy movement of trucks between the two countries for trade purpose.
- **Long-distance** trips made by heavy goods vehicles to provide the east-west connectivity between states such as Uttar Pradesh, Uttarakhand and Delhi, and West Bengal and North-eastern states. The Asset also caters to movement of trucks to countries such as Nepal, Bangladesh and Bhutan.

2.4 The Asset is an 80 km toll road which forms part of the NH 27 in Bihar. It is a four-lane road with one toll plaza, namely, Parsoni Khem (TP1) at Km 467.700 (closer to Kotwa). Figure 2.2 below provides a closer view of the Asset in the context of its immediate surroundings. The Asset lies between the East Champaran and Muzaffarpur districts with Motihari, Chakia, Madhuban, Motipur, Kanti and Muzaffarpur being some of the key settlements along the Asset stretch. It is also located near other traffic generators such as Bettiah, Gopalganj, Patna and Raxual.

Figure 2.2: Asset Context



Source: Steer cartography using OpenStreetMap data

Concession and tolling details

2.5 The toll plaza on the Asset has been operational since December 2012 and the client took over the operations in October 2020. There are still 26 years left from April 2025 in the concession period which ends in FY51. Table 2.1 below presents a summary of the Asset.

Table 2.1: Summary of Concession

Particulars	Details
State	Bihar
Highway and lane configuration	NH 27, four lane
Toll plazas	TP1: Parsoni Khem
Length (km) as per concession agreement, applicable	TP1: 80 km
Commencement of operations	TP1: December 2012
Operated by Client since	October 2020
Concession period	30 years
Last year of concession	FY51

Source: Client data

2.6 Apart from single tickets, the typical NHAI ticket categories like return, monthly, local personal and local commercial passes are also available on the Asset.

Key economic activities

2.7 Bihar's economic progress hinges on agriculture, which serves as its fundamental pillar. This sector employs a significant 77% of the workforce and contributes approximately 24.84% to the State's Domestic Product. An estimated 77% of Bihar's population is engaged in agricultural production, a figure considerably higher than the national average. In 2011-12, agriculture, including forestry and fishing, accounted for nearly 24.84% of the state's GDP[1].

2.8 Muzaffarpur situated on one end of the Asset is considered the commercial hub of north Bihar. It is majorly an agriculture and food processing led region with rice as the main crop grown followed by maize. It is also famous for its Lichi and Mangoes which are supplied all over the country. Some of the key large-scale industries in the region includes a thermal power plant in Kanti and Indian Drug Pharmaceutical Limited long with other medium to small scale industries producing biscuits, cloths, flours etc. There is also a food park in Muzaffarpur along with several chemical factories[2].

2.9 In 2025, Bihar Chief Minister Shri. Nitish Kumar laid the foundation stone for development projects worth ₹574.16 crore in Muzaffarpur. These include a Railway Over Bridge (ROB)-cum-approach road between Ramdayalu Nagar and Muzaffarpur railway station (₹167.68 crore), a road from Muzaffarpur-Pusa Road to Chandwara bridge approach (₹120.93 crore) and widening and strengthening of roads such as Chandni Chowk to Bakhri (₹89.77 crore). The initiative also included social welfare measures like increasing pension amounts and incentives for ASHA workers, and support for self-help groups under the Jeevika program.[3]

2.10 In addition to this, In May 2025, the Bihar State Investment Promotion Board approved 18 new industrial units in Muzaffarpur under the Bihar Industrial Policy 2025. These units, located in Bela and Motipur BIADA zones, span sectors such as bakery and food

[1] **Agriculture Department**

[2] As verified during Steer's site visit in 2025

[3] **Muzaffarpur ROB**

processing, plastic bottle manufacturing, organic food products, furniture production, and amusement parks. The projects are expected to generate approximately 10,000 jobs and provide market access to local farmers, especially those engaged in organic agriculture.[4]

2.11 East Champaran district located on the other end of the Asset is largely an agricultural area with presence of small-scale industries like fisheries industry, agro-based industry, and the pearl industry at Mehsi located about 20 km away from the toll plaza. The town of Raxaul, situated about 60 km from Kotwa is India's gateway to Nepal as it's the only point in India which is connected to Nepal through railways. In April 2023, Muzaffarpur got state's second ethanol plant at Motipur in the Muzaffarpur district with a daily production capacity of 110 kl from Maize/Rice.[5]

2.12 Gas Supply is one of the key economic activities of Bihar where the state is witnessing with increased construction of gas and oil infrastructure. In April 2023[6], the remaining portion of Baruni Guwahati Natural Gas Pipeline commissioned by GAIL got completed which connects to six districts of Bihar and further connecting to Assam in north-east. The project was under Pradhan Mantri Urja Ganga (PMUG) with about 729km. With the start of supply the north-eastern states will now be connected to national grid meeting the fuel demand in the region.

2.13 With increasing focus of the government as of 2024 the state with announced with several infrastructure investment which in-turn create positive impact on the traffic performance with increasing demand. In May 2024[7,] 109km Indian Oil Corporation (IOC) LPG pipeline between Muzaffarnagar- Motihari for the benefit of providing cleaner fuel access in the state and also to bordering countries like Nepal. For the same the construction of IOC bottling plant and storage terminal is announced at Motihari. The pipeline would serve 8 districts of North Bihar i.e. East Champaran, West Champaran, Gopalganj, Siwan, Muzaffarpur, Sheohar, Sitamarhi and Madhubani.

2.14 Also to cater the demand of petrol and kerosene in Nepal[89], the Motihari pipeline is announced by Indian Oil Corporation and Nepal Oil Corporation to get extended to Amlekhganj depot which is at Bihar- Nepal border. This is South Asia's first cross border petroleum project pipeline. The infrastructure construction of this ongoing is nearly completed and expected to be commissioned in next few months with its supply to Nepal.

2.15 In 2024 it was announced that the prime minister of India, Shri. Narendra Modi is set to launch initiatives worth ₹4,027 crore in the petroleum and natural sector. This project

includes setting up a City Gas Distribution (CGD) network across five districts in Bihar — Darbhanga, Madhubani, Supaul, Sitamarhi, and Sheohar worth ₹3,638 crores by Bharat petroleum corporation limited (BPCL). This initiative aims at expanding the cities piped natural gas supplies to households and factories alike. In addition, ₹389 crore Bitumen Manufacturing Unit will be set up at Indian Oil's Barauni Refinery to reduce reliance on imported bitumen and meet its rising demand caused by infrastructure developments such as the Bharatmala Pariyojna[10].

Alternate Routes

2.16 SH74 acts as an alternate connection between Muzaffarpur and NH27. SH74 is state highway with towns and villages on-route. Providing an attractive alternate option in terms of shorter distance and improved speeds. Vehicles travelling from UP and west towards Northeastern parts of the country such as Siliguri, Assam, Guwahati, etc. may use this alternate route to save time and toll, which they would have to otherwise pay if the use the Asset. In order the use this route, vehicles travelling from UP and east towards Darbhanga and west may enter the alternate route from Rampur Khajuria and travel down, parallel to the Asset where they make the decision at Kesariya to exit from Chakia or exit from Motipur by travelling from Sahebganj.

2.17 As a part of Bharatmala Pariyaojna, 568 km long greenfield Gorakhpur Siliguri Expressway has been approved in 2025[11]. The expressway besides reducing travel time to six hours will boost the inter-state tourism and industrialisation between Uttar Pradesh, Bihar, and West Bengal. The expressway will pass through Gorakhpur in Uttar Pradesh, Gopalganj, Champaran, Kotwa and Muzaffarpur in Bihar and Siliguri in West Bengal. Since the alignment of the expressway runs parallel to the Asset, we believe once operational, trips moving from Uttar Pradesh, Bihar towards West Bengal/Northeast will have an alternate option to use the expressway and impact the traffic moving on the Asset.

2.18 The exact share of such traffic assumed to shift due to alternate routes is presented in detail in Chapter 6 of the report.

3 Traffic Description

Introduction

3.1 This chapter outlines the current traffic and revenues on the Asset, as well as Steer's analysis of origin-destination (OD) data as also traffic count data. This covers data which was collected as a part of this study and data that was provided by the Client.

3.2 Traffic demand data is generally collected and analysed to understand the volume and vehicle composition of demand currently using the Asset, while OD data is used to obtain a better understanding of travel patterns, trip lengths, trip purposes and areas of influence in the vicinity of the Asset, and the commodities being moved by goods vehicles. This analysis, combined with our understanding of the Asset (based on our site visits), enables us to identify the key drivers of demand on the Asset.

3.3 Actual toll plaza data is used as the basis from which the current/base year Monthly Average Daily Traffic (MADT) is established. This data is typically provided by the Client and independently analysed and validated by us using Traffic Volume Count (TVC) information.

PCU Factor assumption for reporting

3.4 The PCU values have been taken from 'IRC 64:1990- Guidelines[12] for Capacity of Roads in Rural Areas'. For MAV, based on the discussion with the Client, we have referred to the rigid and trailer splits in the latest TVC counts for calculating the effective PCU for MAVs. For rigid trailer trucks we have assumed a PCU factor of 3, whereas for trailer trucks we have assumed a PCU factor of 4.5. These factors have been used to arrive at the PCU values presented in Table 3.1 below.

Table 3.1: PCU factors

Vehicle Category	PCU Factor
CJV/Mini LCV	1.0
LCV	1.5
Bus/2A/3A	3.0
MAV*	3.5
OSV	4.5

Source: Steer analysis, * Based on Rigid-Trailer split

[12] IRC 064: Guidelines for Capacity of Roads in Rural Areas (First Revision)

Historical trends

3.5 Table 3.2 and Table 3.3 below present traffic and tollable traffic data for the asset between October 2020 and September 2025. Long-term historical data is unavailable since tolling commenced in October 2020. Additionally, the available data for FY21 and FY22 was significantly impacted by COVID-19-related restrictions. Consequently, traffic volumes began to stabilize from FY23 onwards.

Table 3.2: Traffic Levels at TP1 Parsoni Khem

Vehicle Category	FY21*	FY22	FY23	FY24	FY25	FY26 YTD	CAGR FY23 FY25
CJV	3,791	4,118	3,978	4,229	4,489	4,708	6.2%
LCV	629	483	491	468	386	388	(11.4%)
Bus	660	439	397	361	489	530	11.1%

Tollable PCU	**21,183**	**19,022**	**20,191**	**20,447**	**21,636**	**21,809**	**2.5%**

Source: Steer analysis of Client data, (FY21* includes 6 months of data from Oct'20 to Mar'21); FY26YTD includes data till Sept'25; Tollable AADT excludes exemptions and violations

3.6 Between FY23 and FY25, total traffic grew at a rate of 2.6% CAGR indicating moderate traffic growth. In FY26YTD, growth of 1.6% was seen at a total PCU level which was driven by an increase in 2A, CJVs and Buses.

3.7 3As experienced a consistent decline since FY23, primarily due to an industry-wide shift of axle configurations towards MAVs. The reduction in 3A volume is a result of the

declining demand for 3A vehicles, which are being replaced by 2A and MAV's. MAVs offer higher tonnage capacity making them more cost-effective for transporters. While the increase in 2A volume reflects the growing preference for these vehicles due to favourable changes in the legal permissible loads for 2As and their suitability for e-commerce-related freight, particularly high-value, low-volume goods over medium to long distances. This is consistent with our discussion with various transporters and OEMs across the country who are favouring 2A and 5A vehicles for commodity movement due to better unit economics.

3.8 Furthermore, effective May 2024, minibuses previously tolled as LCVs have been reclassified under the bus category. This reclassification is based on a passenger count system, replacing the earlier gross vehicle weight-based classification. Travel patterns in FY25 and FY26YTD remain largely consistent.

3.9 As of FY25, nearly 46% of vehicles on the Asset are cars, which are predominantly used for local travel by commuters between Motihari, Bettiah, Muzaffarpur, Patna and other local destinations along the Asset for purposes such as work, education and medical.

3.10 Commercial vehicle on the Asset constitutes ~45% to the total traffic (2A, 3A and MAV) on the plaza as of FY25, owing to the strategic location of the Asset as a facilitator of east-west movement between northern and eastern parts of India. The Asset provides connectivity between industrial cities of Uttar Pradesh, Uttarakhand, Punjab, Haryana and West Bengal, Bihar and north-eastern states along with providing connectivity with Nepal border at Raxaul, Bihar.

3.11 Historically, as mentioned in paragraph 3.9 above, CJVs have the highest share of ~46% in FY25 and are followed by MAVs, which have a share of around 25% in traffic as of FY26YTD but contribute to approximately half of the revenue generated on the Asset.

3.12 The Asset has seen growth between FY23-25 at a CAGR of 2.6%. FY22 saw negative growth as compared to FY21 on account of the COVID 19 pandemic. FY24 and have exhibited subdued growth at 1.4%.

3.13 The Asset has experienced subdued growth in the goods vehicle category, due to several factors including reduced trade with Nepal due to ongoing economic and political changes in Nepal. Additionally, the near completion of the Motihari - Amlekhganj pipeline, connecting Bihar to Nepal, has resulted in a shift of petroleum and oil transportation from road to pipeline, contributing to a decline in goods traffic[13].

3.14 In FY25, overall traffic growth was further impacted during Q1 of FY25 due to nationwide general elections. Moreover, the broader economic slowdown in Bihar, particularly in the manufacturing and construction sectors, has also contributed to the decline in 2A, 3A and MAVs. The cancellation of multiple infrastructure projects by the Bihar government has further exacerbated the slowdown in traffic volumes[14].

[14] **Bihar govt. cancels tenders worth ₹3,600 crore floated during Mahagathbandhan regime**

Historical Revenue

3.15 Table 3.4 shows the revenue (in INR Crores) and AADC (in INR Lakhs) by each vehicle type at the toll plaza between FY21 to FY26YTD.

Table 3.4: Total Revenue (INR Crores) by vehicle type at TP1 Parsoni Khem, and AADC (average annual daily collection in lakhs)

FY	CJV	LCV	Bus	2A	3A	MAV	OSV	Total	AADC	AADC Growth
FY21*	5.4	1.5	3.3	5.6	6.4	21.7	0.0	**44.0**	**26**	-
FY22	10.4	2.4	6.0	12.1	13.7	45.8	0.0	**90.4**	**25**	**(3.8%)**
FY23	12.3	2.8	4.8	14.6	16.0	51.8	0.1	**102.2**	**28**	**12.0%**
FY24	13.9	2.8	4.6	15.7	16.7	55.6	0.1	**109.4**	**30**	**7.1%**
FY25	15.1	2.4	6.1	17.0	16.2	58.4	0.0	**115.3**	**32**	**5.7%**
FY26YTD	8.0	1.3	3.5	9.4	8.0	30.0	0.0	**60.0**	**33**	**4.6%**

Source: Steer analysis of Client data, (FY21* From Oct-20 (last 12 days) to Mar-21; AADC represents Average Annual Daily Collection; FY26YTD is data for 06 months from Apr'25 to Sept'25.

3.16 MAVs are the highest revenue contributor on the Asset with approximately 51% share followed by 3As at approximately 15% in FY25. CJVs which have the highest share in traffic, contributing to approximately 13% in terms of revenue in FY25. The average daily revenue collected at the toll plaza has been approx. INR 31.2 lakhs in FY25 compared to approx. INR 29.9 lakhs in FY24. The Asset reported an AADC of ~INR 33 Lakhs in FY26YTD. The plaza observed a ~5% % in FY26YTD for AADC.

Toll Frequencies

3.1 Toll frequency or segmentation is typically the share of each ticket category recorded for a particular vehicle type. This is based on the toll policy which forms a part of the concession agreement. Each vehicle category has different segmentation. As a part of historical analysis, we calculate the toll frequency for each vehicle category from the monthly data shared by the client. The most common ticket categories observed on a typical National Highway are: Single, Return, Monthly, Local and Exempt. Given the local nature of traffic, some toll plazas offer custom made local passes to attract the local commuters to opt for these passes instead of evading toll.

3.2 The following are the types of tickets being sold at the plazas of the Asset.

Table 3.5: Typical ticket types sold at NHAI plazas

Category	Description
Single	Allows the vehicle to cross the toll plaza once
Return	Allows for a return journey within a day with a 50% discount on the return trip.
Monthly Pass	Discounted single entry ticket for users who undertake multiple trips within a month can buy the monthly pass.
Local Personal	Discounted single entry pass only for private cars of residents within 20km radius of toll plaza

Local Commercial	50% discount on single trips for commercial vehicles registered in the local district. This pass allows single entry only
Exemptions	Officially exempted vehicles like ambulance, police cars, key political personnel etc.

3.3 Further, the toll plazas also record violations which are non-paying users, who are not officially allowed under exemptions category but are forced exemptions. For some Assets, the Exemption and violations are at time reported together.

3.4 Generally, over the period the shares of single/return/monthly tickets tend to stabilise within 2-3 years of Asset operations. Only in the cases where trip patterns are expected to change significantly due to urban expansion is where we expect these shares to change over the period or due to some external events impacting the trip patterns.

3.5 Further, FY21 was impacted due to the mandatory implementation of FASTag as a mode of payment, where users were now paying via an online payment system instead of cash payments at the toll plaza. Additionally, in FY22 traffic and travel patterns were impacted by the second wave of COVID-19 in Q1 and Q2. With FY21 and FY22 being impacted these external events, the segmentation began to stabilise from FY23 onwards and reached steady state starting FY24.

Introduction of Annual pass for CJVs

3.6 The National Highway Authority of India launched the “The FASTag Annual Pass” on August 15, 2025, a prepaid facility that allows private CJVs to travel across designated National Highway and National Expressway toll plazas. The annual pass is worth INR 3,000. The pass is valid for one year or 200 trips, whichever occurs first and is applicable only to private, non-commercial vehicles (Car/Jeep/Vans).

Since this pass has been introduced by NHAI, it is not valid on

- state governed toll plazas on highways
- state governed toll plazas expressways
- Parking areas or other non-NHAI tolling locations

3.7 The pass can be activated via the RajmargYatra app or the NHAI website, and links directly to an existing FASTag.

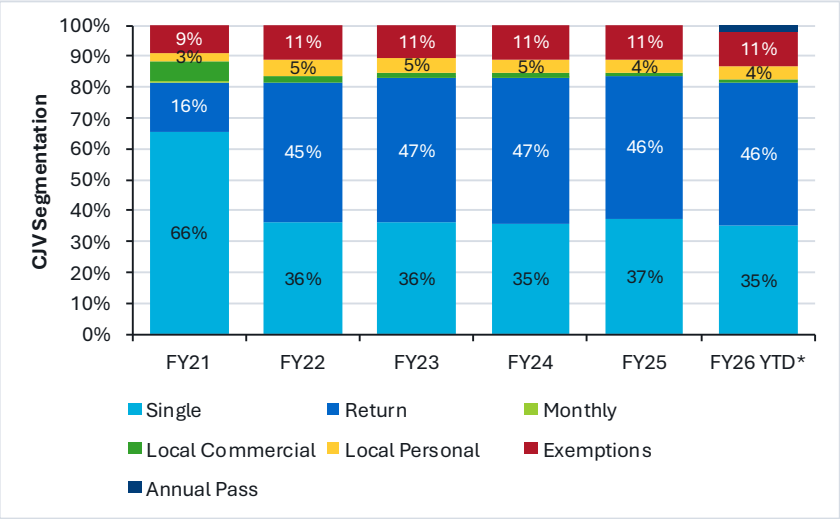
The Annual Pass aims to:

- Promote cashless and seamless travel on national highways.
- Reduce congestion and improve traffic flow at tolls
- Provide cost-effective travel for frequent users of NH/NE toll roads

Share of traffic by payment type

3.8 Figure 3.1 and Figure 3.2 below show ticket segmentation for CJV and MAV categories, between FY21 to FY26YTD for the Asset.

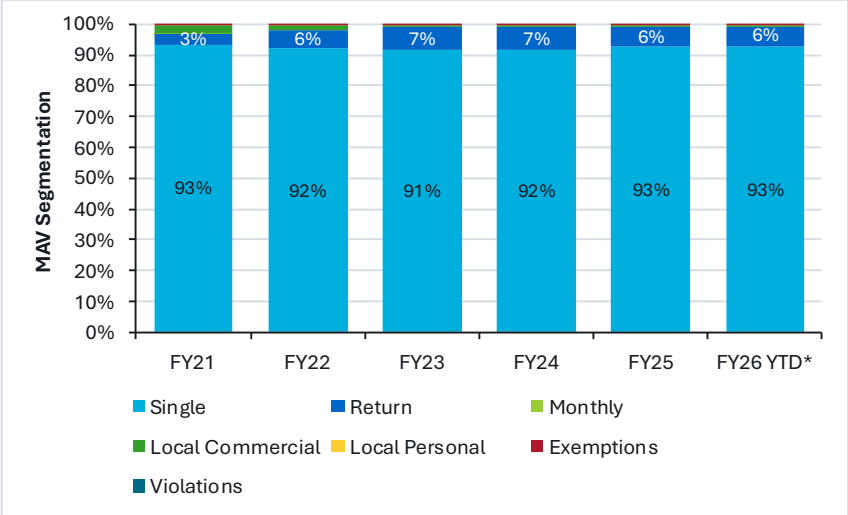
Figure 3.1: Ticket-segmentation for CJV at TP1



Source: Steer analysis of Client data (FY21 has data for Oct-20 to Mar-21); FY26 YTD* considers 05 months of reported data Apr-Aug'25

3.9 As shown in Figure 3.1 above, ticket segmentation in FY26YTD is consistent with FY25 and FY24 trends, indicating a stabilisation in segmentation trends. In FY26YTD, about 35% of the CJVs paid for single journeys with the remainder ticket-share comprising of return tickets, local passes, and exemptions. Highest share of 47% return trips in CJV category can be attributed to CJVs doing short distance trips within 100kms between Motihari, Chakia, Madhuban, Motipur, Kanti and Muzaffarpur for employment, and educational purposes. Share of local personal and exemptions in FY26YTD is 4% and 11% consistent with trends in FY24.

Figure 3.2: Ticket-segmentation for MAV at TP1



Source: Steer analysis of Client data (FY21 has data for Oct-20 to Mar-21); FY26YTD includes 05 months of reported revenue Apr- Aug'25

3.10 In FY26YTD, MAV category has been observed to have high share of ~93% single tickets which is aligned to the observation of MAVs doing medium to long distance trips on the Asset between North- East states, Bangladesh, Nepal and West Bengal. As discussed and validated from the OD data. A slight increase in return tickets post-FY21 is visible due to

implementation of FASTag, allowing trucks to avail return journey discounts, if they return within 24 hrs.

3.11 Table 3.6 below depicts the FY26YTD segmentation for LCV, Bus, 2A, 3A and OSV category for the Parsoni Khem toll plaza.

Table 3.6: Ticket-segmentation for LCV, Bus, 2A and 3A Categories at TP1 Parsoni Khem

Ticket Category	LCV	Bus	2A	3A	OSV
Single	52%	32%	73%	87%	98%
Return	42%	63%	23%	9%	1%
Local commercial	2%	4%	3%	3%	-
Violation	-	-	-	-	-
Exemption	3%	2%	1%	0.1%	0.2%

Source: Steer analysis of Client data; FY26YTD includes 06 months Apr- Sept'25

3.12 The share of return in LCV/Bus is higher compared to 2 Axle trucks attributing to the fact that they make shorter distance local trips while 2A having higher average trip length has higher share of single trips. This has been discussed in detail in the subsequent sections.

Data Collection exercise

3.13 As mentioned previously, to validate and inform various inputs used in our earlier forecasting, we undertook OD data collection on the Asset in this study, comprising the surveys listed in the table below. While TVC surveys were commissioned by Steer by contracting a third party in the study of our earlier commission. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas, which Steer also commissioned with a third party. TVC data is comprehensive; where collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

Table 3.7: Data collection schedule

TP	3-day videography-based TVC			1-day OD survey			
	Start date	End date	Time (hrs)	Start date	Start time	End Date	End time
TP1 Parsoni Khem	23 Jan 2025	25 Jan 2025	0000-2359	23rd Jan 2025	0800 hours	24th Jan 2025	0800 hours
SH-74	23 Jan 2025	25 Jan 2025	0000-2359	24th Jan 2025	0800 hours	24th Jan 2025	0800 hours

Source: Steer analysis

3.14 It should be noted that, in our experience, traffic on national highways shows variation across the week due to the economic activities surrounding each road. To derive a representative TVC count considering daily variation, three-day to seven-day traffic counts are generally recommended, and hence, to fully understand the impact of this weekly fluctuation on the Asset, we collected three-day counts at the toll plaza and the alternate route mentioned in the table above.

Key findings of the TVC data analysis

WADT estimates

3.15 Taking an average of the three-day TVC counts (23rd Jan – 25th Jan 2025, 0000-2359), we obtained the following average daily traffic (ADT). This ADT excludes non-tollable vehicles such as tractors, two-wheelers, bullock-carts, etc., but includes officially exempt vehicles such as police cars, ambulances, emergency response vehicles, government vehicles and other vehicle types officially allowed as 'exempted' under the concession agreement.

Table 3.8: ADT from TVC counts

Location	CJV	Mini LCV	LCV	Bus	2A	3A	MAV	OSV	Total
Parsoni Khem	3,278	800	777	537	951	1,078	2,611	3	**10,035**
SH74 (Alternate Route)	1,209	516	255	131	128	86	704	0	**3,029**

Source: Steer analysis of TVC data

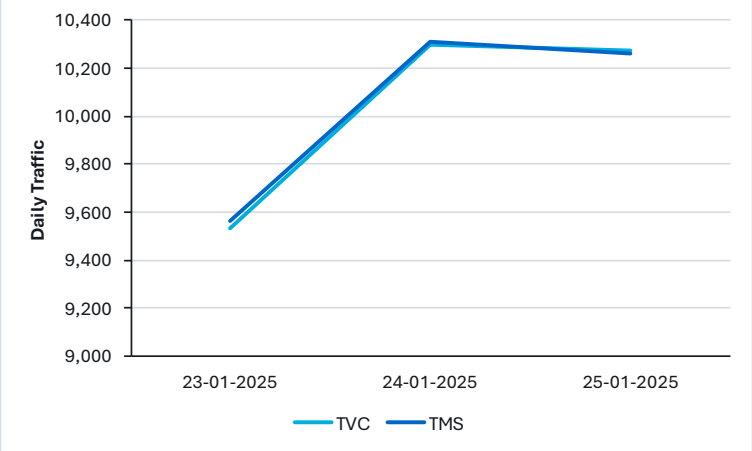
TVC v/s TMS analysis

3.16 As we use the TMS data to estimate the base year MADT, we have used our TVC data to validate the TMS data for those days, as provided by the Client.

3.17 Figure 3.3 below show the comparison between the daily traffic observed by TVC and TMS for the two toll plazas.

Parsoni Khem

Figure 3.3: Comparison between TVC and TMS total daily traffic data on TP1 Parsoni Khem

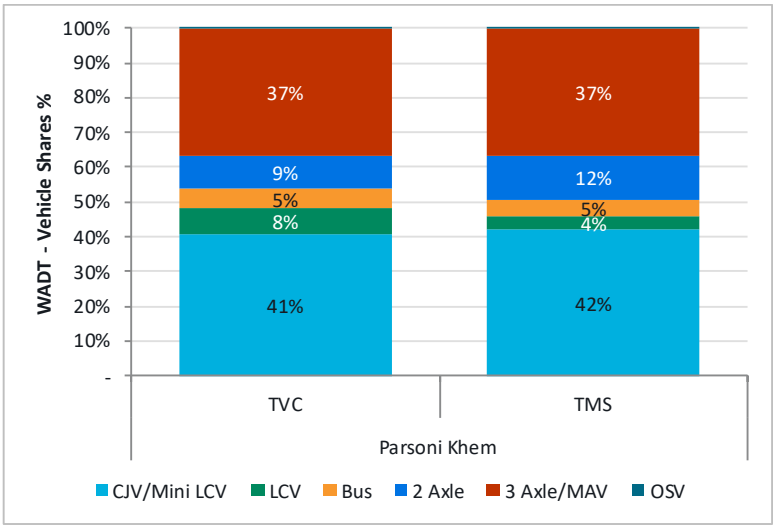


Source: Steer analysis of TVC and Client TMS data

3.18 Figure 3.3 shows that the total WADT count as provided by TMS data is 0.1% higher than those reported by the TVC data. This difference is mainly on account of the difference in the data for LCVs Buses and 2A categories, which could be attributed to common misclassification of vehicle categories due to their similar look and size.

3.19 Figure 3.4 compares the shares of vehicle types as observed through the TVC and TMS data. As can be seen, whilst the share of LCVs is higher in TVC data, share of mini-LCVs and CJVs is lower, and 2 axle trucks are lower too by approx. 2%. These differences can be attributed to misclassification of vehicle categories. The overall difference in TVC-TMS data is within 0.5%, which indicates that TMS data to be within our confidence zone.

Figure 3.4: Comparison between vehicle shares from TVC and TMS WADTs



Source: Steer analysis of TVC and Client TMS data

3.20 Considering the smaller variation between the TVC and TMS data for the largest revenue generator 3A+MAVs, and an overall match in the traffic volumes, TVC-TMS analysis gives us the confidence that the base year traffic calculated using the Client data forms a reliable base year traffic estimate.

Key findings of origin-destination analysis

Overview

3.21 Origin-destination (OD) analysis enables the understanding of the nature of traffic movement on the Asset. We have analysed the regional drivers of demand based on the following analyses:

- Zonal influence
- Commodity distribution
- Top OD pairs
- Trip length distribution

3.22 While zonal analysis and the list of top OD pairs help to understand 'where' people and goods travel, commodity distribution sheds light on 'what' goods get transported. Trip length distribution show 'how far' vehicles and people travel, and goods get transported. This set of analyses is generally used to estimate the key drivers of traffic and aid the making of informed forecasting assumptions around traffic demand elasticities, growth drivers and exogenous impacts

3.23 OD surveys were conducted at two locations along the alternate route SH74—Sahebganj and Benipur—to assess the volume and nature of traffic using this corridor. The objective

was to identify the extent to which traffic that would otherwise use the Asset is instead traversing the toll-free SH74, which also offers shorter travel time.

Sample rates

3.24 Sample rates help understand the reliability of OD data. They are calculated by dividing OD samples by the TVC count observed on the same date for each vehicle category at the toll plaza. Table 3.9 below presents the sample rates for goods and passenger category at the toll plaza. We believe that the sample rates of the OD data are reasonable for the analysis required.

Table 3.9: sample rates for OD data

Vehicle type	TP1 Parsoni Khem
Passenger (CJV+Bus)	57%
Goods (LCV+2A+3A+MAV)	76%

Source: Steer analysis of OD data

Zone Categories

3.25 To facilitate better interpretation of key regional drivers of traffic as determined by their OD zones, and influenced by various towns, cities, states and regions in the vicinity of the Asset, we have aggregated zonal data as described in Table 3.10 below. The methodology behind this aggregation of zones may vary as per the characteristics displayed by the different Asset being studied.

Table 3.10: Zone aggregations for zonal influence analysis

Aggregate Zone	Description
Local	Local zones are those that fall on or very close to the Asset.
IAOI (Immediate Area of Influence)	IAOI zones are the locations which generate traffic and lie within approximately 75-150 km distance from the Asset.
Rest of State	Rest of the cities/Districts in the state that Asset lies in (other than Local/IAOI)
Delhi	Delhi NCR
North India	Uttarakhand, Haryana, Punjab, Jammu and Kashmir
Central India	Madhya Pradesh, Chhattisgarh
West India	Gujarat and Maharashtra
South India	Tamil Nadu, Karnataka, Kerala, Andhra Pradesh
East & Northeast India	West Bengal, Orissa, Jharkhand and Northeast Indian states
Outside India	Nepal, Bhutan, and Bangladesh

Source: Steer analysis

Zonal influence

TP1 Parsoni Khem

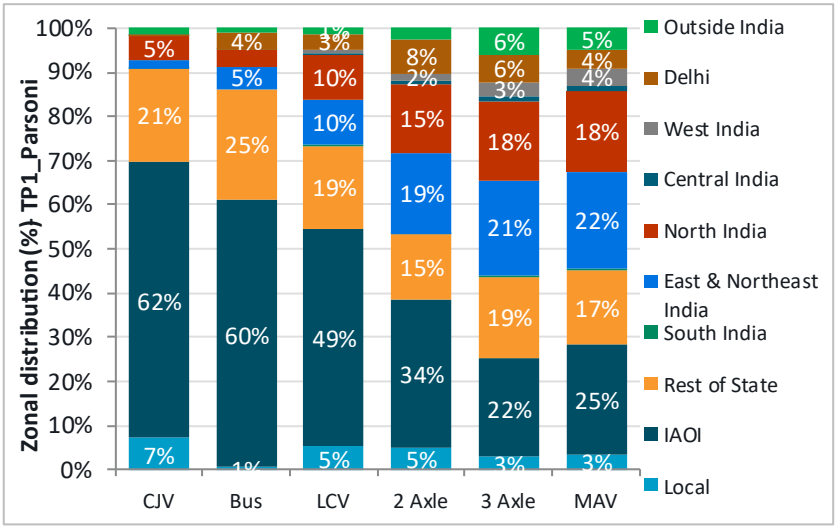
3.26 The zonal influence is the contribution of the zone or the zonal aggregation to trips by a vehicle type. This section presents the zonal influence at each toll plaza of each Asset,

based on zonal aggregation listed in the previous sub-section.[15] it should be noted that zonal influence is analysed on trips ends and not overall trips. E.g., 31% local share in Cars as shown in Figure 3.5 below means 31% of the Cars using the Asset have either originated or destined locally i.e within 20kms of the Asset radius.

3.27 As can be seen from the figure below, local and IAOI make more than 25% trip share across all vehicle categories wherein zones such as Motiput, Madhuban, Kotwa etc. have the greatest influence across all vehicle categories. The influence of local and IAOI is 55% in LCVs as compared to ~39% for 2 Axles and 25% for 3 Axles, signifying that LCVs generally cater to local demand and travel shorter trip lengths as compared to 2 Axles and 3 Axles. Local, IAOI and Rest of the State trips are observed in the highest percentage in the CJV category – accounting for 91% of all trips. This analysis is further supported by the result of the top 10 OD pairs as given in the appendices which shows that the majority of the trips originate and end in local and IAOI areas for passenger traffic whereas for the goods traffic, places such as Nepal, Assam, West Bengal and Uttar Pradesh feature at the top of the OD pair list.

3.28 Outside Bihar, it is seen that places in North India such as Delhi, Kanpur, Gorakhpur, and parts of Rajasthan, and those in East & Northeast India like Siliguri, Guwahati, Kolkata and Assam have a significant influence of around 40% on the heavy goods traffic thereby highlighting that the Asset plays an integral part in catering to the long-distance movement of traffic. There is also an influence of 6% and 5% for 3A and MAVs respectively from areas outside the country such as Nepal and Bangladesh signifying the importance of the Asset in international trade as well.

Figure 3.5: Zonal influence at TP1 Parsoni Khem

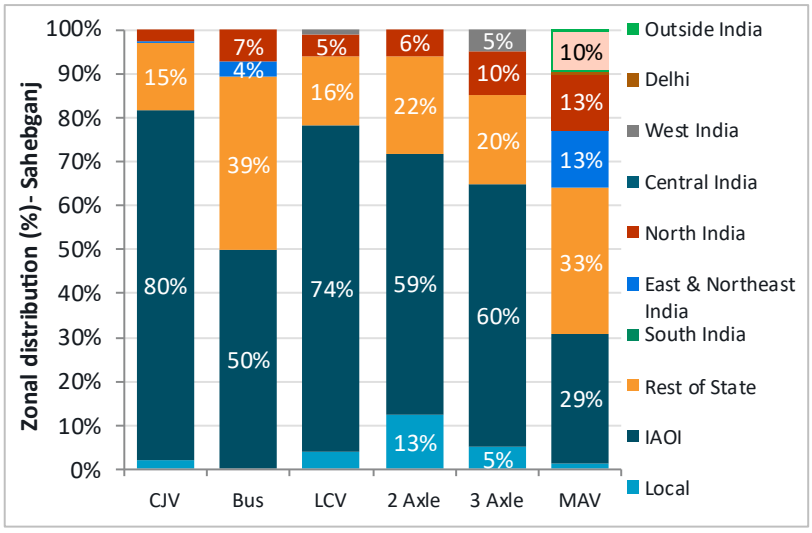


Source: Steer analysis of OD data

[15] For example, if out of 100 trips at a toll plaza on an Asset, 10 trips are between Hyderabad and Delhi and 90 trips are between Hyderabad and Chennai, then zonal influence of Hyderabad would be 50% since one end of all trips are at Hyderabad. Likewise, zonal influence of Delhi and Chennai would be 5% and 45%, respectively.

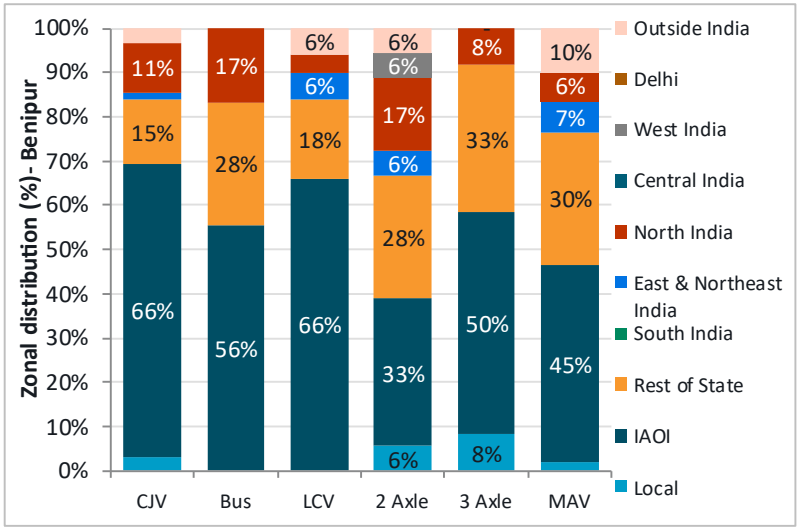
SH74 (Alternate Route)

Figure 3.6: Zonal influence at Sahebganj (Open OD)



Source: Steer analysis of OD data

Figure 3.7: Zonal influence at Benipur (Open OD)



Source: Steer analysis of OD data

3.29 As can be observed in Figure 3.6 and Figure 3.7 the zonal distribution analysis reveals that both Sahebganj and Benipur are dominated by IAOI zones, especially in commercial vehicle categories like LCVs, 3-Axles and MAVs. However, Sahebganj shows a stronger concentration of IAOI traffic, while Benipur sees a more diverse mix, including higher shares from North India and Delhi. Local traffic is minimal at both locations. Both plazas register notable movement from the "Rest of State" and around 10% of MAV traffic from Outside India, indicating cross-border trade with Nepal for POL goods.

3.30 Further analysis of the open OD data reveals that for 3-axle vehicles and MAVs, top origins and destinations on Sahebganj include Patna, parts of East Champaran, West Bengal, Nepal, as well as cities in Uttar Pradesh and Jharkhand. Meanwhile, Benipur sees traffic primarily between East Champaran, Patna, Jharkhand, and Nepal. This travel pattern

suggests that State Highway 74 (SH74) draws a significant portion of traffic from our Asset due to the absence of toll plazas and the superior road quality.

Internal External analysis

TP1 Parsoni Khem

3.31 Internal-External analysis helps in identifying the trips which have both the origin and destination on or near the Asset i.e local/IAOI zones (Internal-Internal or I-I), any one end on the Asset (Internal-External or I-E), or neither end on the Asset i.e., through trips (External-External or E-E). Rest of State here represents areas within the state which are neither local nor IAOI. 'Internal' zones are those that were analysed as 'local' and 'IAOI' in the zonal influence analysis, i.e. lying on the Asset, while 'External' zones are areas lying outside the state.

3.32 Figure 3.8 shows the distribution of trips based for MAV. Understandably, these reflect the observations seen in the zonal influence presented earlier, at a higher level of aggregation.

3.33 The long-distance nature of the MAV traffic is reflected in this analysis as around 33% of the trips for MAV are originating and ending in areas lying outside the state. Overall, 51% of MAVs plying on the Asset have at least one of the trips ends outside state.

Figure 3.8: Internal-external distribution at TP1 Parsoni Khem

	Internal	Rest of State	External
External	15%	11%	33%
Rest of State	5%	2%	8%
Internal	10%	6%	9%

Source: Steer analysis of OD data

SH74 (Alternate Route)

Figure 3.9: Internal-external distribution at Sahebganj

	Internal	Rest of State	External
External	6%	9%	16%
Rest of State	21%	7%	22%
Internal	7%	9%	3%

Source: Steer analysis of OD data

Figure 3.10: Internal-external distribution at Benipur

	Internal	Rest of State	External
External	16%	9%	-
Rest of State	16%	-	15%
Internal	11%	25%	7%

Source: Steer analysis of OD data

3.34 Figure 3.9 and Figure 3.10 illustrate the distribution of MAV trips from alternate OD sites. This analysis highlights the long-distance nature of MAV traffic, with approximately 41% of trips originating or ending externally at Sahebganj. Conversely, Benipur plaza experiences more internal and intra-state trips, suggesting shorter trip lengths.

Commodity distribution

3.35 We have grouped various commodities into aggregate categories for ease of interpretation, as shown in the table below. The charts in the following sub-section present information in terms of aggregate commodity categories.

Table 3.11: Commodity categories

Commodity Description	Code	Combined codes used for charts
Agriculture Products / Cash crops (Wheat, Rice, Sugar cane, Maize etc.)	AGR	AGR
Cattle Food / Live Stock (sheep, ghoat, cow, cattle food etc)	LIV	
Perishable Items (Fruits, vegetables)	PER	GRO
Animal Products/Dairy/Eggs/Fish/Meat/Animals	DFM	
Groceries / Food items (Soap, Salt, Sugar, Pulses, Spices, Biscuits, bread, cool drinks, beer etc.)	GRO	
Building Material / Construction (Cement, Lime, Brick, fly ash, etc)	CNS	CNS
Sand/Clay	SND	
Stone (kota stone, marble, Granite, Aggregate stone etc.)	STN	
Ceramic	CRM	
Petroleum Products (Oil, LPG, CNG, etc.)	PET	PET
Chemicals / Fertilizers (Acids, Fertilizers etc.)	CHM	
Electrical/Manufacturing items (Electronic items, Medicine, Leather, Wine, Rubber/ Tyre, Plastics, Cloth, Paper etc.)	MAN	MAN
Raw Wood, Cork & Wood Products, Furniture	WUD	
Machinery / Spare parts	MAC	
Automobiles (Finished products, auto parts, Car/bike manufacturing, New Chassis)	AUT	AUT
Basic / Fabricated Metals (Iron, Steel / Metal)	MET	MET
Mining Minerals (Coal, Gypsum, Cobalt etc.)	MIN	
Empty	EMT	EMT
Container	CTR	MSC
Miscellaneous (Parcel, Courier, Household items etc.)	MSC	
Passengers	PAS	
Scrap	SCR	

Source: Steer Analysis

TP1 Parsoni Khem

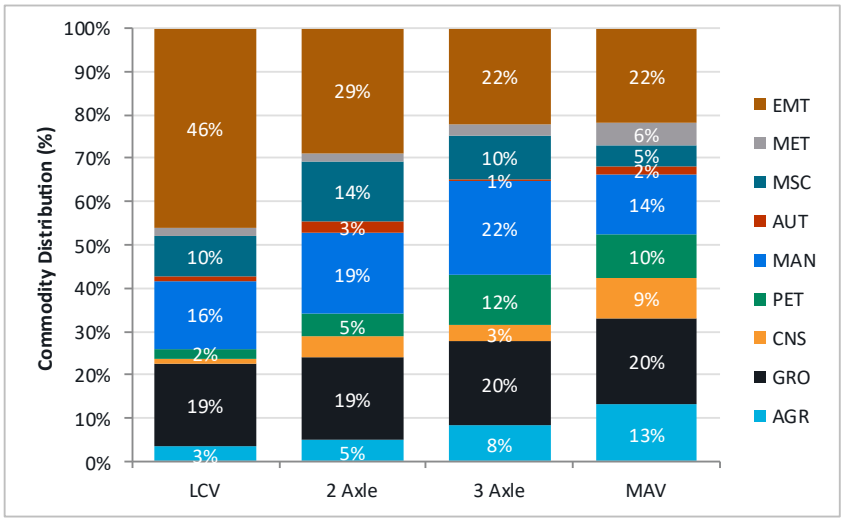
3.36 Figure 3.11 presents the commodity distribution for goods vehicles at the toll plaza, at a total level.

3.37 Agricultural and grocery items such as rice, wheat, maize, and sugarcane are the top commodity category carried by both 3A and MAV traffic with combined share of 28% and 33% respectively. Both the ends of the Asset being heavy agri -based with the dominance of commodities such as rice and sugar. This was followed by 10% of the MAV's and 12%

of the 3A vehicles transporting petroleum products like oil, gas, and petrol. This is due to the presence of the Barauni refinery near the Asset. Manufacturing items (such as clothes, paper and rubber) too are observed in notable quantity in both 3A's and MAVs, account for approx. 22% and 14% vehicle split respectively.

3.38 The light goods vehicle shows a similar mix of commodities with agricultural and grocery items having ~22% share, followed by manufacturing and miscellaneous goods. Many industries are in Muzaffarpur contribute to the high share of manufacturing and finished commodities carried on the Asset.

Figure 3.11: Commodity distribution at TP1 Parsoni Khem (Total)



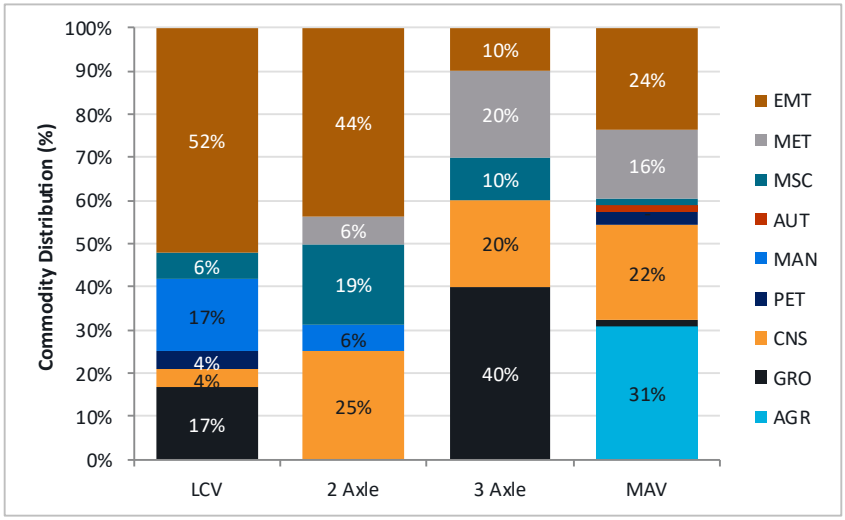
Source: Steer analysis of OD data

SH74 (Alternate Route)

3.39 The distribution of commodities transported by 3-Axle and MAV vehicles at the alternate route points—Sahebganj and Benipur—reveals distinct trends. At Sahebganj, 3-Axle trucks predominantly carry Grocery items (40%), followed by Construction materials (20%), Metals (20%) and Miscellaneous goods (10%). In contrast, MAVs at the same location exhibit a more diverse cargo mix, with Agricultural products (31%), Construction materials (22%) and Metals (16%) making up the bulk of their loads.

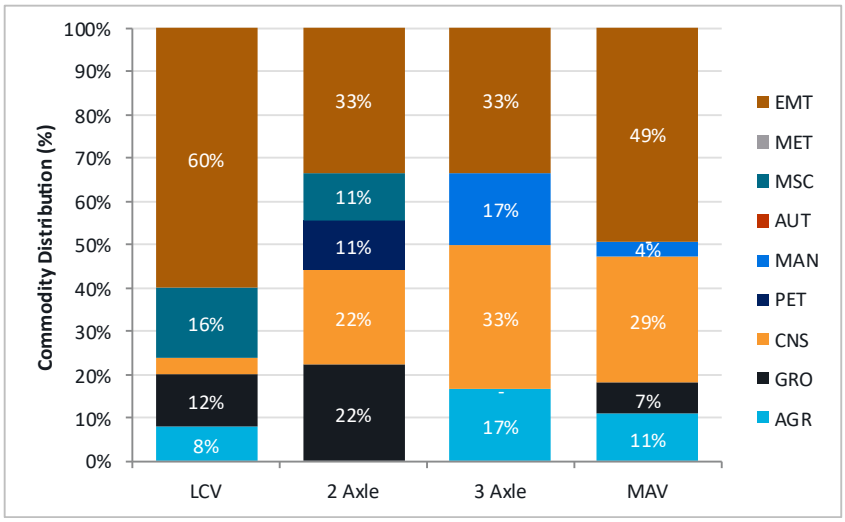
3.40 Benipur, on the other hand, shows a stronger emphasis on Construction materials, which account for the largest share for both 3-Axles (33%) and MAVs (29%). 3-Axles also carry significant proportions of Manufactured goods (17%) and Agricultural products (17%).

Figure 3.12: Commodity distribution at Sahebganj (Total)



Source: Steer analysis of OD data

Figure 3.13: Commodity distribution at Benipur (Total)



Source: Steer analysis of OD data

Trip length analysis

3.41 Trip-length distribution provides the distance-based profile of various vehicle types. This aids in validating the assumptions around the share of macro-economic drivers, inputs from zonal influence and toll segmentation. For the ease of interpretation, we have categorised distances into 5 groups:

- Local (0-100km)
- Short distance (100-300 km)
- Medium-distance (300-500 km)
- Long-distance (500-1000 km) and
- Very-long-distance (+1,000 km)

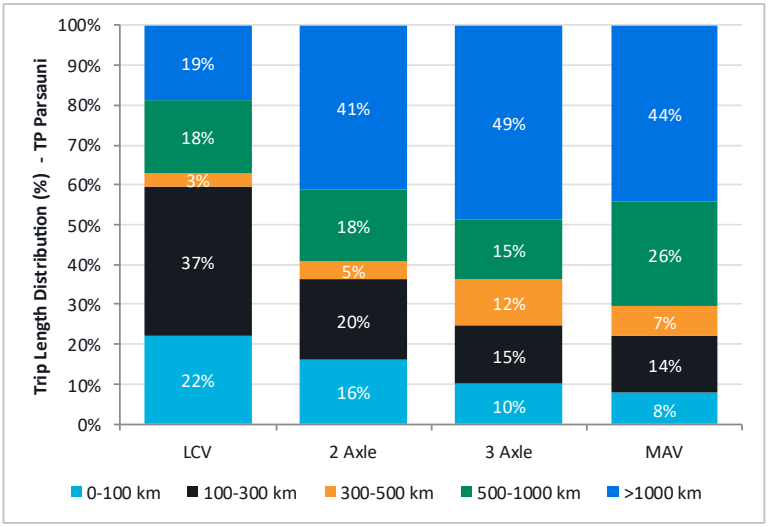
3.42 The trip distances were derived as driving distances from Google Distance Matrix Tool based on zonal coordinates for OD pairs[16].

TP1 Parsoni Khem

3.43 Supporting the observations made in zonal & internal-external analysis in the previous sections, Figure 3.14 below highlights that about 59% of LCVs travel shorter distances up to 300 kms, contributing to within state movements on the Asset. In case of LCVs around 37% of category travel less than 300 but more than 100 kms catering to the local demand carrying agricultural and groceries. It can be seen that as the number of axles increase, the distances travelled also increase.

3.44 As established by the internal-external analysis and the zonal distribution analysis above, the Asset caters to the long-distance movement for a significant proportion of commercial traffic evidenced by 64% of 3A trips and 70% of MAV trips travelling north of 500kms. These trips primarily move from North India (Delhi NCR, Punjab, Haryana, Rajasthan and UP) towards Bihar, West Bengal and north-eastern states.

Figure 3.14: Trip length distribution TP1 Parsoni Khem



Source: Steer analysis of OD data

Table 3.12: Average trip length (in km) at TP1 Parsoni Khem

	LCV	2 Axle	3 Axle	MAV
Average trip length Km	530	888	1,051	1,031

Source: Steer Analysis of OD data

[16] Google Distance API is a tool that is available on a chargeable basis from Google Maps Platform. Link: **https://developers.google.com/maps/documentation/distance-matrix/start**. Travel distance and time information for driving/transit under various congestion scenarios can be extracted through this tool by using macro-enabled Excel, R, etc

SH74 (Alternate Route)

3.45 The trip length distribution shows that Sahebganj mainly serves short to medium hauls for 3-Axles (67% in 100–300 km) and a balanced mix for MAVs, with 35% in 500–1000 km and 28% in 300–500 km ranges. In contrast, Benipur supports longer-distance travel, with MAVs at Benipur have a strong long-haul profile, with 40% in 300–500 km and 8% above 1000 km, indicating more through and extended regional movement. These validate the alternate routes usage for long distance traffic movement for commercial vehicles.

Source: Steer Analysis of OD data

Conclusions

3.46 In summary, as per the traffic volume data in FY26YTD, CJVs contribute to the highest share in traffic around 45% followed by MAVs with approx. 25% share and 3As with an average of approx. 11% share, rest of the volumes are contributed by LCV, Bus and 2As. Even though CJVs make up for the highest share in traffic, MAVs are the biggest revenue contributor.

3.47 The TVC-TMS analysis highlights minor variation between the two datasets wherein at the total level, TVC is approximately 0.1% lower than the TMS data wherein the differences in LCV, CJV/MLCVs and 2A's contribute to the delta, which could be due to mis-categorisation of Mini LCV and LCV with Mini LCV's getting counted into CJV's. However, the difference is minor for the larger revenue generating categories (3A, MAV, and OSV combined) at (0.5%).

3.48 The zonal influence analysis examines the contribution of different zones to vehicle trips. Local and IAOI zones account for over 25% of trips across all vehicle categories, with Motiput, Madhuban, and Kotwa having the highest influence. Among commercial vehicles, LCVs show the strongest local influence at 55%, compared to ~39% for 2 Axles and 25% for 3 Axles. CJV traffic has the highest local and IAOI share at 91%.

3.49 For heavy goods vehicles (3As and MAVs), zones within Bihar account for about 44-45% of all trips on the Asset. Apart from these trips, it is observed that zones in Northern India (including Gorakhpur, Delhi NCR, parts of Rajasthan etc) and Northeast India (Assam, Guwahati and Siliguri) have significant influence, establishing the Asset as a key corridor facilitating east-west movements between north and northeast parts of the country.

3.50 Internal external analysis reflects the long-distance nature of traffic on the Asset with approximately 33% of all trips either originating and ending in zones outside Bihar. Overall, 51% of MAVs plying on the Asset have at least one of the trips ends outside state.

3.51 Commodity distribution reveals that agricultural and grocery items (rice, wheat, maize, sugarcane) dominate 3A and MAV traffic, with a 28% and 33% share, respectively, due to strong agricultural activity at both ends of the Asset. Petroleum products (oil, gas, petrol) account for 10% of MAV and 12% of 3A traffic, influenced by the nearby Barauni refinery. Manufacturing goods (clothes, paper, rubber) also have a notable presence, making up 22% of 3A and 14% of MAV traffic. Light goods vehicles (LGVs) follow a similar pattern, with agricultural and grocery items (~22%) leading, followed by manufacturing and miscellaneous goods, supported by Muzaffarpur's industrial base.

3.52 Our analysis indicates that the alternate route SH74 carries commercial traffic moving between Uttar Pradesh, Patna, Nepal, Jharkhand, and other parts of eastern India. The route competes directly with the Asset due to the absence of toll plazas and the superior road quality of the alternate.

3.53 Analysing the vehicle share on the Asset and understanding the OD analysis, CJVs make up for the highest share of traffic and significantly contributed to the local traffic share, however the largest contribution to the revenue share is made by MAV and 3A traffic, wherein agriculture and groceries are the top commodity category transported on the Asset by both the heavy and light goods vehicles.

4 Socio economic context and traffic growth

Introduction

4.1 The growth of traffic on existing (brownfield) roads depends on, firstly, how fast the background travel demand grows (background growth); and secondly, how successful the roads are in attracting that traffic (traffic capture). Background travel demand is driven by the socio-economic conditions in the region where the Asset is located and the country. These include:

- Changes in factors such as population, economic growth (regional and national) and industrial production; and
- Other local factors such as strategic port growth, and growth in local industries near the Asset.

4.2 In turn, the change in the relative competitive position of the Asset (and thus of the traffic capture they can achieve) derives from how the relative offer for the roads changes, i.e. the service offered, and the tolls charged on the project roads, in comparison to that on competing roads; and whether any competing road facilities are planned.

4.3 In this chapter, we have assessed the trends of the above growth drivers, as indicators of the socio-economic conditions in the regions surrounding the Asset.

Population growth

4.4 We have analysed the key socioeconomic drivers of the background traffic demand in the Bihar state, where the Asset is located.

National level

4.5 The total population in India has grown at a Compound Annual Growth Rate (CAGR) of 1.5% since 2000, decreasing over the years, as shown in Table 4.1below. The World Bank forecasts this growth to decrease to 0.6% CAGR by the 2030-45 period.

Table 4.1: CAGR of population in India

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
1970 - 1985	2.3%	1.9%	3.8%
1985 - 2000	2.0%	1.7%	2.9%
2000 - 2015	1.5%	1.0%	2.6%

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
2015 – 2030*	1.0%	0.3%	2.3%
2030 – 2045*	0.6%	-0.3%	1.9%

Source: World Bank Data on Health Nutrition and Population Statistics, *forecast population growth.

State level

4.6 The Table 4.2 shows the evolution of population in Bihar state compared to that of the country. Overall, as can be seen, the trend observed at the country level is also noticeable at the state level, namely, a move towards urban agglomeration with the growth in rural population being slower than that of urban population. Further, the population of Bihar has grown at a higher rate than the country average between 2012-2024.

Table 4.2: Population Growth in India (2012 – 2024)

State	2012 Population (m)	2024 Population (m)	CAGR (2012 – 2024)
Bihar	105.1	127.9	1.7%
India	1,210	1,395	1.2%

Source: Ministry of Statistics and Program Implementation estimates

4.7 Due to the complexities of the patterns in which urbanisation takes place, and the very dynamic nature of local population migration (which are very difficult to forecast with accuracy), we do not use population growth as a proxy for understanding future travel demand growth on the Asset. It has been included in this section simply to provide a socio-economic context of the trend in the region in which the Asset is located.

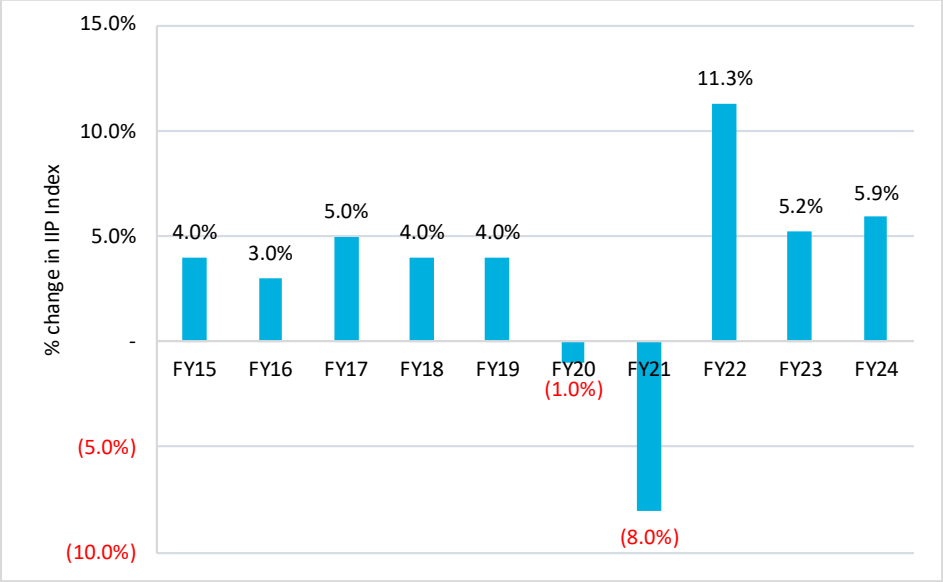
Economic Indicators

Industrial Production

4.8 The Index of Industrial Production (IIP) is a composite indicator that measures the short-term changes in the volume of production for a basket of industrial products. The IIP data tracks the manufacturing activity in different sectors of an economy, with mining, manufacturing, and electricity being the three broad sectors in which IIP constituents fall.

4.9 As can be seen in Figure 4.1 below, at an annual level, the IIP was growing on an average of 4% between FY15-19, before being hit by liquidity crisis and overall economic slowdown in FY20. Post that, the IIP shrank by over 8% in FY21, due to a decline in economic activities in the wake of global lockdowns introduced to curb coronavirus pandemic. However, with the gradual opening of economy and rebound observed in demand, the IIP grew over 5% in FY23 and 6% in FY24.

Figure 4.1: Annual growth – Index of Industrial Production



Source: Ministry of Statistics and Program Implementation (MoSPI)

4.10 Since state-level IIP data is not as readily available as national level IIP, we have presented national IIP here to indicate nationwide activity in key industrial sectors like power, manufacturing, and mining, all of which influence long-distance commercial movements across the nation, and not unique to this asset. We, however, do not use it to forecast future travel demand growth since long-term forecast for IIP is not available through official sources such as MOSPI, RBI or through multilateral organisations like WB, or the IMF.

Vehicle ownership

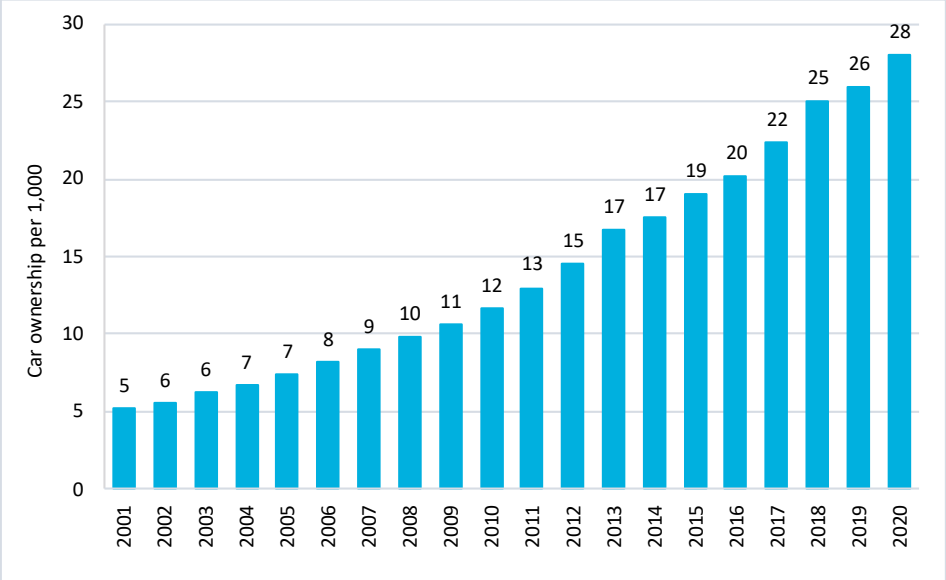
4.11 The gap in car ownership between India and developed nations remains substantial according to recent data. As of 2018, India had approximately 22 cars per 1,000 individuals, a fraction of the 980 cars per 1,000 individuals in the United States[17]. However, this pattern is changing with the increasing per capita income levels. As can be seen in Figure 4.2 below, between 2007-17, number of cars per 1,000 people has more than doubled.

4.12 Overall, India still stands at a very nascent stage in the vehicle saturation curve, offering huge potential for growth going forward. As the income per capita of India and the region itself grow further, we expect car ownership levels to increase. As per the India Energy Outlook (2015), car ownership is projected to grow steeply to 175 cars per 1,000 population by 2040 in India.[18]

[17] **India has 22 cars per 1,000 individuals: Amitabh Kant, Auto News, ET Auto**

[18] **https://www.gita.org.in/Attachments/Reports/IndiaEnergyOutlook_WEO2015.pdf**

Figure 4.2: Car Ownership in India per 1,000 population

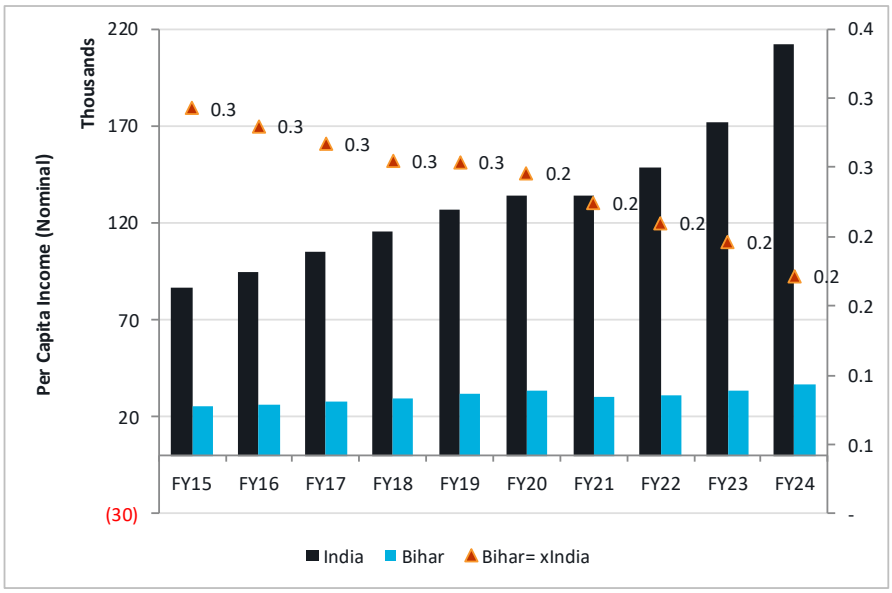


Source: International Energy Agency (IEA)

Per Capita Income (PCI)

4.13 The per capita income of the state where the Asset lies, i.e., Bihar is lower compared to the national average. Thus, the state is at a very early stage of consumption curve. Going forward, we therefore expect local consumption to be strong which would drive the growth in both passenger and commercial traffic.

Figure 4.3: Per Capita Income



Source: Ministry of Statistics and Program Implementation (MoSPI)

4.14 Given the difficulty in obtaining granular district level PCI data, it is not advisable to use this as a growth driver in our forecasts. Additionally, long-term forecasts for PCI are not available from official sources and we therefore refrain from using it to forecast traffic growth.

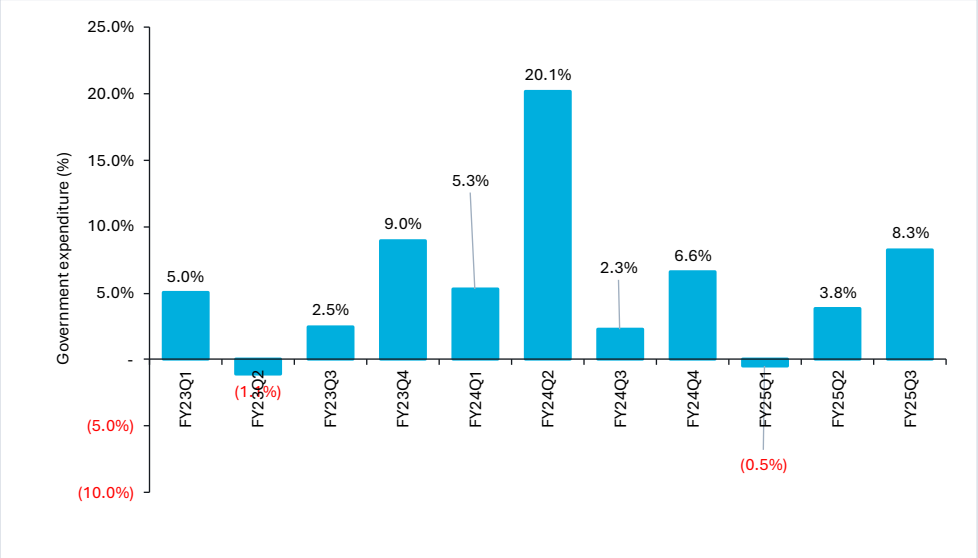
Economic growth

India's Performance

4.15 India's economic performance has shown signs of recovery in the recent months despite a slowdown experienced in H1FY25, as the latest Second Advance Estimates (SAE) released show the GDP growth in FY25 to be 6.5% - which is lower than the 9.2% growth observed in FY24 [19]

4.16 Figure 4.4 below shows that India's economic performance in Q3 of FY25 has shown signs of recovery with latest SAE estimates for FY25 GDP growth registered at 6.5% relative to 9.2% recorded in FY24. This deceleration can be attributed to a downturn in industrial output – specially manufacturing, electricity, and mining (as shown in Figure 4.6 below) – along with a decline in government capital expenditure in FY25 (presented in Figure 4.4 below). Contributing factors also include the impact of the 2024 general elections on central infrastructure spending, state-level fiscal constraints and rising global uncertainties such as Russia-Ukraine war and Gaza-Israel conflict which have had impact on global supply chains.

Figure 4.4: Government final consumption expenditure



Source: Steer Analysis of MOSPI Data

4.17 Weaker industrial activity, as reflected in lower IIP (Figure 4.5) and GVA contribution (Figure 4.6), directly impact freight movement and commercial traffic volume growth across the country, including on the Asset. At the same time, muted government capex had an influence on both construction-linked activity and industrial output which impacted the commercial traffic growth carrying construction material and industrial goods. Export oriented corridors across the country have also seen muted traffic performance in FY25 due to global supply chain disruptions and the Red-Sea crisis, with exported commodities like manufactured goods, marble, and ceramics experiencing declines as well.

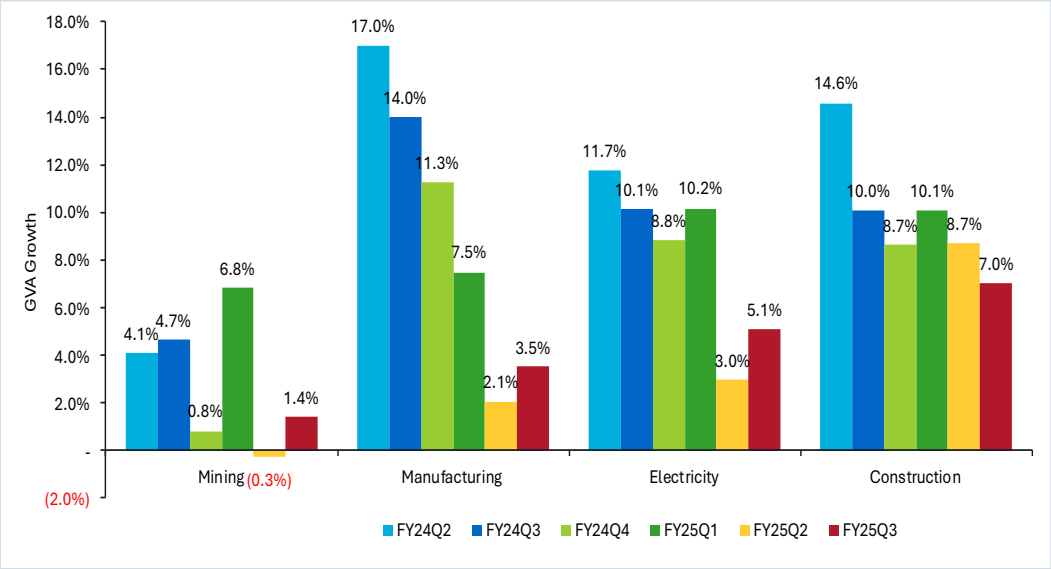
Source: Steer Analysis of MOSPI Data

Figure 4.6: Industrial components of GVA



Source: Steer Analysis of MOSPI Data

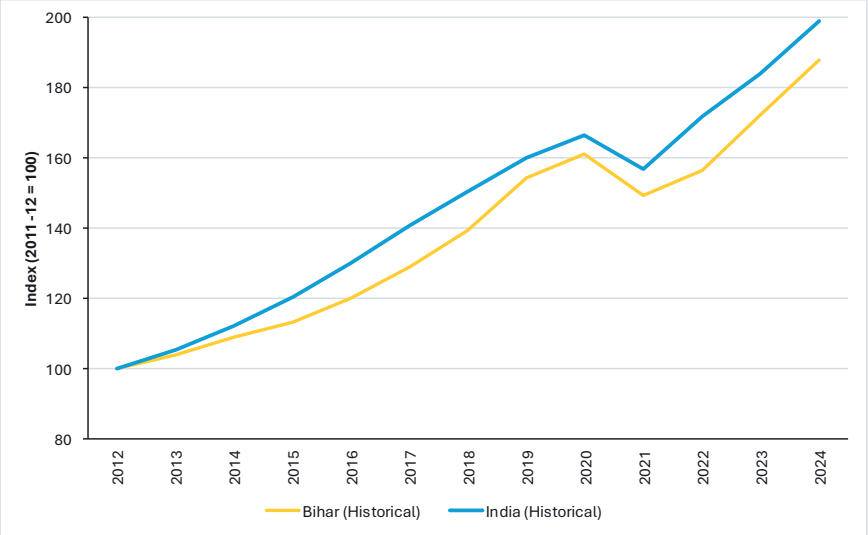
GDP and GSDP Growth

4.18 Over the period FY12-FY24, the Indian economic has grown at a CAGR of approx. 6% aided by growth in the tertiary sector which grew at a CAGR of approx. 6.9% over the same period. The economic performance of Bihar has been weaker than the country during the same period. Bihar's GSDP CAGR was 5.4% between FY12-24. Bihar approximately contributes 2.7% to the India's GDP. Between 2012 and 2024, Bihar's GSDP grew steadily, nearly doubling in real terms. The state saw consistent growth until 2018–19, peaking at approx. 10.9%, before slowing due to the pandemic, with a contraction of 7.4% in FY21. A strong recovery followed, with growth rebounding to over 9% in FY23 and FY24.

4.19 Bihar is largely an agrarian state, with around 77% of population dependent upon agriculture as a livelihood[1]. The state is one of the largest producers of vegetables and fruits in the country, especially, sugarcane, banana, mango, and eggplant.

4.20 Figure 4.7 below illustrates the evolution of Bihar's GSDP during FY12-FY24.

Figure 4.7: Evolution of Bihar's state GDP and National GDP



Source: Ministry of Statistics and Program Implementation (MoSPI)

4.21 The official historical GDP and GSDP data for India are released by the Ministry of Statistics and Program Implementation (MoSPI). The GDP forecasts for India are available from various reliable sources such as Oxford Economics and Consensus Economics[20], but state-specific GSDP forecasts are not published by any such sources. To derive state GSDP forecasts, we rely on past trends of the relationship between GDP and GSDP and develop GSDP forecasts as a function of our assumed GDP forecasts[21].

4.22 For any indicator to be used as a growth driver to forecast traffic, a reliable source of historical and forecast data availability for that indicator is the key requirement. Of the key socioeconomic indicators discussed above, GDP was assessed to be the only growth driver for which reliable data is available both in terms of historical and forecast data. Therefore, to forecast traffic, we use GDP/GSDP as our key growth drivers.

Forecasts for growth drivers

4.23 Following the discussion in Chapter 4 on the nature of economic activity in the state of Bihar, in this section, we describe the assumptions in relation to forecasts of the key macro-economic drivers of traffic growth on the Asset.

4.24 We have based our forecasts of Bihar GSDP using forecasts of GDP as provided by the Client.

---

[20] **Consensus Economics - Economic Forecasts and Indicators**

[21] Assuming that the historical long-term relationship between GSDP and GDP sustains over the short-term, we project future growth in GSDP as a function of our GDP growth forecast. We taper the relationship of GSDP growth to converge to GDP growth gradually over the long-term.

National GDP

4.25 After the last period of economic slowdown in FY11-12, the country experienced an economic downturn again in late FY19 with FY20 having reported a GDP growth of 4% (relative to an average growth rate of 7% per year between FY13 and FY19). India's GDP growth declined as domestic investment and consumption demand were already under stress because of the liquidity crunch before Covid-19. Other factors that contributed to the economic slowdown included reduced growth rates in automobile sales and production, liquidity crunch in credit markets and rising number of Non-Performing Assets (NPAs) within the banking sector, as well as lower manufacturing production and lower rural consumption.[22]

4.26 The Covid19 outbreak had a significant impact on the Indian economy during the first two quarters of FY21 as government mandated lockdowns across the country effectively stalled economic activity and growth. The growth momentum eventually picked up in Q3 of FY21, with a sharp rebound in the economy in FY22 (GDP recorded 9.7% growth over FY21) and has since observed a consistent growth of 7.6% in FY23, 9.2% in FY24 (as per the SAE) before slowing down to 6.5% in FY25 due to several domestic and external factors.

4.27 Figure 4.8 below shows client provided GDP projections for India. The forecast projects the Indian GDP to grow at 6.5% between FY25-FY27[23] and gradually tapering down to 5.2% by FY50. The India GDP growth forecast is broadly in line with other independent forecasts available from reliable sources such as IMF, World Bank and RBI[24] in the short term.

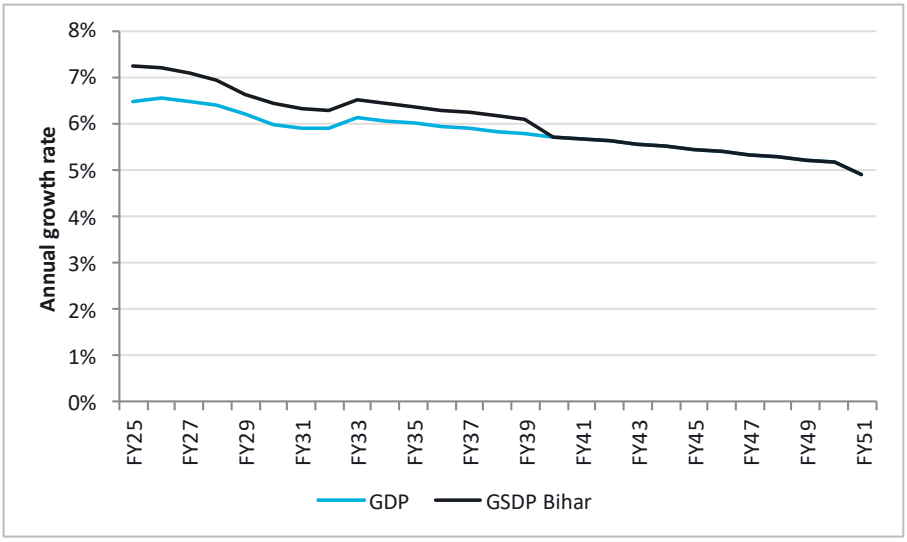
4.28 We expect Bihar's GSDP to grow faster than India's overall GDP, driven by its low base, rising infrastructure investments, and growth in construction and services sectors. Government focus on rural development and improving connectivity is also expected to boost economic activity in the state.

[22] **Data | India's GDP was on a downward slope even before COVID-19 wreaked havoc - The Hindu** (September 2020)

[23] Based on Asia Pacific Consensus Forecasts (December 2024)

[24] **Survey of Professional Forecasters on Macroeconomic Indicators – Results of the 93rd Round (April 2025)**

Figure 4.8: GDP-GSDP forecast



Source: GDP forecast provided by the Client

4.29 By comparing historical trends of regional GSDP growth with the national GDP growth we have established GSDP projections for each state. We assumed that as the Indian economy grows, the states which have historically grown at a faster pace will, over 10 years, see a slowdown in GSDP growth, tending to the national average, whereas the states that have grown slower than the national GDP will begin to pick-up. The GDP-GSDP gap would converge by 2040.

5 FY26 base year AADT and Traffic Growth Analysis

Introduction

5.1 In this section, we present our approach, assumptions, and estimates for base year AADT and background traffic growth for each vehicle category on the Asset.

5.2 Traffic growth is commonly related to a variety of macro-economic and industry- or commodity-specific factors (hereafter referred to as 'traffic growth drivers'). These growth drivers are typically identified from the results of the OD data analysis and the site visits that help us appreciate the nature of traffic movement – 'what' travels 'where' and 'why'.

5.3 While comprehensive historical data on the asset is not available, we have access to six years of records. Despite some inconsistencies, this dataset provides a reasonable foundation for analysis. As a result, statistical methods to estimate background growth relationships could not be applied. Instead, we conducted a benchmarking exercise, supported by trip length and origin-destination (OD) analysis, to derive elasticity estimates. These are discussed in detail below.

FY26 base year AADT estimates

5.4 The base year is the year on which long-term background forecast growth rates are applied to derive year-wise average annual daily traffic (AADT) estimates for forecast years. This is therefore an important aspect of our forecasting approach as traffic and ultimately revenue forecasts for future years are built on top of the base year traffic estimate. We have used FY26 as the base year for AADT estimates for the forecast years.

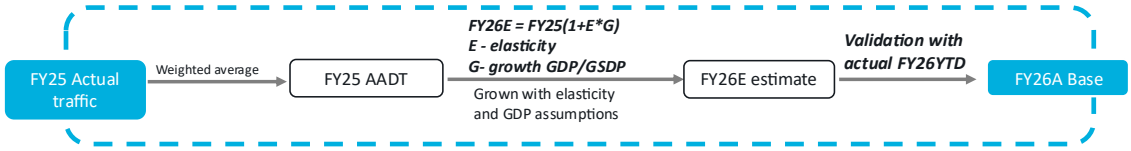
5.5 As described previously in Chapter 3, to establish the base year (FY26) traffic position, we utilized information from various sources – including from the Client and our context knowledge, to assess a reasonable demand on the corridor.

Methodology

5.6 The base traffic for FY26 has been estimated utilizing the actual 12 months of FY25. The weighted average of the actual FY25 traffic (April to March) was taken to arrive at annual FY25 AADT. Using elasticity-based growth assumptions GSDP or GDP we arrived at estimated FY26 (FY26E).

5.7 The monthly profile of the FY26E AADT was then compared to the actual traffic observed in the six months (April 2025 to September 2025) of FY26 (FY26YTD). The Adopted FY26 AADT (FY26A) is derived by making necessary adjustments to FY25E to reflect the outturn traffic in FY26YTD (adjusted for seasonality). The methodology is represented using the below schematic in Figure 5.1:

Figure 5.1: FY26 base Estimation methodology



Source: Steer Analysis

5.8 The two key inputs to estimate the base year FY26 traffic are FY25 traffic and seasonality correction factor (SCF).

Seasonal Correction Factors

5.9 Traffic on any Asset varies on a month-on-month level. Such variations maybe due to monsoons (typically Jul to Sept) or due to festivals in the region. For e.g. It is observed that typically the truck traffic during the first half of the financial year (April-September) is generally lower than the annual average, mainly because of peak summer season followed by monsoons affecting the freight movement patterns in large parts of the country in the July-September period. In addition to these there may be other seasonal variations specific to the Asset.

5.10 To normalize for these variations across the year to provide an AADT estimate, Seasonality Correction Factors (SCF) are used. SCFs are estimated to convert the monthly traffic numbers to an AADT level while accounting for seasonal variation due to local/national festivals, weather changes and/or temporary external impacts. These are typically estimated using historical data for each plaza and vehicle category over multiple years. SCF >1 means that the traffic for the month is lower than the annual average and vice-versa.

5.11 Historical traffic data was available for all toll vehicle categories starting October 2020 up-to September 2025. Therefore, in absence of longer-term historical data for the Asset where FY21 and FY22 are COVID-19 impacted years, we assume FY23 onwards to be normal years, thus average FY23-FY24 seasonality is considered for FY26 base year estimation.

5.12 Table 5.1 below presents the average of FY23 and FY24 SCF used to estimate the AADT for the Asset.

Table 5.1: Adopted SCF for the Asset, FY23 and FY24 average

Vehicle Category	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
CJV	1.05	0.89	0.93	1.08	1.12	1.19	1.11	0.89	0.91	1.11	0.91	0.94
LCV	0.97	0.93	0.95	1.05	1.09	1.04	1.05	0.97	0.95	1.12	1.12	0.87
Bus	0.98	0.90	0.86	0.93	1.10	1.06	1.09	0.96	1.02	1.21	1.03	0.98
2A	1.00	0.99	1.00	0.98	1.08	1.05	1.01	1.00	1.00	1.12	0.90	0.92
3A	0.96	1.00	1.06	1.14	1.07	0.96	0.99	0.97	0.95	1.06	0.92	0.96
MAV	0.98	0.95	1.08	1.15	1.09	1.06	0.97	0.90	0.86	1.04	0.99	1.02

Source: Steer analysis of Client shared data

Adopted base estimates

5.13 Based on the above methodology and inputs, the adopted base for the toll plaza has been shown below:

Table 5.2: Adopted base estimates AADT: TP1: Parsoni Khem

	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	4,489	4,708	4,893	9.0%
LCV	386	388	387	0.4%
Bus	489	530	510	4.3%
2A	1,190	1,265	1,283	7.8%
3A	1,005	951	976	(2.9%)
MAV	2,468	2,423	2,555	3.5%
OSV	1	1	1	-
Total	**10,029**	**10,266**	**10,606**	**5.8%**
PCU	**21,812**	**22,058**	**22,777**	**4.4%**

Source: Steer analysis: FY25 actual full year, FY26YTD includes 06 months (Apr-Sept) of FY26, FY26A is adopted base for FY26

5.14 Table 5.1 indicates a total PCU growth of 4.4% in FY26, primarily driven by an increase in CJV traffic and a 7.8% rise in 2A vehicle volumes. The growth in traffic in 2A is linked to increased LPG and petroleum activity in the region, as discussed in Chapter 2 of this report.

5.15 The MAV traffic has regained traction in FY26 compared to FY25 which exhibited flat growth largely due to the economic slowdown in Bihar, particularly in the manufacturing and construction sectors. Additionally, recent announcements of road and oil-related infrastructure investments in the state are likely to drive future demand for construction materials and petroleum transport, fostering healthy long-term growth on the asset.

Estimation of background elasticities

Overview

5.16 For brownfield Asset, where sufficient historical traffic evolution is available, it is common practice to use regression model analysis to determine the relationship, expressed as elasticity, between traffic growth and key socioeconomic drivers. This relationship is then applied to assumptions of future socio-economic evolution to estimate future traffic growth.

5.17 As for the Asset under consideration, a historical trend was not available since the Asset started tolling by the client in Oct-2020 and both FY21 and FY22 have been affected by Covid19 related disruptions. Therefore, we undertook a benchmarking exercise in order to estimate our forecast elasticities, Sources used included historical vehicle wise traffic growth on the Asset, outputs from the analysis of the OD data (refer chapter 3 for Commodity and trip length analysis) collected on the toll plaza. We have also undertaken a regional benchmarking against Asset having similar traffic profiles, which gives us reasonable confidence in the relationships proposed.

5.18 In terms of selection of growth drivers for vehicle types, in general we have assumed GSDP as the key driving factor for the CJVs and Buses given this traffic is generally driven by the local economies of the cities and state containing the Asset. The heavier commercial vehicles such as generally travel long-distance, and the underlying growth is governed by the general economies of several states or nation as whole.

5.19 Given the nascent stage of India's logistics sector, characterized by a highly fragmented trucking industry (95% of operators owning fewer than five trucks) and low car ownership rates (30-35 per 1000 people), the forecast elasticities are projected to remain constant throughout the concession period. This assumption is grounded in historical trends and a long-term perspective on regional and national growth, suggesting market maturity is still several years away.

5.20 Table 5.3 below presents the growth drivers identified to model the forecast background traffic growth rates.

Table 5.3: Identified growth drivers to model traffic growth

Vehicle type	GDP India	GSDP Bihar
Car		100%
LCV		100%
Bus		100%
2A	100%	
3A	100%	
MAV	100%	

Source: Steer Analysis

5.21 Further to developing estimates for FY26 AADT, the Asset has operational history between FY22 and FY25, proving us four years of traffic growth on the Asset. Table 5.4 below summarises the volume growth across each of the vehicle categories. For this comparison we have normalised the FY22 AADT for COVID19 by adopting seasonally corrected H2FY22 as the FY22 normalised (FY22N).

Table 5.4: Passenger and Commercial growth with normalised FY22

	FY22N	FY23	FY24	FY25	FY26A	FY22N-26 CAGR
CJV	4,118	3,978	4,229	4,489	4,893	4.4%
LCV	483	491	468	386	387	(5.4%)
Bus	439	397	361	489	510	3.8%
2A	1,042	1,105	1,121	1,190	1,283	5.3%
3A	1,083	1,081	1,072	1,005	976	(2.6%)
MAV	2,349	2,346	2,394	2,468	2,555	2.1%
Total	**9,516**	**9,401**	**9,633**	**10,029**	**10,606**	**2.7%**
PCUs	**20,810**	**20,730**	**21,014**	**21,812**	**22,777**	**2.3%**
Passenger	**4,557**	**4,375**	**4,575**	**4,978**	**5,404**	**4.4%**
Commercial	**4,474**	**4,532**	**4,587**	**4,663**	**4,814**	**1.8%**

Source: Steer Analysis; Note; Passenger includes CJV and Bus traffic whereas Commercial includes 2A/3A/MAV traffic

5.22 The Asset is growing at 2.3% from FY22N to FY26 at the PCU level. Passenger traffic, which includes CJV and buses, is projected based on the state's GSDP, as the growth is driven by the regional local economy.

5.23 Meanwhile, commercial traffic (2A/3A/MAV) is growing in relation to GDP, as the asset lies on the NH52 corridor, which primarily facilitates north-east movement between UP and north India and East India and Bihar. Any growth observed on the asset is influenced by regions along this north-east route. 2A have registered a healthy CAGR of 5% whereas MAV traffic has registered a rebound in FY26 after a flatline performance in FY25.

5.24 The sections below detail out the reasoning for selection of respective growth driver(s) for each vehicle category.

5.25 In recent historical traffic performance across national highway corridors, a notable trend has emerged: there is a noticeable shift in axle preference towards 2As and MAVs, resulting in a dampening effect on the growth of 3As. This trend is mirrored in FY26 performance as well. Because of these evolving axle preferences, it has been assumed that the relationship between 3As and GDP will be relatively muted, whereas 2As and MAVs are expected to grow more closely in line with the country's GDP.

Table 5.5: Elasticity recommendations for the Asset (Kotwa- Muzaffarpur)

Vehicle Category	Growth Driver	Elasticity	Comments
CJV	GSDP Bihar	1.0	CJV cater to local movement between Motihari, Muzaffarpur, Kotwa, and Patna. Around 92% of the trips have one end of their trip in Bihar. Strong traffic growth is benchmarked to reference Asset
Mini-LCV	GSDP Bihar	0.6	MLCV on this Asset has witnessed a growth with increasing demand for Local and IAOI

Vehicle Category	Growth Driver	Elasticity	Comments
			movements withing 300km. Therefore, elasticity of 0.6 is assumed.
Buses	GSDP Bihar	0.3	Buses tend to grow as the intercity connections improve. With Bihar being a state, which is growing, buses tend to play an important role linking key cities in the state. However, the volume of bus remains similar in last few years. Over half of the trips are within 100-300 km. Therefore, 0.3 elasticity is assumed.
LCV	GSDP Bihar	0.4	2A in this region and country have started doing long- medium distance movement. 2A growth is closer to that MAV growth as the goods being transported on this corridor are travelling long distance and carrying manufacturing, petrol, LPG, kerosene or agriculture, which are more efficient to move using heavy trucks.
2A	GDP	0.8	
3A	GDP	0.2	3A/MAV: Agri products and petroleum/gas are the prime commodities carried from northern parts of the country to northeast and eastern states and to bordering countries. A significant portion of heavy truck movement dependent upon Muzaffarpur/Motihari industries as well. The Asset also caters to movements in regions outside India, such as Nepal, Bangladesh and Bhutan which represent 10% of 3A/MAV shares. With same toll rates applicable and benefit of carrying additional tonnage in the region and countrywide a shift from 3A to higher category MAV is observed.
MAV	GDP	0.9	

Source: Steer Assumptions

6 Forecast: Network overlays and forecasts

Introduction

6.1 Following the discussion on our forecast of background growth rates in the previous chapter, this chapter first covers the potential network impacts on traffic growth on the Asset. Thereafter, we present our assumptions around toll segmentation, trip factors and evolution of toll rates for the forecast period which are used to forecast revenues as derived from forecast traffic. In the final section, this chapter summarises traffic growth rates for the forecast years.

Analysis of potential network/developmental impacts

6.2 This section details the impacts, which we believe would affect traffic on the Asset during the concession period. As discussed in previous Chapters, to assess the impacts on the Asset, whether positive or negative, we have studied developments (alternate roads, feeder roads and regulatory) in the surrounding road network.

Proposed Gorakhpur Siliguri Expressway

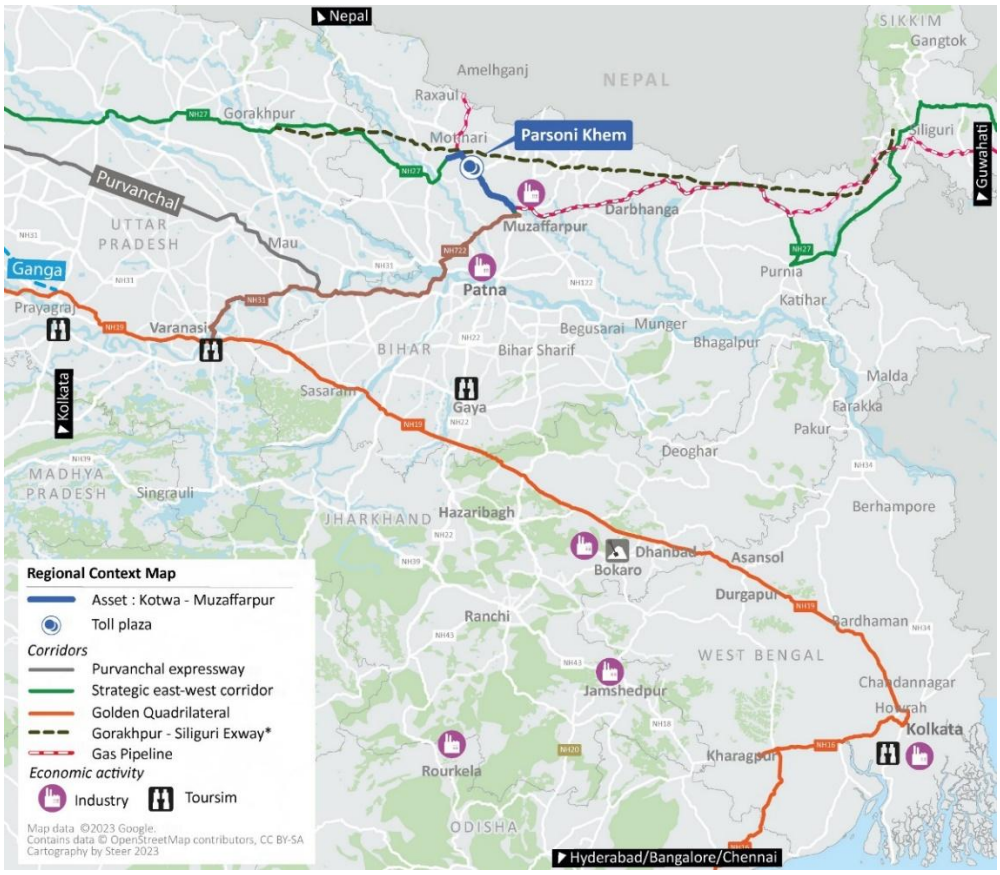
6.3 The central government has approved the Gorakhpur-Siliguri six-lane greenfield expressway project, a 568-km high-speed route. This expressway will traverse through 313 villages across 39 blocks in eight districts of Bihar, covering a total of 417km within the state. The project includes the construction of several bridges over major rivers like Gandak, Bagmati, and Kosi. The estimated cost of the project is ₹38,645 crore, with Bihar contributing ₹27,552 crore[25]. The project is currently in the Detailed Project Report (DPR) and land acquisition stage[26], with no officially announced timeline for completion. Given the early stage of project development, the scale of the proposed 560+ km alignment, and the inherent challenges associated with large-scale greenfield infrastructure—including inter-state coordination, environmental clearances, and land acquisition complexities—Steer has adopted a conservative completion estimate of 2035. This assumption reflects our qualitative understanding of typical timelines for similar expressway projects.

[25] **Centre approves Gorakhpur-Siliguri 6-lane expressway | Patna News - The Times of India**

[26] **Construction of Gorakhpur-Siliguri Expressway will start soon |** गोरखपुर-सिलीगुड़ी एक्सप्रेस-वे का जल्द शुरू होगा निर्माण: **3** जिलों के **115** गांवों की जमीन का होगा अधिग्रहण**, 32** हजार करोड़ आएगी लागत - **Gorakhpur News | Dainik Bhaskar**

6.4 The proposed alignment of the expressway runs parallel to the Asset, and will affect trips moving from UP, Bihar towards West Bengal/Northeast will have an option to travel via Asset or the expressway. This greenfield expressway will lead to attractiveness of the traffic traversing between these three states and North-east as it is going to cut down the travel time significantly, therefore the same have been considered as in scopes.

Figure 6.1: Proposed Alignment of Gorakhpur Siliguri Expressway



Source: Steer cartography using OpenStreetMap data

6.5 Table 6.1 below shows the comparison the key input toll and time comparison between route via Asset and the alternate:

Table 6.1: Toll & Time Comparison between Asset and Alternate

	Toll (INR)	
	Via Asset	*Via Expressway*
CJV	970	1,313
LCV	1,552	2,084
2A	3,252	4,419
3A	3,553	4,836
MAV	5,096	6,948

Table 6.2 Impact of Gorakhpur Siliguri Expressway

Vehicle category	FY35	FY36 onwards
Staging	*80%*	*100%*
2A	(8.8%)	(11.0%)
3A	(10.5%)	(13.2%)
MAV	(6.6%)	(8.3%)

Source: Steer analysis, Full impact will be applicable from FY36, while impact will be applicable in a phased manner from FY35.

6 laning LOS improvement

6.6 As per the concession agreement as soon as the Asset hits 40,000 PCU's the Asset is eligible for capacity augmentation. The PCU level need to be maintained above the 40,000 levels for three consecutive years and two years will be earmarked for DPR preparation. After that a three-year period is factored in for construction, during which 75% toll rates will be applicable in all 3 years of construction period. After the construction is over the toll rates will be calculated as normal, as they should have been in that year.

6.7 On the Asset, it is expected based on our forecasts that traffic volumes will go beyond the 40,000 PCUs mark in FY40, thus breaching the capacity requirements set out in the concession agreement, thus leading to capacity augmentation on the Asset. We expect the level of service on the Asset to improve post capacity augmentation. To calculate this impact, we have employed a GJC based approach.

6.8 A comparison of generalised journey costs (GJC) estimates how different elements of cost and time affect traffic. This comparison was done for both light and heavy vehicles. Lower GJCs correspond to higher induced traffic. Based on Steer's studies and research in India, we have found that for every 1% reduction in the GJCs, the traffic increases by a factor of 0.3. We then applied the difference of GJCs to the elasticity of 0.3 to get net influence on the traffic.

6.9 The improvement in travel costs or GJC is translated into the impact on that share of local + IAOI OD movements using a linear inverse relationship. Therefore, the GJC influence is applied on the corresponding shares of traffic, which were extracted from OD data.

6.10 Table 6.3 below shows the extent of the LOS impact.

Table 6.3: Impact of 6 laning LOS improvement

Staging	*100%*
CJV	1.8%
LCV	1.3%
2A	1.1%
3A	0.6%
MAV	0.6%

Source: Steer analysis

Revenue forecasting assumptions

6.11 To forecast the revenues for a particular financial year, the traffic forecast for each vehicle type is converted into tickets sold, which is then multiplied with the corresponding toll rate, which grows over the years as defined in the Concession Agreement. While "trip factors" provide the conversion factor to the former, i.e., traffic (trips) to tickets sold, "toll segmentation" provides the latter i.e., the breakup of trips paying each ticket type. This section discusses assumptions related to trip factors, toll segmentation and toll rates for the forecast period.

Trip factors

6.12 Trip factors are used to calculate the revenue for the trips made on passes such as return, local personal, monthly passes. The trip factors assumed are based on the latest FY25 data available and listed in Table 6.4 below:

Table 6.4: Trip factors at TP1 Parsoni Khem

Forecast	CJV/MLCV	LCV	Bus	2A	3A	MAV
Single	1	1	1	1	1	1
Return	2	2	2	2	2	2
Monthly	45	45	50	45	74	45
Local commercial	1	1	1	1	1	1
Local Personal	15	-	-	-	-	-

Source: Steer analysis of Client TMS data

Toll segmentation

6.13 The Ministry of Road Transport & Highways has finalized a compensation formula for existing toll concessionaires to offset revenue loss from the Annual Pass scheme for non-commercial vehicles[27].

6.14 Across multiple assets, the number of passes sold has observed to be rising on a day-to-day basis, indicating an early adoption among frequent users since its introduction on 15th August 2025 till 30th September 2025, and a corresponding decline in other ticket categories mainly in the single and return categories. The evolution of proportion of users using the annual pass up to September 2025 is presented below:

	15th to 31st Aug	1st to 15th Sept	16th to 30th Sept
%CJV using Annual pass	5.5%	8.6%	10.1%

6.15 CJV Segmentation for FY26 has been developed using the pre annual pass segmentation till 14th August 2025, and daily Annual Pass transaction data from 15th August 2025 till 30th September 2025. Post September 2025, a gradual ramp up is assumed such that they form a large portion of the CJV trips by the end of FY26. This corresponds to a reduction in a proportionate decrease in single and return trips. For FY27 and beyond, we have assumed the share of annual pass trips to be in line with that observed at the end of

[27] Finalization-Concessionaire-Annual-Pass-Facility-on-NHs-01092025.pdf

March 2026, by when we believe the distribution of ticket categories in CJVs should stabilise.

6.16 In FY26, the share of CJVs using the Annual Pass is projected at **9%** (on an annual basis) with a March 2026 estimate of around 21%, which from FY27, expected to stabilize at March'26 levels.

6.17 For other vehicle categories we have analysed the historical TMS data split by ticket categories, to understand trends, as shown in Chapter 3. For the traffic and revenue forecast, FY26YTD (Apr- Sept) as discussed in the earlier sections, can be considered a normal period.

Table 6.5: Toll segmentation FY26 onwards, TP1 Parsoni Khem

Ticket type	CJV FY26	CJV FY27	MLCV	Bus	LCV	2A	3A	MAV
Single	32%	27%	36%	32%	52%	73%	87%	93%

6.18 The Annual pass compensation is separately calculated using the formula prescribed by NHAI in the same circular. Following Table 6.6 presents the Annual pass compensation computed for the toll plaza.

Table 6.6: Annual pass compensation for CJVs (in Crore)

Toll Plaza	FY26	FY28	FY33	FY38	FY43	FY51
Parsoni Khem	1.4	4.1	7.2	12.2	20.1	44.1

Source: Steer Analysis

Toll evolution

6.19 Based on the concession agreement and the gazetted toll notification, we understand that base toll rates increase every year (revision month is April) based on WPI-linked inflation. These are rounded up to the nearest five decimals to estimate the final toll rate charged to users.

6.20 We have used actual toll rates from the FY25 toll notifications and FY26 WPI to validate the modelling of future toll evolution. Increase in WPI was calculated based on the Client's WPI forecasts, as shown in the table below. These forecasts provided by the Client expect the Indian WPI to grow at an average of 4.2% between FY25-FY51. The WPI

forecasts available from other independent forecasting agencies may vary from this assumption and could be lower or higher than that provided by the client.

Table 6.7: WPI growth forecast assumptions

Financial year	WPI growth (%)
FY26	2.57%
FY27	2.4%
FY28	5.0%
FY29	5.1%
FY30	4.9%
FY31	4.4%
FY32 onwards	4.1%

Source: FY27 onwards WPI as per client inputs

Revenue reconciliation

6.21 As part of validating the data provided by the Client, as well as our assumptions around toll calculations, we have reconciled the actual reported revenue on a monthly level for the Asset. To reconcile we have used the FY26YTD segmentation, FY26YTD AADT and compared it with the reported revenue for the year. The exercise was undertaken at an annual level. The comparison, as shown in the table below, depicts the modelled revenue vs the reported revenue difference, and the difference lies within 1%, this gives us the confidence in the assumptions around segmentation and trip factors for future forecast purposes.

Table 6.8: FY25 Revenue reconciliation summary (INR Lakhs)

Asset	Modelled	Actual	Difference (%)
	FY26YTD	FY26YTD	
TP1-Parsoni Khem	28.47	28.48	0.01%

Source: Steer comparison between modelled and reported revenue, FY26

Traffic and Revenue forecasts

6.22 Based on the traffic and revenue-related forecast assumptions discussed above, we have modelled the traffic and revenue forecasts for the concession length of the Asset. The table below presents the AADT/PCU and revenue forecast growth rates and CAGRs on this Asset. Further, Appendix B presents the AADT and revenues for the concession period.

Table 6.9: Traffic forecast (with impacts) for TP1 Parsoni Khem

Vehicle Type	FY26	FY28	FY33	FY38	FY43	FY51
CJV	3,933	4,502	6,146	8,339	11,015	16,917

Source: Steer analysis

6.23 As presented in the tables above, traffic CAGRs (PCUs) for the traffic forecast (with impacts) on the Asset over the concession period is around 4.4% and corresponding revenue CAGR is around 9.1%. This growth is majorly driven by:

6.24 CJVs, as discussed in the historical section, this Asset has an even mix of CJVs and MAVs. The CJVs on the Asset are expected to grow with increasing per capita income levels of the region and are expected to grow at a healthy rate for a longer period, given the low car ownership levels in the state.

6.25 While MAV carrying heavy Agri commodities rice, maize and wheat as expect with the increased production in Agri industries as explained in Chapter 2, MAVs will witness a healthy growth on this Asset in long term as well.

Target revenues and modification of concession period

6.26 As per the concession agreement, the target revenue for TP1 should be 14.2 Cr for the month of March 2030 first calculation of target revenue and 23.12Cr for the month of March 2040 for the second calculation of target revenue. The traffic sampling will be undertaken for a continuous period of seven days during anytime within 15 days prior to the date on the specified year, previous year and following year. The average thereof will be deemed as 'actual revenue.'

6.27 If the target revenue falls short or exceeds by 20% and 30% for extensions 1 and 2 respectively, the concession period shall be deemed to be modified using the laid-out conditions in the concession agreement. The table below presents the summary of the analysis.

Table 6.13: Target Revenues for Extension 1

Asset	Target Month	Target Revenue	Estimated Revenue			Average Revenue	Variation (%)
		Cr	2029	2030	2031		
KM	Mar-30	14.22	14.80	16.25	17.79	16.28	15%

Source: Steer analysis

Table 6.14: Target Revenues for Extension 2

Asset	Target Month	Target Revenue	Estimated Revenue			Average Revenue	Variation (%)
		Cr	2039	2040	2041		
KM	Mar-40	23.12	34.08	37.24	40.69	37.34	62%

Source: Steer analysis

6.28 We have used the average AADT forecast for target year, previous year and following year as a proxy for 'actual traffic.' We have applied seasonality of March month to adjust for seasonal trends and arrive at March traffic from AADT traffic, which is then segmented according to the forecast toll segmentation and trip factors and multiplied with respective estimated toll rates to get to a monthly revenue collection.

6.29 As seen from the table above, the target revenue forecast for the Asset is higher than the Concession Agreement target revenue by a rounded 15% for target date 1 and 62% for target date 2. As the difference lies below the permitted threshold 30% for target date 1 and above 30% for target level 2 respectively, a change in the length of the concession is expected. As per the Concession Agreement, for every 1% excess target revenue, the concession period shall be decreased by 1.5%, with a capping at 20%. Therefore, for the excess traffic on these toll plazas, the concession period, originally 30 years, is expected to reduce by five years from FY51, potentially changing the concession period to end by FY46 instead of FY51.

Upside and Downside cases

Upside and Downside scenario assumptions

6.30 We have developed our base case scenario considering a balanced view on the risks associated with input assumptions around GDP growth and traffic growth elasticities. There is always a risk that the outturn values of these inputs will vary as compared to the assumptions taken due to exogenous impacts, e.g. GDP growth could be influenced both positively and negatively by the impact of monsoons, export-import balances, political changes etc.

6.31 Similarly, traffic growth elasticities could be influenced by increased efficiencies achieved by technology, large shifts in commodity prices globally, changes in local manufacturing practices. However, at this stage we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

6.32 To account for the possible variations in the growth drivers, we are also presenting an Upside (optimistic) and a Downside (pessimistic) scenario. These scenarios are defined by the following variations from the base assumptions:

Table 6.15: Summary of Macro-economic Assumptions for upside and downside cases

Input	Upside	Downside
Macro Assumptions		
GDP/GSDP	+1% every year	-1% every year

WPI	+1% every year	-1% every year
Elasticities	+ 10%	- 10%

Source: Steer analysis

6.33 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

Impacts-Upside Case

6.34 The upside case impacts included in forecasts are summarised in below.

Table 6.16: Summary of impacts on the Assets

Development	Year of impact	Change in impact w.r.t base case	Magnitude of impact
6 laning LOS improvement	FY45	+25% of base case	CJV: 2.3% LCV: 1.7% 2A: 1.3% 3A: 0.8% MAV: 0.7%
Gorakhpur Siliguri Expressway	FY36 (80%) FY37 (100%)		2A: (8.2%) 3A: (9.9%) MAV: (6.2%)

Source: Steer analysis of OD data

Impacts-Downside Case

6.35 The downside case impacts included in forecasts are summarised in below.

Table 6.17: Summary of impacts on the Assets

Development	Year of impact	Change in impact w.r.t base case	Magnitude of impact
6 laning LOS improvement	-	-25% of base case	*No Impact*
Gorakhpur Siliguri Expressway	FY33 (80%) FY34 (100%)		2A: (13.7%) 3A: (16.5%) MAV: (10.4%)

Source: Steer analysis of OD data

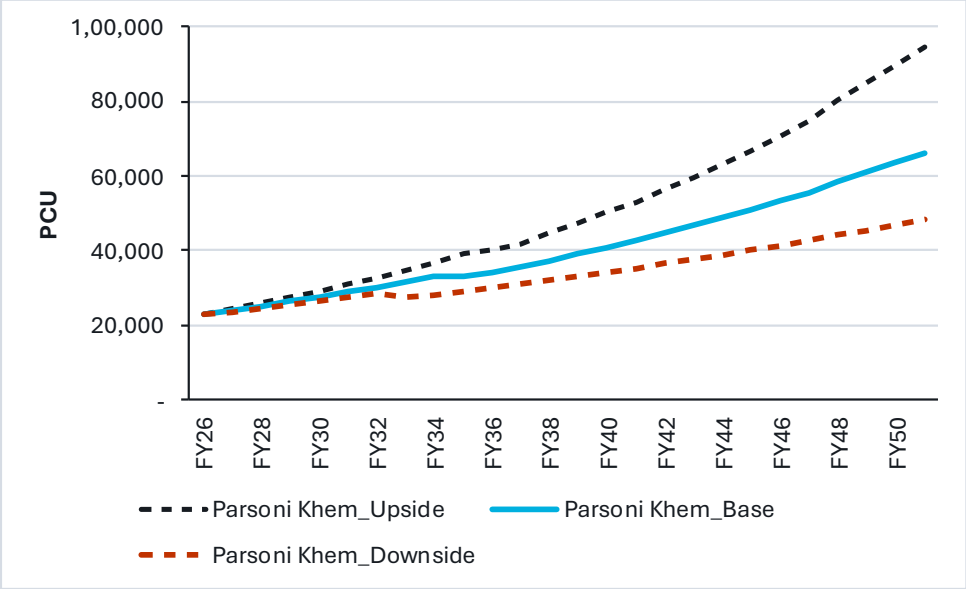
6.36 Based on the above assumptions for upside and downside scenarios, the following table summarizes the upside potential and downside risks associated with the PCU and the revenue for Parsoni Khem toll plaza at the end of the concession i.e. FY51.

Table 6.18: Upside potential and Downside PCU scenario – FY51

Toll Plaza	Upside Potential	Downside Risk
Parsoni Khem	42.6%	(27.5%)

Source: Steer Analysis

Figure 6.2: Long term PCU forecasts for Parsoni Khem TP including upside and downside scenario



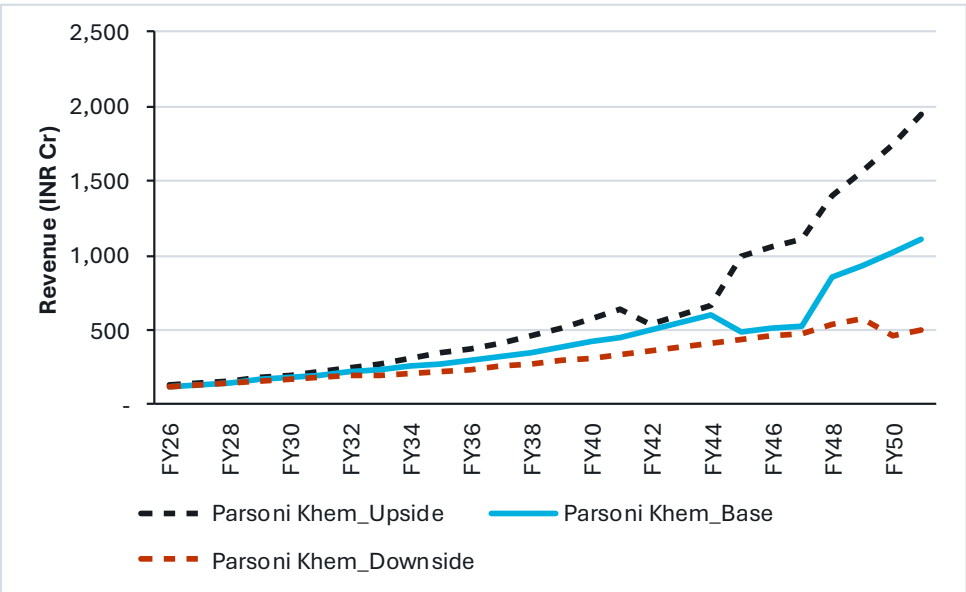
Source: Steer Analysis

Table 6.19: Upside potential and Downside Revenue scenario – FY51

Toll Plaza	Upside Potential	Downside Risk
Parsoni Khem	75.5%	(55.3%)

Source: Steer Analysis

Figure 6.3: Long term Revenue forecasts for Parsoni Khem TP including upside and downside scenario



Source: Steer Analysis

6.37 Revenue projections exhibit variability in both the upside and downside cases, driven by fluctuations in macro-economic factors such as WPI, GDP/GSDP, elasticities and the network impacts.

Summary Outlook

6.38 Passenger movement on the Asset is largely local in nature, connecting the cities of Motihari, Patna, Muzaffarpur to West and East Champaran, Chakia and other nearby towns. Cars are expected to see a healthy growth on the Asset following the overall behavioural shift of users away from public transport.

6.39 The Asset benefits from its strategic location, facilitating the east-west movement of goods from Uttar Pradesh and the Delhi NCR region towards Bihar, West Bengal, and the northeastern states. Additionally, the proximity of the Nepal border near Raxaul serves as a key destination for a substantial share of traffic using the Asset. The 3A/MAV traffic on the Asset predominantly caters to long-haul routes, with approximately 70% of users covering distances exceeding 500 km.

6.40 This segment of traffic is expected to exhibit a relatively muted growth trend in the near term, particularly given the prevailing economic slowdown in Bihar projected to continue until FY27. Beyond FY27, it is anticipated that the regional economic conditions will improve, leading to a gradual normalization of economic activity and corresponding traffic growth on the Asset.

6.41 Our findings and estimates in this report are based on our understanding from the site visit, analysis of primary data available both from surveys and the toll management system (both historical and current), macroeconomic assumptions prescribed by Client, feedback from Client meetings and secondary publicly available data. There can be both positive and negative risks associated with assumptions and the forecasts using them as summarised below.

6.42 Overall, we see a positive outlook for the region and the Asset in the longer term, given that it serves major urban centres of Delhi NCR, Lucknow, Patna all the way to East and North-East India along with bordering countries for major commodities. The underlying growth drivers of the corridor are strong and are expected to deliver long term sustained growth.

Appendices

A Top 10 OD Pairs

A.1 Further to the OD analysis presented in Chapter 3 this appendix presents the top 10 OD pairs at each toll plaza. Please see this data for both CJVs and MAVs and OSVs combined below.

TP1 Parsoni Khem

Table A.1: CJV, Bus and Mini Bus top 10 OD pair shares at TP1 Parsoni Khem

	OD Pair	Share
1.	Muzaffarpur-Motihari	17.15%
2.	Patna-Motihari	15.11%

C Data Collection Exercise

C.1 To validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

3 days TVC count

Table C.1: 3-day TVC counts at TP1 Parsoni Khem

Date	Source	CJV	Mini LCV	LCV	Bus	2 Axle	3 Axle	MAV	OSV	Total
23-01-2025	TVC	2,987	746	785	514	856	1,024	2,618	3	9,533
24-01-2025	TVC	3,481	825	752	520	955	1,138	2,624	1	10,296

Disclaimer

This report has been produced for the sole benefit of Cube Highways Pvt. Ltd ("the Client"). The report may only be relied upon by Approved Addressees in accordance with the terms of our engagement letter. This Report (the "Report") is confidential and disclosed only for information purposes, and it may not be relied upon by any party other than the Client or a Party to a Reliance Letter, and Steer: a) makes no warranty, expressed or implied, with respect to the use of any information or methods disclosed in this Report; and b) assumes no liability with respect to the use of any information or methods disclosed in this document. Any such party by its acceptance or use of this Report releases Steer from any liability for direct, indirect, consequential, or special loss or damage whether arising in contract, warranty, express or implied, tort or otherwise.

The Report is based on standard professional efforts, and information available to us at the time the review took place and is subject to time and budget constraints of the Report's scope of work. This Report, information and statements contained herein, are all based on third party data provided to us, or sourced by us, and Steer has not sought to establish the reliability of the data, except as specifically stated in the Report. Steer bears no responsibility for the results of any actions taken on the basis of third-party data. Certain forward-looking statements in the Report are estimates based on interpretations or assessments of information available at the time of writing. The Report is thus to be viewed as an assessment that is time-relevant, specifically referring to conditions at the time of the review. Steer undertakes no obligation to update the Report for any reason. While the estimates contained in the Report are not precise forecasts, they do represent, in our view a reasonable expectation of the future, based on information we have been provided with or sourced. However, the estimates necessarily rely on numerous assumptions and judgements, and circumstances may occur over the timeframe of the project that go counter to these assumptions and judgements and that affect the project's realized revenues. Actual events may differ from those assumed, and events are subject to change. Therefore, Steer makes or provides no warranty, whether implied or otherwise, as to the accuracy of forward-looking information presented. Further, it is important to note that forecasts presented represent long term growth profiles; the results for individual time periods may vary from forecasted values.

Traffic Consultant developed the relationships in the models used to produce the forecasts for the projects based on data available through September 2025. This report does not consider variations in traffic performance due to changing macro and force majeure events such (but not limited to) as global wars, economic uncertainty (high inflation, global recession), and changes in the regulatory environment. The situation remains dynamic and is subject to significant change in the short and medium term. In this challenging context, Traffic Consultant has produced base forecasts with a view on a possible scenario for the traffic forecasts. However, it is important to note that this is only one view, and there continues to remain uncertainty as to the short-term, intermediate or prolonged effects of and responses to such macro-economic/force majeure events. As a result, no assurance can be provided by Traffic Consultant that the scenarios and assumptions Traffic Consultant has identified will prove to be accurate. Given the uncertainty inherent in this scenario, Traffic Consultant advises that all readers of the Report consider the Report in the context of their own assessment of the impact of such events.

TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, THE LIABILITY OF THE TRAFFIC CONSULTANT FOR ANY LOSS, DAMAGE, COST OR EXPENSE SUFFERED OR INCURRED BY ALL PERSONS OR ENTITIES AND FOR ALL CLAIMS RESPECTING ITS WORK PERFORMED IN CONNECTION WITH THE ISSUE OR THE REPORTS IS HEREBY LIMITED IN THE AGGREGATE TO THE AMOUNT OF FEES ACTUALLY PAID BY THE CLIENT TO THE TRAFFIC CONSULTANT IN RESPECT OF THE REPORTS AND CONNECTED SERVICES.

TMS	Traffic Management System
TVC	Traffic Volume Count
WADT	Weekly average daily traffic
YTD	Year to Date

1 Introduction

The assignment

1.1 The Cube Highways Fund Advisors Private Limited (the "Client") has commissioned Steer Davies Gleave India Private Limited ("Steer") for a traffic due diligence to be carried out on Narketpally-Addanki-Medarametla Expressway Ltd. (or 'NAMEL', hereafter called 'Asset'). This report forms part of the annual fair market valuation (FMV) undertaken as part of the "Transit 9 project". This report presents an update of the traffic and revenue forecasts based on actual traffic data available up to September 2025 and latest macro-economic assumptions.

1.2 The Asset consists of a single stretch of toll road with three toll plazas. For the purpose of this report, we hereafter call the toll plazas present on the Asset as TP1, TP2 and TP3 respectively as:

- TP1 – Madgulapally
- TP2 – Thummalacheruvu
- TP3 – Elchuru

1.3 Our scope of work for the traffic and revenue forecasting process includes:

Table 1.1: Scope of work and sources of data

Scope of work	Data source
• Review of historical Traffic Management System (TMS) data, Vendor reports and documents	• Provided by client for the period between Mar'14 and Sep'25
• Historical analysis and forecasts for baseline growth, including; — Background growth, and — Seasonality trends	• Historical data provided by the Client and benchmarking using plazas in the vicinity or of similar nature of the Asset has been done wherever sufficient data was unavailable.
• Validation of revenue reported in FY25YTD	• TMS data provided by Client • Revenue reconciliation using toll plaza traffic and ticket type data to calculate revenue and reconciling it with toll plaza reported revenue
• Origin Destination (OD) analysis to understand growth drivers: — Zonal influence and Top OD pairs — Commodity distribution — Trip length distribution	• Origin Destination (OD) surveys undertaken by Steer in 2025. The latest surveys were undertaken in 2025 at TP2 Thummalacheruvu only.

Scope of work	Data source
• Analysis of upcoming network improvements and other developments, that may have future impacts on traffic	• Secondary research and our in-house experience of working in the vicinity of the Asset. Impact analysis conducted by Steer based on Generalised Journey Cost spreadsheet-based analysis
• Historical revenue analysis and forecasts for revenue estimation, including — Toll segmentation and trip factors, — Overloading shares	• Calculated from historical data provided by Client
• Final traffic growth forecasts including baseline growth rates and potential future impacts	• Elasticity based base growth and potential impacts from secondary research and Steer's in-house experience of working in the vicinity of the Asset
• Toll revenue estimation for the entire concession, including toll evolution	• Toll evolution based on latest toll notification published by the Government of Telangana – Roads and Buildings Department and latest actual Wholesale Price Index (WPI) trends as shared by the Client. • Assumptions of WPI forecasts and future tolling length changes provided by Client • Revenues estimated as a product of traffic forecasts and toll evolution

Our approach

1.4 Our approach follows well-established practices for forecasting ongoing traffic growth on an existing/brownfield Asset. The analysis focused on two sets of issues, namely:

1. Understanding the traffic that is currently using the Asset; and
2. Identifying how and why that traffic is likely to change in the future.

1.5 To understand the current traffic on the Asset, we have analysed traffic data from multiple independent sources:

- Client-provided secondary data, including:
  - TMS data starting March 2014 to September 2025
  - Concession agreement and toll notifications for FY25 and FY26
  - Previous studies related to traffic and revenue
  - Steer-commissioned OD surveys on TP2 on 22nd January 2025 and previously conducted surveys in 2023 on the Asset to validate any change in growth drivers and travel patterns.
  - Steer-commissioned three-day TVC survey between 23rd January and 25th January 2025 on TP2 and previously conducted surveys in 2023 as a part of study.
- We undertook revenue reconciliation for FY26YTD, by building up revenue from the traffic reported by the toll plaza and subsequently matched it to the reported revenue for FY26YTD using the prevailing toll rates and reported segmentation/toll-frequencies for FY26YTD, this is a key part of our analysis to validate the segmentation/toll-frequency assumptions and the Annual Average Daily Traffic (AADT) reported for each of the toll plaza.

1.6 The estimation of future traffic demand on the Asset was undertaken through:

- Estimating FY26 base year position. The FY25 AADT was calculated using the monthly traffic data for FY25. The annual FY25 AADT was then grown with elasticity linked GDP/GSDP growth to arrive at the FY26 expected traffic. To determine the adopted FY26, the expected FY26 traffic was validated against the ten months of actual traffic (Apr-Sep) and necessary adjustments were made where required.
- Secondary research to understand plans for new developments and progress of ongoing developments on the Asset.
- Steer independent primary surveys and site visits to validate our network and contextual understanding.
- Developing a bespoke growth model for each Asset/plaza/toll class to forecast year-on-year traffic growth from FY26 to the end of concession period.
- Investigating the elasticity of historical traffic growth compared to state (GSDP) and national (GDP) growth. Where historical data is limited, we have benchmarked the Asset against our Steer knowledge base (e.g., similar Asset types in the same state or on the same corridor), to derive appropriate elasticities.
- Applying our elasticities to independent GDP forecasts as provided by Client.
- Identifying and analysing the potential impacts of any relevant changes to the competitive position of each Asset – these include impacts of changes to road network including expressways and opening of competitive modes of travel.
- Identifying and analysing any other potential impacts to traffic and revenue on each Asset – these include axle load norms, axle shift for heavy goods, FASTag implementation.
- Considering changes in trends of segmentation over time and making suggestions for changes in exemptions in the future.
- Preparing traffic and revenue forecast for the Asset for the complete length of concession. The analysis here includes the specific impacts of network, or other exogenous factors specific to the Asset. We have developed a set of forecasting assumptions for three scenarios: a base case and upside and downside scenarios.

Contents of this Report

1.7 The report has been divided into six chapters, including Chapter 1 providing an introduction:

- Chapter 1 introduces the methodology and approach to undertake the traffic and revenue due diligence;
- Chapter 2 describes the key characteristics of the Asset and its surrounding road network, primarily based on site visits;
- Chapter 3 summarises the current and historical traffic on the Asset, including results from the TMS, TVC and OD analysis;
- Chapter 4 presents the socio-economic context of the corridor and region/state containing the Asset, along with our approach and results on estimating background traffic demand growth;
- Chapter 5 presents our baseline year forecast and summarises our results on estimating background traffic demand growth; and
- Chapter 6 summarises our assessment of network impacts and presents concession traffic and revenue forecasts for the Asset along with the assumptions for upside and downside cases

2 The Asset

Introduction

2.1 This chapter provides a description of the Asset, based on both primary data (from site visits), and our understanding of the region and network surrounding the Asset. We cover the strategic network context, followed by key economic activities and network developments around the Asset.

Strategic network

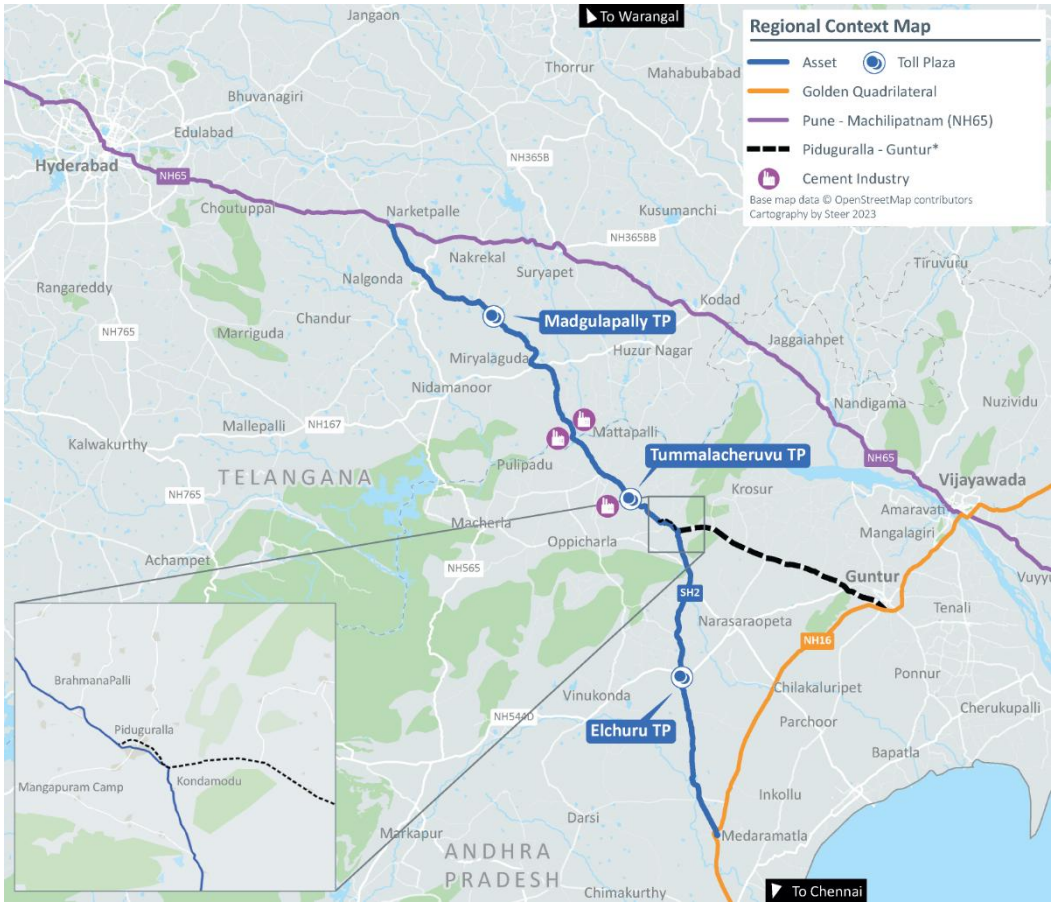
2.2 The Asset is an interstate route connecting southeastern Telangana with northern Andhra Pradesh. It connects the towns of Narketpally (Nalagonda district, Telangana) and Medarametla (Bapatla district, Andhra Pradesh). Figure 2-1 below shows the regional road network in which the Asset is located.

Figure 2-1: Asset location in India context

Source: Steer cartography using OpenStreetMap data

2.3 The Asset is a 212.5-km four-lane toll road which forms a part of the state highway SH-2 (New SH36 in Andhra Pradesh (AP)). There are three toll plazas, namely, Madgulapally (also spelled as "Madugulapally") (TP1), Tummalacheruvu (also spelled as "Thummalacheruvu") (TP2), and Elchuru (TP3) in the increasing order of their distance from Hyderabad. Figure 2-2 below provides a closer view of the Asset in the context of its immediate surroundings.

Figure 2-2: Asset context



Source: Steer cartography

2.4 The Asset caters to three different types of movements, by virtue of its strategic location on various corridors:

Long-distance

- NH44-SH2-NH16 long-distance corridor connecting North India (including Delhi, Haryana, Punjab, and Uttarakhand) with Chennai
- NH65-SH2-NH16 long-distance corridor connecting Mumbai with Chennai
- NH52-SH2-NH16 long distance corridor connecting Gujarat and Rajasthan with Chennai

Medium distance

- SH2-NH16 medium-distance corridor connecting Chennai/Hyderabad, and cement production sites
- SH2: Medium-distance corridor connecting Hyderabad with Vijayawada and Guntur.

Short distance

- SH2: Short-distance trips between Hyderabad and Rest of Telangana/Andhra Pradesh.

Concession and tolling details

2.5 The toll plazas have been operational since April 2014 (FY15), and the Client took over operations in FY19. The concession period runs until FY40. Table 2.2 below summarises key aspects of the concession.

Table 2.1: Summary of concession

	Particulars
State	Andhra Pradesh - Telangana
Highway and lane configuration	SH2 four-lane
Toll plazas	• TP1: Madgulapally (Madugulapally) • TP2: Tummalacheruvu (Thummalacheruvu) • TP3: Elchuru
Length (km) as per concession agreement, applicable	• TP1: 70.61Km • TP2: 63.88Km* • TP3: 69.32Km
Commencement of operations	TP1, TP2 & TP3: April 2014
Implementation of FASTag	TP1: August 2021, TP2 & TP3: October 2021
Operated by Client since	October 2018 (FY19)
Concession period	21 years
Last year of concession	FY40

Source: Concession agreement, FY25 toll notification; *excluding 5.79Km of net bypass length

2.6 Tolls on the Asset are collected for the following vehicle categories with rates as shown in Table 2.2 below. The toll plazas have dedicated ETC/FASTag lanes for electronic tolling.

2.7 Table 2.2 below presents the Single toll rate charged at the toll plazas. Apart from single tickets, the typical NHAI ticket categories like return, monthly, local personal and local commercial passes are also available on the Asset. Tolls are revised every alternate year on this Asset.

Table 2.2: Single toll rates on NAMEPL (INR) – FY26

Type of Vehicle	TP1	TP2	TP3
CJV	77	77	76
LCV/ Minibus	154	153	152
Bus/Truck	309	307	303
3A/MAV	772	767	759

Type of Vehicle	TP1	TP2	TP3
HCM/EME/OSV	772	767	759

Source: Government of Telangana Roads and Buildings Department Revision of User Fee Rate;

2.8 On January 22, 2025, Steer conducted a site visit to the Assets to oversee ongoing traffic surveys and gain a comprehensive understanding of the adjacent transportation network. Figure 2.3 below illustrates the Assets' toll plazas as observed during the site visit, accompanied by a visual representation of the Assets' road infrastructure. The pictures displayed clockwise show TP2, TP3, TP1 and the Asset's road infrastructure.

Figure 2-3: Typical cross section of the Asset and toll plaza (Clockwise)

Source: Steer site visit

Economic activities

2.9 The Asset is located between Hyderabad and Vijayawada-Guntur region and Chennai region on the other side. Chennai, Hyderabad, and the Guntur–Vijayawada region are key economic centres in southern India, each with distinct industrial strengths.

2.10 Chennai has strategically cultivated a strong economic profile, moving beyond traditional perceptions to become a prime business destination in India. Its long-term industrial policy has fostered a significant economic powerhouse, particularly in the state of Tamil Nadu. The city benefits from a well-educated workforce, making it a major outsourcing hub for international banks and insurers, and has seen substantial growth in its electronics manufacturing sector. This robust development has also led to a relatively affluent population, making it a key testing ground for fast-moving consumer goods.

Chennai is also a major automobile manufacturing hub and excels in software services, hardware production, financial services, and port-based trade[1]. Guntur and Vijayawada, in Andhra Pradesh, are known for agriculture-driven commerce—especially chili exports—and have strong industrial bases in textiles, cement, and tobacco processing[2]. Hyderabad has emerged as a global centre for IT and pharmaceuticals, housing tech giants like Microsoft and Google, along with major pharma players such as Dr. Reddy's Laboratories and Aurobindo Pharma[3].

2.11 According to the Telangana Socio Economic Outlook 2024[4], the state is ranked 12th in country if terms of population, and 11th in terms of its area. Owing to various initiatives taken by the State government, the state's economy has shown steady growth since inception, which is expected to continue with news around the state and its neighbour (Andhra Pradesh) both anticipating extensive investment in healthcare, port infrastructure, last mile connectivity and private employment.

2.12 Amaravati, the planned capital of Andhra Pradesh, is witnessing renewed development momentum with the launch of a ₹65,000 crore capital city project aimed at transforming the region into a modern administrative and civic hub. The initiative includes the construction of the Legislative Assembly and High Court within 24 months, along with the Secretariat and other infrastructure in phased timelines. This revival, driven by the state government's renewed focus, aims to build a "people's capital" with robust amenities in housing, education, healthcare, and transport[5].

2.13 The Asset is characterised by cement factories situated along its alignment, in proximity to TP2 facilitating movement in both directions; towards Hyderabad, and towards Chennai/Guntur. Since their establishment, the India Cements plant and the Penna Cements plant supply cement for construction projects in the region, with the Asset providing critical access to nearby consumption centres such as Hyderabad, Piduguralla, Nalgonda, Addanki, Guntur as well as the demand generated by Krishnapatnam port in the south[6]. Additionally, in 2024, Shree Cement Limited, a prominent Indian cement manufacturer, commenced operations at its newly established integrated cement plant in Dachepalli village, Guntur district, Andhra Pradesh. This facility, completed six months ahead of its projected timeline with an investment exceeding Rs 2,500 crore, possesses an annual cement production capacity of 3 million tons[7].

2.14 Paddy farming is extensively laid out along the Asset route, predominantly found closer to TP1. The agricultural movement observed on the Asset majorly consists of rice being transported from rice mills on the Asset, from where they're moved to areas in Nalgonda,

[7] **Shree Cement inaugurates new plant in Guntur, to generate 2,000 jobs**

Miryalguda, Piduguralla, Guntur, etc. Apart from agriculture-linked traffic, the Asset also observes a significant share of manufacturing movement which includes automobiles from North India destined to Chennai/Krishnapatnam port, e-commerce products, and electronic appliances[8].

Alternate routes

2.15 Further to the previous section on the strategic network context of the Asset, this section provides details on alternate routes that have been considered in our network analysis (discussed in chapter 6).

2.16 The main competitor for long-distance traffic on the Asset is the under-construction 1,271 km four-six lane access-controlled Surat- Solapur- Chennai Expressway. The Indian government is rapidly progressing on the Surat-Solapur-Chennai (SCE) expressway project, which will pass through Nasik, Ahmednagar, Solapur, Kalaburgi, Kurnool, Kadappa, and Tirupati. The Surat-Solapur section will be a new greenfield alignment, while the rest will involve upgrading existing two-lane roads to four lanes. The upcoming expressway once operational[9] is expected to reduce the travel time between Surat and Chennai resulting in diversion of some long-distance traffic from the Asset, which is discussed in detail in Chapter 6.

2.17 The Hyderabad Regional Ring Road is a 330+ km long planned highway that will be outside the existing Outer Ring Road (ORR) that will connect various towns and growth centres around Hyderabad as a bypass route for through traffic crossing the region on long-distance routes. The RRR will enable long-distance vehicles to access southern regions without entering Hyderabad, saving time and avoiding congestion. It will allow traffic to enter the Asset from the north via the Pragnapur-Chottupal route, whereby traffic on NH44 will get direct access to Narketpalle without experiencing congestion along dense urban networks around Hyderabad. The Hyderabad Regional Ring Road (RRR) is currently under development[10] and is expected to benefit the Asset once completed and operational.

2.18 The existing 217 km segment between Hyderabad and Nandyal (NH167k) is being upgraded to a 4-lane section. This project is broken into three phases, with the middle section being a greenfield upgrade. Once completed, this segment will most likely provide vehicles starting in Hyderabad or north of it with alternative route to Chennai via Kurnool-Kadapa route. The incorporation of this impact has been taken alongside the impact of the HORR, the details of which are provided in Chapter 6 below.

2.19 Under the Bharatmala Pariyojna Project, the National Highways Authority of India (NHAI) is undertaking the development of the 457-kilometer Nagpur – Vijayawada Expressway as an Economic Corridor[11]. This project encompasses the widening of existing alignments and the creation of a new greenfield section connecting Warangal and Vijayawada in the state of Andhra Pradesh.

2.20 The above-mentioned network developments and their impacts have been discussed in detail in Chapter 6 of the report.

3 Traffic description

Introduction

3.1 This chapter outlines the current traffic and revenue trends on the Asset basis TMS traffic data provided by the Client, and analyses of origin-destination (OD) survey data as well as TVC traffic count data as collected by Steer commissioned surveys as part of this study.

3.2 Traffic demand data is generally collected and analysed to understand the volume and vehicle composition of demand currently using the Asset, while OD data is used to obtain a better understanding of travel patterns, trip lengths, trip purposes and areas of influence in the vicinity of the Asset, as also the commodities being moved by goods vehicles. This analysis, combined with our understanding of the Asset (based on our site visits), enables us to identify the key drivers of demand on the Asset.

3.3 Actual toll plaza data is used as the basis from which the current/base year Monthly Average Daily Traffic (MADT) is established. This data is typically provided by the Client and independently analysed and validated by us using Traffic Volume Count (TVC) information.

PCU factor assumption

3.4 The PCU values have been taken from 'IRC 64:1990- Guidelines for Capacity of Roads in Rural Areas'[12]. For MAVs, based on the discussion with the Client, we have referred to the rigid and trailer splits in the TVC counts for calculating the effective PCU for MAVs. For rigid trailer trucks we have assumed a PCU factor of 3, whereas for trailer trucks we have assumed a PCU factor of 4.5, as defined in IRC 64:1990[12]. The PCU factors used in our analyses are presented in Table 3.1 below.

Table 3.1: PCU Factors

Vehicle Category	PCU Factor
CJV	1.0
Mini LCV	1.0
LCV	1.5
Bus	3.0
2A	3.0
3A	3.0
MAV*	3.2
OSV	4.5

[12] IRC 064: Guidelines for Capacity of Roads in Rural Areas

Source: Steer analysis, * Rigid-Trailer PCU

Historical Trends

3.5 Between FY18-FY25, all three toll plazas on the Asset have observed robust traffic growth. This growth, primarily driven by CJVs, MAVs, and 2As, can be attributed to two key factors: heightened construction activity fuelled by capital expenditure (CAPEX) in Telangana[13] and Andhra Pradesh[14], leading to increased truck traffic; and a rise in passenger traffic across all three plazas due to the Asset's strategic location between developing urban centres such as the Hyderabad and Guntur/Vijayawada regions. The Asset observed decline in traffic volumes in FY21 due to the Impact of the COVID-19 Pandemic. However, recovery of traffic post FY21 was strong and has sustained since then, further adding to the robust growth observed on the Asset over the same period (FY18-25).

3.6 Additionally, we observe flat to marginal decline in LCV and 3A volumes on the Asset over the same period, which can be attributed to shifting axle preferences amongst long-distance commercial transporters - a trend we have consistently observed on multiple Assets across the country, and not unique to this asset

3.7 Table 3.2 and Table 3.3 below show the historical variation in total and tollable traffic volume at the Madgupally toll plaza (TP1).

Table 3.2: Historical evolution in AADT by vehicle class at TP1 Madgulapally

Vehicle Type	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26 YTD	CAGR FY18-25

Source: Steer analysis of Client data, FY26YTD includes data till September'25.

3.8 As can be seen in Table 3.2 above, TP1 has witnessed a PCU CAGR of 6.0% from FY18-25. This growth is primarily driven by growth in CJVs, 2As, and MAVs. Negative growth observed in FY21 was caused by the onset of the COVID-19 pandemic, which was followed by a rapid recovery in FY22.

3.9 In FY25, CJVs constituted approximately 56% of the total traffic at TP1, followed by 3A+MAVs in total traffic (AADT), which represented approximately 21% of the traffic during the same period. The substantial volume of CJVs is primarily attributed to passenger movement from Guntur to Hyderabad and Dachepalli for purposes including employment, healthcare, and education. As seen in Table 3.2 above, CJVs have grown at a CAGR of 8.6% between FY18-25 indicating the increase of use of the Asset as a means of commute between key hubs such as Guntur, Chennai, Ongole and Hyderabad.

3.10 From FY18 to FY25, MAV and 2A volumes at TP1 grew at 7.2% and 11.9% per year (respectively). A significant portion of the commercial traffic on TP1 comprises manufactured goods, including automobile components and electronics, moving between Chennai-Hyderabad and between North India and the industrial hubs of near Chennai.

3.11 MAVs observed at TP1 also include those carrying cement from local cement plants between TP1 and TP2 and are destined for Hyderabad (and beyond). 2-Axle and MAV growth is further aided by a shift in preference from 3A trucks to MAVs and 2As, a trend observed at an Asset as well as national level due to the alternatives providing better economic value in goods transportation.

3.12 Similar to TP1, TP2 achieved a PCU CAGR of 4% between FY18 and FY25, with CJV, 2A, and MAV being key contributors to overall traffic growth at TP2. As observed at TP1, the COVID-19 pandemic also impacted traffic growth at TP2 in FY21, resulting in total traffic decline of 2.5% in FY21, followed by a robust recovery in FY22-FY23. Additionally, growth in 2A and MAV traffic at TP2 is also due to construction material demand (particularly, cement) in and around Hyderabad, Chennai, and the Guntur/Vijaywada wider region, leading to increased truck traffic, alongside passenger growth directed towards Chennai and Hyderabad.

3.13 In FY20, TP2 observed decline in traffic due to the ban on sand mining near the Krishna River[15], which previously formed a significant portion of the Asset's truck traffic. Since the ban, and stricter enforcement to curb illegal mining and movement of sand between Andhra Pradesh and Telangana, sand as a commodity observed on the Asset has diminished. Several Roads and Transport Authority (RTA) checkpoints are also stationed between TP1 and TP2 to prevent sand transit.

3.14 Despite the impact of the FY20 sand mining ban on commercial traffic growth on the Asset, TP2 continues to observe the highest truck volumes among the three toll plazas on the Asset, primarily due to its proximity to major existing cement manufacturing facilities, including India Cements and Penna Cements, and the development of new cement plants

[15] Govt. bans sandmining - The Hindu

in Hyderabad and near Guntur[16]. The regional industrial profile and continued capacity augmentation through new developments have collectively driven strong growth of commercial traffic on the Asset and at particularly at TP2, where MAVs have grown at an annual average rate of 3.6% per year from FY18 to FY25.

3.15 Table 3.6 and Table 3.7 below present the historical variation in traffic volume at the TP3:

Table 3.6: Historical evolution in AADT by vehicle class at TP3 Elchuru

3.16 When compared to TP1 and TP2, TP3 has historically observed lower traffic volumes. This is because a major portion of traffic originating from Hyderabad is bound for Guntur and appears only on TP1 and TP2; this is evidenced by our OD survey analysis outputs at TP1 and TP2 (refer to Appendix B) and based on our site visit observations. The Guntur bound traffic does not appear on TP3, as it diverts after appearing on TP2 from Pidgurulla via

[16] Shree Cement inaugurates three MTPA plant in Andhra Pradesh - The Economic Times

SH21 to reach Guntur, leading to relatively lower volumes that cross TP3 on their way further south.

3.17 TP3 saw volumes declines for commercial vehicles in FY20 because of the sand-mining prohibition, and again in FY21 due to the impact of the COVID-19 pandemic – similar to trends observed at TP1 and TP2. In FY22, traffic at TP3 rebounded as construction activity in the region recovered. Between FY18 and FY25, PCU growth at TP3 was 5.1% per year.

3.18 3A volumes at all three plazas on the Asset have declined over the period FY18-25. This reduction in 3A volumes can be attributed to transporters increasingly opting for 2A and MAV vehicles in place of 3As. MAVs offer a greater tonnage capacity, enhancing their cost-effectiveness for freight transport, while growth in 2A vehicle volumes reflect a rising preference for these vehicles, driven by favourable adjustments in legal permissible loads and their suitability for e-commerce-related freight, particularly for high-value, low-volume goods transported over medium to long distances. This trend aligns with insights gained from discussions with various transporters and OEMs nationwide, who are increasingly favouring 2A and MAV vehicles for commodity movement due to their superior unit economics.

Historical Revenue

3.19 Table 3.8 below presents the reported historical revenue of the Asset.

Table 3.8: Historical revenue evolution (in INR Crores) and AADC (in INR Lakhs) for the Asset

Asset	FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26YTD	CAGR FY18-25
Annual Revenue (INR Crore)	158.3	186.8	180.6	144.5	198.1	254.4	268.9	301.2	167.4	9.63%
AADC (in lakhs)	43.4	51.2	49.9	41.8	54.3	69.7	73.5	82.5	91	9.61%
AADC Growth (%)	-	18.0%	(2.5%)	(16.2%)	29.9%	28.4%	5.5%	12.3%	10.3%	-

Source: Steer analysis of Client data, FY26YTD includes data till September'25.

3.20 With increase in traffic across plazas and vehicle categories, the Asset recorded an average daily collection of INR ~83 lakh in FY25, compared to INR ~75 lakhs in FY24. Overall, AADC of the Asset has grown at 9.6% per year between FY18 and FY25.

3.21 Every alternate year observes a greater jump in revenue than the year-on-year increases due to the tolling regime followed on the Asset, wherein toll rates on the Asset are revised once every two years.

Toll Frequencies

3.22 Toll frequency or segmentation is typically the share of each ticket category recorded for a particular vehicle type. This is based on the toll policy which forms a part of the concession agreement. Each vehicle category has different segmentation. As a part of historical analysis, we calculate the toll frequency for each vehicle category from the monthly data shared by the Client. The most common ticket categories observed on a typical National Highway concession are: Single, Return, Monthly, Local and Exempt.

Given the local nature of traffic, some toll plazas offer custom made local passes to attract the local commuters to opt for these category passes instead of evading toll.

3.23 Understanding the toll frequency gives insights into the nature of traffic. CJVs generally have higher shares of return passes or local monthly passes because they travel for short to medium distances, while heavy trucks mostly have single tickets since they travel long distance. However, this distribution varies from asset to asset or even toll plaza to toll plaza. An asset catering to short distance local traffic generally observes high share of return or other local monthly passes while another that caters more to strategic long-distance traffic generally observes high share of single ticket traffic.

3.24 Since the Asset is a state highway that runs between AP and TL states, the "Daily Pass" ticket is the equivalent of a "Return Journey" ticket charged at national highways. This ticket allows users to make more than two trips (within a 24-hour period) at the price of 1.5x of a Single Journey ticket and is thus different from the NHAI "Return" ticket which only permits a user to make two trips within the same time. The data collection and compilation on the Asset is done in such a way that all users who purchase a Daily Pass ticket but make more than two trips per day are classified as "Return 2". This category generates no additional revenue and was processed similarly to the "Return" ticket in our analysis. In this context, Table 3.9 below shows the different types of tickets being sold at all three plazas on the Asset, including the wider definition of the "Return" ticket.

Table 3.9: Typical ticket types sold at plazas

Category	Description
Single	Allows the vehicle to cross the toll plaza once
Return	Allows the vehicle to cross the plaza twice (or more than twice) in a day at discounted rates.
Monthly Pass	Discounted ticket for all road users issued at toll plaza who intend to undertake multiple single trips using the toll plaza. 50 trips are allowed on a discounted rate to be used within 30 days of issue.
Local Personal	Discounted single entry pass only for private cars of residents within 20km radius of toll plaza
Local Commercial	50% discount on single trips for commercial vehicles registered in the local district. This pass allows single entry only
Exemptions	Officially exempted vehicles like ambulance, police cars, key political personnel etc

3.25 On the Asset, a user can buy the ticket for crossing all three plazas at one plaza, via cash. However, since FASTag was implemented on the Asset (starting August 2021 on TP1, and 26th October 2021 on TP2 and TP3) there was a change in how these ticket categories were being recorded via these two modes of payment.

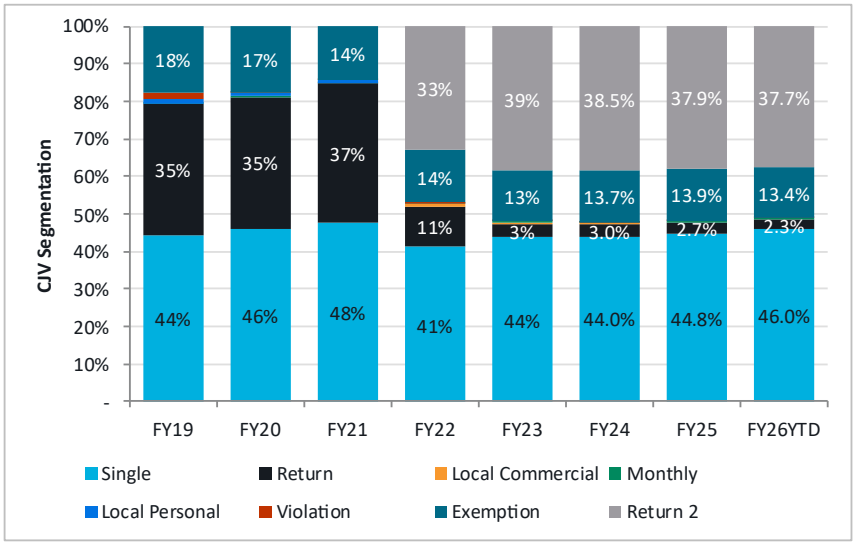
3.26 Generally, shares of single/return/monthly tickets tend to stabilise within 2-3 years of Asset operations. Only in the cases where trip patterns are expected to change significantly due to urban expansion is where we expect these shares to change over the period or due to some external events impacting the trip patterns. During the calendar year 2021, for instance, two key events impacted the traffic patterns throughout the country: the COVID-19 pandemic, and FASTag implementation.

Share of traffic by payment type

3.27 As the Asset is a part of State highway which is under Andhra Pradesh Roads Development Corporation, FASTag is not mandatory on the Asset and separate lanes are provided for FASTag users. Across all three toll plazas, the Asset has 92-95% ETC penetration rate as of FY26YTD, with the remaining share of transactions still being facilitated via cash. This is because the Asset is a state-highway which does not mandate the use of FASTag for all vehicles.

3.28 Figure 3-1 through Figure 3-6 below show the toll segmentation for the historical years at all the toll plazas for CJVs and MAVs.

Figure 3-1: Ticket-segmentation for CJV at TP1



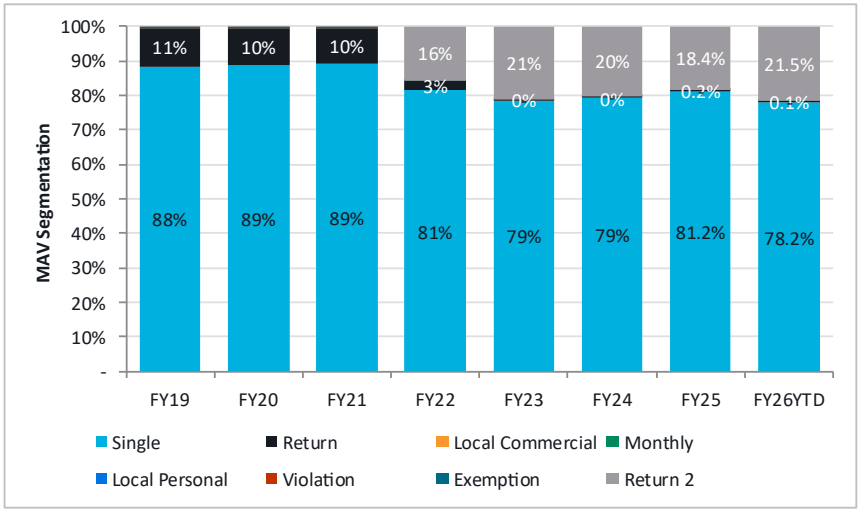
Source: Steer analysis of Client data, FY26YTD includes data till September'25.

3.29 From Figure 3-1 above, we see that ticket segmentation trends for CJVs at TP1 have stabilised post FY23. The ticket segmentation for CJVs in FY26YTD is characterised by a high share of Single and Return (including the "Return 2") tickets at approximately 46% and 40% (respectively). The high share of return tickets is dominated by a large share of short distance trips observed on the Asset at TP1 for CJVs[17]. A modest share of 13% of CJV trips at TP1 were Exemptions as of FY26YTD – stable since FY21 but lower than observed in FY19.

3.30 As shown in Figure 3-2 below, most MAVs crossing TP1 purchase single journey tickets (78% in FY26YTD) and the remainder (22%) purchase return tickets. This pattern is supported by the results of the OD analysis, which reveal a large share of long-distance travel and a corresponding share of short/medium distance traffic to locations such as Nalgonda, Miryalguda, and Pidugurulla, among others (see Figure 3-21).

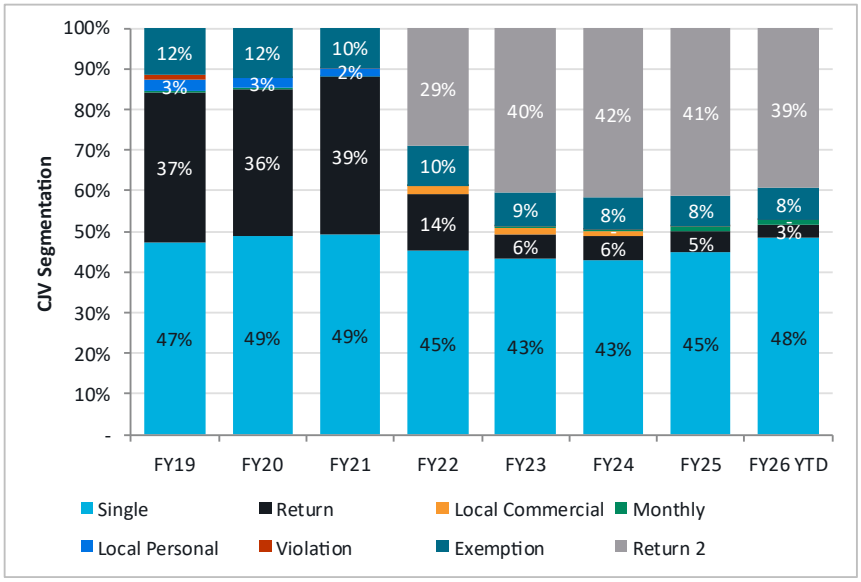
[17] Source: Steer Analysis of Origin-Destination Survey Data

Figure 3-2: Ticket-segmentation for MAV at TP1



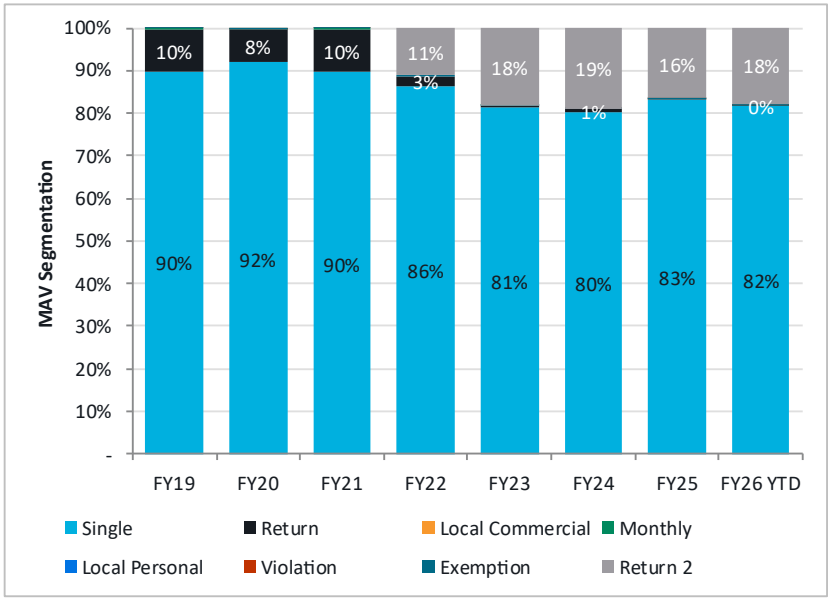
Source: Steer analysis of Client data, FY26YTD includes data till September'25.

Figure 3-3: Ticket-segmentation for CJV at TP2



Source: Steer analysis of Client data, FY26YTD includes data till September'25.

Figure 3-4: Ticket-segmentation for MAV at TP2

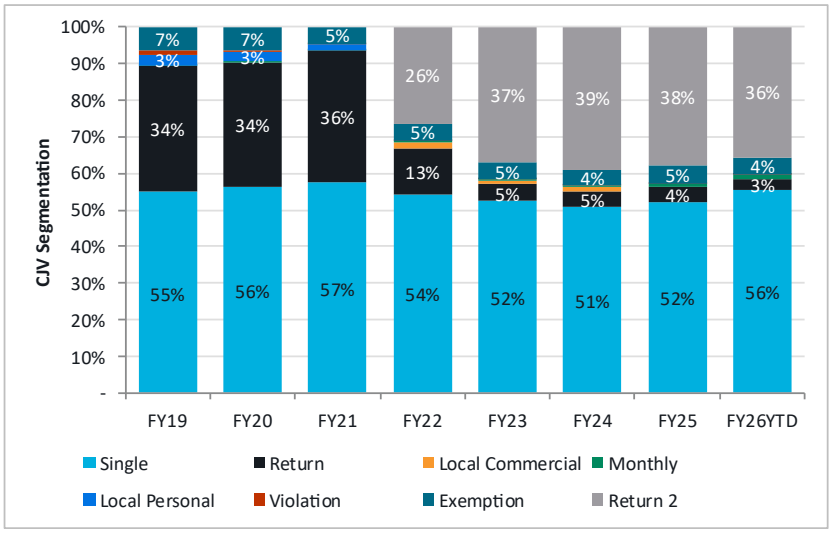


Source: Steer analysis of Client data, FY26YTD includes data till September'25.

3.31 As seen in Figure 3-3 above, CJVs on TP2 exhibit similar travel patterns as those at TP1. The share of CJV Exemptions at TP2 has reduced from 12% in FY19 to 8% as of FY26YTD. CJVs are characterised by an almost equal split between Single and Return Journey tickets. As mentioned before, the high share of return tickets is an indication of CJVs primarily making short distance trips[17], wherein 50% of CJVs are making trips shorter than 300 kms. Some of the commonly travelled hubs include Guntur, Hyderabad, Mirayalguda, Nalgonda and Dachepalli.

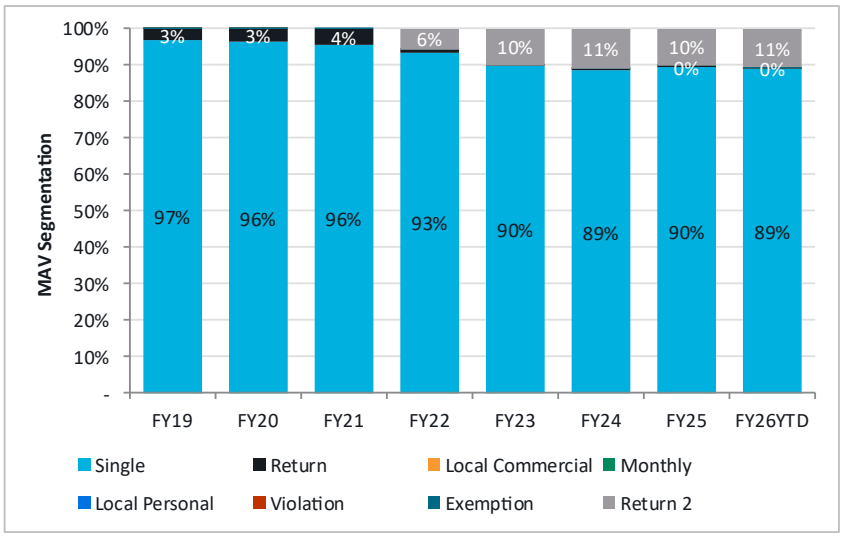
3.32 Most MAVs (83% in FY25) pay for single trips on TP2, with the balance purchasing return tickets. This pattern is corroborated by the results of the OD analysis, which reveal a substantial share of long-distance travel between hubs such as Chennai, Hyderabad, Mumbai, Delhi and Khammam, verifying the ticket segmentation trends determined from the Client's historical data (see Figure 3-22).

Figure 3-5: Ticket-segmentation for CJV at TP3



Source: Steer analysis of Client data; FY25YTD includes 10 months of reported revenue Apr-Jan'25

Figure 3-6: Ticket-segmentation for MAV at TP3



Source: Steer analysis of Client data, FY26YTD includes data till September'25.

3.33 On TP3, as of FY25, around 52% of CJV users paid for single tickets and approx. 41% bought return tickets. These shares have remained relatively steady over the years indicating that travel patterns of CJVs at TP3 appear to have stabilised by now.

3.34 For MAVs at TP3, the share of single tickets is the highest among all three toll plazas on the Asset, as most (if not all) of the MAV traffic on this plaza is through-traffic travelling from Hyderabad city to Ongole, Nellore, and onwards to Chennai. Because of the long-haul travel pattern of MAVs on this plaza, the single journey ticket share is relatively high for MAVs, ranging between 82% and 90%, as of FY25YTD.

3.35 Table 3.10, Table 3.11 and Table 3.12 below depicts the FY25 segmentation for LCV, Bus, 2A, 3A and OSV category for TP1, TP2 and TP3 respectively.

Table 3.10: Ticket-segmentation for LCV, Bus, 2A, 3A and OSV Categories at TP1

Data collection and validation

Overview

3.36 As mentioned previously, to validate and inform various inputs used in our earlier forecasting, we undertook OD data collection on the Asset in this study, comprising the surveys listed in Table 3.13 below. While TVC surveys were commissioned by Steer by contracting a third party in the study, OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas, which Steer also commissioned with a third party. TVC data is comprehensive; where collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting. New OD surveys were conducted for TP2 in 2025.

Table 3.13: Data collection schedule

TP	3-day videography-based TVC			1-day OD survey
	Start date	End date	Time (hrs)	Survey Date
TP1	26th September 2023	28th September 2023	0000-2359	28th September 2023
TP2	22nd January 2025	24th January 2025	0000-2359	22nd January 2025
TP3	26th September 2023	28th September 2023	0000-2359	26th September 2023

Source: Steer analysis

3.37 In our experience, traffic on national highways shows variation across the week due to the economic activities surrounding each road. To derive a representative TVC count considering daily variation, three-day to seven-day traffic counts are generally recommended, and hence, to fully understand the impact of this weekly fluctuation on the Asset, we collected three-day counts at the toll plaza.

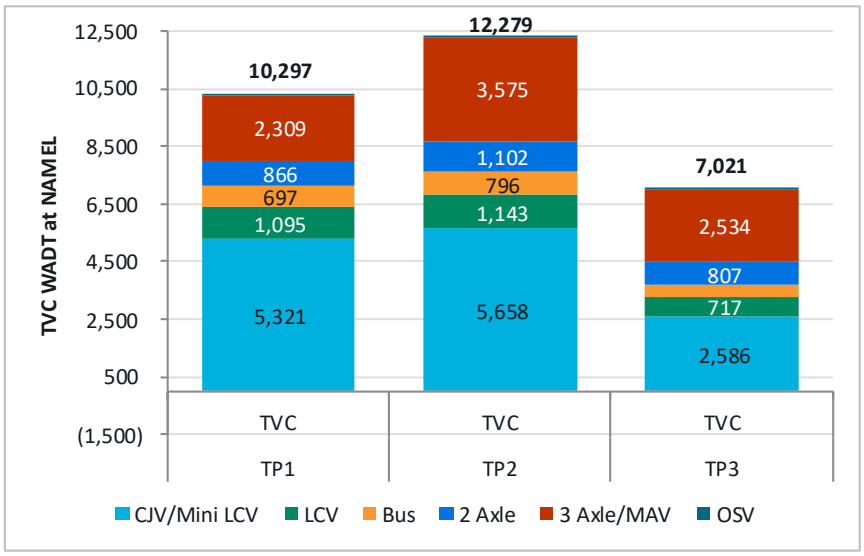
Key findings of the TVC data analysis

WADT estimates

3.38 Taking an average of the three-day TVC counts (22rd Jan – 24th Jan 2025 for TP2 and 26th Sep – 28th Sep 2023 for TP1 and TP3), we obtained estimates of weekly average daily traffic (WADT) by vehicle category for each of the three toll plazas on the Asset. This WADT excludes non-tollable vehicles such as tractors, two-wheelers, bullock-carts, etc., but includes officially exempt vehicles such as police cars, ambulances, emergency response vehicles, government vehicles and other vehicle types officially allowed as 'exempted' under the concession agreement.

3.39 As shown in Figure 3-7 below, at TP1 and TP2, CJVs accounted for the largest share of all vehicles crossing the plazas, followed by MAVs and LCVs. In the case of TP3, both CJVs and MAVs accounted for almost equal shares of total traffic (between 2,500-2,600 vehicles each). As discussed previously, this difference in volumes between TP1, TP2, and TP3 is due to the Pidugurulla diversion that connects Hyderabad and Vijayawada-Guntur region through the Asset, and the cement plants near TP2.

Figure 3-7: WADT at TP1, TP2 and TP3



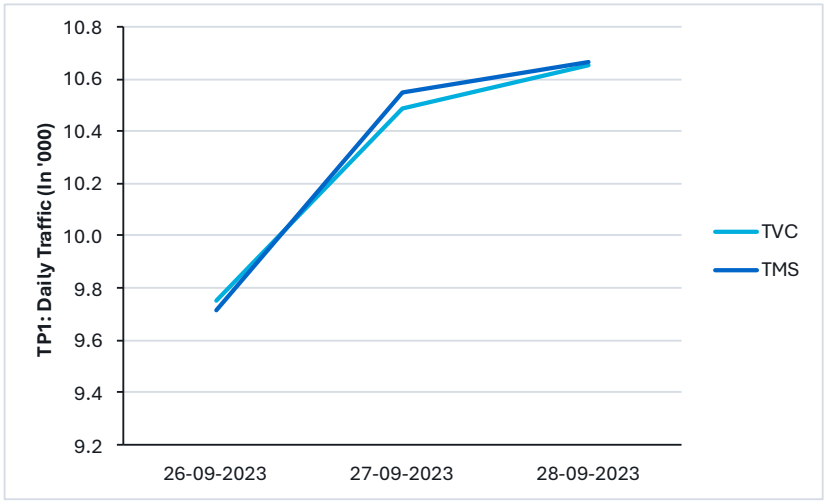
Source: Steer analysis of Steer-commissioned TVC data. TP2 TVC count reflects latest TVC count done in Jan 2025 and TP1 and TP3 counts reflect TVC counts done in Sep 2023.

TVC v/s TMS analysis

3.40 As we use the TMS data to estimate the base year AADT, we have used our TVC data to validate the TMS data on those particular days, as supplied by the Client.

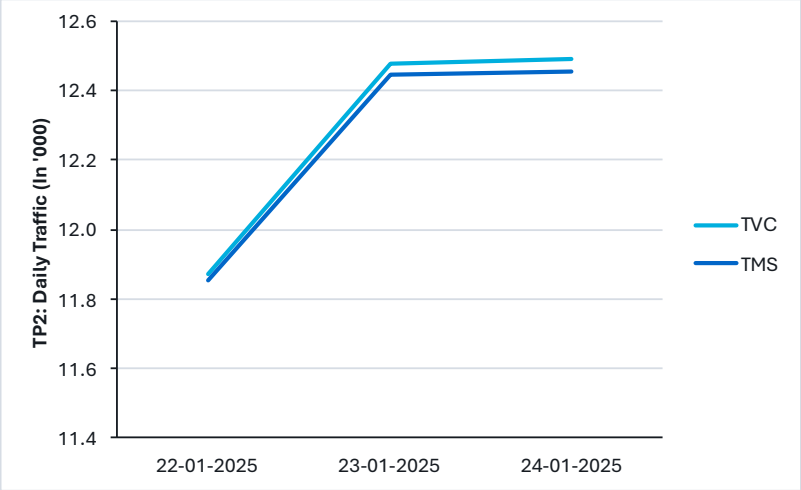
3.41 Figure 3-8, Figure 3-9 and Figure 3-10 below shows the comparison between daily volumes in tollable traffic derived from TVC and TMS data for all three toll plazas. This shows a good fit at the aggregate level at all the plazas with an absolute delta of 0.1% on TP1 and TP2, and 0.8% on TP3.

Figure 3-8: Comparison between TVC and TMS daily traffic data on TP1 (2023)



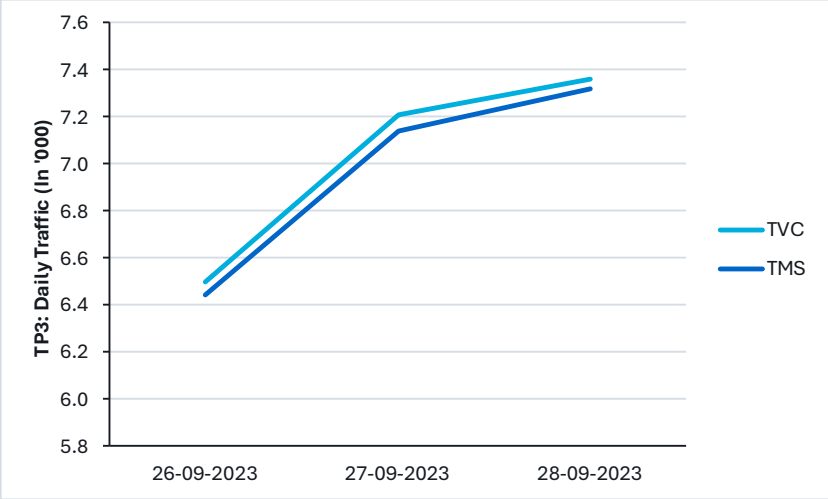
Source: Steer analysis of Steer-commissioned TVC and Client TMS data

Figure 3-9: Comparison between TVC and TMS daily traffic data on TP2 (2025)



Source: Steer analysis of TVC and client TMS data

Figure 3-10: Comparison between TVC and TMS daily traffic on TP3 (2023)

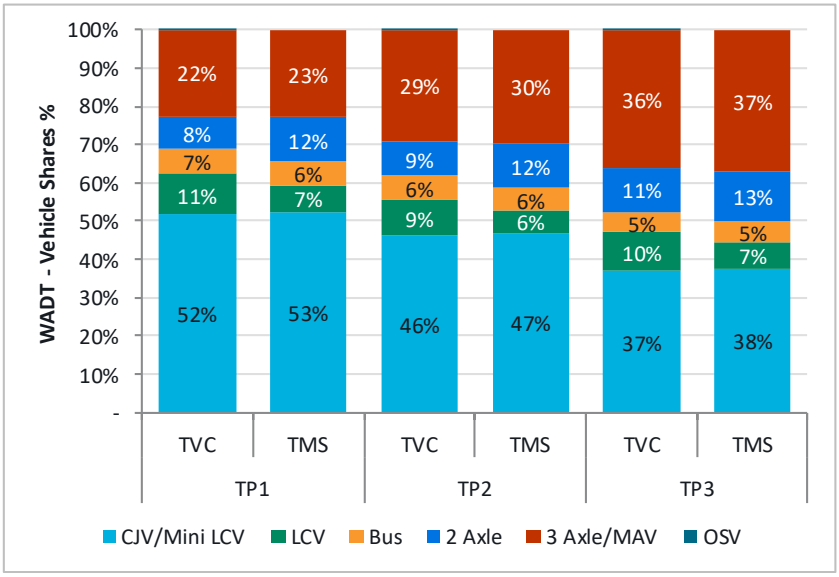


Source: Steer analysis of TVC and client TMS data

3.42 Figure 3-11 below compares the share of traffic by vehicle type at each toll plaza, as recorded between the TVC and TMS data. At aggregated levels (aggregated in such a way due to common misclassification between these groups), there is minimal variation between the TVC and TMS count data. In all cases, the TVC and TMS vehicle shares differ from each other by a small margin - between 0-0.5%.

3.43 There is common misclassification between the CJV and Mini LCV categories, and therefore, these have been combined in our analysis. Apart from classification issues, differences can be attributed to reporting system for exempted vehicles at the toll plazas, along with the technical differences between the two independent traffic counting systems.

Figure 3-11 Comparison between vehicle shares from TVC and TMS WADTs



Source: Steer analysis of TVC and client TMS data

Table 3.14: Difference in vehicle counts when combined

Vehicle type	TP1 (2023)			TP2 (2025)			TP3 (2023)		
	TVC	TMS	TMS vs TVC (%)	TVC	TMS	TMS vs TVC (%)	TVC	TMS	TMS vs TVC (%)
CJV+LCV+2A+ Bus	7,979	7,953	**0.3%**	8,698	8,614	**1%**	4,483	4,400	**1.9%**
3A+MAV+OSV	2,318	2,356	**(1.6%)**	3,581	3,638	**(1.6%)**	2,538	2,566	**0.2%**
Total	**10,297**	**10,309**	**(0.1%)**	**12,279**	**12,252**	**0.1%**	**7,021**	**6,966**	**0.8%**

Source: Steer analysis of TVC and client TMS data; TP2 TVC counts reflect updated 2025 counts whereas TP1 and TP3 counts reflect 2023 TVC counts

3.44 Given an overall match in the traffic volumes, TVC-TMS analysis gives us the confidence that the base year traffic calculated using the Client data forms a reliable base year traffic estimate. We therefore consider the Client TMS data to estimate the base year AADT.

Key findings of origin-destination analysis

Overview

3.45 Origin-destination (OD) analysis enables the understanding of the nature of traffic movement on the Asset. The OD analysis presented here is based on data collected on behalf of the Client in September 2023 for TP1 and TP3 and based on latest data collected in January 2025 for TP2.

3.46 We have analysed the regional drivers of demand based on the following OD analyses on the data as provided by the Client:

- Zonal influence
- Commodity distribution

- Top OD pairs
- Trip length distribution

3.47 While top OD pairs and zonal influence help us understand 'where' people and goods travel, the commodity distribution sheds light on 'which' goods are transported. Trip length distribution analysis further indicates 'how far' vehicles and people travel. This set of analyses is generally used to estimate the key drivers of traffic and aids the making of informed forecasting assumptions around traffic demand elasticities, growth drivers and exogenous impacts.

Sample rates

3.48 Sample rates help understand the reliability of OD data. They are calculated by dividing OD samples by the TVC counts observed on the same date for each vehicle category at the toll plaza. Table 3.15 below presents the sample rates for goods and passenger category at the toll plaza. We believe that the sample rates of the OD data are reasonable for the analysis required.

Table 3.15: Sample rates for OD data

Vehicle Category	TP1 (2023)	TP2 (2025)	TP3 (2023)
Passenger (CJV+Bus)	27%	47%	26%
Goods (LCV+2A+3A+MAV)	58%	54%	67%

Source: Steer analysis of OD data

Zone categories

3.49 To facilitate better interpretation of key regional drivers of traffic as determined by their OD zones, and influenced by various towns, cities, states and regions in the vicinity of the Asset, we have aggregated zonal data as described in the Table 3.16 below. The methodology behind this aggregation of zones may vary as per the characteristics displayed by the different Assets being studied.

Table 3.16: Zone aggregations for zonal influence analysis

Aggregate Zone	Description
Local	Local zones are those that fall on or very close to the Asset.
Immediate area of influence (IAOI)	IAOI zones are the locations which generate traffic and lie within approximately 75-150 km distance from the Asset.
Rest of Telangana	Rest of the cities/Districts in Telangana other than Local/IAOI
Rest of Andhra Pradesh	Rest of the cities/Districts in Andhra Pradesh other than Local/IAOI
Rest of South India	Tamil Nadu, Karnataka, Kerala, Puducherry
West India	Maharashtra, Gujarat, Rajasthan
North India	Jammu & Kashmir, Punjab, Himachal Pradesh, Haryana, Delhi, Uttar Pradesh, Uttarakhand
Central India	Madhya Pradesh, Chhattisgarh
East & Northeast India	Bhar, Jharkhand, Odisha, West Bengal, Northeast Indian states
Outside India	Nepal, Bhutan

Source: Steer analysis

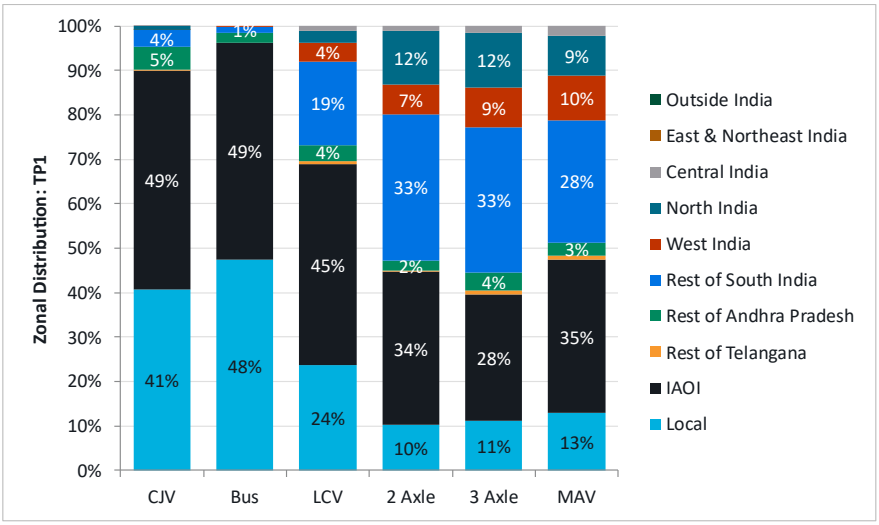
Zonal influence

3.50 The zonal influence is the contribution of a zone or the zonal aggregation to trips by a vehicle type. This section presents the zonal influence at each toll plaza of the Asset, aggregated based on zonal aggregation listed in Table 3.16 above. Please note that zonal influence is analysed on trip ends and not trips.

3.51 Figure 3-12, Figure 3-13 and Figure 3-14 below present the zonal influence by vehicle type at all three toll plazas on the Asset. At all the three toll plazas, the zone category with the highest influence is IAOI, across the vehicle categories.

3.52 At TP1, we see that unlike the other two plazas, local trips also have major influence, especially among CJV and Bus. This is because the TP1 (Madgulapally) is located near the major urban agglomeration of Hyderabad. The CJV traffic on the corridor caters to the local demand connecting key towns of Nalgonda, Miryalguda, Guntur, Pidugurlla, and others. Among the goods vehicles we see the Rest of South India accounts for a high share, with influence on MAV trips at 28% of all MAV trips crossing the plaza. This is because the Asset is a major access road to Chennai, which is a major port and manufacturing hub. 10% of MAV traffic is also influenced by West India. North India also shows significant influence – at 12% for both 2As and 3As observed at TP1.

Figure 3-12: Zonal influence at TP1 (2023)

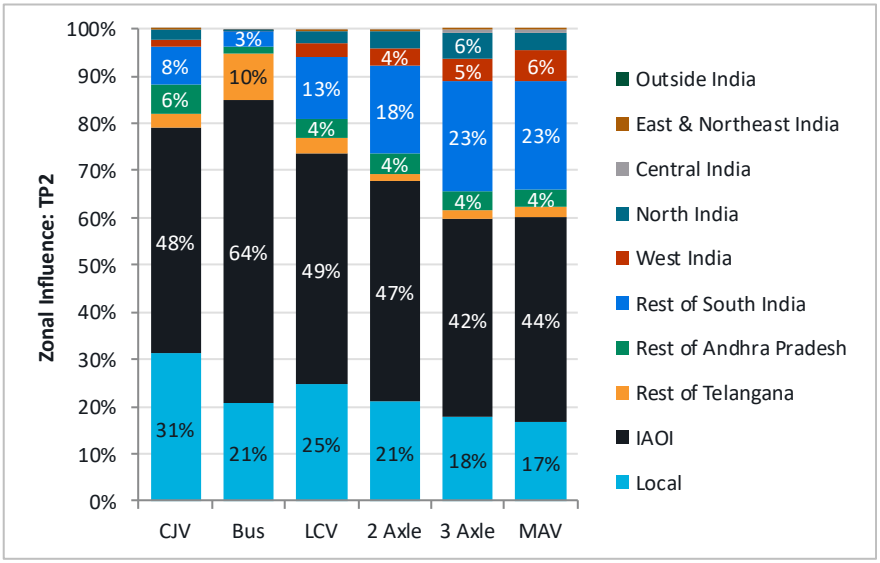


Source: Steer analysis of OD data

3.53 LCVs and 2A trucks serve a relatively more local market, connecting the industrial nodes on the Assets and regions of Pidgurulla, Addanki, and Miryalguda, the same is also validated through the high zonal influence of the state in these categories.

3.54 At TP2, both IAOI and Rest of Andhra Pradesh have a high influence. This is because the toll plaza is located near several cement plants, which generate significant truck volumes appearing on the Asset. These cement plants cater to demand from both distant centres like Chennai, as well as centres in rest of the state like Guntur. 4% of the MAV traffic is influenced by the Rest of Andhra Pradesh, whereas the Rest of South India shows an influence of 23% on all MAV trips observed at TP2.

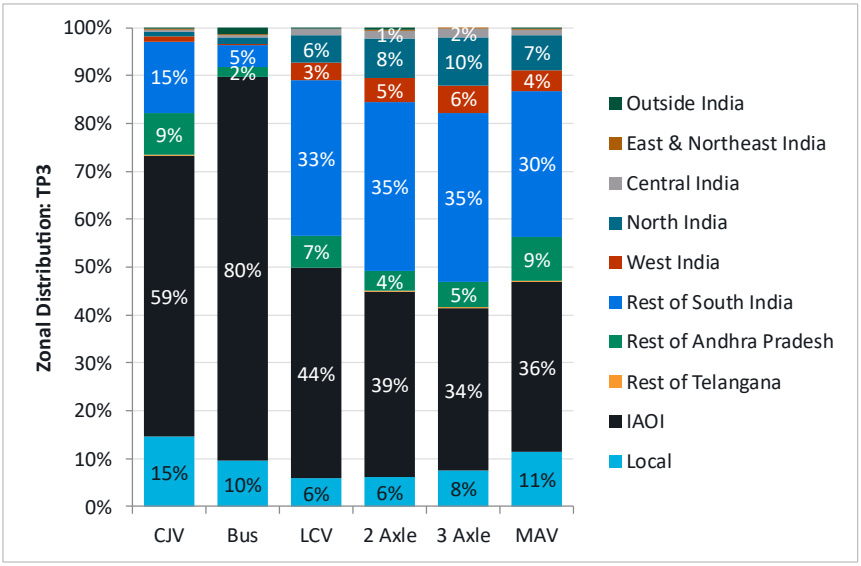
Figure 3-13: Zonal influence at TP2 (2025)



Source: Steer analysis of OD data

3.55 The zonal distribution at TP3 is somewhat similar to that of TP1. The Rest of South India influence ranges from 30-35% among goods vehicles, which is primarily dominated by Tamil Nadu, with trips going towards Chennai. The Rest of Andhra Pradesh's influence on MAV trips at TP3 is at 9%.

Figure 3-14: Zonal influence at TP3 (2023)



Source: Steer analysis of OD data

Internal-External analysis

3.56 Internal-External analysis helps in identifying the trips which have both the origin and destination on or near the Asset i.e., local/IAOI zones (Internal-Internal or I-I), any one end on the Asset (Internal-External or I-E), or neither end on the Asset i.e., through trips (External-External or E-E). RoS here represents areas within the state (Telangana and Andhra Pradesh for the Asset under consideration) which are neither local nor IAOI.

'Internal' zones are those that were analysed as 'local' and 'IAOI' in the zonal influence analysis, i.e., lying on the Asset, while 'External' zones are areas lying outside the state.

Figure 3-15 Internal-external distribution at TP1 (2023)

	Internal	Rest of State	External
External	22%	2%	31%
Rest of State	3%	-	1%
Internal	28%	2%	11%

Source: Steer analysis of OD data

3.57 Figure 3-15, Figure 3-16 and Figure 3-17 show the distribution of trips based on these categories specifically for MAV. Understandably, these reflect the observations made in the zonal influence analyses presented earlier, at a higher level of aggregation, but at a trip level.

Figure 3-16: Internal-external distribution at TP2 (2025)

	Internal	Rest of State	External
External	17%	1%	14%
Rest of State	3%	1%	2%
Internal	38%	4%	20%

Source: Steer analysis of OD data

3.58 At TP1, we see that the external zone influenced trips form a majority, ~65% of MAV trips have at least one end lying in a zone External to the Asset. We also see that the highest share is of E-E trips (31%). This confirms our assertion that the Asset is a major route for

through-trips, connecting areas in both the north and west of the country with the southeastern regions like coastal Andhra Pradesh and Tamil Nadu.

3.59 TP2 sees the highest share of MAV trips between internal zones, i.e., I-I (38%). This is because these MAVs are largely influenced by the presence of several cement production units in the vicinity which supply to consumption centres like Hyderabad, Guntur etc. which are located within the "Internal" zones to the Asset.

3.60 At TP3 as well we see that the largest proportion of trips are influenced by External zones (~65%) among the MAVs. This reiterates that the Asset serves as a major route for through-traffic which travels long distances.

Figure 3-17: Internal-external distribution at TP3 (2023)

	Internal	Rest of State	External
External	16%	1%	23%
Rest of State	9%	0%	1%
Internal	19%	7%	24%

Source: Steer analysis of Client OD data

Commodity distribution

3.61 We have grouped various commodities into aggregate categories for ease of interpretation, as shown in Table 3.17 below. The charts in the following sub-section present information in terms of these aggregate commodity categories.

Table 3.17: Aggregate commodity categories

Commodity Description	Code	Combined codes used for charts
Agriculture Products / Cash crops (Wheat, Rice, Sugar cane,Maize etc.)	AGR	AGR
Cattle Food / Live Stock (sheep, ghoat, cow,cattle food etc)	LIV	
Perishable Items (Fruits, vegetables)	PER	GRO
Animal Products/Dairy/Eggs/Fish/Meat/Animals	DFM	
Groceries / Food items (Soap, Salt, Sugar, Pulses, Spices, Biscuits, bread,cool drinks, beer etc.)	GRO	
Fly ash	FAS	CNS
Sand	SND	
Bricks	BRC	
Granite	GRN	
Stone (kota stone, Aggregate stone etc.)	STN	
Ceramic	CRM	
Petroleum Products (Oil, LPG, CNG, etc.)	PET	PET
Chemicals / Fertilizers (Acids,Fertilizers etc.)	CHM	
Electrical/Manufacturing items (Electronic items, Medicine, Leather, Wine, Rubber/ Tyre, Plastics, Cloth, Paper etc.)	MAN	MAN
Machinery / Spare parts	MAC	
Raw Wood,Cork & Wood Products, Furn	WUD	
Subadul wood	SBW	
Automobiles (Finished products, auto parts, Car/bike manufacturing)	AUT	AUT
Parcel and Courier including Delhivery, Amzon, flipkart etc	PAR	MSC
Miscellaneous (House hold items, any other commodties different then mentioned in list etc.)	MSC	
Container	CTR	
Passengers	PAS	
Scrap	SCR	
Coal	COAL	MET
Mining Minerals (Gypsum, Cobalt etc.)	MIN	
Basic / Fabricated Metals (Iron, Steel / Metal)	MET	
Empty	EMT	EMT
Cement	CMT	CMT

Source: Steer analysis

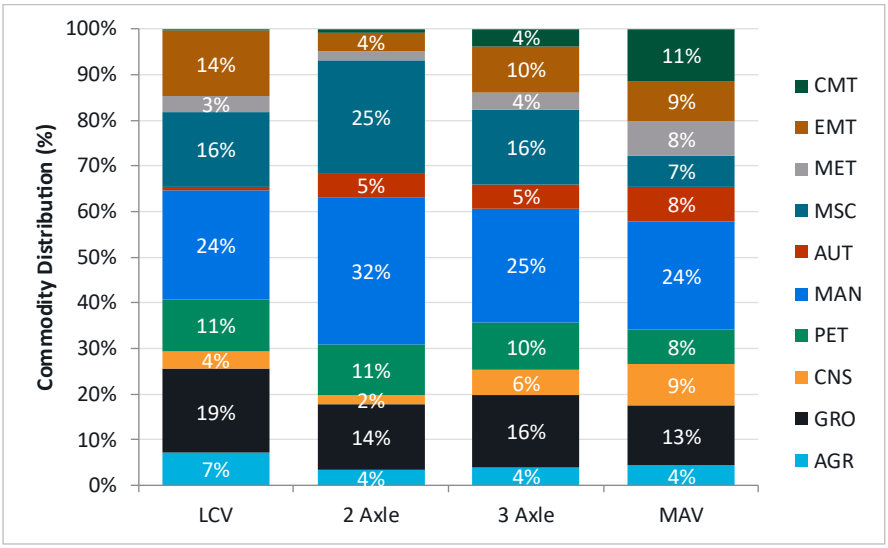
3.62 Figure 3-18, Figure 3-19 and Figure 3-20 below present the commodity distribution for goods vehicles at the three toll plazas.

3.63 At TP1, manufactured goods, specifically machine parts and electrical items, constituted the primary commodity transported by all goods vehicle categories. For Multi-Axle

Vehicles (MAVs), this was followed by cement (11%), and equally by automobiles, and metals and minerals (8% each).

3.64 Looking at the commodity distribution on TP1 by direction, we observe that only 7% of MAVs carry cement towards Addanki as compared to 18% carrying the same towards Nalgonda. This difference is attributable to the presence of cement plants located in the area between TP1 and TP2. Thus, the trucks carrying cement from the plants to areas such as Hyderabad appear at TP1 travelling towards Nalgonda.

Figure 3-18: Commodity distribution at TP1 (Total)



Source: Steer analysis of OD data

3.65 As also observed during our site visits, we see that manufactured products, agricultural and grocery items make up the top two aggregate categories at TP1. manufactured products and miscellaneous products form the top two categories at TP3. Groceries also find a consistently high share in the commodity distribution across the three toll plazas, especially at TP2 (ranging between 17% to 35% across vehicle categories).

3.66 The high share of manufactured products can be attributed to the presence of automobile parts manufacturing units in Sriperumbudur and other industries that have been setup in Telangana and AP. Presence of several warehouses for logistics companies and e-commerce ventures also increase the share of manufactured goods/miscellaneous categories.

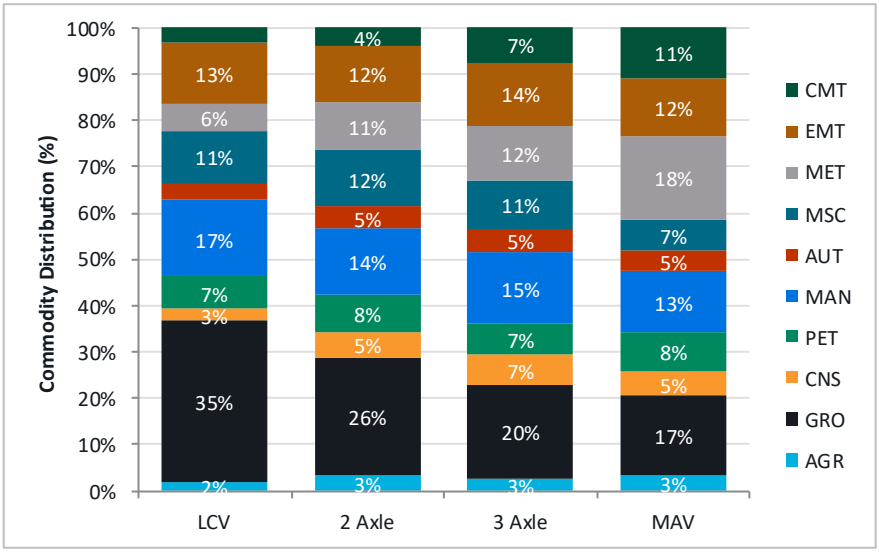
3.67 Cement shows a 11-18% share for MAVs across the three toll plazas on the Asset. Most of these cement carrying trucks originate in the areas surrounding TP2 which forms a local cement manufacturing cluster near the Asset. The robust demand for cement and associated construction materials in Andhra Pradesh and Telangana is a direct result of the region's development initiatives and extensive infrastructure development[18][19].

[18] Andhra Pradesh posts highest Capex increase among states for FY-26 | Vijayawada News - Times of India

[19] Telangana Budget 2025-26 Highlights: Rs 3.04 lakh crore outlay, mega master plan 2050 for industrial growth - India News | The Financial Express

3.68 At TP2 the key differences are a higher share of cement carrying MAVs going towards Addanki (16% compared to 5% towards Nalgonda) while metals show a reverse directionality (25% towards Nalgonda against 12% towards Addanki).

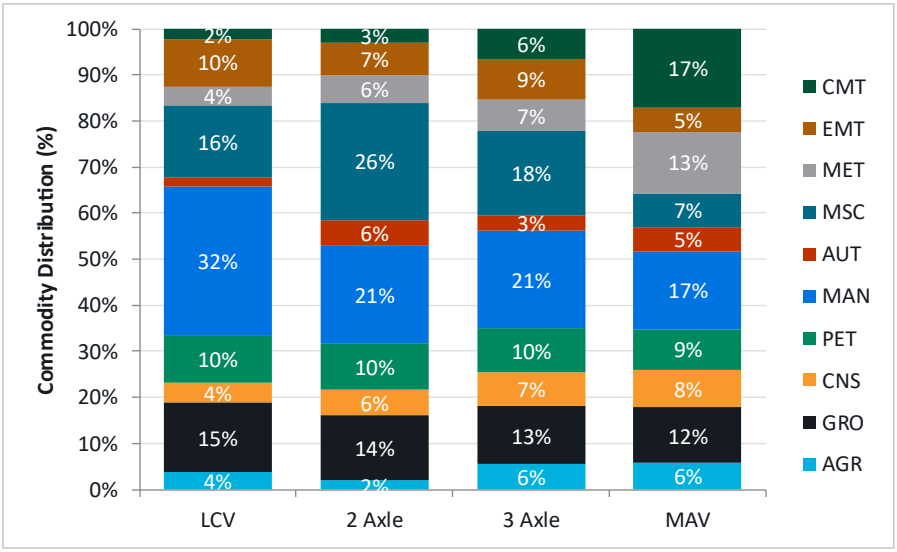
Figure 3-19: Commodity distribution at TP2 (Total)



Source: Steer analysis of OD data

3.69 A similar trend in differences exists at TP3, with mining materials accounting for higher share of total commodities that travel towards Nalgonda, and cement accounting for a higher share of total commodities travelling towards Chennai.

Figure 3-20: Commodity distribution at TP3 (Total)



Source: Steer analysis of OD data

Trip length analysis

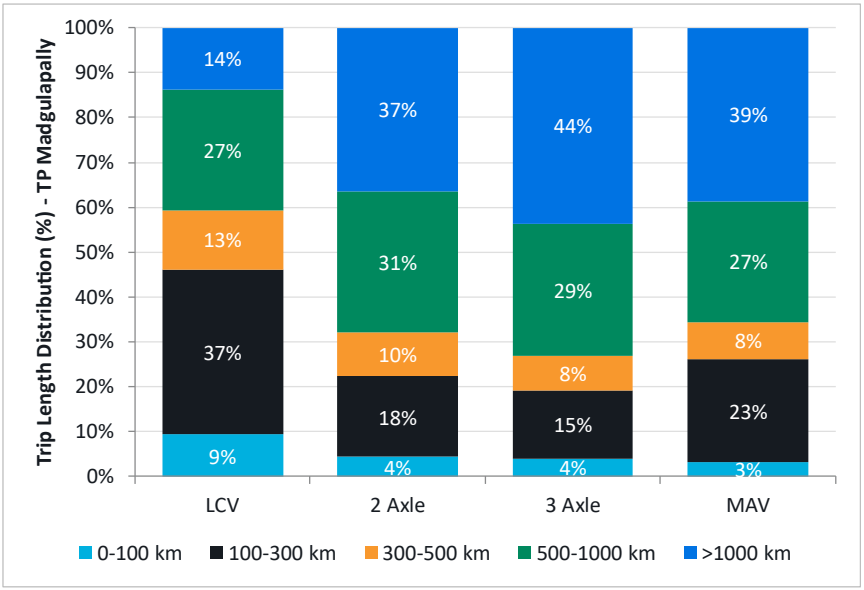
3.70 Trip-length distribution provides the distance-based trip profile of each vehicle category observed at each of the toll plazas on the Asset. This analysis aids in validating our assumptions on the share of macro-economic drivers for forecasting background traffic growth on the Asset, our analysis outputs from the zonal influence analysis, as well as the

toll segmentation analysis outputs from our historical traffic data analyses. The trip distances were derived as driving distances from Google Distance Matrix Tool[20] based on zonal coordinates for OD pairs. For the ease of interpretation, we have categorised distances into 5 groups:

- Local (0-100km)
- Short-distance (100-300 km)
- Medium-distance (300-500 km)
- Long-distance (500-1000 km) and
- Very-long-distance (+1,000 km)

3.71 As presented in Figure 3-21, Figure 3-22 and Figure 3-23 below, for LCVs, the largest share of trips at TP1 and TP2 are local or short-distance (45-55%). Whereas the largest share of TP3 LCV trips is of long-distance (500-1000km).

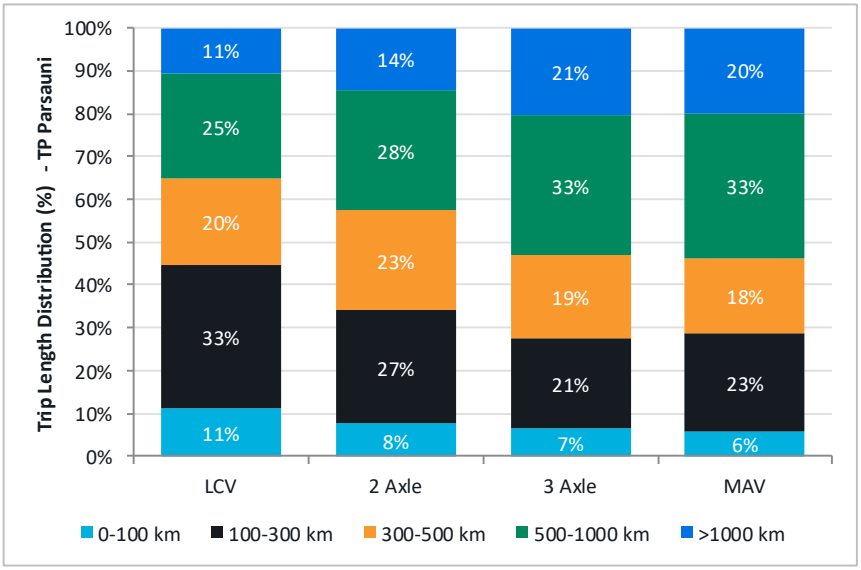
Figure 3-21: Trip length distribution TP1 (2023)



Source: Steer analysis of OD data

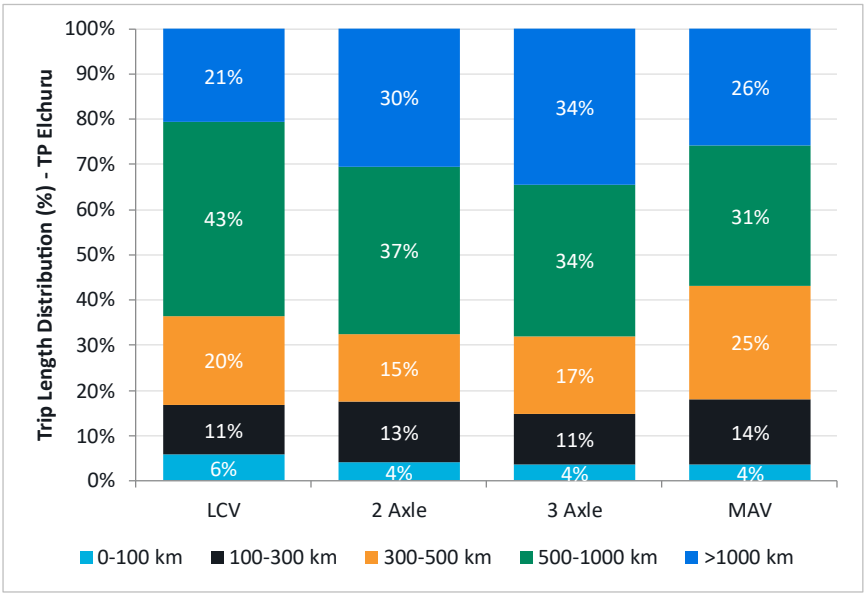
[20] Google Distance API is a tool that is available on a chargeable basis from Google Maps Platform. Link: https://developers.google.com/maps/documentation/distance-matrix/start. Travel distance and time information for driving under various scenarios can be extracted using macro-enabled Excel, R, etc.

Figure 3-22: Trip length distribution TP2 (2025)



Source: Steer analysis of OD data

Figure 3-23: Trip length distribution TP3 (2023)



Source: Steer analysis of OD data

3.72 Long-distance movement is observed at all three toll plazas, with MAVs accounting for a considerable share of trucks travelling over 500 km. Trips on TP1 and TP3 have a higher proportion of very long-distance (>1000km) trips. While TP2 also exhibits a significant proportion of long-distance Multi-Axle Vehicle (MAV) trips, this share is lower than at TP1 and TP3. This can be attributed to the influence of the Guntur/Vijayawada region, as well as the proximity of cement plants, which serve as frequent origins or destinations for trucks utilizing the Asset.

Conclusions

3.73 In summary, CJVs account for the largest share of traffic across all three toll plazas on the Asset, with TP1 and TP2 exhibiting the highest shares, while TP3 share of CJVs are similar to its share of MAVs. MAVs on the Asset account for significant share of total traffic observed at each of the three plazas as well ranging from 14% of total traffic at TP1 to 25% of total traffic at TP3.

3.74 Historically across the period FY18-FY25 the toll plazas have grown by the following CAGRs; TP1 at 6.0%, TP2 at 4.0% and TP3 at 5.1%. These strong growth trends can be attributed to regional industrial activities (primarily driven by the cement industry in proximity of the Asset) and strong urban-rural linkages supported by this corridor.

3.75 Ticket segmentation reveals that for CJVs, return tickets form a significant share, reflecting patterns of commuter and short-haul regional travel. For MAVs, single tickets are clearly dominant, making up nearly 70-75% of tickets issued, consistent with their use for long-distance goods movement.

3.76 TVC and TMS data correlation shows high system reliability, with variation within acceptable margins (mostly under 1%), reaffirming confidence in the tolling infrastructure and its capacity to capture accurate traffic volumes.

3.77 OD analysis indicates that TP1 and TP2 see a higher proportion of regional and short-distance trips by CJVs, highlighting their utility for local commuting. In contrast, TP3 has a higher incidence of long-distance freight, especially from Rest of South India and Central India, prominently carried by MAVs.

3.78 Manufactured products, cement, and agricultural goods emerge as the key commodities transported via the Asset, with cement particularly significant at TP2 and TP3 due to the Assets proximity to cement clusters as discussed in Chapter 2. The trip length analysis supports this—while LCVs show a larger share of sub-500 km trips, MAVs at all three toll plazas consistently dominate in the 500 km+ trip segment.

4 Socio-economic context

Introduction

4.1 The growth of traffic on existing (brownfield) roads depends on, firstly, how fast the background travel demand grows (background growth); and secondly, how successful the roads are in attracting that traffic (traffic capture). Background travel demand is driven by the socio-economic conditions in the region where the Asset is located and the country. These include:

- Changes in factors such as population, economic growth (regional and national) and industrial production; and
- Other local factors such as strategic port growth, and growth in local industries near the Asset.

4.2 In turn, the change in the relative competitive position of the Asset (and thus of the traffic capture they can achieve) is a function of the relative costs, and benefits offered by the Asset to that of other competing roads. These costs and benefits can be in terms of actual monetary costs, time savings, or via other less tangible but important aspects suggest as the Asset's safety features and offered reliability in travel times.

4.3 In this chapter, we assess and present trends in the above socio-economic growth drivers that we believe influence the background traffic growth of the Asset. This includes an analysis of regional economic data trends relative to nationwide benchmarks. For the impact of competing roads (existing or planned) on the Asset, Chapter 6 presents a more detailed view on how we believe traffic growth on the Asset may be affected.

Population growth

4.4 For this study, we have analysed the key socioeconomic drivers of the background traffic demand in the states of Telangana and Andhra Pradesh, given that the Asset is located within, and is influenced by wider regional economic factors in both these states.

National level

4.5 The total population in India has grown at a CAGR of 1.5% between 2000 and 2015, decreasing over the years, as shown in Table 4.1 below. The World Bank forecasts this growth to decrease to 0.6% CAGR by the 2030-45 period[21].

[21] World Bank Data on Health Nutrition and Population

Table 4.1: CAGR of population in India

Years	CAGR		
	Total Population (m)	Rural Population (m)	Urban Population (m)
1970 - 1985	2.3%	1.9%	3.8%
1985 - 2000	2.0%	1.7%	2.9%
2000 - 2015	1.5%	1.0%	2.6%
2015 – 2030*	1.0%	0.3%	2.3%
2030 – 2045*	0.6%	-0.3%	1.9%

Source: World Bank Data on Health Nutrition and Population Statistics, *forecast population growth

State Level

4.6 Table 4.2 below shows the evolution of population in Andhra Pradesh and Telangana compared to that of the country. As Table 4.2 shows, the populations of both Andhra Pradesh and Telangana have grown at a slower pace, compared to that of India. As of FY24, Andhra Pradesh holds a 3.8% share in India's population, while Telangana has a 2.7% share.

Table 4.2: Population Growth in India (2012 – 2024)

State	2012 Population (m)	2024 Population (m)	CAGR (2012 – 2024)
Andhra Pradesh	49.3	53.2	**0.7%**
Telangana	35.7	38.2	**0.6%**
India	1,210	1,395	**1.2%**

Source: Ministry of Statistics and Program Implementation estimates

4.7 Due to the complexities of the patterns in which urbanisation takes place, and the very dynamic nature of local population migration (which are very difficult to forecast with accuracy), we do not use population growth as a proxy for understanding future travel demand growth on the Asset. It has been included in this section simply to provide socio-economic context of population growth in the region where the Asset is located.

Economic Indicators

Industrial Production

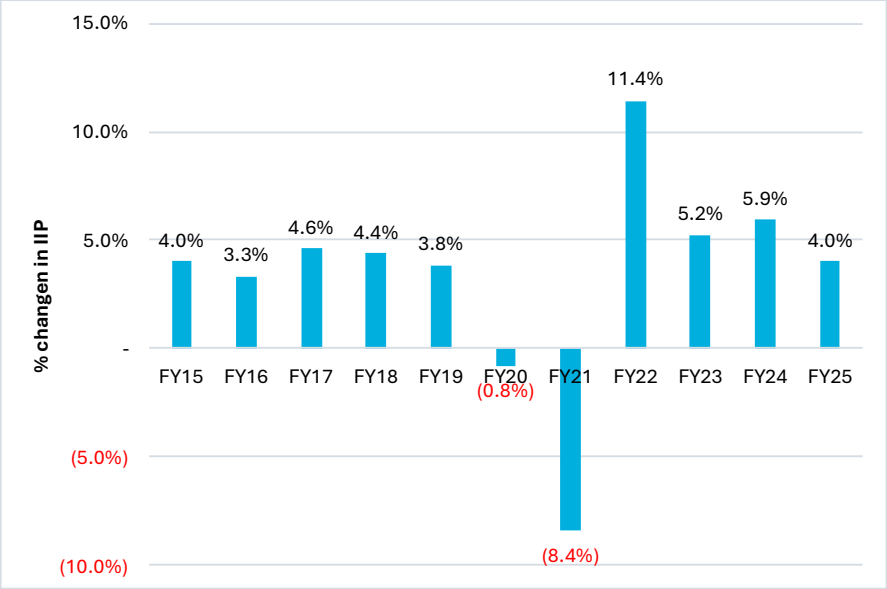
4.1 The Index of Industrial Production (IIP) is a composite indicator that measures the short-term changes in the volume of production for a basket of industrial products. The IIP data tracks the manufacturing activity in different sectors of an economy, with mining, manufacturing, and electricity being the three broad sectors constituting the IIP.

4.2 **Figure 4-1** below shows that at an annual level, national IIP was growing at an average of 4% per year over the period FY15-19, before the country underwent a liquidity crisis and experienced an overall economic slowdown in FY20. In the aftermath, IIP shrank by over 8% in FY21 due to a decline in economic activity in the wake of global lockdowns introduced to curb the Covid-19 pandemic. Post the immediate recovery in FY22, IIP growth has since stabilised, with FY25 recording 4% growth over FY24.

4.3 Since state-level IIP data is not as readily available as national level IIP, we have presented national IIP here to indicate nationwide activity in key industrial sectors like

power, manufacturing, and mining, all of which influence long-distance commercial movements across the nation, and not unique to this asset. However, we do not use it to forecast future travel demand growth since long-term forecast for IIP is not available through official sources such as MOSPI, RBI or through multilateral organisations like WB, or the IMF.

Figure 4-1: Annual growth – Index of Industrial Production



Source: Ministry of Statistics and Program Implementation (MoSPI)

4.4 Since state-level IIP data is not as readily available as national level IIP, we have presented national IIP here to indicate nationwide activity in key industrial sectors like power, manufacturing, and mining, all of which influence long-distance commercial movements across the nation. We, however, do not use it to forecast future travel demand growth since long-term forecasts for IIP is not available through official sources such as MOSPI, RBI or through multilateral organisations like WB, or the IMF.

Vehicle ownership

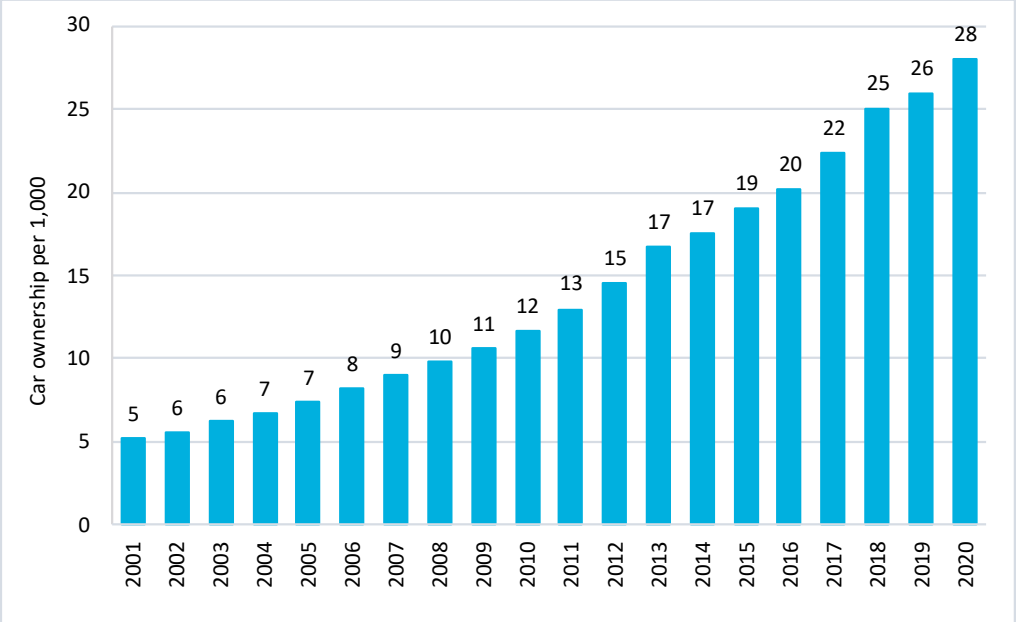
4.5 The gap in car ownership between India and developed nations remains substantial according to recent data. As of 2018, India had approximately 22 cars per 1,000 individuals, a fraction of the 980 cars per 1,000 individuals in the United States[22]. However, this pattern is changing with increasing per capita income levels. As can be seen in Figure 4-2 below, between 2007-17, number of cars per 1,000 people has more than doubled and increased at a CAGR of about 11%.

4.6 Overall, India still stands at a very nascent stage in the vehicle saturation curve, offering significant potential for growth going forward. As the income per capita of India and the region itself grow further, we expect car ownership levels to increase. As per the India Energy Outlook (2015), car ownership is projected to grow steeply to 175 cars per 1,000 population by 2040 in India.[23]

[22] **India has 22 cars per 1,000 individuals: Amitabh Kant, Auto News, ET Auto**

[23] **https://www.gita.org.in/Attachments/Reports/IndiaEnergyOutlook_WEO2015.pdf**

Figure 4-2: Car Ownership in India per 1000 population

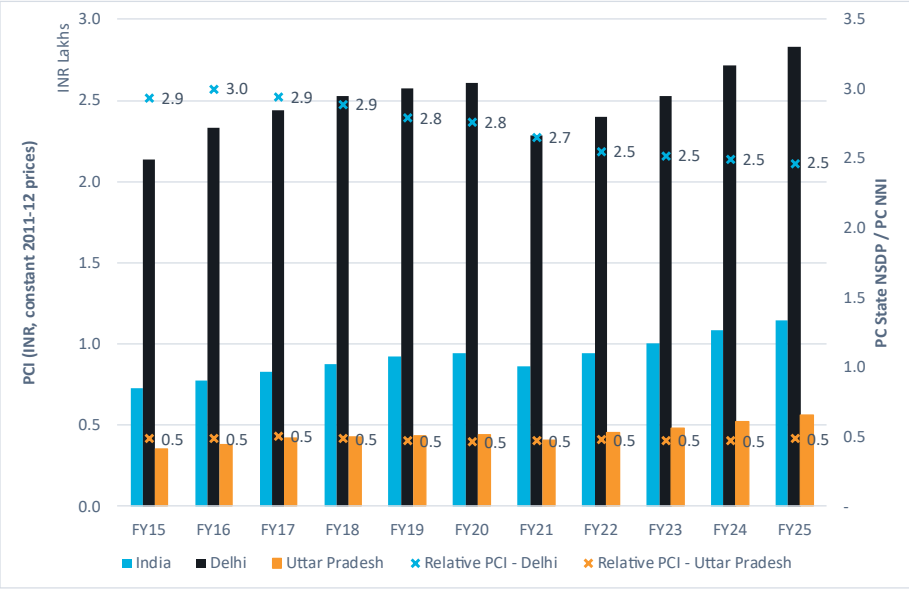


Source: International Energy Agency (IEA)

Per Capita Income (PCI)

4.7 As per the latest data from MOSPI and as can be referred to in Figure 4-3, in FY25, Telangana's per capita income at current prices was ₹1,92,128, while Andhra Pradesh's was ₹ 1,41,609. In comparison, India's per capita income for the same period stood at ₹1,14,710. This indicates that Telangana's per capita income was approximately 67.5% higher than the national average, and Andhra Pradesh's was about 23.4% higher. These figures highlight the relatively stronger economic performance of both states compared to the national average, and their robust regional economic profiles.

Figure 4-3: Per Capita Income



Source: Steer Analysis of Ministry of Statistics and Program Implementation (MoSPI) Data

4.8 Given the difficulty in obtaining up-to-date district level PCI data for different states in India, we have not presented district level PCI data as part of our analysis above. Though per capita income is a statistically robust metric to base background traffic growth on, the unavailability of long-term forecasts of PCI precludes its use in forecasting future traffic growth. We therefore do not use PCI as a growth driver in our background traffic growth forecasts.

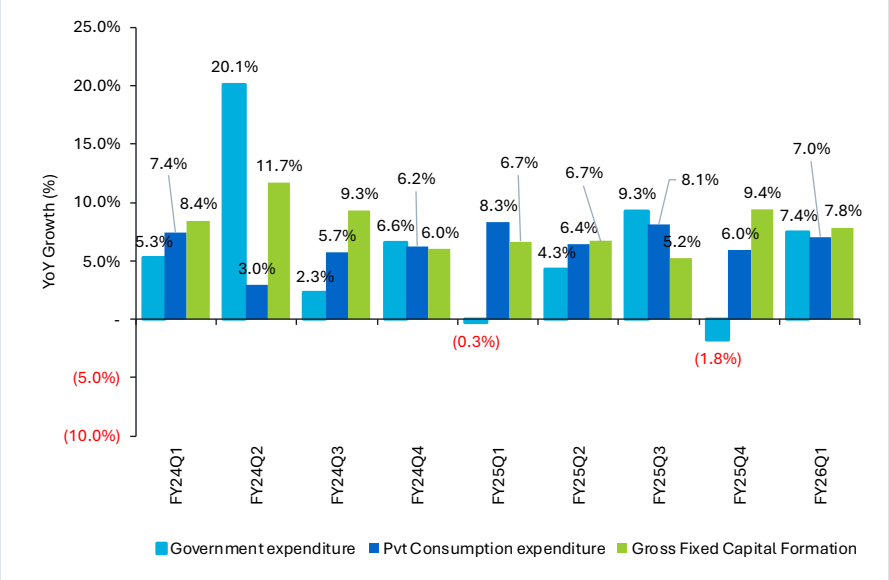
Economic growth

India's Performance

4.9 Despite a slowdown in the economy during H1FY25, the Indian economy has observed strong growth each quarter since FY25Q2, with the latest published estimates for FY26Q1 GDP at 7.8% over FY25Q1. This performance has been driven by strong growth in investment and consumption expenditures and higher consumer optimism for the year ahead[24].

4.10 In Figure 4-4 below, we present quarterly Y-o-Y growth in three major components of GDP – government expenditures, consumption expenditures, and business investment (gross fixed capital expenditure) over the past two years (FY24-FY26Q1).

Figure 4-4: YoY Growth in Government, Consumption and Business Expenditures



Source: Steer Analysis of MOSPI Data

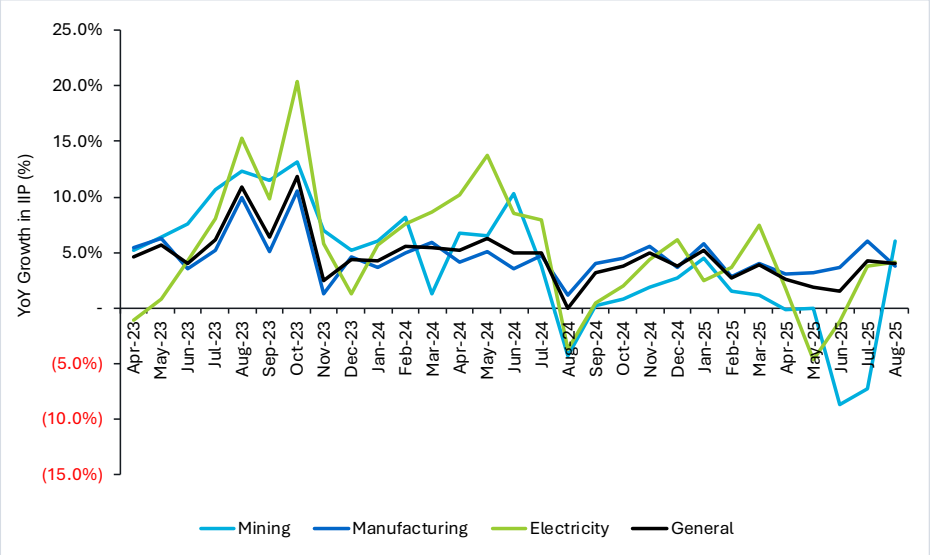
4.11 While consumption and investment expenditures have continued to show consistent growth over the past two quarters, government expenditures observed a marginal decline in FY25Q4. In FY26Q1, government expenditures rebounded, recording 7.4% growth over FY25Q1 levels.

4.12 Performance across different types of industrial activities (such as Mining, Manufacturing, and Power Generation) directly impact freight movement and commercial traffic volume growth across the country, including on the Asset. In the chart below, we present growth

[24] Government of India, PIB Release Oct 1 '25

trends in IIP – a measure that tracks the performance of the economy across these activities. As of FY26YTD (Apr-Aug '25), the Manufacturing sector continues to perform strongly, recording positive y-o-y growth since FY25Q3. While industrial activity across the two other sectors (i.e., Power Generation and Mining) dropped between May and Jun/Jul '25, they have since rebounded and show signs of continued growth going forward.

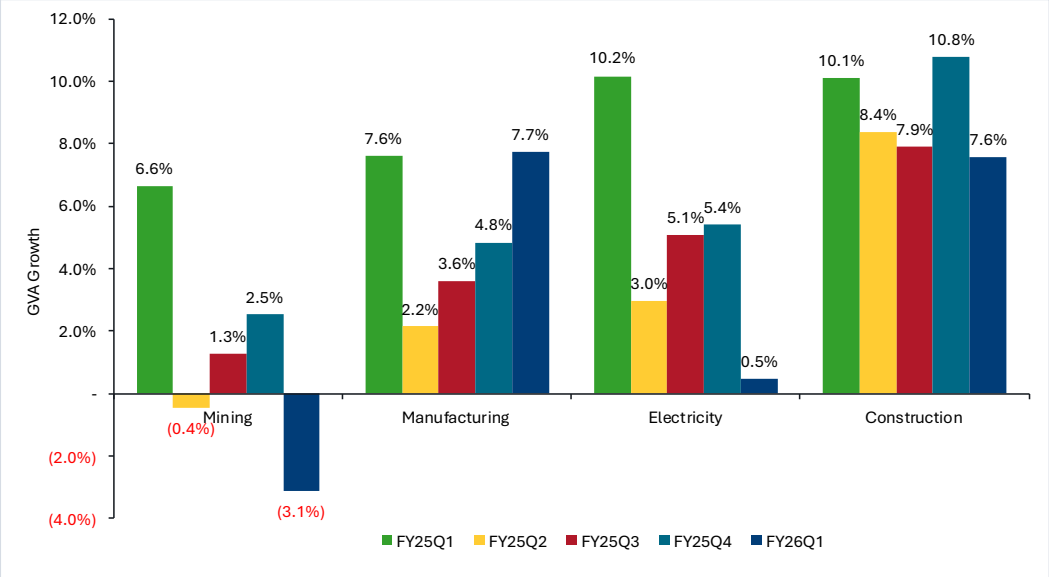
Figure 4-5: Month on Month IIP performance



Source: Steer Analysis of MOSPI Data

4.13 In addition to monthly trends in IIP, the chart below presents y-o-y growth of quarterly GVA in four industrial sectors - Mining (& Quarrying), Manufacturing, Electricity (and other Utilities), and Construction. While the Mining and Power sectors observed decline and muted growth in FY26Q1, the Manufacturing and Construction sectors experienced strong growth. Generally, economic growth has remained resilient as of FY26YTD, but performance across industries have varied, impacting economic growth across different regions and on the Asset as well.

Figure 4-6: Industrial components of GVA

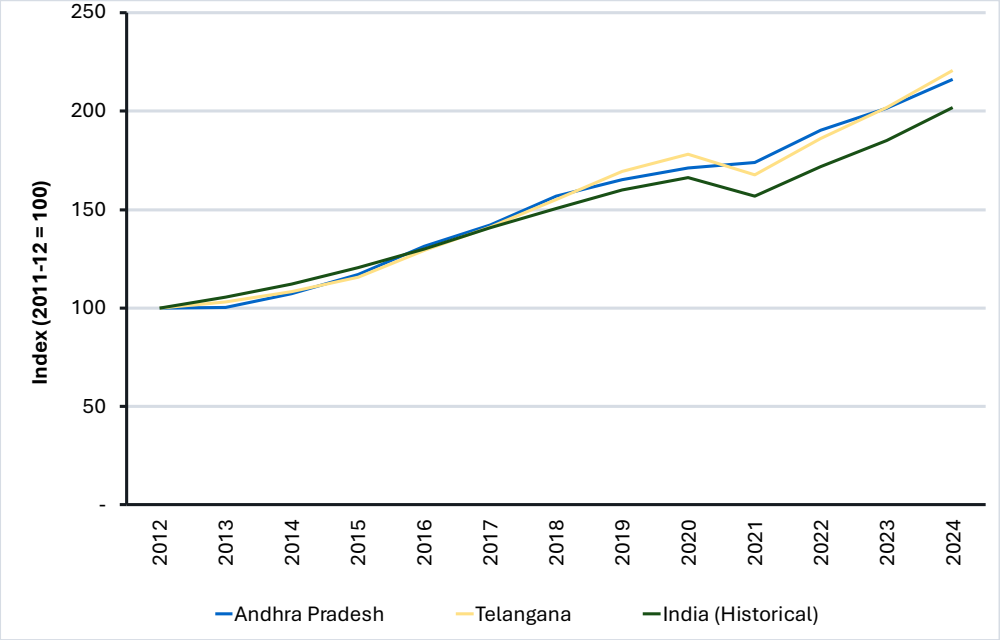


Source: Steer Analysis of MOSPI Data

GDP and GSDP Growth

4.14 The Indian economy has grown at a CAGR of 5.9% during FY12-24, aided by a strong growth in the services/tertiary sector. The economic performance of Andhra Pradesh and Telangana was weaker than the national average till FY15. However, as can be seen in Figure 4-7 below, GSDP growth of Andhra Pradesh and Telangana have outpaced national GDP growth since FY17. In FY19, Andhra Pradesh and Telangana showcased an impressive growth of 11.0% and 10.5% respectively, compared to 6.6% growth in GDP in the same period. Both the states contributed close to 4.7% and 4.5% each to the national GDP in FY24, highlighting their vital role as contributors to the country's total GDP.

Figure 4-7: Evolution of Andhra Pradesh's state GDP and national GDP



Source: Ministry of Statistics and Program Implementation (MoSPI); The years on the x-axis correspond to financial years (e.g., 2012 represents FY 2011-12).

Economic activity in the state

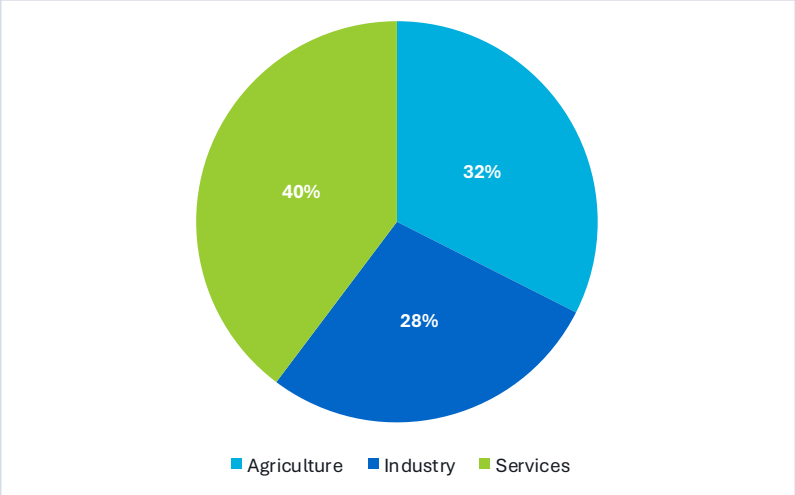
Andhra Pradesh

4.15 As seen in Figure 4-8 below, in terms of sectoral contribution to the state GSDP, the tertiary sector (40%) has the highest share followed by the primary (32%) and secondary (28%) in FY24. As per the Socio-Economic Survey 2024–25, the Gross State Domestic Product (GSDP) of Andhra Pradesh at current prices is estimated at ₹16.06 lakh crore for the year 2024–25, reflecting a robust growth rate of 12.94% over the previous year. This expansion has been driven by balanced growth across agriculture (₹5.19 lakh crore, 15.86% growth), industry (₹3.41 lakh crore, 6.71% growth), and services (₹6.11 lakh crore, 11.70% growth). The state's per capita income for 2024–25 is projected at ₹2,68,653,

significantly higher than the national average of ₹2,00,162, indicating improving living standards[25].

4.16 Andhra Pradesh has experienced rapid industrialization with the onset of major industries such as oil, petrochemical, construction (cement) and minerals sector. The state houses several cement plants such as Ramco Cements Limited, Ultratech Cement Limited, Zuari Cement Limited and Dalmia Cement (Bharat) Ltd. The state also has one of the major ports of India in the city of Visakhapatnam and two private ports in Krishnapatnam and Gangavaram. The city Vishakhapatnam also serves as a major industrial centre of the eastern coast, with several public sector undertakings (PSUs) set up. These include the Vishakhapatnam steel plant run by Rashtriya Ispat Nigam Limited (RINL), an oil refinery owned by Hindustan Petroleum, Hindustan Shipyards, as well as several defence industries as Vishakhapatnam serves as a major base for the Indian Navy.

Figure 4-8: Sectoral contribution to Andhra Pradesh GSDP (FY24)



Source: Steer Analysis of Ministry of Statistics and Program Implementation (MoSPI) Data

Telangana

4.17 The state of Telangana was formed in June 2014 post the split of erstwhile Andhra Pradesh. The earlier capital city of the united state, Hyderabad, is now part of Telangana. The capital city of Hyderabad is considered a hub for information technology and pharmaceutical sectors. As seen in Figure 4-9 below, in terms of sectoral contribution to the state GSDP, the contribution of the services sector is highest (~63%) as of FY24.

4.18 In 2023–24, Telangana's Gross State Domestic Product (GSDP) at current prices was estimated at ₹14.64 lakh crore, marking an impressive growth of 11.9% over the previous year—outpacing the national growth rate of 9.1%. This growth was primarily driven by the Services sector, which contributed a significant 63% to the state's GSVA, followed by the Industrial sector at 20%, and the Agriculture and Allied sector at 17%. Key growth drivers included information technology, trade, transport, communication, and financial

[25] **AP Finance**

services, highlighting Telangana's shift toward a dynamic, service-oriented economy underpinned by proactive governance and infrastructure development.[26]

Figure 4-9: Sectoral contribution to Telangana GSDP (FY24)

Forecasts for growth drivers

4.19 In the following section we describe our assumptions in relation to forecasts of the key macro-economic drivers of traffic growth.

National GDP

4.20 After the last period of economic slowdown in FY11-12, the country experienced an economic downturn again in late FY19 with FY20 having reported a GDP growth of 4% (relative to an average growth rate of 7% per year between FY13 and FY19). India's GDP growth declined as domestic investment and consumption demand were already under stress because of the liquidity crunch before COVID-19. Other factors that contributed to the economic slowdown included reduced growth rates in automobile sales and production, liquidity crunch in credit markets and rising number of Non-Performing Assets (NPAs) within the banking sector, as well as lower manufacturing production and lower rural consumption.[27]

4.21 The COVID-19 outbreak had a significant impact on the Indian economy during the first two quarters of FY21 as government mandated lockdowns across the country effectively stalled economic activity and growth. The growth momentum eventually picked up in Q3 of FY21, with a sharp rebound in the economy in FY22 (GDP recorded 9.7% growth over FY21) and has since observed a consistent growth of 7.6% in FY23, 9.2% in FY24 (as per the SAE) before slowing down to 6.5% in FY25 due to several domestic and external factors discussed in paragraph 4.9 above.

[26] tgdps.telangana.gov.in/seo-2024.pdf

[27] Data | India's GDP was on a downward slope even before COVID-19 wreaked havoc - The Hindu (September 2020)

4.22 Figure 4-10 below shows Client-provided GDP projections for India. The forecast provided expects national GDP to grow at 6.5% between FY25-FY27[28] and gradually tapering down to 5.2% by FY50. The India GDP growth forecast is broadly in line with other independent forecasts available from reliable sources such as IMF, World Bank and RBI[29] in the medium term.

4.23 Based on client projections, the Gross State Domestic Product (GSDP) in both Andhra Pradesh and Telangana is expected to outpace the national growth rate in the near to medium term. However, over the long term, we anticipate their GSDP growth will gradually align with the national average as their economies and industrial systems mature and additional growth potential diminishes.

4.24 Figure 4-10 shows the forecast growth lines for GSDP of Telangana and Andhra Pradesh with the national GDP.

5 FY26 base year AADT and traffic growth analysis

Introduction

5.1 In this section, we present our approach, assumptions, and estimates for base year AADT and background traffic growth for each vehicle category on the Asset.

5.2 Traffic growth is commonly related to a variety of macro-economic and industry- or commodity-specific factors (hereafter referred to as 'traffic growth drivers'). These growth drivers are typically identified from the results of the OD data analysis and the site visits that help us appreciate the nature of traffic movement – 'what' travels 'where' and 'why'.

As part of this study, we undertook regression analyses to estimate background growth relationships between traffic and the underlying growth drivers. However, our results indicated that estimating statistically robust elasticity coefficients was not possible with the given data. We therefore undertook a detailed benchmarking exercise, coupled with trip length and OD data analyses to estimate the background growth elasticities. These are discussed in detail below.

FY26 Base year AADT estimates

5.3 The base year is the year on which long-term background forecast growth rates are applied to derive year-wise average annual daily traffic (AADT) estimates for forecast years. This is therefore an important aspect of our forecasting approach as traffic and ultimately revenue forecasts for future years are built on top of the base year traffic estimate. We have used FY26 as the base year for AADT estimates for the forecast years.

5.4 As described previously in Chapter 3, to establish the base year (FY26) traffic position, we utilised information from various sources – including from the Client, and our contextual knowledge, to assess a reasonable estimate of current demand on the corridor.

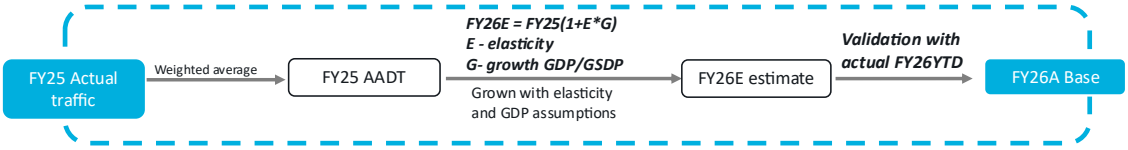
Methodology

5.5 The base traffic for FY26 has been estimated utilizing the actual 12 months of FY25. The weighted average of the actual FY25 traffic volumes (April to March) was taken to arrive at the annual FY25 AADT value. Using elasticity-based growth assumptions for GSDP or GDP, we arrived at estimated FY26 (FY26E) AADT value.

5.6 The monthly profile of the FY26E AADT was then compared to the actual traffic observed in the ten months (April 2025 to September 2025) of FY26 (FY26YTD). The adopted FY26 AADT (FY26A) was then derived by making necessary adjustments to FY26E AADT to

reflect the outturn in traffic in FY26YTD (adjusted for seasonality). The methodology is represented using the schematic below.

Figure 5-1: FY26 Base Estimation methodology



Source: Steer Analysis

Seasonality Correction factors

5.7 Traffic on any Asset varies on a month-on-month level. Such variations maybe due to monsoons (typically Jul to Sept) or due to festivals in the region. E.g. we observe truck traffic during the first half of the financial year (April-September) is generally lower than the annual average, mainly because of the peak summer season followed by monsoons that affect freight movement patterns in large parts of the country in the July-September period. In addition to these, there may be other seasonal variations specific to the Asset.

5.8 To normalize for these types of variations across the year to provide an AADT estimate, Seasonality Correction Factors (SCF) are used. SCFs are estimated to convert the monthly traffic numbers to an AADT level while accounting for seasonal variation due to local/national festivals, weather changes and/or temporary external impacts. These are typically estimated using historical data for each plaza, by vehicle category, and over multiple years. An SCF >1 means that the traffic for the month is lower than the annual average and vice-versa. Table 5.1 below presents the average of FY24 and FY25 SCF used to estimate the AADT for the Asset.

Adopted base estimates

5.9 Based on the above methodology and inputs, the adopted base for all the three toll plazas has been shown below.

Table 5.4: Adopted AADT, TP1 Madgulapally

Vehicle category	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	7,464	8,080	8,232	**10.3%**
LCV	633	653	664	**5.0%**
Bus	790	836	831	**5.2%**
2A	1,215	1,263	1,333	**9.8%**
3A	646	647	647	**0.3%**
MAV	1,784	1,990	2,007	**12.5%**
Total	**12,530**	**13,469**	**13,715**	**9.5%**
PCUs	**22,083**	**23,678**	**24,099**	**9.1%**

Steer analysis: FY25 actual full year, FY26YTD includes 6 months (Apr-Sep) of FY25, FY26A is estimated base for FY26

Table 5.5: Adopted AADT, TP2 Tummalacheruvu

Vehicle category	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	6,438	6,937	7,102	10.3%
LCV	615	619	640	4.0%
Bus	739	779	775	5.0%
2A	1,191	1,228	1,306	9.7%
3A	680	677	667	(1.9%)
MAV	2,528	2,700	2,749	8.7%
Total	**12,191**	**12,940**	**13,240**	**8.6%**
PCUs	**23,296**	**24,577**	**25,124**	**7.8%**

Steer analysis: FY25 actual full year, FY26YTD includes 6 months (Apr-Sep) of FY25, FY26A is estimated base for FY26

Table 5.6: Adopted AADT, TP3 Elchuru

Vehicle category	FY25	FY26YTD	FY26A	FY26A vs FY25
CJV	3,330	3,626	3,661	9.9%
LCV	452	485	486	7.5%
Bus	395	425	424	7.3%
2A	931	977	1,021	9.7%
3A	570	602	586	2.8%
MAV	1,912	2,115	2,119	10.8%
Total	**7,590**	**8,231**	**8,298**	**9.3%**
PCUs	**15,828**	**17,152**	**17,279**	**9.2%**

Steer analysis: FY25 actual full year, FY26YTD includes 6 months (Apr-Sep) of FY25, FY26A is estimated base for FY26

5.10 From the above tables we observe that all three TPs exhibit similar trends at a PCU level when comparing FY26A values with FY25 AADT. Positive growth at a PCU level is expected on all three toll plazas with the highest at TP3 (9.2%), followed by TP1 (9.1%) and TP2 (7.8%). The growth is expected to be driven primarily by an increase in CJVs, 2As, and MAVs due to growth in inter-city personal travel between the urban centres along the Asset alignment, Hyderabad and Guntur/Vijayawada regions, as well as construction activity linked commercial transportation of cement from the cement clusters near the Asset to surrounding nearby consumption centres as well as destinations further away.

5.11 On TP1, MAV growth is significantly influenced by its strategic connectivity for freight traffic between the key economic centres of Hyderabad and Chennai. A substantial portion of this commercial traffic involves the transportation of manufactured goods, including automobile components moving between North India and Chennai. Furthermore, cement truck movement towards Hyderabad contributes to the growth in

commercial traffic at TP1 as well. The growth of 2A and MAV traffic on TP2 is driven by increasing consumption demand from regions such as Guntur, Chennai, and Hyderabad. TP3, despite having lower MAV volume, experiences growth driven by robust long-distance commercial traffic (specifically between North India and Chennai). This was further aided by truck volumes transporting construction materials from northern cement clusters along the Asset to consumption centers in Ongole, Nellore, Chennai, and other parts of South India.

5.12 2A growth has been robust at all three plazas. While 3A volumes have declined on TP2 and TP3, TP1 has observed growth, owing to higher volume of construction/mining-related traffic traveling towards Nalgonda.

Estimation of background elasticities

5.13 Elasticities, in the case of traffic growth, are the relationships between traffic growth and the growth in growth drivers of traffic. Multiplied with forecasts of growth drivers like GDP or GSDP, they provide the forecasts of background traffic growth rates.

5.14 In terms of selecting growth drivers for different vehicle types, we have assumed state GSDP as the key growth driver for the CJVs and Buses given that this type of traffic is generally driven by local economic activity in cities and the state containing the Asset.

5.15 For the heavier commercial vehicles such as 2As, 3As, and MAVs (that generally ply long-distance routes), we assume national GDP as the key growth driver of traffic as growth in these types of commercial vehicles is influenced by nationwide economic cycles and inter-state market dynamics that are better captured by GDP growth trends of a much larger geographic extent than the immediate state(s) within which the Asset is located.

5.16 Table 5.7 below presents the growth drivers identified to model the forecast background traffic growth rates.

Table 5.7: Identified growth drivers to model traffic growth

Vehicle type	GDP India	GSDP AP	GSDP Telangana
Car		50% (All plazas)	50% (All plazas)
LCV		50% (All plazas)	50% (All plazas)
Bus		50% (All plazas)	50% (All plazas)
2A	100% (All plazas)		
3A	100% (All plazas)		
MAV	100% (All plazas)		

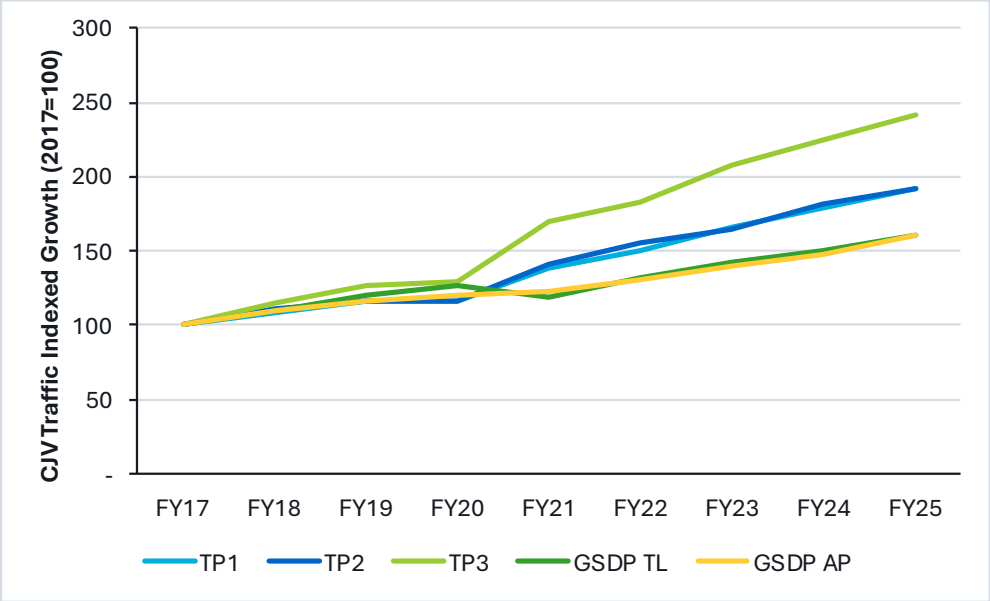
Source: Steer analysis of OD data

5.17 The recent historical period of tolling has had significant variations in traffic growth between years for certain vehicle types, impacts due to the effect of COVID-19 pandemic and the ban on illegal sandmining[15], especially for commercial vehicles. Therefore, only a few unaffected years were available for the regression analysis. This is one of the reasons for differences between the derived and assumed elasticities.

CJV

5.18 We see from the OD data that the CJVs on the Asset primarily cater to regional movements between Hyderabad, Guntur, Ongole and other towns lying on or near the Asset. We have therefore taken average GSDP growth rate between AP and Telangana to be the growth driver to model the growth of CJV traffic. Figure 5-2 below shows the relationship between indexed values of CJV traffic and AP and Telangana GSDP.

Figure 5-2: Relationship between CJV traffic and AP-Telangana GSDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.19 Generally, we would expect that in fast-growing economies with relatively low car ownership levels, car traffic growth rates are often in line with or slightly higher than growth in GSDP/GDP (i.e., suggesting elasticities at or just above 1.0). Further, there is an expected increase in car ownership proportion of overall population as the economy grows. This assumption is very contextual and subject to change as there are changes in economic policies of government and overall economic stability nationally and globally.

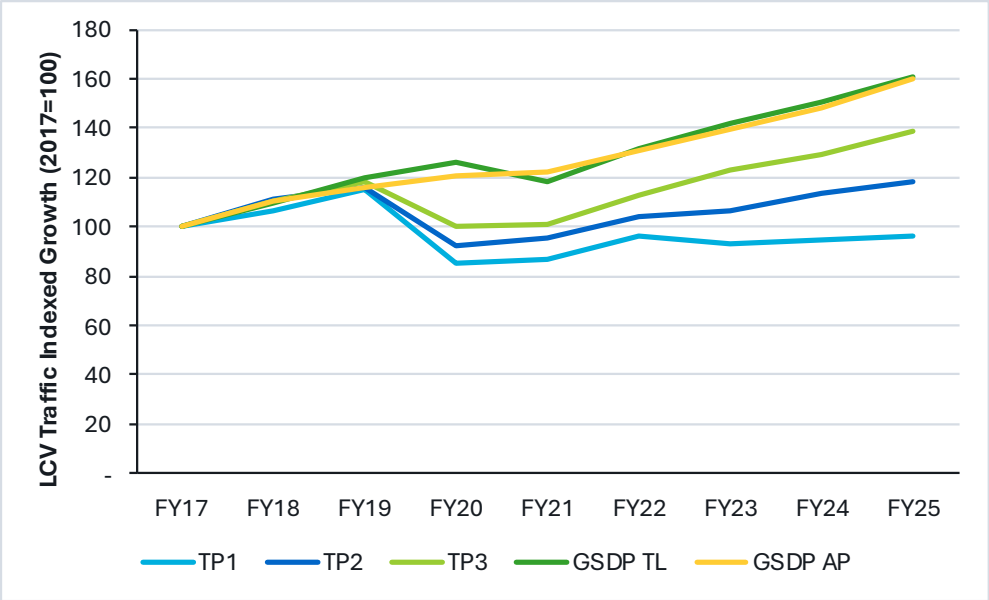
5.20 Historically, the CJV traffic on the Asset has shown strong growth throughout with the FY18-FY25 period showing over 10% CAGR in the category. The regression analysis suggests that between FY17 and FY25 traffic has grown with a background growth elasticity of approximately 1.5 (TP1), 1.5 (TP2) and 2.03 (TP3) with respect to GSDP of Telangana and Andhra Pradesh. Taking note of the positive outlook for passenger traffic on the Asset, driven by improved connectivity for business and leisure trips, and a benchmark toll road in the region, we have assumed a forecast background elasticity of 1.1 for CJVs on all plazas going forward.

LCV

5.21 In comparison to heavier commercial vehicles such as 3As and MAVs, LCVs have more regional movements within the state (i.e., AP and Telangana in this case) as seen in the OD data analyses above. More than 55% and up to approx. 80% of LCVs have trip ends in either Andhra Pradesh or Telangana. We have therefore taken GSDP of AP-Telangana to

be the growth driver to model growth of LCV traffic on the Asset. Figure 5-3 below shows the relationship between indexed values of LCV traffic and AP-Telangana GSDP.

Figure 5-3: Relationship between LCV and AP-Telangana GSDP



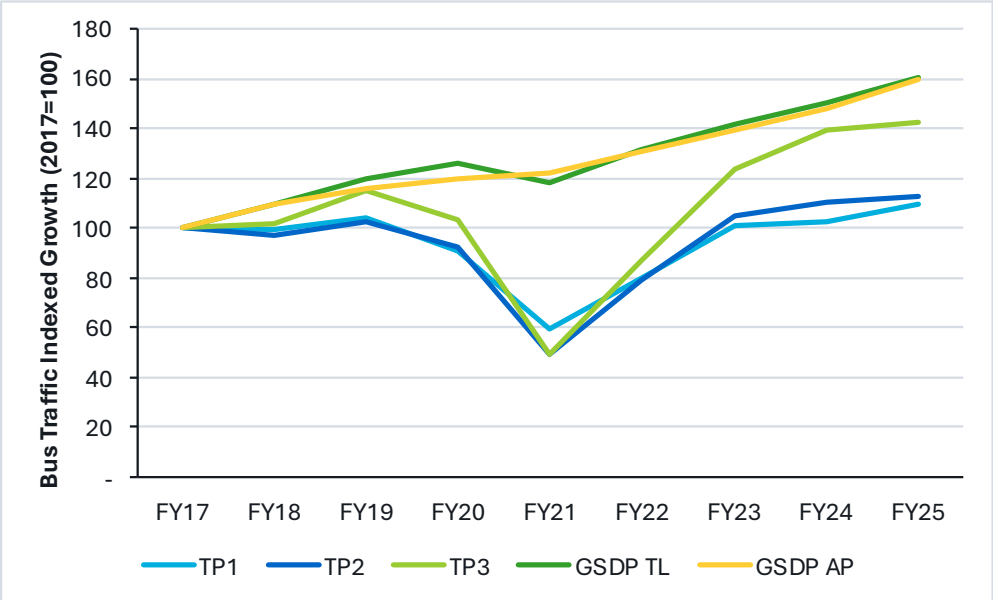
Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.22 Regression analysis suggests that when observing growth between FY17 and FY25, LCV showed an elasticity of 1.37 (TP1), 1.39 (TP2) and 1.39 (TP3) with respect to GSDP AP-Telangana.

Bus

5.23 Figure 5-4 shows the relationship between indexed values of bus traffic and AP-Telangana GSDP.

Figure 5-4: Relationship between Bus traffic and AP-Telangana GSDP



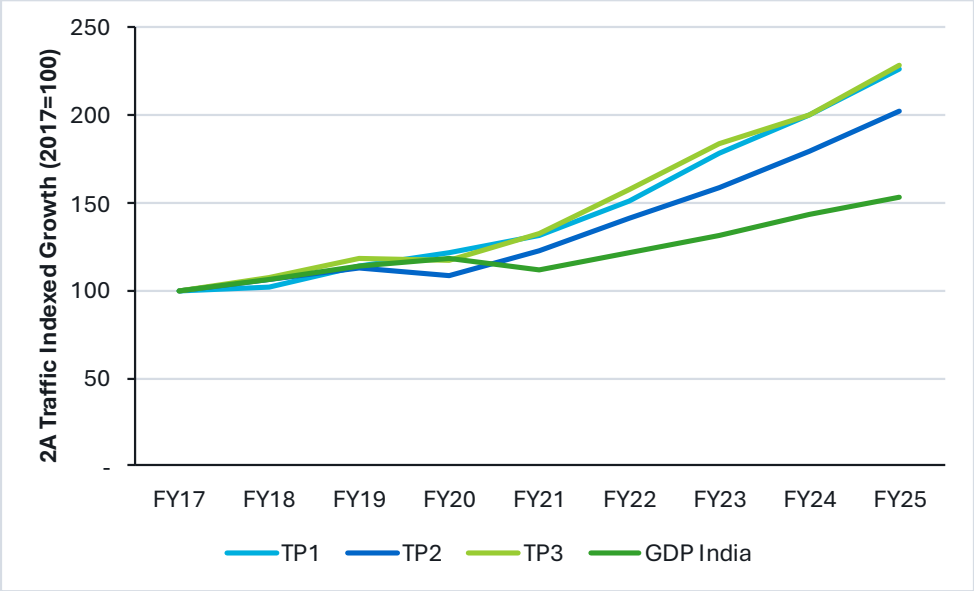
Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.24 Bus growth tends to be largely supply-driven in many parts of the country, with new buses being bought and deployed by the government at intervals of time. Based on our experience across the country, buses on inter-urban corridors in South India show moderate elasticities of 0.4 to 0.6. Despite a sharp drop in FY21 due to COVID-19, the regression results show elasticities in the range of 0.2 on the Asset. Based on the regression results and considering benchmarks, we have therefore assumed an elasticity of 0.4 at TP1 and 0.6 at TP2 and TP3, with respect to GSDP of AP-Telangana in our model.

2A

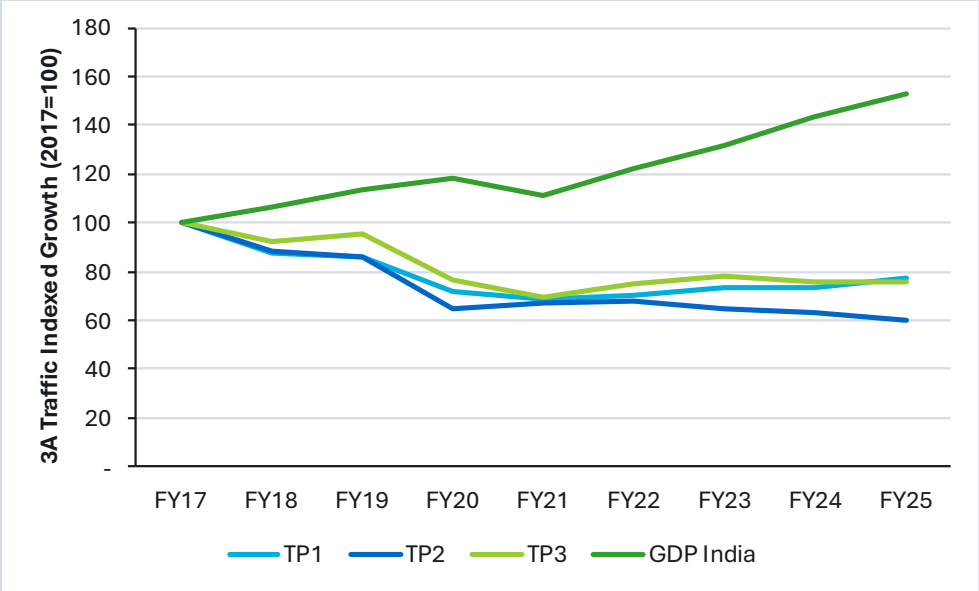
5.25 2A, 3A and MAV trucks have more national or long-distance movements covering several states. Given that manufacturing-related commodities tend to take prominence in their commodity distribution, traffic growth in commercial vehicles are dependent on industry demand-supply ecosystems spread across the country. We have therefore taken GDP as the key growth driver to model the traffic growth in 2As. Figure 5-5, Figure 5-6 and Figure 5-7 show the relationship between indexed values of 2A, 3A and MAV traffic respectively and India's GDP.

Figure 5-5: Relationship between 2A and India GDP



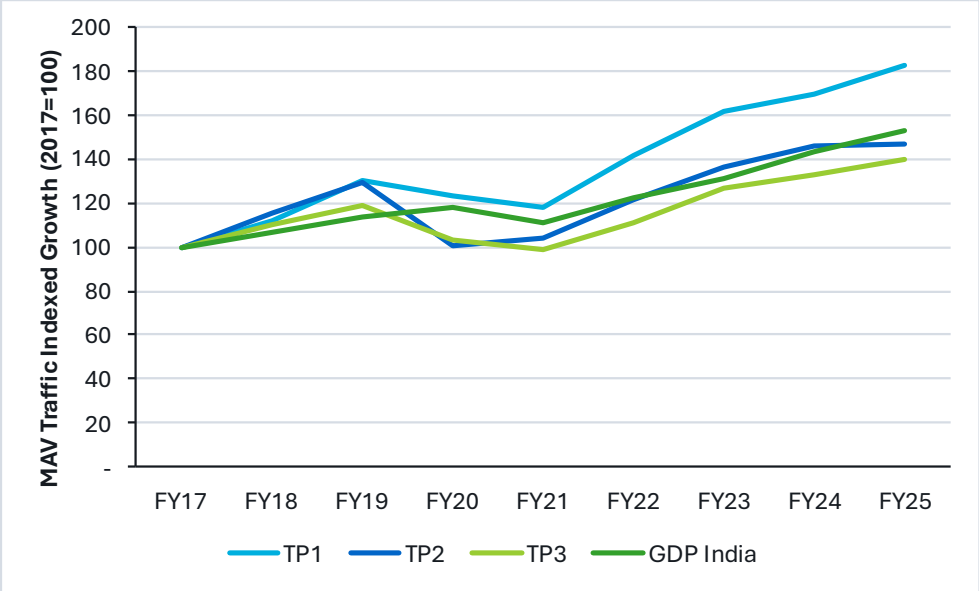
Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

Figure 5-6: Relationship between 3A combined traffic and India's GDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

Figure 5-7: Relationship between MAV combined traffic and India's GDP



Source: Steer analysis of Client TMS data and publicly available GDP/GSDP data

5.26 Regression analysis suggests that when observing growth between FY17 and FY25, LCV showed an elasticity of 2.15 (TP1), 1.78 (TP2) and 2.11 (TP3) with respect to GSDP AP-Telangana. However, in our model we have assumed an elasticity of 0.80 going forward for 2A Trucks.

5.27 Historically, though 3A+MAV combined traffic experienced declines in FY21, they have exhibited strong growth since FY22. Analysis of historical data shows strong MAV growth on the Asset contrasting with flat or negative 3A traffic in recent years. We project slower 3A growth than MAVs due to an ongoing shift of 3-axle traffic towards MAVs, as discussed in paragraph 3.6. This preference for MAVs in long-distance transport is driven by their

greater load capacity, leading to economies of scale and reduced costs. However, 3A trucks are not expected to disappear entirely, as specific goods or transport needs will likely continue to favour them.

5.28 Based on the above points, as well as the indicative results obtained from the regression analyses, we have assumed elasticities of 0.20 and 0.90 for 3A and MAV trucks (respectively), with respect to India GDP growth.

Forecasts for background elasticities

5.29 Table 5.8 below presents a summary of the results of the regression analysis carried out on the historical toll plaza data and the macroeconomic (GDP/GDSP) growth, along with the assumed forecast elasticities for background traffic growth.

Table 5.8: Derived elasticities from regression analysis and assumed forecast elasticities for background growth

Vehicle type	Growth driver	History		Forecast	
		Derived elasticity	Years considered	Assumed forecast elasticity	Evolution of elasticity
TP1 Madgulapally					
CJV	GSDP AP-Telangana	1.50	FY17 to FY25	1.10	Reducing from 1.1 to 1.0 FY30 onwards

6 Forecast: Network overlays and forecasts

Introduction

6.1 Following the discussion on our forecast of background growth rates in the previous chapter, this chapter first covers the forecasting assumptions around the base year AADT. Thereafter, we present our assumptions around potential network impacts on traffic growth, Asset toll segmentation, trip factors and evolution of toll rates for the forecast period which are used to forecast revenues as derived from forecast traffic. In the final section, this chapter summarises traffic growth rates for the forecast years.

Analysis of network/developmental impacts

6.2 This section details the network-related, or other developmental impacts which we believe would affect traffic growth on the Asset during the concession period. To assess these types of impacts on the Asset, whether positive or negative, we have reviewed existing and planned network-related developments (e.g., alternate roads, feeder roads) as well as other commercial developments in the Asset's vicinity and surrounding road network. Figure 6-1 below shows the road network surrounding the Asset.

Figure 6-1: Alternate routes and Asset route shown against the regional network context

Source: Steer analysis and cartography

Impact of Surat-Solapur-Chennai Expressway

6.3 The Surat-Solapur-Chennai expressway is progressing in its development (**refer to paragraph 2.16**). This expressway, once completed, will pass through 6 major states, including Gujarat, Maharashtra, Karnataka, Andhra Pradesh, Telangana and Tamil Nadu.

6.4 Two sections; Surat-Ahmednagar, and Akkalkot-Mahbubnagar, are planned as greenfield alignments, while the rest of the corridor includes brownfield upgrades of existing national highways. The impact of this network development has been split into two separate impacts in our analysis, based on in-scope markets for long-distance traffic currently observed on the Asset. This distinction is done on the following basis on the Traffic destined to Chennai, originating from areas in Solapur and west of Solapur.

6.5 **For in-scope market (Solapur/west to Chennai),** the proposed upgrades of Solapur bypass on NH50, along with the upgrade of Solapur-Kurnool-Kadapa-Tirupati-Chennai sections of the proposed expressway will improve the route's overall attractiveness for traffic generating from Solapur/west and Chennai/nearby regions.

6.6 No official information is available to definitively say when this project will be completed. However, different sources suggest the project may be completed by the mid of 2026 i.e., FY27Q2. We believe a more realistic timeline for its completion is FY28 given the size and complexity of this project.

6.7 Based on our GJC-based diversion analysis, we estimate a negative diversion on the Asset route once the expressway will be completed and opened to the public, as summarised by Table 6.1 below.

Table 6.1: Impact due to greenfield Surat-Chennai expressway (Solapur/West)

Impact of Nagpur Vijayawada Expressway

6.8 As discussed in Chapter 2, the 457 km long Nagpur – Vijayawada Expressway is being developed as Economic Corridor by National Highways Authority of India (NHAI) under Bharatmala Pariyojana Project2.19). While unofficial external sources suggest operationalization by FY28, the project's considerable scale and complexity lead us to incorporate a more conservative estimate of an additional 2.5 to 3 years for completion. Accordingly, we have assumed project completion by FY29-30.

6.9 The proposed alignment of the same is shown in Figure 6-2 below.

Figure 6-2: Impact due to Nagpur Vijayawada Expressway

Source: Steer analysis and cartography

6.10 The establishment of the proposed Nagpur-Vijayawada expressway will introduce a new competitive route for north-south (NH-44) traffic generated from Nagpur and North and South of the Asset on NH-16 currently part of the Asset's long-distance demand. We believe, the development of this expressway is anticipated to negatively impact the Asset's traffic. Based on our GJC-based diversion analysis, we have estimated a negative diversion on the Asset route, summarised by the Table 6.2 below.

Table 6.2: Impact due to Nagpur Vijayawada Expressway

Impact of Hyderabad Regional Ring Road

6.11 The Hyderabad Regional Ring Road (RRR), a planned 330+ km highway situated outside the existing Outer Ring Road (ORR), aims to streamline long-distance traffic flow around Hyderabad. By connecting key towns and growth centres, it will serve as a crucial bypass, allowing vehicles to access southern regions efficiently, thereby reducing travel time and alleviating congestion.

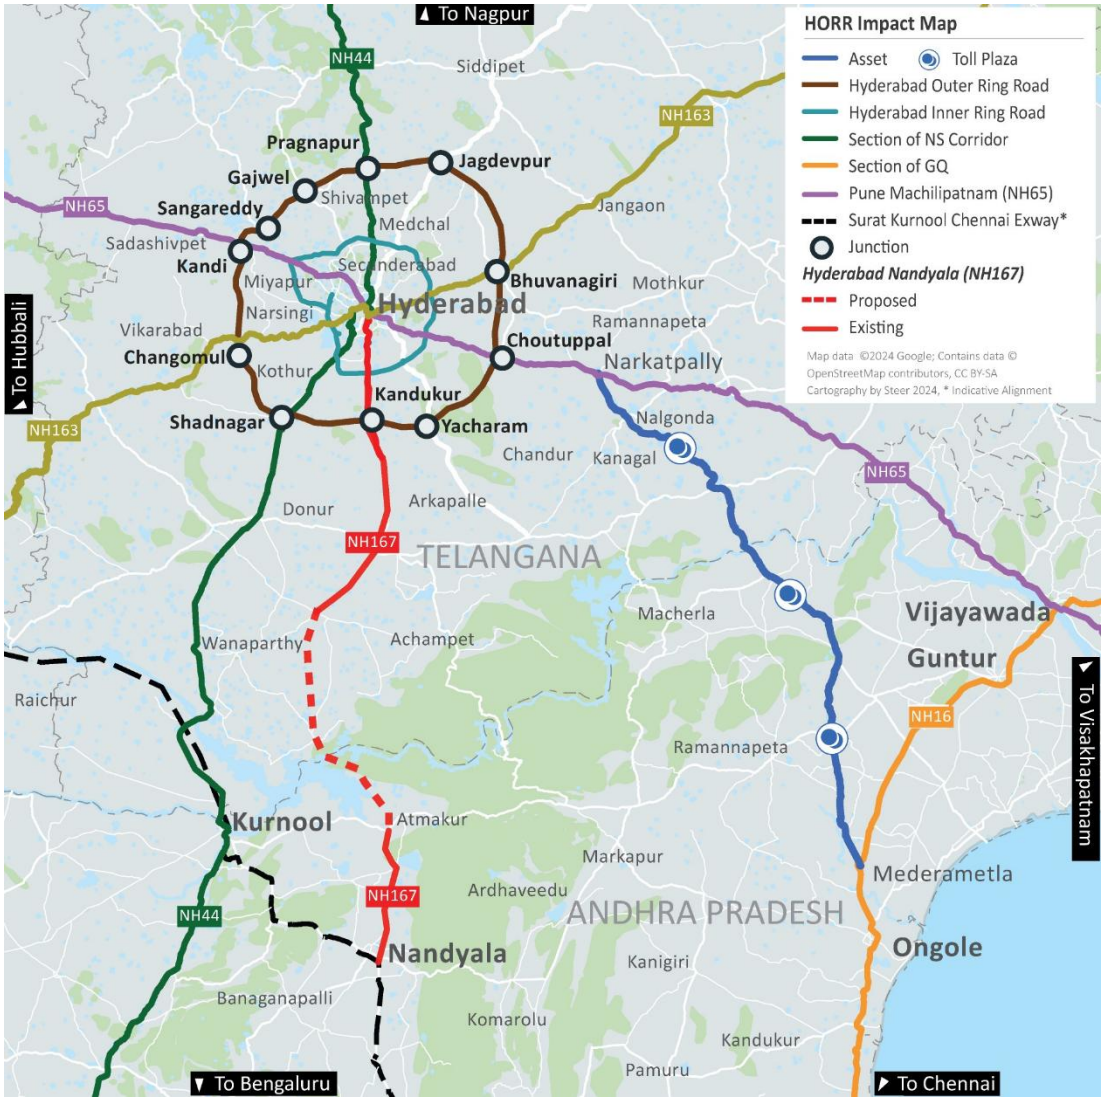
6.12 This expressway is projected to be developed in two parts, as follows:

- The northern section, which is around 164 km long and will connect Sangareddy, Narsapur, Toopran, Gajwel, Yadadri, Pragnapur, Bhongir, and Choutuppal.
- The southern half will connect Choutuppal, Ibrahimpatnam, Kandukur, Amangal, Chevella, Shankarpally, and Sangareddy.

6.13 As per the latest updates, the northern section of the Hyderabad Regional Ring Road has received environmental clearance and is presently in the bidding stage, while the Detailed Project Report for the southern section is under preparation[30]. The project is being carried out under a PPP model. The proposed alignment of the same is shown in Figure 6-3 below.

[30] Rs 34,367 Crore Hyderabad Regional Ring Road: Northern Section Gets Environmental Clearance; DPR For Southern Stretch In Progress

Figure 6-3: Impact due to RRR



Source: Steer analysis and cartography

6.14 We expect the RRR will positively impact traffic growth on the Asset from FY31 onwards (i.e., post it's assumed completion date). This can be explained as follows:

1. For this development, the in-scope traffic includes traffic moving from Hyderabad/North and Chennai/south which are currently using the Asset. This proportion represents traffic that is originating north of Hyderabad and is bound to regions between Chennai and Ongole.
2. Assuming some traffic shifts to the Nagpur–Vijayawada Expressway upon its expected FY29 completion, we anticipate a portion to return to the Asset by FY31 once the RRR is operational. That traffic will choose either to remain on the Nagpur–Vijayawada Expressway, or to use the RRR up to Chottupal, rejoin the Asset, and continue south toward Ongole.
3. Since the RRR will provide improved LoS on this route (i.e., enabling vehicles to avoid entering Hyderabad to access the NAM Asset), we believe an incremental proportion of 2As, 3As, and MAVs (~3%) will return to the Asset post the completion of the RRR.

6.15 Based on our GJC-based diversion analysis, we estimated a positive diversion on the Asset route, summarised by the Table 6.3 below.

Table 6.3: Impact due to RRR

MAV	2.3%	2.9%	2.9%

Source: Steer analysis of OD data, client TMS data and publicly available information

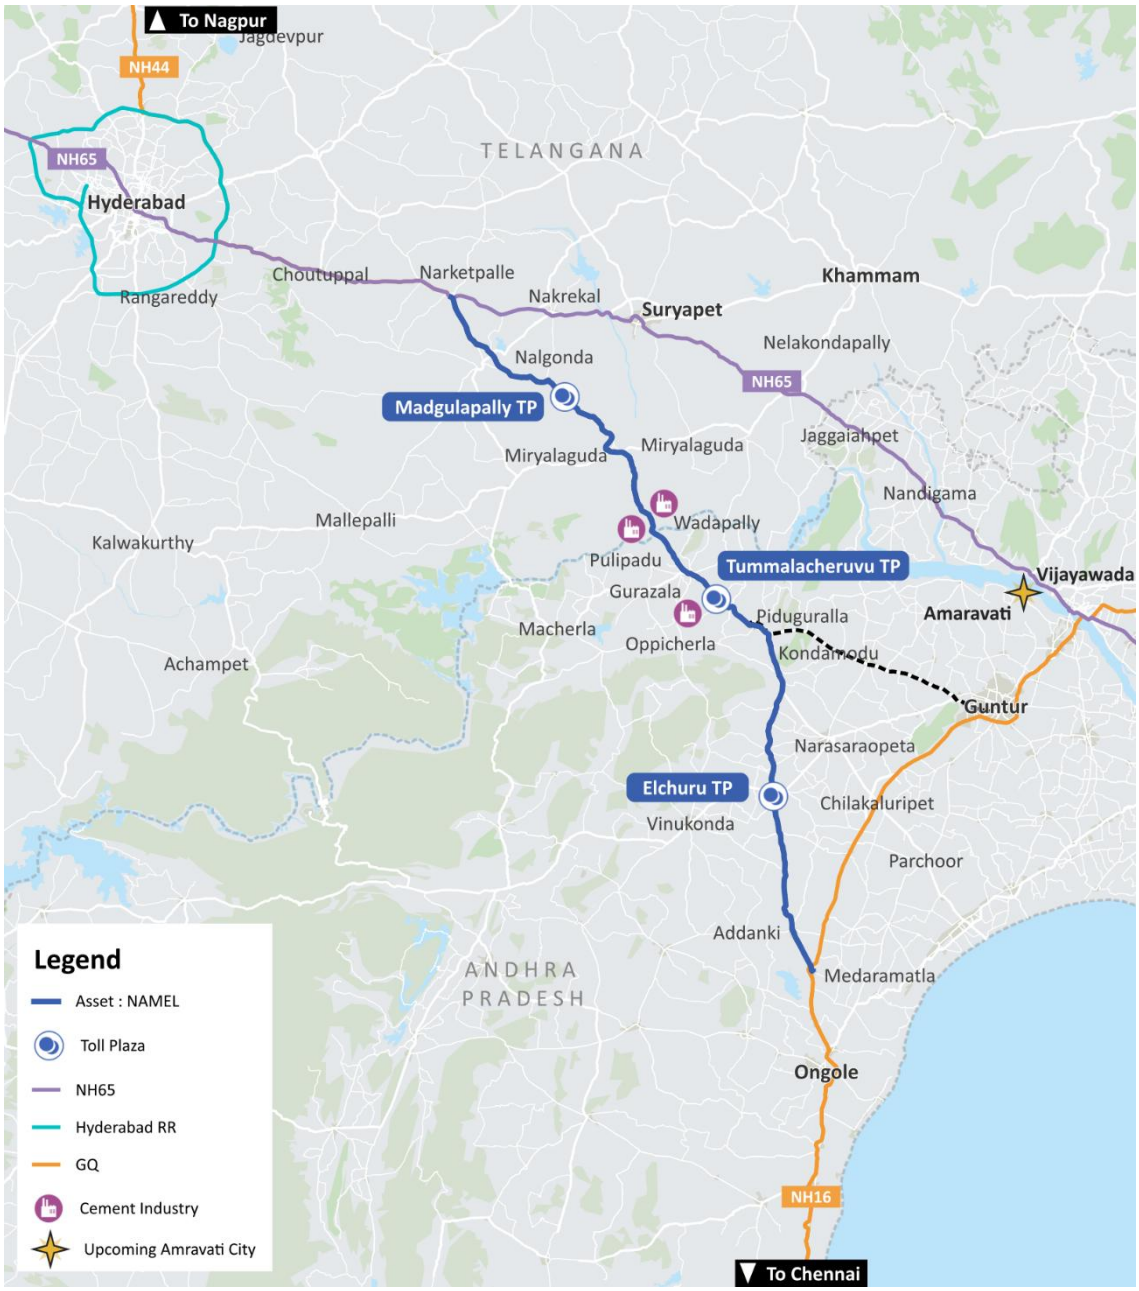
6.16 Additionally, the upgradation of the NH167K is also underway. NHAI is also developing Kalvakurthi to Karivena greenfield section. The existing 2-lane sections between Hyderabad to Kalvakuthi and Atmakur-Nandyal will be upgraded to 4-lane configuration, which includes a greenfield upgrade of the middle section of the development near Krishna River (close to Boravelle). Our current study does not factor in the NH167K development due to the unavailability of detailed information regarding its alignment and anticipated completion date. While this new route could influence traffic on the Asset and potentially serve as an alternative for traffic heading south from north of Hyderabad, any such impact is considered to overlap with the effects of the Nagpur–Vijayawada Expressway, which we have already accounted for in our forecasts.

Impact of Amaravati-Led Induced Demand

6.17 Following the Andhra Pradesh-Telangana state division, Amaravati is being established as the new administrative capital of Andhra Pradesh. The city's master plan includes a 217 sq km urban area with state-of-the-art infrastructure such as broad arterial roads, dedicated zones for governance, education, and finance, and smart city features like underground utility corridors and high-speed public transport. The government has relaunched construction with a massive ₹43,000 crore investment, targeting key projects including the High Court, Secretariat, Assembly, and residences for government officials. The city is also expected to host economic hubs to attract industries and global investors, supported by a land pooling model that integrates local farmers into the development

process. Amaravati aims to become a global capital city with sustainable urban planning and robust economic infrastructure.[31]

Figure 6-4: Impact of Amaravati Induced Demand



Source: Steer analysis and cartography

6.18 The development of the city is projected to influence the Asset in the following ways:

- Proximity to cement clusters suggests that these clusters will likely serve the construction needs of the developing city, a factor relevant to the Asset, particularly TP2.

[31] Amaravati Capital City Project revived: CM Chandrababu Naidu's global vision greenfield capital city's construction relaunched - India Today

- Upon completion, the city is expected to generate increased travel demand, which will positively impact traffic volumes on the Asset.

6.19 Based on our analysis, we estimated a positive impact on the Asset route, summarised by the Table 6.4 below.

Revenue forecasting assumptions

6.20 To forecast the revenues for a particular financial year, the traffic forecast for each vehicle type is converted into tickets sold, which is then multiplied with the corresponding toll rate, which grows over the years as defined in the Concession Agreement. While "trip factors" provide the conversion factor to the former, i.e., traffic (trips) to tickets sold, "toll segmentation" provides the latter i.e., the breakup of trips paying each ticket type. This section discusses assumptions related to trip factors, toll segmentation and toll rates for the forecast period.

Toll evolution

6.21 Based on the concession agreement and the gazetted toll notification, we understand that base toll rates increase every two years (revision month is March) based on WPI-linked inflation. These are rounded up to the nearest five decimals to estimate the final toll rate charged to users.

6.22 We have used actual toll rates from the FY26 toll notifications and FY27 WPI to validate the modelling of future toll evolution of the Asset (and its individual toll plazas). WPI-linked toll growth was calculated based on the Client's WPI forecasts, as shown in the Table 6.5 below. These forecasts provided by the Client expect the Indian WPI to grow at an average of 4.2% between FY25-FY51. The WPI forecasts available from other independent forecasting agencies may vary from this assumption and could be lower or higher than that provided by the client.

Table 6.5: WPI growth forecast assumptions

Financial year	WPI growth (%)
FY26	2.57
FY27	2.4%
FY28	5.0%
FY29	5.1%
FY30	4.9%
FY31	4.4%
FY32 onwards	4.1%

Source: FY27 onwards WPI print as per client inputs

Toll segmentation and trip factors

6.23 We have analysed the historical TMS data split by ticket categories, to understand toll segmentation trends, as presented in Chapter 3. As per the historical analysis we observed that the ticket segmentation of the Asset had progressively stabilised over FY22-FY25YTD period after two external events resulted in large variations prior to FY22 i.e., the COVID-19 pandemic and FASTag implementation. Therefore, the FY25YTD ticket segmentation provide us with a stable toll segmentation which can be used for forecasting purposes.

6.24 For the traffic and revenue forecast, we assume that the ticket segmentation observed in FY26 YTD—specifically April to September 2025—provides a reasonable assumption for long-term average segmentation. Our future toll segmentation profiles by vehicle type and across all three toll plazas on the Asset are presented in Table 6.6 through Table 6.8 below.

Table 6.6: Toll segmentation for the forecast years for TP-1

6.25 Trip factors are used to calculate the revenue for the trips made on passes such as return, local personal, monthly passes. The trip factors assumed are based on the latest FY25YTD data available and listed in the Table 6.9, Table 6.10 and Table 6.11 below:

Table 6.9: Trip factors for the forecast years at TP 1

Return 2	2	2	2	2	2	2

Source: Steer analysis of Client TMS data

6.26 Please note that the category Exemptions as reported in the TMS data includes local cars that are exempt from paying on this Asset. This assumes that further changes in toll categories, unless specific discounts are offered, are unlikely. For trips through ETC, especially the return trips, the trip factors input into the model calculations is 2.

Revenue reconciliation

6.27 As part of validating the data provided by the Client, as well as our assumptions around toll calculations, we have reconciled the actual reported revenue on a monthly level for the Asset. To reconcile we have used the FY26YTD segmentation, FY26YTD ADT and compared it with the reported revenue for the year. The exercise was undertaken at an annual level. The comparison, as shown in Table 6.12 below, depicts the modelled revenue vs the reported revenue difference, and the difference lies within 1%, this gives us the confidence in the assumptions around segmentation and trip factors for future forecast purposes.

Table 6.12: FY25 Revenue reconciliation summary (INR Lakhs)

Asset	Modelled	Actual	Difference (%)
	FY26YTD	FY26YTD	
TP1	29.68	29.93	(0.8%)
TP2	34.58	34.63	(0.2%)
TP3	26.62	26.43	0.7%

Traffic and Revenue forecasts

6.28 Based on the traffic and revenue-related forecast assumptions discussed above, we have modelled the traffic and revenue forecasts for the concession length of the Asset. The tables below present the AADT/PCU and revenue forecast growth rates and CAGRs on this Asset. Further, Appendix A presents the detailed AADT and revenue forecasts for the Asset over the full concession period.

Upside and Downside cases

Upside and Downside scenario assumptions

6.29 We have developed our base case scenario considering a balanced view on the risks associated with input assumptions around GDP growth and traffic growth elasticities. There is always a risk that the outturn values of these inputs will vary as compared to the assumptions taken due to exogenous impacts, e.g. GDP growth could be influenced both positively and negatively by the impact of monsoons, export-import balances, political changes etc.

6.30 Similarly, traffic growth elasticities could be influenced by increased efficiencies achieved by technology, large shifts in commodity prices globally, changes in local manufacturing practices. However, at this stage we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

6.31 To account for the possible variations in the growth drivers, we are also presenting an Upside (optimistic) and a Downside (pessimistic) scenario. These scenarios are defined by the following variations from the base assumptions:

Table 6.25: Summary of Macro-economic Assumptions for upside and downside cases

Input	Upside	Downside
Macro Assumptions		
GDP/GSDP	+1% every year	-1% every year
WPI	+1% every year	-1% every year
Elasticities	+ 10%	- 10%

Source: Steer analysis

6.32 Further, network developments are highly dependent on governmental directions, policies, legal and financial measure which might result in early or delayed completion of developments. Therefore, we have included an Upside (optimistic) and a Downside (pessimistic) case. However, at this stage, we consider that the base case represents a central case scenario given the risks of variation of input assumptions.

Impacts-Upside Case

6.33 The upside case impacts included in forecasts are summarised in Table 6.26 below.

Table 6.26: Summary of impacts on the Assets

	Year of Impact		Magnitude of impact		
			TP1 Madgullapally	TP2 Tummalacheruvu	TP3 Elchuru

Upside and Downside Case Forecasts

6.35 Table 6.28 below presents the difference between the Upside and Downside Case forecasts relative to the Base Case forecasts in FY40 (i.e., the concession end year) for all three Asset toll plazas. Figure 6-5 through Figure 6-10 below plot the Upside and Downside Case forecasts relative to the Base Case forecasts for each Asset toll plaza over the full concession period (FY26-FY40).

Table 6.28: Percentage Difference Upside and Downside Case Forecasts vs. Base Case Forecasts - FY40

Case	Measure	TP1 Madugulapally	TP2 Thummalacheruvu	TP3 Elchuru
Upside Case	Traffic (PCU)	26.2%	26.1%	28.2%
Downside Case		(18.9%)	(18.8%)	(20.2%)
Upside Case	Revenue	44.1%	43.3%	45.8%
Downside Case		(29.1%)	(28.6%)	(29.9%)

Summary outlook

6.36 Overall, passenger traffic on the Asset has a mix of regional movement between Hyderabad, Chennai, Ongole and other urban/semi-urban locations lying along the Asset alignment. Goods traffic on the Asset are driven by regional industries such as cement clusters near the Asset as well as manufacturing plants further away (such as automotive manufacturers in Tamil Nadu). There is also significant short to medium-distance movement of trucks carrying agricultural goods such as rice, chillis and tobacco.

6.37 The states of Andhra Pradesh and Telangana have both shown great focus on enhancing their respective industrial sectors while also establishing themselves as key IT hubs to foster a favourable environment for start-ups and tech-driven businesses (as observed in Hyderabad in Telangana, and as is intended for the city of Amravati in Andhra Pradesh). Several other investments in sectors like textiles, petrochemicals and food processing have also been made to boost economic growth in these states.

6.38 The two states have also invested heavily in strategic infrastructure development aimed at boosting trade and commerce by improving connectivity via roads and ports[32][33][34]. All these events are expected to positively influence traffic growth on the Asset going forward.

6.39 The impacts considered while forecasting include the onset of the Surat-Solapur-Chennai expressway, the Nagpur-Vijayawada expressway, combined net impact of the Hyderabad Regional Ring Road in conjunction with the NH167k upgrade between Hyderabad and Nandyal, and finally, the demand induced by Amaravati super city development in AP.

6.40 The forecasts overall translate to stable PCU growth rate CAGRs of 4.3%, 4.5% and 4.2% per year at TP1, TP2 and TP3 (respectively) between FY26 and FY40, and we expect these growth rates to sustain over the long-term after considering all network related impacts in and around the Asset's surrounding road network. Hence, reflecting the robustness of the underlying growth drivers of travel demand on the Asset.

C Data Collection Exercise

C.1 In order to validate and inform various inputs used in our forecasting, we undertook primary data collection on the Asset. OD survey data was collected on behalf of the Client, TVC surveys were commissioned by Steer with a third party. OD data collection typically involves manual data entry by enumerators based on oral surveys with road users crossing toll plazas. TVC data collection involves video-graphic capture of traffic passing crossing the toll plazas, followed by manual counting.

3-day TVC counts

Table C.1: TVC counts at TP1

Date	CJV	Mini LCV	LCV	Bus	2 Axle	3 Axle	MAV	OSV	Total
